## PREFACE.

---

By the Constitution of the Commonwealth of Australia, the Commonwealth is empowered "to make laws for the peace, order, and good government of the Commonwealth, with respect to," *inter alia*, "Census and Statistics." In exercising the power so conferred, a "Census and Statistics Act" was passed in 1905, and in the year following the "Commonwealth Bureau of Census and Statistics" was created. The publication here presented is the fifth authoritative Year Book issued under the Federal Constitution.

This Year Book furnishes corrected statistics for the whole period of Australian settlement, viz., from 1788 to 1911. Wherever space has permitted, detailed statistics have been furnished for each year since Federation, viz., from 1901 to 1911. In the few instances where this has proved impracticable, reference will be necessary to Year Books Nos. 1 to 4. The inclusion, as stated, of the total available information in the more important branches of statistics enables this publication to be used wherever it is desired to make a comparative survey of the evolution of this portion of the British Empire. Not only are the results given for the Commonwealth as a whole, but also for each State therein.

The general arrangement of the publication, which has been widely commended, corresponds with that of previous issues, and is shewn in the synopsis on pp. xiii. to xxix. immediately following.

In addition, however, to what may be called purely statistical matter, each issue contains special articles dealing at length with some particular subject or subjects of more or less permanent interest. These cannot of course be repeated year after year, but usually a brief condensation is given in subsequent issues. Though many articles in Year Books Nos. 1 to 4 have been reduced to synopses or deleted, sufficient indication is given to enable the subject to be traced in previous issues.

The present issue of the Year Book contains several new features of interest. Among these may be mentioned the section dealing with the Islands of Australia, Cost of Living, Northern Territory, and Preferential Voting. The section dealing

with Population contains results for the Census of 1911, additional tables also figuring in the Appendix. Considerable additions have been made to the section on Vital Statistics (see pp. 220 to 250), and Public Hygiene. A bibliography of recent works on Australia will be found on p. 10. Descriptions of Norfolk and Lord Howe Islands have been added to the Miscellaneous Section. A Statistical Summary and a Chronological Table, which will be found on pages xxxiii. to xl., appear for the first time and will, it is hoped, prove useful. Among the various additions and improvements to the maps and graphs, the maps shewing monthly and annual temperatures and wettest months, density of population at Census of 1911, and artesian areas in the Commonwealth may be specially mentioned. A large number of new graphs has been included in the section dealing with Vital Statistics. Blocks representing the three prize winning designs for the Federal Capital have also been included. The full text of the Commonwealth Constitution Act, and Amendments, appear on pages 13 to 24.

The subject matter throughout is dealt with, as far as possible, from the following points of view, viz :—

(i.) The development of the individual States. (ii.) The progress of Australia as a whole from the earliest times. (iii.) The statistical comparison of Australia with other leading countries of the world.

A feature of this publication is the use made of maps and diagrams. As a rule facts can be properly appreciated only by the use of graphs, and the progress of events, the characteristics of growth and decline, can in general be grasped much more readily graphically than numerically. The diagram or "graph" is a direct picture in which the relative magnitudes are preserved and by which instantaneous comparisons of a wide range of facts are made possible at a glance. The statistical data, however, are also given *in extenso* numerically.

The development of Australia has been in many instances very remarkable, and this could be shewn only by tables and graphs dating back to its beginning in 1788. In most cases accurate data are not available for years much before 1860. In such cases, therefore, it seemed sufficient at present to give continuous results from that year onwards.

The great mass of material embodied in each Year Book is always carefully examined, but it would be idle to hope that all error has been avoided. The Commonwealth Statistician desires to express appreciation of the opportunity afforded him of perfecting the matter of the Year Book, by those who have been kind enough to point out defects or make suggestions.

The corresponding years indicated in various sections of this book do not always necessarily refer to the same period, the year ending in some cases on 31st December, 30th June, or 31st March, etc. The precise period for which returns are given is indicated where necessary.

Recent information or returns which have come to hand since the various Sections were sent to press, may be found in the Appendix, p. 1219 *et seq.*, and the publication has been delayed slightly in order to include the more important results of the 1911 Census.

In conclusion, the Commonwealth Statistician desires to express his cordial thanks to the State Statisticians, and to the responsible officers of the various Commonwealth and State Departments, who have kindly, and often at considerable trouble, supplied all desired information.

G. H. KNIBBS,

*Commonwealth Statistician.*

COMMONWEALTH BUREAU OF CENSUS AND STATISTICS,

25th June, 1912.

# INDEX TO SPECIAL ARTICLES, ETC., APPEARING IN PREVIOUS ISSUES.

These articles have appeared in former issues of the Commonwealth Year Book, but, owing to exigencies of space, they are not included in this publication.

NOTE.—The Roman figures indicate the number of the Year Book to which reference refers.

2. Subsequent Development	333
3. Increase in Numbers	333
4. Fluctuations	334
5. Live Stock in Relation to Population	334
6. Live Stock in Relation to Area	335
7. Minor Classes of Live Stock	335
8. Net Exports of Principal Pastoral Products	335
<b>§ 2. Horses</b>	
1. Suitability of Australia for Horse-breeding	336
2. Distribution throughout C'wealth	336
3. Proportion in the several States	337
4. Oversea Export Trade in Horses	337
5. Comparison with other Countries	339
6. Relation to Population	340
<b>§ 3. Cattle</b>	
1. Purposes for which Raised	340
2. Distribution throughout C'wealth	340
3. Proportion in each State	341
4. Imports and Exports of Cattle	342
5. Cattle Slaughtered	342
6. Export of Beef preserved by Cold Process	343
7. Comparison with other Countries	344
8. Relation to Population	344
<b>§ 4. Sheep</b>	
1. The Founding of the Commonwealth Pastoral Industry	345

2. Distribution throughout C'wealth	345
3. Proportion in the several States	345
4. Oversea Imports & Exports of Sheep	346
5. Sheep Slaughtered	346
6. Exports of Mutton and Lamb preserved by Cold Process	347
7. Comparison with other Countries	348
8. Relation to Population	348
<b>§ 5. Wool</b>	
1. Importance of Wool Production	349
2. Greasy and Scoured Wool	349
3. Total Production	349
4. Wool Locally Used	350
5. Bounties on Combed Wool or Tops Exported	350
6. Exports of Wool	350
7. Care needed in Comparing Clips	351
8. Wool-producing Countries in Southern Hemisphere	351
9. United Kingdom Importation of Wool	352
10. The Wool Market	352
<b>§ 6. Hides and Sheepskins</b>	
1. Extent of Trade	353
2. Sheepskins with Wool	353
3. Sheepskins without Wool	354
4. Hides	355
<b>§ 7. Graphical Representation of Pastoral Production</b>	
1. General	356
2. Horses	356
3. Cattle	356
4. Sheep	356
5. Pigs	356

## SECTION VIII.—AGRICULTURAL PRODUCTION.

<b>§ 1. Introductory</b>	
1. Early Attempts at Agriculture	359
2. The First Sowing	359
3. Discovery of Suitable Agricul Land	359
<b>§ 2. Progress of Agriculture</b>	
1. Early Records	359
2. Progress of Cultivation since 1860	360

3. Relation to Population	361
4. Relation to Total Area	361
5. Artificially-sown Grasses	361
<b>§ 3. Relative Importance of Crops</b>	
1. Various Crops	362
2. Relative Areas of Crops in States	363
3. Acreage of Principal Crops, Cwith.	363

	PAGE		PAGE
<b>§ 4. Wheat</b>		<b>§ 13. Sugar Cane</b>	
1. Progress of Wheat-growing ... ..	364	1. Area ... ..	391
2. Australian & Foreign Wheat Yields ...	366	2. Productive and Unproductive Cane ...	392
3. Wheat Crops of the World ... ..	366	3. Yield of Cane ... ..	392
4. Prices of Wheat ... ..	367	4. Relation to Population ... ..	392
5. Imports, Exports of Wheat & Flour ...	368	5. Quality of Cane ... ..	393
6. Value of the Wheat Crop ... ..	371	6. Sugar Bounties ... ..	393
		7. Cost of Bounties ... ..	394
<b>§ 5. Oats</b>		8. Collection of Sugar Excise ... ..	394
1. Progress of Cultivation ... ..	371	9. Production by White and Black Labour ...	394
2. Total Yield ... ..	371	10. Imports and Exports of Sugar ...	395
3. Average Yield ... ..	372		
4. Relation to Population ... ..	373	<b>§ 14. Vineyards</b>	
5. Value of Oat Crop ... ..	373	1. Nature and Extent ... ..	396
6. Imports and Exports ... ..	373	2. Wine Production ... ..	397
7. Oatmeal, etc. ... ..	374	3. Relation to Population ... ..	397
8. Comparisons with other Countries ...	374	4. Imports and Exports ... ..	397
9. Comparison of Yields ... ..	374	5. Other Viticultural Products... ..	398
10. Price of Oats ... ..	374		
<b>§ 6. Maize</b>		<b>§ 15. Orchards and Fruit Gardens</b>	
1. States Growing Maize ... ..	375	1. Nature and Extent ... ..	399
2. Area under Maize ... ..	375	2. Relation to Population ... ..	400
3. Total Yield ... ..	376	3. Commonwealth Imports & Exports ...	401
4. Average Yield ... ..	376	4. Jams and Jellies ... ..	402
5. Value of Maize Crop ... ..	377	5. Preserved Fruit ... ..	402
6. Relation to Population ... ..	377		
7. Oversea Imports and Exports ... ..	377	<b>§ 16. Minor Crops</b>	
8. Prepared Maize ... ..	378	1. Nature and Extent ... ..	403
9. Maize-growing in other Countries... ..	378	2. Market Gardens ... ..	403
10. Price of Maize ... ..	378	3. Grass Seed ... ..	403
		4. Tobacco ... ..	403
<b>§ 7. Barley</b>		5. Pumpkins and Melons ... ..	404
1. Area under Barley ... ..	378	6. Hops ... ..	404
2. Malting and other Barley ... ..	379	7. Millet ... ..	404
3. Total Yield... ..	379	8. Nurseries ... ..	404
4. Value of Barley Crop ... ..	379	9. Cotton ... ..	404
5. Relation to Population ... ..	380	10. Coffee ... ..	405
6. Commonwealth Imports & Exports ...	380	11. Other Crops ... ..	405
7. C'wealth Imports & Exports of Malt ...	381		
8. Comparison with other Countries... ..	381	<b>§ 17. Bounties on Agricultural Products</b>	
9. Average Yield ... ..	381	1. General ... ..	405
10. Price of Barley ... ..	382		
<b>§ 8. Other Grain and Pulse Crops</b> ... ..	382	<b>§ 18. Fertilisers</b>	
		1. General ... ..	406
<b>§ 9. Potatoes</b>		2. Fertilisers Acts ... ..	406
1. Area ... ..	383	3. Imports ... ..	407
2. Total Yield... ..	383	4. Exports ... ..	408
3. Average Yield per Acre ... ..	383	5. Statistics of Use of Fertilisers ... ..	408
4. Value of Potato Crop ... ..	384	6. Local Production of Fertilisers ... ..	410
5. Relation to Population ... ..	384	7. Benefits Derived from the Use of Fertilisers ... ..	410
6. Commonwealth Imports & Exports ...	384		
7. Comparison with other Countries... ..	385	<b>§ 19. Ensilage</b>	
<b>§ 10. Other Root and Tuber Crops</b>		1. Value to Stockowners ... ..	410
1. Nature and Extent ... ..	385	2. Government Assistance in the Production of Ensilage ... ..	411
2. Commonwealth Imports & Exports ...	386	3. Quantity made ... ..	411
<b>§ 11. Hay</b>			
1. Nature and Extent ... ..	386	<b>§ 20. Agricultural Colleges and Experimental Farms</b>	
2. Kinds of Hay ... ..	386	1. Introduction ... ..	412
3. Total Yield ... ..	388	2. New South Wales ... ..	413
4. Value of Hay Crop ... ..	388	3. Victoria ... ..	416
5. Average Yield per Acre ... ..	388	4. Queensland ... ..	419
6. Relation to Population ... ..	389	5. South Australia ... ..	420
7. Oversea Imports and Exports ... ..	389	6. Western Australia ... ..	422
8. Hay Production in other Countries ...	390	7. Tasmania ... ..	423
<b>§ 12. Green Forage</b>			
1. Nature and Extent ... ..	390	<b>§ 21. Government Loans to Farmers</b>	
2. Value of Green Forage Crops ... ..	390	1. Introduction ... ..	424
3. Relation to Population ... ..	390	2. Particulars of Transactions in each State 1908 to 1911 ... ..	424
		3. New South Wales ... ..	425
		4. Victoria ... ..	426
		5. Queensland ... ..	428
		6. South Australia ... ..	429
		7. Western Australia ... ..	430
		8. Tasmania ... ..	434
		<b>§ 22. Graphical Representation</b>	
		1. Areas of Principal Crops ... ..	435
		2. Production ... ..	436

## SECTION IX.—FARMYARD AND DAIRY PRODUCTION.

	PAGE		PAGE
<b>1. Introductory</b>		<b>§ 5. Bee Farming</b>	
1. General ... ..	438	1. The Bee Farming Industry ... ..	447
2. State Supervision of Industry ... ..	438	2. Production of Honey and Beeswax ... ..	448
3. Mixed Farming ... ..	440	3. Oversea Trade in Bee Products ... ..	449
4. Factory System ... ..	440		
5. Butter and Cheese Factories ... ..	440	<b>§ 6. Summary of Australian Farmyard and Dairy Products</b> ... ..	449
<b>§ 2. Milk, Butter, and Cheese</b>		<b>§ 7. Summary of Australian Farmyard and Dairy Products Exported, 1906 to 1910</b> ... ..	450
1. Dairy Herds ... ..	441	<b>§ 8. British Imports of Dairy Products</b>	
2. Milk ... ..	441	1. Value of Britain's Imports of Dairy Products ... ..	450
3. Butter and Cheese ... ..	442	2. Butter ... ..	451
4. Concentrated Milk ... ..	442	3. Cheese ... ..	451
5. Oversea Trade in Milk, Butter, and Cheese ... ..	442	4. Bacon and Ham ... ..	451
6. Local Consumption of Butter and Cheese ... ..	443	5. Pork ... ..	451
<b>§ 3. Pigs, Bacon, etc.</b>		6. Other Products ... ..	451
1. Pigs ... ..	444	<b>§ 9. Graphical Representation of Dairy Production</b> ... ..	451
2. Bacon and Ham ... ..	444		
3. Oversea Trade in Pig Products ... ..	444		
4. Local Consumption of Bacon and Ham ... ..	445		
5. Total Dairy Production ... ..	446		
<b>§ 4. Poultry Farming</b>			
1. Development of the Industry ... ..	446		
2. Production of Poultry ... ..	447		
3. Oversea Trade in Poultry Products ... ..	447		

## SECTION X.—FORESTS, FORESTRY, AND FORESTAL PRODUCTS.

<b>§ 1. The Forests of Australia</b>		<b>§ 3. Commercial Uses of Principal Australian Timbers</b> ... ..	460
1. Extent of Forests ... ..	452	<b>§ 4. Forestal Industries and Production</b>	
2. Characteristics of State Forest Areas ... ..	453	1. Timber ... ..	463
3. Distribution of Timber in the Commonwealth generally ... ..	456	2. Forest Produce ... ..	463
<b>§ 2. Forestry</b>		<b>§ 5. Oversea Trade</b>	
1. Objects ... ..	456	1. Imports ... ..	464
2. Forestry Departments ... ..	456	2. Exports ... ..	464
3. Sylvicultural Nurseries and Plantations ... ..	458		
4. A Forest School ... ..	460		

## SECTION XI.—FISHERIES AND PISCICULTURE.

<b>§ 1. Commercial Fisheries</b>		<b>§ 4. Development of the Fishing Industry</b>	
1. Early Fishing Excursions of Malays ... ..	469	1. Transport and Marketing ... ..	477
2. Fish Stocks ... ..	469	2. Experiment and Culture ... ..	477
3. Economic Fisheries ... ..	469	<b>§ 5. The Commonwealth Department of Fisheries</b>	
4. Lake and River Fishing ... ..	469	1. The Federal Council of Australasia ... ..	479
5. Distribution of Supplies ... ..	469	2. Commonwealth Investigations ... ..	479
6. Oyster Fisheries ... ..	470	3. Scope of the Inquiry ... ..	480
7. Pearl-shelling ... ..	470	4. The F.I.S. "Endeavour" ... ..	480
<b>§ 2. Fisheries Statistics</b>		5. The "Endeavour's" Cruises ... ..	480
1. Estimates of the Commonwealth ... ..	471	6. Results ... ..	480
2. States Fisheries Statistics ... ..	473	7. Treatment & Disposal of the Catch ... ..	481
<b>§ 3. Oversea Trade in Fish</b> ... ..	476	8. Possibility and Scope for future Development ... ..	481
		<b>§ 6. Fish Preserving</b> ... ..	482

## SECTION XII.—MINES AND MINING.

§ 1. The Mineral Wealth of Australia		PAGE
1. Place of Mining in Australian Development ... ..	483	
2. Extent of Mineral Wealth ... ..	483	
3. Value of Production during 1910 ... ..	483	
4. Total Production to end of 1910 ... ..	484	

### (A) METALS

## § 2. Gold

1. Discovery of Gold in various States	485
2. Production of Gold at various Periods	485
3. Changes in Relative Positions of States as Gold Producers	487
4. Methods of Gold Mining adopted in each State	487
5. Remarkable Masses of Gold	491
6. Modes of Occurrence of Gold in Aust.	491
7. Place of Commonwealth in the World's Gold Production	491

### § 3. Platinum and the Platinoid Metals

1. Platinum	...	...	...	...	492
2. Osmium, Iridium, etc.	...	...	...	...	493

#### §4. Silver

1. Occurrence in each State	...	...	493
2. Development of Silver Mining	...	...	494
3. Chief Centres of Silver Production	...	...	495
4. World's Production of Silver	...	...	496
5. Prices of Silver	...	...	496
6. Employment in Silver Mining	...	...	496

### § 5. Copper

1. Production of Copper	...	...	...	497
2. History	...	...	...	498
3. Price of Copper	...	...	...	499
4. Relationship to World's Production	...	...	...	500
5. Employment in Copper Mining	...	...	...	500

### § 6. Tin

1. Production of Tin	...	...	...	501
2. Sources of Production	...	...	...	501
3. World's Production of Tin	...	...	...	502
4. Prices of Tin	...	...	...	502
5. Employment in Tin Mining	...	...	...	503

### § 7. Zinc

1. Production of Zinc	...	...	...	503
-----------------------	-----	-----	-----	-----

§ 8. iron

1. General	...	...	...	...	504
2. Production of Iron	...	...	...	...	505

## § 9. Other Metals

1. Aluminium	...	...	...	...	507
2. Antimony	...	...	...	...	507
3. Arsenic	...	...	...	...	507
4. Barium	...	...	...	...	507
5. Bismuth	...	...	...	...	507
6. Chromium	...	...	...	...	508
7. Carnotite	...	...	...	...	508
8. Cobalt	...	...	...	...	508
9. Lead	...	...	...	...	508

						PAGE
10.	Mercury	...	...	...	...	508
11.	Manganese	...	...	...	...	509
12.	Molybdenum	...	...	...	...	509
13.	Radium	...	...	...	...	509
14.	Tungsten	...	...	...	...	509
15.	Tantalum	...	...	...	...	510
16.	Uranium	...	...	...	...	510

### (B) NON-METALLIC MINERALS

§ 10. Coal

1. Production in each State	...	...	510
2. Distribution and Quantity of Coal in each State	...	...	511
3. Production of Coal various Countries	...	...	515
4. Export of Coal	...	...	516
5. Consumption of Coal in Australia	...	...	517
6. Price of Coal	...	...	517
7. Price of Coal in other Countries	...	...	518
8. Employment and Accidents in Coal Mining	...	...	519

### § 11. Coke

1. Production of Coke ... .. 519

## § 12. Oil Shale and Mineral Oils

1. Production of Shale	...	...	...	520
2. Export of Shale	...	...	...	521
3. Shale Oils Bounties	...	...	...	521

### § 13. Other Non-metallic Minerals

1. Alunite	...	...	...	...	...	521
2. Asbestos	...	...	...	...	...	523
3. Barytes	...	...	...	...	...	523
4. Clays and Pigments	...	...	...	...	...	523
5. Coorongite...	...	...	...	...	...	523
6. Fuller's Earth	...	...	...	...	...	523
7. Graphite	...	...	...	...	...	522
8. Gypsum	...	...	...	...	...	523
9. Tripolite or Diatomaceous Earth	...	...	...	...	...	523
10. Salt	...	...	...	...	...	523
11. Natural Manures...	...	...	...	...	...	523

## § 14. Gems and Gemstones

1. Diamonds	...	...	...	...	523
2. Sapphires	...	...	...	...	524
3. Precious Opal	...	...	...	...	524
4. Other Gems	...	...	...	...	524

### § 15. Numbers Engaged, Wages Paid, and Accidents in Mining

1. Total Employment in Mining	...	524
2. Wages Paid in Mining	...	525
3. Accidents in Mining, 1910	...	527

### § 16. State Aid to Mining

1. Introduction	...	...	...	527
2. New South Wales	...	...	...	527
3. Victoria	...	...	...	528
4. Queensland	...	...	...	532
5. South Australia	...	...	...	533
6. Northern Territory	...	...	...	532
7. Western Australia	...	...	...	533
8. Tasmania	...	...	...	534

### SECTION XIII.—MANUFACTURING INDUSTRIES.

## § 1. General

1. Industrial Progress	...	...	535
2. Defects in Industrial Statistics	...	...	536
3. Classification of Manufacturing Industries	...	...	537

## § 2. Number of Manufactories

1. General	...	...	...	...	538
2. Use of Mechanical Power	...	...	...	...	540

### § 3. Number Employed in Aust. Factories

1. Total Number Employed	...	...	540
--------------------------	-----	-----	-----

2. Classification of Number Employed in Factories in Commonwealth, 1906 to 1910	...	...	...	...	541
3. Classification of Number Employed in each State, according to Class of Industry, 1910	...	...	...	...	542
4. Classification of Number Employed according to Nature of Employment, 1910	...	...	...	...	543
5. Classification of Factories according to number of Hands Employed, 1910	...	...	...	...	543
6. Outworkers	...	...	...	...	544

<b>§ 4. Sex Distribution in Factories</b>	<b>PAGE</b>
1. Employment of Females in Factories	544
2. Distribution of Employees according to Sex, 1906 to 1910	545
3. Rate of Increase for each Sex	546
4. Increasing Ratio of Female Employment in Factories	547
5. Employment of Females in Particular Industries, 1910	548
<b>§ 5. Child Labour in Factories</b>	
1. Conditions of Child Labour	549
2. Average Number of Children Employed in Factories, 1906 to 1910	549
3. Industries Employing Child Labour, 1910	550
4. Apprenticeship	551
<b>§ 6. Amount of Wages Paid and Value of Production</b>	
1. Introduction	551
2. Amounts of Salaries and Wages Paid, 1910	552
3. Value of Fuel and Light used in Factories, 1910	553
4. Value of Raw Material used in Factories, 1910	554
5. Total Value of Output of Manufacturing Industries, 1910	555
6. Value of Production of Manufacturing Industries, 1910	557
<b>§ 7. Land, Buildings, Plant and Machinery</b>	
1. General	558
2. Value of Land and Buildings	559
3. Value of Plant and Machinery	561

<b>§ 8. Individual Industries</b>	<b>PAGE</b>
1. General	562
2. Tanning Industry	563
3. Soap and Candle Factories	564
4. Saw Mills, etc.	565
5. Agricultural Implement Factories	565
6. Engineering, Ironworks, and Foundries	566
7. Railway Carriages & Rolling Stock, Railway & Tramway Workshops	566
8. Smelting Works	567
9. Bacon-curing Factories	567
10. Butter, Cheese, and Condensed Milk Factories	568
11. Meat and Fish Preserving, Ice and Refrigerating Works	569
12. Biscuit Manufactories	570
13. Jam and Fruit Preserving, Pickles, Sauces, and Vinegar Manufactories	570
14. Confectionery	571
15. Flour Mills	571
16. Sugar Mills	572
17. Sugar Refineries	573
18. Breweries	573
19. Distilleries	574
20. Tobacco, Cigars, and Cigarettes	575
21. Woollen and Tweed Mills	577
22. Boots and Shoes	577
23. Hats and Caps	578
24. Coach and Wagon Building Works	579
25. Furniture and Cabinet Making and Billiard Table Making	580
26. Electric Light and Power Works	580
27. Gas and Coke Works	580

## SECTION XIV.—WATER CONSERVATION AND IRRIGATION.

<b>§ 1. Water Supply Works</b>	
1. General	582
2. The Goldfields Water Supply of Western Australia	582
3. The Mines Water Supply Branch	583
<b>§ 2. Artesian Wells</b>	
1. General	583
2. New South Wales	585
3. Victoria	586

4. Queensland	587
5. South Australia	588
6. Western Australia	589
<b>§ 3. Irrigation Plants</b>	
1. General	589
2. New South Wales	590
3. Victoria	591
4. Queensland	593
5. South Australia	593
6. Conflicting Interests	594

## SECTION XV.—COMMERCE.

<b>§ 1. Introductory</b>	
1. General	595
2. Constitutional Powers of Commonwealth in regard to Commerce	595
<b>§ 2. Commonwealth Commercial Legislation</b>	
1. Customs Act 1901	597
2. Customs Tariff Act 1902	597
3. Sea Carriage of Goods Act	597
4. Secret Commission Act 1905	598
5. Commerce (Trade Descriptions) Act 1905	599
6. Aust. Industries Preservation Act 1906	599
7. Customs Tariff 1906	599
8. Customs Tariff (South African Preference) 1906	599
9. Australian Industries Preservation Act 1907	600
10. Customs Tariff 1908	600
11. Customs Tariff Amendment Act 1908	600
12. Australian Industries Preservation Act 1909	600
13. Customs (Interstate Accounts) Act 1910	600
14. Australian Industries Preservation Act 1910	600
15. Customs Act 1910	600
16. Customs Tariff 1910	601
17. Customs Tariff 1911	601

<b>§ 3. Method of Recording Imports and Exports</b>	
1. Value of Imports	601
2. Value of Exports	601
3. Records of Past Years	601
4. Vessels (Ships) Imported & Exported	601
5. Ships' Stores	601
<b>§ 4. Oversea Trade</b>	
1. Total Oversea Trade	602
2. Ratio between Exports and Imports	604
<b>§ 5. Direction of Trade</b>	
1. Country of Shipment and Country of Origin	604
2. Direct Imports according to Country of Shipment	606
3. Imports from the United Kingdom	607
4. Imports Shipped from Brit. Poss.	608
5. Principal Imports, the Produce of British Possessions, 1910	608
6. Imports from Foreign Countries	609
7. Principal Imports, the Produce of Foreign Countries, 1910	609
8. Direction of Exports	610
9. Exports to the United Kingdom	612
10. Exports to British Possessions	613
11. Principal Exports to British Possessions, 1910	613
12. Exports to Foreign Countries	614
13. Principal Exports to Foreign Countries, 1910	614

	PAGE		PAGE
§ 6. Development of Export Trade to Eastern Countries		3. External Trade as a Measure of Prosperity	629
1. Trade with Eastern Countries	615	4. Australian Trade Evidence of Prosperity	630
§ 7. Trade of Commonwealth since Federation		§ 11. Trade of the United Kingdom with Australia.	
1. Classified Summary of Australian Trade	622	1. General	630
§ 8. Movements of Specie and Bullion		2. Proportion of Trade from U.K.	631
1. Specie and Bullion	625	3. Significance of Increase of Trade with other Countries	636
2. Imports of Bullion and Specie	626	4. Preferential Tariff	636
3. Exports of Bullion and Specie	626	5. Effect of Preference	638
§ 9. Effects of Prices on the Values of Exports		6. General Conclusions as to Preference	650
1. Significance of Price in Totals	626	7. Preferential Tariff of New Zealand	651
2. Effect of Prices	627	8. " " South Africa	652
3. Influence of Quantity and Price on Total Increased Value of Exports	627	9. " " Canada	653
§ 10. External Trade of Australia and other Countries		10. Preferential Tariff Comparisons	653
1. Essentials of Comparisons	628	11. South African Preference	654
2. "Special Trade" of various Countries	629	§ 12. Imports of Dutiable and Free Goods

§ 5. The New Defence System...	
3. Organisation of Land Forces under the Defence Act 1903-11 ... ..	1245
4. Compulsory Training in Operation ... ..	1245

## CORRIGENDA.

---

Page 50, in table "Square Miles of Territory per Mile of Coast Line," for "1,310 " read "11,310 " as Coast-line of Continent.

„ 352, in the sentence under the first table after the words "account for about 70 "per cent.," insert the following, viz., "of the aggregate number of bales "imported. Such a comparison is, however, somewhat misleading, as the "River Plate bale is much larger than the Australasian or the Cape bale. "Allowing approximately for the difference in size of the several bales, it "may be said that the importations from Australasia represent about 60 "per cent of the total."

„ 234, in the "Explanation of Graphs," for "1,000,000 of population " in lines 5, 6, and 7 of the Explanation, read "10,000,000 of population."

# STATISTICAL SUMMARY.

## STATISTICAL SUMMARY FOR THE COMMONWEALTH, 1861-1910.

(Figures for 1911, where available, will be found in the Appendix, and, in some instances, have been incorporated in the succeeding sections.)

# CHRONOLOGICAL TABLE.

## CHRONOLOGICAL TABLE OF CHIEF EVENTS SINCE THE ESTABLISHMENT OF SETTLEMENT IN AUSTRALIA.

Year.	
1788	N.S.W.—Arrival of "First Fleet" at Botany Bay. Land in vicinity being found unsuitable for settlement, the expedition moved to Sydney Cove (now Port Jackson). Formal possession of Sydney Cove, Port Jackson taken by Captain Phillip on 26th January. Formal proclamation of colony on 7th February. Branch settlement established at Norfolk Island. French navigator La Pérouse visits Botany Bay.
1789	N.S.W.—First wheat harvest at Parramatta, near Sydney. Discovery of Hawkesbury River. Outbreak of small-pox amongst aborigines.
1790	N.S.W.—"Second Fleet" reached Port Jackson. Landing of the New South Wales Corps. Severe suffering through lack of provisions. First Circumnavigation of Australia by Lieut. Ball.
1791	N.S.W.—Arrival of "Third Fleet." Territorial seal brought by Governor King. First grape vines planted.
1792	N.S.W.—Visit of <i>Philadelphia</i> , first foreign trading vessel.
1793	N.S.W.—First free immigrants arrived in the <i>Bellona</i> .
1794	N.S.W.—Establishment of Settlement at Hawkesbury River.
1795	N.S.W.—Erection of the first printing press. Descendants of strayed cattle discovered at Cowpastures, Nepean River.
1797	N.S.W.—Discovery of coal at Illawarra, and on Hunter River. Introduction of merino sheep from Cape of Good Hope.
1798	Tas.—Tasmania proved an island by voyage of Bass and Flinders.
1800	N.S.W.—First export of coal.
1801	N.S.W.—First rough Census muster. First colonial manufacture of blankets and linen. First issue of copper coin.
1802	Vic.—Discovery of Port Phillip by Lieut. Murray.
1803	N.S.W.—First Australian wool taken to England by Capt. Macarthur. Issue of "The Sydney Gazette," first newspaper. Vic.—Attempted colonisation of Port Phillip by Captain Collins. Tas.—First settlement in Tasmania formed at Risdon by Lieut. Bowen.
1804	N.S.W.—Insurrection of convicts at Castle Hill. Vic.—Abandonment of settlement at Port Phillip. Tas.—Foundation of settlement at Hobart by Lieut.-Governor Collins, and at Yorktown by Colonel Paterson.
1805	N.S.W.—First extensive sheep farm established at Camden by Capt. Macarthur. Portion of settlers from Norfolk Island transferred to Tasmania.
1806	N.S.W.—Shortage of provisions, and floods. Tas.—Settlement at Launceston.
1807	N.S.W.—Final shipment of convicts from Norfolk Island. First shipment of merchantable wool.
1808	N.S.W.—Deposition of Governor Bligh.
1810	N.S.W.—First post-office established. Tas.—First newspaper printed.
1813	N.S.W.—Passage across Blue Mountains discovered by Wentworth, Lawson, and Blaxland.
1814	N.S.W.—Australia, previously known as "New Holland," received present name on recommendation of Flinders. Creation of Civil Courts.

- 1815 N.S.W.—Town of Bathurst laid out by Governor Macquarie. Evans discovered Macquarie River. Tas.—Arrival of first immigrant ship with free settlers. First export of wheat to Sydney.
- 1817 N.S.W.—Oxley's first exploration inland. Discovery of Lakes George and Bathurst, and the Goulburn Plains, by Meehan and Hume. Qld.—Lieut. King surveyed and charted portion of eastern coast.
- 1818 N.S.W.—Cessation of free immigration. Oxley reaches Macquarie River.
- 1819 N.S.W.—Opening of Savings Bank at Sydney.
- 1820 N.S.W.—Discovery of Murrumbidgee and Clyde Rivers. Tas.—First importation of pure merino sheep.
- 1821 N.S.W.—Foundation of Philosophical (now Royal) Society. Tas.—Establishment of penal settlement at Macquarie Harbour.
- 1823 N.S.W.—First Australian Constitution. Discovery of gold at Fish River by Assistant-Surveyor McBrien. Arrival in Sydney of Dr. John Dunmore Lang. Qld.—Oxley discovers Brisbane River.
- 1824 N.S.W.—Introduction of trial by jury. Proclamation of freedom of the press. First land regulations. First manufacture of sugar. Hume and Hovell's overland expedition to the south. Vic.—Hume and Hovell arrive at Corio Bay. Qld.—Expedition to prepare for establishment of penal settlement at Moreton Bay.
- 1825 N.S.W.—First jury empanelled at Sydney. Commencement of three years' drought. Tas.—Proclamation of Van Diemen's Land, as separate colony.
- 1826 N.S.W.—Darling River discovered by Captain Sturt. Vic.—Foundation of settlement at Western Port. Qld.—Penal settlement established at Moreton Bay. W.A.—Settlement founded at King George's Sound, Albany, by Major Lockyer.
- 1827 N.S.W.—Colony becomes self-supporting. Feverish speculation in land and stock. Qld.—Darling Downs discovered by Cunningham. Tas.—Copper ore discovered at Macquarie Harbour.
- 1828 N.S.W.—Second Constitution. First Census. Sturt's expeditions—discovery of Darling and Murray Rivers. Cotton first grown in Sydney Botanical Gardens. Vic.—Abandonment of settlement at Western Port. Qld.—Cunningham discovers a route from Moreton Bay to the Darling Downs, and explores Brisbane River to its source. Tas.—First land sales.
- 1829 N.S.W. and S.A.—Sturt journeys down Murrumbidgee and Murray Rivers to mouth of latter. W.A.—Foundation of settlement at Swan River, under command of Lieut.-Governor Stirling.
- 1830 N.S.W.—Insurrection of convicts at Bathurst. Inland exploration to southward by Sturt. Qld.—Murder of Captain Logan at Moreton Bay. W.A.—First Executive Council appointed. S.A.—Sturt discovers Lake Alexandrina. Tas.—Trouble with natives. Black line organised with object of forcing aborigines into Tasman's Peninsula. Attempt failed. Between 1830 and 1835, however, George Robinson, by friendly suasion, succeeded in gathering the small remnant of aborigines (203) into settlement at Flinders Island.
- 1831 N.S.W.—Lord Ripon's land regulations. Mitchell's explorations north of Liverpool Plains. Launching of first colonial steamer. Arrival at Sydney of first steamer *Sophia Jane*. First immigrant ship arrived. S.A.—Wakefield's first colonisation committee. Murder of Captain Barker by aborigines. W.A. and Tas.—Lord Ripon's land regulations. W.A.—Appointment of Executive and Legislative Council. First newspaper—"Fremantle Observer."
- 1832 N.S.W.—Initial appropriation of public funds for immigration.
- 1834 Vic.—Settlement formed at Portland Bay by Henty Bros. S.A.—Formation of the South Australian Association. W.A.—Severe reprisals against natives at Pinjarrah.
- 1835 N.S.W.—Establishment of dépôt at Fort Bourke on the Darling River, by Mitchell. Vic.—John Batman's arrival at Port Phillip. Makes treaty with the natives

- for 600,000 acres of land, but claim disallowed by Imperial Government. John Pascoe Fawkner founds Melbourne on site previously selected by Batman.
- 1836 N.S.W.—Fall of snow in Sydney. Mitchell's explorations in the south (Australia Felix). "Squatting" formally recognised. Vic.—Proclamation of Port Phillip district as open for settlement. Captain Lonsdale appointed Resident Magistrate. S.A.—Founding of South Australia under Governor Hindmarsh.
- 1837 N.S.W.—Appointment in London of Select Committee on Transportation. Heavy snowfall near Sydney. Vic.—Governor Bourke arrived from Sydney and gave the name of Melbourne to metropolis of Victoria. First sale of Crown lands in Melbourne. S.A.—First newspaper published in Adelaide. Tas.—Sir John Franklin assumes Governorship.
- 1838 N.S.W.—Discontinuance of assignment of convicts. Drought and failure of crops. Frenzied speculation. Vic.—First Census of Victoria—population 3511. Qld.—Settlement of German missionaries at Moreton Bay. S.A.—"Over-landing" of cattle along the Murray route by Hawden and Bonney.
- 1839 N.S.W.—Finding of gold near Hartley by Count Strzelecki. Vic.—Appointment of Mr. C. J. LaTrobe as Superintendent Port Phillip district.
- 1840 N.S.W.—Abolition of transportation to New South Wales. Land regulations—proceeds of sales to be applied to payment for public works and expenditure on immigration. Foundation of viticultural industry. Monetary crisis. Vic.—Determination of northern boundary. Colonists desire separation from New South Wales. Qld.—Breaking up of penal settlements and throwing open of Moreton Bay district to free settlers. S.A.—Eyre begins his overland journey from Adelaide to King George's Sound. Tas.—Visit of the *Erebus* and *Terror* to Hobart. Dr. Hooker investigates the island flora.
- 1841 N.S.W.—Alluvial gold found near Bathurst by Rev. W. B. Clarke. Separation of New Zealand. W.A.—Completion of Eyre's overland journey from Adelaide to King George's Sound. Tas.—Renewal of transportation.
- 1842 N.S.W.—Incorporation of Sydney. Vic.—Incorporation of Melbourne.
- 1843 N.S.W.—First Representative Constitution. First manufacture of tweed. Financial crisis. Qld.—Moreton Bay granted legislative representation. S.A.—Discovery of copper at Kapunda. Tas.—Agitation against further introduction of convicts.
- 1844 S.A.—Sturt's last expedition inland. Qld.—Leichhardt's expedition from Darling Downs to Port Essington.
- 1845 N.S.W.—Mitchell's explorations on the Barcoo. S.A.—Discovery of the Burra copper deposits. Qld.—Explorations by Mitchell and Kennedy. Census in March shewed population as 2210. W.A.—First steam vessel (*H.M.S. Driver*) visited Fremantle.
- 1846 N.S.W.—Mr. Gladstone proposed to revive transportation. Initiation of meat preserving. Qld.—Foundation of settlement at Port Curtis. S.A.—Proclamation of North Australia. W.A.—Organisation of first mining company. Foundation of New Norcia Mission.
- 1847 N.S.W.—Crown Land Leases Act. Opening of iron smelting works near Berrima. Vic.—Melbourne created a City by Royal Letters Patent. Qld.—Explorations by Burnett and Kennedy. W.A.—Issue of regulations for leasing Crown lands. First export of guano.
- 1848 N.S.W.—Attempts to revive transportation. Influx of Chinese. Vic.—Earl Grey returned as Melbourne member of the Legislative Council. Qld.—Leichhardt's last journey. Kennedy speared by the blacks at York Peninsula. Chinese brought in as shepherds. W.A.—Copper and lead discovered in the Champion Bay district by the Messrs. Gregory. First Census of the colony.

- 1849 N.S.W.—Indignation of colonists at arrival of convict ship *Hashemy*. Exodus of population to goldfields of California. Vic.—Outburst of indignation at arrival of *Randolphe* with convicts. Qld.—Assignment of convicts per *Hashemy* to squatters on Darling Downs. W.A.—Commencement of transportation to Western Australia.
- 1850 N.S.W.—Final abolition of transportation. First sod of first Australian railway turned at Sydney. S.A.—Representative government granted. W.A.—Pear oysters found by Lieut. Helpman at Saturday Island Shoal. Tas.—Representative government granted. Discovery of coal at the Don and Mersey.
- 1851 N.S.W.—Payable gold discovered by Hargreaves, near Bathurst. Telegraph first used. Vic.—Separation of Port Phillip—erected into independent colony under the name of Victoria. Discovery of gold. “Black Thursday,” Feb. 6th, a day of intense heat, when several persons died and a vast amount of damage to property was occasioned by fires. Qld.—Agitation for separation from New South Wales. S.A.—Financial depression. Tas.—Serious exodus of population to goldfields on mainland. W.A.—Proclamation of Legislative Council Act.
- 1852 N.S.W.—Destruction of Gundagai by flood—77 lives lost. Arrival of the *Chusan*, first P. and O. mail steamer from England. S.A.—First steamer ascends the Murray River to the junction with the Darling. Tas.—Meeting of first elective Council protests against transportation. Payable gold discovered at The Nook, near Fingal, and at Nine Mile Springs.
- 1853 Tas.—Abolition of transportation. Name Van Diemen’s Land disappears—replaced by Tasmania.
- 1854 N.S.W.—Russian war-scare and volunteer movement. Vic.—Opening of first Australian railway—Flinders Street to Port Melbourne. Riots on Ballarat goldfields. Storming of the Eureka Stockade, Dec. 3rd. Fifth Census—population 236,798.
- 1855 N.S.W.—Opening of railway—Sydney to Parramatta. Introduction of responsible Government. Vic.—Proclamation of Constitution. Qld.—Gregory’s expedition in search of Leichhardt. S.A.—Responsible government. Tas.—Responsible government.
- 1856 N.S.W.—First elective Parliament. Pitcairn Islanders placed on Norfolk Island, which was placed under jurisdiction of Governor of New South Wales. Tas.—Opening of first Parliament. W.A.—A. C. Gregory’s expedition in search of Leichhardt.
- 1857 N.S.W.—Heavy floods. Wreck of the *Dunbar* (119 lives lost), and *Catherine Adamson* (21 lives lost), at Sydney Heads. Select Committee on Federation. S.A.—Exploration by Babbage and Warburton.
- 1858 N.S.W.—Establishment of manhood suffrage and vote by ballot. Telegraphic communication between Sydney and Melbourne. S.A.—Passage of Torrens’ Real Property Act. Stuart’s explorations. Qld.—The Canoona gold rush.
- 1859 Qld.—Proclamation of Queensland as separate colony. Tas.—First submarine cable, via Circular Head and King Is., to Cape Otway.
- 1860 N.S.W.—Disastrous floods on the Shoalhaven and at Araluen. Vic.—Burke and Wills start on their journey across Continent. S.A.—Copper discoveries at Wallaroo and Moonta.
- 1861 N.S.W.—Anti-Chinese riots at Lambing Flat and Burrangong goldfields. Opening of first tramway in Sydney—Cars drawn by horses. Robertson’s Land Acts. Messrs. Parkes and Dalley proceed to London as emigration lecturers. Regulation of Chinese immigration. Vic.—Seventh Census—population 540,322. Conference of Statisticians, Melbourne. Qld.—Burke and Wills perish in the Great Stony Desert. Expedition despatched to search for their remains. First Census. W.A.—Exploration of F. Gregory in the North-west.
- 1862 N.S.W.—Raid by bushrangers on the Lachlan gold escort (£14,000 taken). Abolition of State aid to religion. Real Property Act. Vic.—C. Gavan Duffy’s

- Land Act. S.A.—Stuart crosses the Continent from north to south. Qld.—McKinlay's explorations. Heavy floods on Fitzroy River. W.A.—Severe floods—damage to property, £30,000. First export of pearl-shell.
- 1863 N.S.W.—Bathurst and Canowindra "held up" by bushranger Gilbert. Vic.—Inter-colonial conference at Melbourne. S.A.—Taking over of the Northern Territory. W.A.—Initiation of settlement in the North-west district.
- 1864 N.S.W.—Frequent outrages by bushrangers. Qld.—First railway begun. First sugar made from Queensland cane. W.A.—Messrs. Panton, Harding and Goldwyer, murdered by natives. Tas.—First successful shipment of English salmon ova.
- 1865 N.S.W.—Destruction by fire of St. Mary's Cathedral, Sydney. Qld.—Opening of first railway.
- 1866 N.S.W.—Passage of Public Schools Act of (Sir) Henry Parkes. Vic.—Political deadlock. Qld.—Financial crisis. S.A.—Introduction of camels for exploration, etc.
- 1867 Vic.—Imposition of protective tariff. Qld.—Discovery of gold at Gympie.
- 1868 N.S.W.—Attempted assassination of the Duke of Edinburgh at Clontarf, near Sydney. Qld.—Passage of Act to regulate island labour traffic. W.A.—Arrival of the *Hougomont*, last convict ship. Tas.—First sod of first railway (Launceston and Western) turned by Duke of Edinburgh.
- 1869 N.S.W.—Establishment of Eskbank Iron Company. Vic.—Reduction of property qualification for members and electors of Legislative Council. W.A.—Opening of first telegraph line, from Perth to Fremantle. Tas.—Opening of second cable.
- 1870 N.S.W.—Opening of Intercolonial Exhibition at Sydney in celebration of centenary of Cook's landing in Australia. Withdrawal of Imperial troops. Vic.—Intercolonial Congress at Melbourne. S.A.—Commencement of trans-continental telegraph. W.A.—Meeting of first Legislative Council under Responsible Government.
- 1871 N.S.W.—Permanent military force raised. Vic.—Increase of protective duties. Qld.—Foundation of Queensland National Bank. W.A.—Passage of Elementary Education Act. Forrest's explorations. Tas.—Discovery of tin at Mount Bischoff. Launceston-Western railway opened for traffic.
- 1872 N.S.W.—International Exhibition at Sydney. Death of W. C. Wentworth, Qld.—Discovery of tin at Stanthorpe, copper at Mt. Perry, coal at Wide Bay, gold at the Palmer. S.A.—Cable from Singapore to Port Darwin. Completion of trans-continental telegraph line. W.A.—Cyclonic storms—destruction of town of Roeburne. Tas.—Completion of direct telegraphic communication with England.
- 1873 N.S.W.—Intercolonial Conference at Sydney. First volunteer encampment. Inauguration of mail service with San Francisco. W.A.—Warburton crosses from transcontinental telegraph line to head of De Grey River.
- 1874 N.S.W.—Triennial Parliaments Act passed. Intercolonial Conference. Qld.—Dalrymple's discoveries on north-eastern seaboard. W.A.—Explorations by E. Giles.
- 1875 Qld.—Transfer of Port Albany Settlement to Thursday Island. S.A.—Wreck of the *Gothenburg*—Judge Wearing and other well-known Adelaide citizens drowned. Education Act passed. Explorations by Giles, Gosse, and Warburton. W.A.—J. and A. Forrest cross colony from east to west. Tas.—Conference of Statisticians, Hobart.
- 1876 N.S.W.—Completion of cable—Sydney to Wellington. Vic.—Members of Legislative Assembly increased to 86. W.A.—Violent gale at Exmouth Gulf, number of pearling vessels wrecked, 69 lives lost. Giles crosses colony from east to west. Tas.—Death of Truganini, last representative of Tasmanian aborigines.

1877. Vic.—Deadlock on question of payment to members. S.A.—Inauguration of University of Adelaide. W.A.—Opening of telegraphic communication with South Australia. Tas.—Discovery of rich gold-bearing quartz reef at Beaconsfield.
- 1878 N.S.W.—Seamen's strike. Vic.—Visit to England of Victorian delegation *re* alteration of Victorian Constitution. "Black Wednesday"—wholesale dismissal of civil servants. Qld.—Restriction of Chinese immigration.
- 1879 N.S.W.—First artesian bore at Killara. International Exhibition at Garden Palace, Sydney. First steam tramway. W.A.—Celebration of 50th anniversary of foundation of colony. A. Forrest's explorations in the Kimberley district.
- 1880 N.S.W.—Public Instruction Act passed. Sydney streets partially wood-paved. Vic.—Opening of first Victorian International Exhibition at Melbourne. Federal Conference at Melbourne and Sydney.
- 1881 N.S.W.—Further restrictions on Chinese immigration. Women admitted as students at University. Vic.—Reduction of property qualification for members and electors of Legislative Council, number of members increased to 42. W.A.—Cyclone near Roeburne wrecks number of pearling vessels. On the Ashburton, 1000 sheep destroyed by cyclone.  
First simultaneous Australian Census. Visit to Australia of T.R.H. Prince Albert Victor and Prince George of Wales.
- 1882 N.S.W.—Garden Palace destroyed by fire. W.A.—Nugget of gold found between Roeburne and Cossack.
- 1883 N.S.W.—Discovery of silver at Broken Hill. Completion of railway between New South Wales and Victoria. Qld.—Annexation of New Guinea—repudiated by Imperial authorities.  
Federal Conference held at Sydney.
- 1884 N.S.W.—Land legislation restricting sales by auction. Vic.—Appointment of First Public Service Board. W.A.—Stockdale's explorations.  
Federation Bill passed in Victoria. Similar measure rejected in New South Wales.
- 1885 N.S.W.—Military contingent sent to the Soudan. Opening of the Broken Hill Silver Mines. Qld.—Agitation for division of the colony. W.A.—First gold found by prospectors on the Margaret and Ord Rivers in the Kimberley district. Tas.—Silver-lead discovered at Mount Zeehan.  
Formation of the Federal Council of Australia.
- 1886 N.S.W.—Industrial depression. Wreck of the *Ly-ee-Moon*, *Coringamite*, and *Helen Nicol*. Qld.—Discovery of gold at Mount Morgan. W.A.—Proclamation of Kimberley goldfields. Tas.—Discovery of gold and copper at Mount Lyell. First session of Federal Council met at Hobart on the 26th January.
- 1887 N.S.W.—Disaster at Bulli coal mine (83 lives lost). Peat's Ferry (Hawkesbury River) railway accident. S.A.—International Exhibition at Adelaide. W.A.—Cyclone destroyed nearly the whole pearling fleet off the Ninety-Mile Beach—200 lives lost. Gold discovered at Yilgarn and Southern Cross.  
Australasian Conference in London. Australasian Naval Defence Force Act passed.
- 1888 N.S.W.—Destructive bush fires. Centennial celebrations. Restrictive legislation against Chinese. Imposition of poll-tax of £100. Strike of coal-miners at Newcastle. Vic.—Second Victorian International Exhibition held at Melbourne. Members of Legislative Council increased to 48, and of Assembly to 95. Qld.—Railway communication opened between Sydney and Brisbane. W.A.—Favenc's explorations.  
Centenary of first settlement in Australia. Conference of Australian Ministers at Sydney to consider question of Chinese immigration. First meeting of the Australasian Association for the Advancement of Science held in Sydney. Imperial Defence Act passed.

- 1889 N.S.W.—Destructive floods, Hunter River. W.A.—Framing of new Constitution.
- 1890 N.S.W.—Strike at Broken Hill. Maritime and shearers' strikes. Payment of members of Parliament. Destructive bush fires. Qld.—Wreck of the *Quetta*—146 lives lost. Floods and hurricanes. Industrial depression. W.A.—Granting of responsible government. Tas.—Opening of University.  
Meeting at Melbourne of Australasian Federation Conference. Pre-censal Conference of Statisticians at Hobart.
- 1891 N.S.W.—Election to Legislative Assembly of 35 Labour members. Arrival of Australian Auxiliary Squadron. Collapse of several building societies. Cessation of assisted immigration. Death of Sir John Robertson. W.A.—Opening of first Parliament under responsible government.  
Federal Convention in Sydney, draft bill framed and adopted.
- 1892 N.S.W.—Broken Hill miners' strike. Run on Government Savings Bank. Opening of Women's College, Sydney University. Vic.—Suspension of Railway Commissioners. W.A.—Discovery of gold by Messrs. Bayley and Ford at Coolgardie.
- 1893 N.S.W.—Departure by the *Royal Tar* of colonists for "New Australia." Electoral Act—"One man one vote." Financial crisis, chiefly affecting the eastern States.
- 1894 N.S.W.—Shearers' strike. S.A.—Adult Suffrage Bill assented to. Industrial depression.
- 1895 N.S.W.—Crown Lands Act of 1895. Death of Governor Sir R. Duff. Free-trade tariff. Land and income taxes.  
Conference of Premiers at Hobart *re* Federation.
- 1896 N.S.W.—Death of Sir Henry Parkes. Re-organisation of Public Service. Women's franchise. People's Federal Convention at Bathurst. S.A.—Departure of Calvert expedition.
- 1897 S.A.—Town of Palmerston destroyed. Floods and storms at Adelaide. Death of Sir Thomas Elder. Earthquake and hurricane in Northern Territory.
- 1897-8 Sessions of Federal Convention at Adelaide, Sydney and Melbourne.
- 1898 N.S.W.—First surplus of wheat for export.  
Draft Federal Constitution Bill submitted to electors in Victoria, New South Wales, South Australia, and Tasmania. Requisite statutory number of votes not obtained in New South Wales.
- 1899 N.S.W.—First contingent of troops to assist the British army in South Africa.  
Conference of Premiers in Melbourne to consider amendments in Federal Constitution Bill. Referendum—Bill accepted by New South Wales, Victoria, Queensland, South Australia, and Tasmania.
- 1900 N.S.W.—Old-age Pensions instituted. W.A.—Agitation for separation by gold-fields. Strike of railway engine drivers and firemen.  
Commonwealth Constitution Act receives Royal Assent, 9th July. Mr. (afterwards Sir) Edmund Barton forms first Federal Ministry.
- 1901 Proclamation of the Commonwealth at Sydney, and swearing-in of Ministry. Opening of first Federal Parliament at Melbourne by the Duke of Cornwall and York, who visits each State of the Commonwealth. Contingents sent to South Africa and China. Simultaneous Australasian Census.
- 1902 N.S.W.—Disastrous explosion at Mount Kembla Colliery—95 lives lost. Women's franchise. Jubilee of Sydney University. S.A.—Reduction of number of members of both Houses of Parliament. W.A.—Opening of pumping station at Northam in connection with Goldfields water supply.
- 1903 Vic.—Railway Strike (Enginemen). W.A.—Opening of Coolgardie and Kalgoorlie water supply.  
Inauguration of the Federal High Court. Conference of Statisticians in Melbourne.
- 1904 N.S.W.—Reduction of members of Legislative Assembly from 125 to 90.
- 1905 N.S.W.—Re-introduction of assisted immigration.

- 1906 Wireless telegraphy installed between Queenscliff, Vic., and Devonport, Tas. Consummation of Commonwealth Free-trade interstate by cessation of special Western Australian tariff. Conference of Statisticians of Australian States and New Zealand, under the presidency of the Commonwealth Statistician. Papua taken over by Commonwealth.
- 1907 N.S.W.—Strike of coal-miners in Newcastle district. Vic.—Opening of first Australian Exhibition of Women's Work in Melbourne. Bakers' strike, Melbourne. Opening of telephone, Sydney to Melbourne.  
Imperial Conference in London—Australia represented by the Hon. A. Deakin, Prime Minister. Introduction of new tariff in Federal Parliament. Allowance to Federal members of Parliament increased from £400 to £600.
- 1908 N.S.W.—Tramway employees' strike, Sydney. Fire at Newcastle—damage to property £150,000. Vic.—Railway accident at Braybrook Junction (Sunshine)—44 killed, 412 injured; compensation paid, £126,000.  
Yass-Canberra chosen as site of Federal Capital. Interstate Premiers' Conference at Melbourne. Visit of American Fleet to Australia.
- 1909 N.S.W.—Miners' strikes at Broken Hill and Newcastle. Arrest of strike leaders at Newcastle. Qld.—Opening of Queensland University. S.A.—Foundering of *Clan Ranald* in St. Vincent's Gulf—40 drowned. W.A.—Cyclone at Broome.  
Imperial Defence Conference in London—Commonwealth sends three representatives. Premiers' Conference at Hobart. Conference at Melbourne of Commonwealth and State Ministers *re* financial relations. Death at Parliament House of Sir Frederick Holder, Speaker of the House of Representatives. Commonwealth orders two destroyers and one first-class cruiser for fleet unit. Federal Treasurer orders £200,000 Australian silver coinage from British Mint. Visit of Lord Kitchener to report and advise on Commonwealth military defence. Loss of the *Waratah*—vessel sailed from Melbourne on 1st July with 300 passengers and crew, left Durban on the 26th July. Opening of Empire Commerce Congress at Sydney. Commencement of payment by Commonwealth of Old-age Pensions.
- 1910 Vic.—Railway accident at Richmond—9 killed, over 400 injured; compensation paid £129,000. S.A.—Strike of transport workers at Adelaide. W.A.—Cyclone at Broome—several pearling vessels wrecked, 3 whites and many coloured fishermen drowned. Strike of tramway employees at Perth. Wreck of the *Pericles* off Cape Leeuwin.  
Rt. Hon. Sir G. H. Reid takes up duty as High Commissioner for the Commonwealth of Australia in London. Defeat of the "Fusion" Government under the Hon. A. Deakin. The Hon. A. Fisher becomes Prime Minister. Referendum on financial relations between the Commonwealth and the States—electors accept proposal for transfer to Commonwealth of State debts, but reject proposal for return of 25s. per capita to States out of Commonwealth revenue for period of 25 years. Question settled for 10 years by Commonwealth deciding to pay the amount fixed—matter to be reopened at end of that period. Proclamation taking over Yass-Canberra (in New South Wales) as site for Federal Capital. Imposition of Federal Land Tax. Application of toll system to telephone services. Penny Postage. Visit of Scottish Agricultural Commission. Dutch squadron visits Australia. Arrival of the *Yarra* and *Parramatta*, first vessels of Australian navy. Australian Notes Act empowers Federal Treasurer to issue notes of various denominations. Admiral Sir R. Henderson visits Australia to advise on naval defence.
- 1911 First issue of Commonwealth notes. First Federal Census. Federal referenda relating to Monopolies and Industrial Legislation—proposals rejected. Introduction of compulsory military training. Launch of Commonwealth destroyer *Warrego* at Sydney. Establishment of penny postage to all parts of British Empire. Erection of first Commonwealth wireless station at Pennant Hills, Sydney.

**OFFICIAL YEAR BOOK**  
OF THE  
**COMMONWEALTH OF AUSTRALIA, 1911,**  
**AND EARLIER YEARS.**

---

**SECTION I.**

**STATISTICAL ORGANISATION AND SOURCES OF INFORMATION.**

**§ 1. Introduction.**

1. **Development of Australian Statistics.**—In the first issue of the Commonwealth Official Year Book (No. 1, 1901-1907), an account was given of the origin and development of Australian Statistics; *vide* pp. 1 to 16 therein. Owing to considerations of space, however, this matter was considerably curtailed in succeeding Year Books, and appears in No. 4, on pp. 1 to 4. In the present issue a still further curtailment has had to be made in order to make room for new matter.

Briefly, it may be stated that to the "Blue Books" compiled in Australia for the Home Government, there succeeded, under Responsible Government, the statistics which each of the departments prepared for itself, State statistical departments being organised principally as collecting agencies of official and general information.

Absence of co-ordination in collection and compilation, due to the organisation, independently, of the various States bureaux, caused difficulties in so combining State statistics as to get a satisfactory statistic for Australia as a whole, and various conferences of State Statisticians did not completely rectify the divergencies that arose.

(i.) *Creation of the Commonwealth Bureau of Census and Statistics.* Constitutionally, matters relating to "Census and Statistics" belong to the Commonwealth, and in 1906, under the authority of the Census and Statistics Act of 1905, providing for the taking of the Census and the collecting of general statistics, the Commonwealth Bureau of Census and Statistics was created. A conference of statistical representatives of Australian States and New Zealand, under the presidency of the Commonwealth Statistician, met in November and December, 1906. For a more or less complete presentation of the affairs of the Commonwealth and of its constituent parts, various desiderata were recognised, and a series of resolutions adopted by the conference. Identity of categories, simultaneity and identity in methods of collection, and uniformity in compilation, were the main features desired. A resumé of the resolutions of this conference is given in Year Book No. 1, pp. 12-16.

2. **Sources of Information.**—Statistical information is furnished (i.) by the State Statistical Bureaux, as a result of direct demand, or through the police and special collectors; (ii.) by Commonwealth and State Departments (see lists of publications in § 2 *infra*); (iii.) in respect of returns of Trade, Customs and Excise, by the Trade and Customs Department; (iv.) by scientific and technical experts, specially requisitioned

## STATISTICAL PUBLICATIONS OF AUSTRALIA.

to write on particular subjects; (v.) by State Statisticians, as officers duly constituted under the Commonwealth Census and Statistics Act; (vi.) and by information supplied compulsorily, on the Commonwealth Statistician's demand.

**3. Maintenance of Secrecy.**—Under no circumstance can information supplied to a statistical office be used against the individual supplying it. All statistical enquiries are strictly impersonal, and the affairs of individuals or individual businesses are never disclosed. No other Government Department can make use of the Statistical departments in order to acquire detailed information otherwise unavailable.

**4. Accuracy Essential.**—The importance of accurate statistical information is emphasised, and the making of untrue statements is heavily penalised.

## § 2. Statistical Publications of Australia.

**1. Introductory.**—The official statistical publications of Australia may be divided bibliographically into two main divisions, viz.:—(1) Commonwealth publications dealing both individually and collectively with the several States of the Commonwealth, and (2) State publications dealing with individual States only. Besides these there are a large number of publications issued regularly, which, though not wholly statistical, necessarily contain a considerable amount of statistical information. These are included in the lists given hereunder, which are revised to 30th November, 1911.

**2. Commonwealth Publications.**—Commonwealth publications may be grouped under two heads, viz.:—(i.) Publications issued by the Commonwealth Statistician, and (ii.) Departmental Reports and Papers.

(i.) *Publications issued by the Commonwealth Statistician.* The following is a list of statistical publications issued from the Commonwealth Bureau of Census and Statistics since its inauguration and up to 31st December, 1911:—

*Finance*—Bulletin No. 1, 1901 to 1907.

Bulletin No. 2, 1901 to 1908.

Bulletin No. 3, 1901 to 1909.

Bulletin No. 4, 1901 to 1910.

*Inquiry into the Cost of Living in Australia, 1910-11.*

*Labour and Industrial Statistics*—Explanatory Memorandum on the Proposed Scheme.

*Population and Vital Statistics*—Bulletin No. 1, Determination of the Population of Australia, 1901 to 1906.

Bulletin No. 2, Commonwealth Demography, 1901 to 1906.

Bulletin No. 7, Commonwealth Demography, 1901 to 1907.

Bulletin No. 13, Commonwealth Demography, 1901 to 1908.

Bulletin No. 19, Commonwealth Demography, 1901 to 1909.

Bulletins Nos. 3 to 6, 9 to 12, 15 to 18, 21 to 24, 26 and 27, Vital Statistics, issued quarterly, 1907 to 1910, and first and second quarters of 1911.

Bulletin No. 8, Vital Statistics for year 1907.

Bulletin No. 14, Vital Statistics for year 1908.

Bulletin No. 20, Vital Statistics for year 1909.

Bulletin No. 25, Vital Statistics for year 1910.

*The Nomenclature of Diseases and of Causes of Death, 1907.* New Edition, 1910.

*Production*—Bulletin No. 1, 1901 to 1906.

Bulletin No. 2, 1901 to 1907.

Bulletin No. 3, 1901 to 1908.

Bulletin No. 4, 1901 to 1909.

*Professional Papers*—The Classification of Diseases and Causes of Death, from the standpoint of the Statistician.

Census Taking—C. H. Wickens, A.I.A.

On the Influence of Infantile Mortality on Birthrate (2 papers).

On the Statistical Opportunities of the Medical Profession.

Tuberculosis Duration Frequency Curves, and the number of existing cases ultimately fatal.

The Problems of Statistics.

The Evolution and Significance of the Census.

Studies in Statistical Representation.

The First Commonwealth Census.

*Railway Statistics*—Report on the Desirability of Improved Statistics of Government Railways in Australia, February, 1909.

*Shipping*—Shipping and Oversea Migration for 1906.

Shipping and Oversea Migration for 1907.

Shipping and Oversea Migration for 1908.

Shipping and Oversea Migration for 1909.

Shipping and Oversea Migration for 1910.

*Social Insurance*—Report to the Hon. the Minister of Trade and Customs.

*Superannuation for the Commonwealth Public Service*—Report to the Hon. the Minister of Home Affairs.

*The Australian Commonwealth*—Its Resources and Production, 1903. New Edition, 1910.

*Trade and Customs*—Trade, and Customs and Excise Revenue for 1906.

Trade, and Customs and Excise Revenue for 1907.

Trade, and Customs and Excise Revenue for 1908.

Trade, and Customs and Excise Revenue for 1909.

Trade, and Customs and Excise Revenue for 1910.

Trade, Shipping, and Oversea Migration—Bulletins Nos. 1 to 58, issued monthly, commencing January, 1907.

*Transport and Communication*—Bulletin No. 1, 1901 to 1906.

Bulletin No. 2, 1901 to 1908.

Bulletin No. 3, 1901 to 1909.

Bulletin No. 4, 1901 to 1910.

*Social Statistics*—Bulletin No. 1, 1907.

Bulletin No. 2, 1908.

Bulletin No. 3, 1909.

*Year Book of the Commonwealth*—No. 1, 1901 to 1907.

No. 2, 1901 to 1908.

No. 3, 1901 to 1909.

No. 4, 1901 to 1910.

(ii.) *Commonwealth Parliamentary and Departmental Reports and Papers.* The following official reports and papers containing statistical matter have been issued since the inauguration of the Commonwealth:—

Australia for Farmers, 1910.

Australia: The Wheat Country.

Budget, 1901-2 to 1911-12.

Chief of the General Staff: Memo. re Defence.

Commonwealth Meteorologist. Climate and Meteorology of Australia; Bulletins 1 to 5; Rainfall Maps of Australia; Professional Papers and Charts (various); Monthly Meteorological Reports, commencing January, 1910.

Contract Immigrants Act 1905 and Immigration Restriction Acts 1901-5: Returns for Years 1902 to 1910.

Director-General of Cadets: Reports to 30th June, 1910.

Director of Naval Forces: Report for 1906.

Electoral Statistical Returns *re* Referendum of 26th April, 1911.

Electoral Statistics of Commonwealth Elections; 1903, 1906, and 1910.

Estimates: 1901-2 to 1911-12.

Fisheries: Reports of the Director on Fishing Experiments carried out by the F.I.S. "Endeavour."

Handbooks of the Territory of Papua.

Inspector-General of Military Forces: Reports, 1905 to 1907. Extracts from Report of 1910.

Invalid and Old-Age Pensions: Statements *re*.

Manufactures Encouragement Act: Return of Bounties Paid.

Memorandum on Australian Military Defence and its progress since Federation.

Memorandum on the Defence of Australia, by Field-Marshal Lord Kitchener.

Military and Naval Forces Lists.

Military Board: Reports, 1905 and 1906.

Naturalisation Act 1903; Returns.

Naval Defence of Australia: Memorandum by Admiral Sir Reginald Henderson.

Organisation and Distribution of the Military Forces.

Papua: Reports for 1904-5 to 1909-10.

Parliamentary Papers (miscellaneous); Reports of Committees, Commissions, Conferences, etc.

Patents Statistics, 1904 to 1911.

Postal Services Royal Commission.

Postmaster-General's Department: Statement of Business transacted and details of Receipts and Expenditure, 1907, 1908 and 1909.

Public Service Commissioner: Reports, 1901-4 and 1905 to 1910, and Public Service Lists, 1903 to 1911.

Representation Act 1905: Returns.

Royal Commission on Tasmanian Customs Leakage.

Sugar: Statistics, 1901-2 to 1910-11 *re* White and Black Labour, Production, Duties, Bounties, etc.

Trade and Customs Returns, 1903 to 1905; compiled by the New South Wales Government Statistician for the Minister for Customs.

Treasurer's Statements and Reports of Auditor-General, 1901-2 to 1909-10.

Treasury Statements of Receipts and Expenditure, issued quarterly in the *Commonwealth Gazette*.

Tropical Diseases: Report by Dr. Breinl.

3. **State Publications.**—The chief statistical publications of each State issued since Federation may be most conveniently grouped under the following heads, viz.:—(a) Publications issued by the Government Statist, (b) parliamentary and departmental reports and papers, and (c) reports and statements of local and public bodies. These are set out hereunder for each State:—

(i.) **New South Wales.**—(a) *Publications by Government Statistician:*—

The Wealth and Progress of New South Wales, 1900-1.

The Seven Colonies of Australasia, 1901-2.

A Statistical Account of Australia and New Zealand, 1902-3, 1903-4.

The Official Year Book of New South Wales, 1904-5, 1905-6, 1907-8, 1908-9, 1909-10.

Six States of Australia and New Zealand (annual statistics), 1901 to 1905.  
 Monthly Statistical Bulletin, 1905 to October 1911.  
 Statistical Registers, 1901 to 1909, and 1910 (parts).  
 Census of New South Wales, 1901.  
 Vital Statistics (annual), 1901 to 1910; and monthly issues to September, 1911.  
 Agricultural and Live-stock Statistics, 1901 to 1911.  
 Statistical View of the Progress of New South Wales during 50 years, 1856 to 1906.  
 Friendly Societies' Experience, New South Wales, 1900-1908.  
 Comparative Legislation relating to the Industrial Classes.  
 Annual Reports on Agricultural, Dairying, and Pastoral Industries, on Manu-  
 factories and Works, and on Value of Production.

(b) *Departmental Papers:—*

Annual Reports of—

Aborigines	Inspector under Factories and Shops Acts.
Australian Museum	Labour Commissioners
Board of Public Health	Leprosy Board
Chief Commissioner of Railways	Minister of Public Instruction
Chief Medical Officer	National Art Gallery
Comptroller-General of Prisons	Pharmacy Board
Department of Agriculture	Public Library
Department of Crown Lands	Public Service Board
Department of Mines	Registrar of Friendly Societies, Building
Department of Police	Societies, and Trade Unions
Department of Public Works	Registrar-General
Director of Botanical Gardens and Domains	State Children's Relief Board
Director of Labour	State Debt Commissioners
Fisheries Board	Superintendent of Carpenterian Reformat'ry
Forestries Department	Technological Museums
Government Savings Bank	University of Sydney
Industrial Schools	Western Land Board.
Inspector-General of Insane	
The Estimates.	
Parliamentary Papers (miscellaneous); Reports of Committees, Commissions	
Conferences, etc.	
Public Accounts and Report of the Auditor-General.	
General Election 1910. Double Voting. Synopsis of the Voting.	
State Contracts for the Public Service.	
Agricultural Gazette (monthly).	
Records of the Geological Survey.	

(c) *Reports and Statements of Local Bodies:—*

Annual Statements of Municipalities	Metropolitan Board of Water Supply and
Fire Brigades Board	Sewerage
Hospitals	Sydney Harbour Trust Commissioners
Hunter District Water Supply and Sewerage	Town Clerk of the City of Sydney.
Board	

(iii.) *Victoria.—(a) Publications by the Government Statist:—*

Statistical Registers, 1901 to 1909, and 1910 (parts).  
 The Victorian Year Books, 1902 to 1909-10, and 1910-11 (parts).  
 Quarterly Statistical Abstracts, 1904 to 30th June, 1911.  
 Quarterly Returns of Vital Statistics, 1901 to 30th June, 1911.

Monthly Returns of Oversea Imports and Exports, 1901 to September, 1911.  
 Statistics of Manufactories, Works, etc., 1901 to 1910.  
 Agricultural Statistics, 1900-1 to 1910-11.  
 Australasian Statistics, 1901-2, with Summaries for Previous Years.  
 The First Fifty Years of Responsible Government in Victoria, 1856 to 1906.  
 Census of Victoria, 1901.  
 Annual Reports on Agricultural, Dairying, and Pastoral Industries, and on Value of Production.

(b) *Departmental Papers:—*

Annual Reports of—

Actuary for Friendly Societies on Trade Unions	Inspector of Neglected Children and Reformatory Schools
Board for the Protection of Aborigines	Inspector-General of Penal Establishments and Gaols
Board of Public Health	Inspector-General of Savings Banks
Chief Inspector of Explosives	Lands Purchase Management Board
Conservator of Forests	Licenses Reduction Board
Council of Judges	Marine Board of Victoria
Department of Agriculture	Minister of Public Instruction
Department of Crown Lands and Survey	Public Service Commissioner
Government Astronomer	Registrar of Friendly Societies
General Manager of State Coal Mines	Railways Commissioners
Indeterminate Sentences Board	Secretary for Mines
Inspector of Charitable Institutions	State Rivers and Water Supply Commission
Inspector of Factories, Workrooms and Shops	Trustees of the Public Library, Museums, and National Gallery
Inspector-General of the Insane	Vice-Chancellor of Melbourne University.
Inspector of Inebriates' Institutions	

Accounts of the Trustees of Agricultural Colleges and the Council of Agricultural Education.

The Budget.

Returns under the Banks and Currency Act 1890, the Companies Act 1890, and the Electric Light and Power Act 1896.

Parliamentary Papers (miscellaneous); Reports of Committees, Commissions, Conferences, etc.

Statement of Expenditure under the Constitution Statute.

The Estimates.

Treasurer's Statement and Report of the Auditor-General.

Agricultural Journal (monthly).

Register of Teachers and Register of Schools.

(c) *Reports of Local Bodies:—*

Annual Reports of the Melbourne Harbour Trust Commission	Geelong Municipal Waterworks Trust Hospitals
Annual Reports of the Fire Brigades Board	Statement of Accounts of the Melbourne and Metropolitan Board of Works.
Annual Statements of Municipal and Shire Councils	

(iii.) *Queensland.—(a) Publications by Government Statistician and Registrar-General:—*

The Queensland Official Year Book, 1901.

The Census of 1901.

A.B.C. of Queensland Statistics, 1905 to 1911.

Vital Statistics (annual), 1901 to 1909; and monthly issues to September, 1911.  
 Statistical Registers, 1901 to 1910.  
 Stock List, 1901 to 1910.  
 Annual Reports on Agricultural, Dairying, and Pastoral Statistics.

(b) *Departmental Papers:—*

Annual Reports of the—

Agent-General	Inspector of Hospitals for the Insane
Benevolent Asylums	Inspector of Orphanages
Bureau of Sugar Experiment Stations	Manager of the Government Savings Bank
Chief Protector of Aborigines	Marine Department
Chief Inspector of Factories and Shops	Medical Officers of Hospitals
Chief Inspector of Machinery & Scaffolding	Officer in Charge, Government Relief
Commissioner for Public Health	Official Trustees in Insolvency
Commissioner of Income Tax	Pacific Island Immigration
Commissioner of Police	Police Investment Board
Commissioner for Railways	Public Service Board
Comptroller-General of Prisons	Registrar of Friendly Societies, Building
Curator of Intestate Estates	Societies, and Trade Unions
Department of Agriculture and Stock	Registrar of Friendly Societies and Official
Department of Public Lands	Valuer on the Quinquennial Valuation
Department of Public Works	of Friendly Societies
Director of Forests	Secretary for Public Instruction
Director of Labour	Trustees of the Agricultural Bank
Engineer for Harbours and Rivers	Trustees of the National Art Gallery
Govt. Life Insurance and Annuity Business	Trustees of the Public Library
Hydraulic Engineer on Water Supply	Under-Secretary for Mines.
Immigration Agent	University of Queensland.
Blue Book.	
The Estimates.	
Parliamentary Papers (miscellaneous); Reports of Committees, Commissions, Conferences, etc.	
Reports of the Auditor-General.	
Treasurer's Financial Statement.	
Reports of the Geological Survey.	

(c) *Reports and Statements of Local Bodies:—*

## SECTION II.

DISCOVERY, COLONISATION, AND FEDERATION OF  
AUSTRALIA.

## § 1. Early Knowledge of Australia.

A brief, though fairly comprehensive, account of the discovery and early knowledge of Australia was given in Year Book No. 1 (pp. 44 to 51). This account appeared in a condensed form in Year Books Nos. 2, 3, and 4. Bibliographical references to the subject were also given in Year Book No. 1 (p. 49). Exigencies of space prevent the inclusion of any further reference to this subject in the present issue.

## § 2. The Taking Possession of Australia.

Reference was made to the more important facts relating to the taking possession and annexation of Australia in each of the previous issues of this book: See preferably Year Book No. 4 (pp. 15 and 16). In so far as the annexation of the eastern parts is concerned, a full historical account of the period may be found in the "Historical Records of New South Wales," Vol. I., parts 1 and 2. For an account of the annexation of Western Australia, reference may be made to the West Australian Year Book 1905, Part 1.

## § 3. The Creation of the Several Colonies.

1. **Introduction.**—A historical summary of the facts relating to the creation of the several colonies, the separation of Victoria and Queensland, and the changes in the boundaries of certain of the colonies has appeared in previous issues of this book: See Year Book No. 4 (pp. 16 to 23). The main facts in this connection may be traced by reference to the maps on pages 17 and 18.

2. **No further Creation of Colonies after 1859.**—Since the separation of Queensland in 1859 no other creation of colonies has taken place in Australia, though the boundaries of New South Wales, Queensland, and South Australia were altered later, and the control of the Northern Territory was transferred from South Australia to the Commonwealth in 1911. The dates of foundation of the Australasian colonies, and their areas at the close of 1859, were as shewn in the following table:—

### DATES OF FOUNDATION OF AUSTRALASIAN COLONIES AND AREAS AS AT END OF 1859.

Colony.	Date of Annexation.	Date of Creation.	Date of First Permanent Settlement.	Area. Square Miles.
New South Wales ... ..	1770	1786	1788	1,020,412
Tasmania ... ..	1788	1825	1803	26,215
South Australia ... ..	1788	1834	1836	309,850
Victoria ... ..	1770	1851	1834	87,884
Queensland ... ..	1770	1859	1824	554,300
Western Australia ... ..	1829	1829	1829	975,920
New Zealand ... ..	1840	1841	1814	104,471 <sup>1</sup>

1. By proclamation dated 10th June, 1901, the area of the Dominion was increased by 280 square miles, making it now 104,751 square miles, by the inclusion of the Cook Group and other islands.

3. **Australasia, 1863 to 1900.**—The immense area generally known as Australasia had, by 1863, been divided into seven distinct colonies, the areas of which are shown below. The area of the Northern Territory which is now under the exclusive jurisdiction of the Commonwealth is given separately.

On the 1st January, 1901, the colonies mentioned above, with the exception of New Zealand, were federated under the name of the "Commonwealth of Australia," the designation of "Colonies" being at the same time changed into that of "States." The total area of the Commonwealth is, therefore, 2,974,581 square miles; the dates of creation and the areas of the separate colonies, as determined on the final adjustment of their boundaries, are shown in the following table:—

### DATES OF CREATION AND AREAS OF THE SEVERAL COLONIES.

Colony.	Year of For- mation into Separate Colony.	Present Area in Square Miles.	Colony.	Year of For- mation into Separate Colony.	Present Area in Square Miles.
New South Wales ...	1786	310,372 <sup>1</sup>	New Zealand ...	1841	104,751
Tasmania ... ..	1825	26,215	Victoria ... ..	1851	87,884
Western Australia ...	1829	975,920	Queensland ... ..	1859	670,500
South Australia (proper)	1834	380,070	Northern Territory	1863	523,620
Commonwealth ... ..	...	...	2,974,581 square miles.		
Australasia ... ..	...	...	3,079,332 square miles.		

1. Now includes Federal Capital Territory, approximately 900 sq. miles.

4. **British New Guinea or Papua.**—Under the administration of the Commonwealth, but not included in it, is British New Guinea or *Papua*, finally annexed by the British Government in 1884. This territory was for a number of years administered by the Queensland Government, but was transferred to the Commonwealth by proclamation on the 1st September, 1906, under the authority of the Papua Act (Commonwealth) of 16th November, 1905. The area of Papua is about 90,540 square miles. More extended reference to this dependency of the Commonwealth will be found in Section xxix.

5. **Transfer of the Northern Territory to the Commonwealth.**—On the 7th December, 1907, the Commonwealth and the State of South Australia entered into an agreement for the surrender to and acceptance by the Commonwealth of the Northern Territory, subject to approval by the Parliaments of the Commonwealth and the State. This approval was given by the South Australian Parliament under the Northern Territory

Surrender Act 1907 (assented to on the 14th May, 1908), and by the Commonwealth Parliament under the Northern Territory Acceptance Act 1910 (assented to on the 16th November, 1910). The Territory accordingly was transferred by Proclamation to the Commonwealth on the 1st January, 1911. Further information may be found in the section of this book on "*The Northern Territory.*"

#### § 4. The Exploration of Australia.

A fairly complete, though brief, account of the Exploration of Australia was given in Year Book No. 2 (pp. 20 to 39). A brief summary of the more important facts relating to the subject was given in Year Books Nos. 3 and 4. Maps shewing the progress of Australian exploration may be found on page 35 hereof.

#### § 5. The Constitutions of the States.

A brief and condensed statement of the constitutional history of the several States, shewing how their present Constitutions have been built up, may be found in Section II. of the second, third, and fourth issues of the Year Book. See No. 4, pp. 27-32.

#### § 6. The Federal Movement in Australia.

A summary was given in Year Book No. 1 (pp. 17 to 21) of the "Federal Movement in Australia" from its inception to its consummation; a synopsis thereof was given in Year Books Nos. 2, 3, and 4. See No. 4, pp. 32 to 37.

#### § 7. Creation of the Commonwealth.

1. **The Act.**—The Commonwealth of Australia Constitution Act, 63 and 64 Vic., Chapter 12, namely, an Act to constitute the Commonwealth of Australia, was shewn *in extenso* in Year Book No. 1. In the Year Books Nos. 2, 3 and 4, a summary of the Act was given. As two amending Acts, namely, the Constitution Alteration (Senate Elections) Act 1906, and the Constitution Alteration (State Debts) Act 1909, have been passed, it has been thought desirable to insert the Act, as amended, in full.

##### THE COMMONWEALTH OF AUSTRALIA CONSTITUTION ACT.

63 & 64 VICT., CHAPTER 12.

*An Act to constitute the Commonwealth of Australia. [9th July, 1900.]*

**W**HEREAS the people of New South Wales, Victoria, South Australia, Queensland, and Tasmania, humbly relying on the blessing of Almighty God, have agreed to unite in one indissoluble Federal Commonwealth under the Crown of the United Kingdom of Great Britain and Ireland, and under the Constitution hereby established:

And whereas it is expedient to provide for the admission into the Commonwealth of other Australasian Colonies and possessions of the Queen:

Be it therefore enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:—

1. This Act may be cited as the Commonwealth of Australia Constitution Act.
2. The provisions of this Act referring to the Queen shall extend to Her Majesty's heirs and successors in the sovereignty of the United Kingdom.
3. It shall be lawful for the Queen, with the advice of the Privy Council, to declare by proclamation that, on and after a day therein appointed, not being later than one

year after the passing of this Act, the people of New South Wales, Victoria, South Australia, Queensland, and Tasmania, and also, if Her Majesty is satisfied that the people of Western Australia have agreed thereto, of Western Australia, shall be united in a Federal Commonwealth under the name of the Commonwealth of Australia. But the Queen may, at any time after the proclamation, appoint a Governor-General for the Commonwealth.

4. The Commonwealth shall be established, and the Constitution of the Commonwealth shall take effect, on and after the day so appointed. But the Parliaments of the several colonies may at any time after the passing of this Act make any such laws, to come into operation on the day so appointed, as they might have made if the Constitution had taken effect at the passing of this Act.

5. This Act, and all laws made by the Parliament of the Commonwealth under the Constitution, shall be binding on the courts, judges, and people of every State and of every part of the Commonwealth, notwithstanding anything in the laws of any State; and the laws of the Commonwealth shall be in force on all British ships, the Queen's ships of war excepted, whose first port of clearance and whose port of destination are in the Commonwealth.

6. "The Commonwealth" shall mean the Commonwealth of Australia as established under this Act.

"The States" shall mean such of the colonies of New South Wales, New Zealand, Queensland, Tasmania, Victoria, Western Australia, and South Australia, including the northern territory of South Australia, as for the time being are parts of the Commonwealth, and such colonies or territories as may be admitted into or established by the Commonwealth as States; and each of such parts of the Commonwealth shall be called "a State."

"Original States" shall mean such States as are parts of the Commonwealth at its establishment.

7. The Federal Council of Australasia Act 1885 is hereby repealed, but so as not to affect any laws passed by the Federal Council of Australasia and in force at the establishment of the Commonwealth.

Any such law may be repealed as to any State by the Parliament of the Commonwealth, or as to any colony not being a State by the Parliament thereof.

8. After the passing of this Act the Colonial Boundaries Act 1895 shall not apply to any colony which becomes a State of the Commonwealth; but the Commonwealth shall be taken to be a self-governing colony for the purposes of that Act.

9. The Constitution of the Commonwealth shall be as follows:—

#### THE CONSTITUTION.

This Constitution is divided as follows:—

Chapter I.—The Parliament:—

Part I.—General.

Part II.—The Senate.

Part III.—The House of Representatives.

Part IV.—Both Houses of Parliament.

Part V.—Powers of the Parliament.

Chapter II.—The Executive Government.

Chapter III.—The Judicature.

Chapter IV.—Finance and Trade.

Chapter V.—The States.

Chapter VI.—New States.

Chapter VII.—Miscellaneous.

Chapter VIII.—Alteration of the Constitution.

The Schedule.

#### CHAPTER I.—THE PARLIAMENT.

##### PART I.—GENERAL.

1. The legislative power of the Commonwealth shall be vested in a Federal Parliament, which shall consist of the Queen, a Senate, and a House of Representatives, and which is hereinafter called "The Parliament," or "The Parliament of the Commonwealth."

2. A Governor-General appointed by the Queen shall be Her Majesty's representative in the Commonwealth, and shall have and may exercise in the Commonwealth during the Queen's pleasure, but subject to this Constitution, such powers and functions of the Queen as Her Majesty may be pleased to assign to him.

3. There shall be payable to the Queen out of the Consolidated Revenue fund of the Commonwealth, for the salary of the Governor-General, an annual sum which, until the Parliament otherwise provides, shall be ten thousand pounds.

The salary of a Governor-General shall not be altered during his continuance in office.

4. The provisions of this Constitution relating to the Governor-General extend and apply to the Governor-General for the time being, or such person as the Queen may appoint to administer the Government of the Commonwealth; but no such person shall be entitled to receive any salary from the Commonwealth in respect of any other office during his administration of the Government of the Commonwealth.

5. The Governor-General may appoint such times for holding the sessions of the Parliament as he thinks fit, and may also from time to time, by Proclamation or otherwise, prorogue the Parliament, and may in like manner dissolve the House of Representatives.

After any general election the Parliament shall be summoned to meet not later than thirty days after the day appointed for the return of the writs.

The Parliament shall be summoned to meet not later than six months after the establishment of the Commonwealth.

6. There shall be a session of the Parliament once at least in every year, so that twelve months shall not intervene between the last sitting of the Parliament in one session and its first sitting in the next session.

## PART II.—THE SENATE.

7. The Senate shall be composed of senators for each State, directly chosen by the people of the State, voting, until the Parliament otherwise provides, as one electorate.

But until the Parliament of the Commonwealth otherwise provides, the Parliament of the State of Queensland, if that State be an Original State, may make laws dividing the State into divisions and determining the number of senators to be chosen for each division, and in the absence of such provision the State shall be one electorate.

Until the Parliament otherwise provides there shall be six senators for each Original State. The Parliament may make laws increasing or diminishing the number of senators for each State, but so that equal representation of the several Original States shall be maintained and that no Original State shall have less than six senators.

The senators shall be chosen for a term of six years, and the names of the senators chosen for each State shall be certified by the Governor to the Governor-General.

8. The qualification of electors of senators shall be in each State that which is prescribed by this Constitution, or by the Parliament, as the qualification for electors of members of the House of Representatives; but in the choosing of senators each elector shall vote only once.

9. The Parliament of the Commonwealth may make laws prescribing the method of choosing senators, but so that the method shall be uniform for all the States. Subject to any such law, the Parliament of each State may make laws prescribing the method of choosing the senators for that State.

The Parliament of a State may make laws for determining the times and places of elections of senators for the State.

10. Until the Parliament otherwise provides, but subject to this Constitution, the laws in force in each State, for the time being, relating to elections for the more numerous House of the Parliament of the State shall, as nearly as practicable, apply to elections of senators for the State.

11. The Senate may proceed to the despatch of business, notwithstanding the failure of any State to provide for its representation in the Senate.

12. The Governor of any State may cause writs to be issued for elections of senators for the State. In case of the dissolution of the Senate the writs shall be issued within ten days from the proclamation of such dissolution.

13. As soon as may be after the Senate first meets, and after each first meeting of the Senate following a dissolution thereof, the Senate shall divide the senators chosen for each State into two classes, as nearly equal in number as practicable; and the places of the senators of the first class shall become vacant at the expiration of [the third year] *three years*<sup>1</sup>, and the places of those of the second class at the expiration of [the sixth year] *six years*<sup>1</sup> from the beginning of their term of service; and afterwards the places of senators shall become vacant at the expiration of six years from the beginning of their term of service.

The election to fill vacant places shall be made [in the year at the expiration of which] *within one year before*<sup>1</sup> the places are to become vacant.

For the purposes of this section the term of service of a senator shall be taken to begin on the first day of [January] *July*<sup>1</sup> following the day of his election, except in the cases of the first election and of the election next after any dissolution of the Senate, when it shall be taken to begin on the first day of [January] *July*<sup>1</sup> preceding the day of his election.<sup>2</sup>

14. Whenever the number of senators for a State is increased or diminished, the Parliament of the Commonwealth may make such provision for the vacating of the places of senators for the State as it deems necessary to maintain regularity in the rotation.

15. If the place of a senator becomes vacant before the expiration of his term of service, the Houses of Parliament of the State for which he was chosen shall, sitting and voting together, choose a person to hold the place until the expiration of the term, or until the election of a successor as hereinafter provided, whichever first happens. But if the Houses of Parliament of the State are not in session at the time when the vacancy is notified, the Governor of the State, with the advice of the Executive Council thereof, may appoint a person to hold the place until the expiration of fourteen days after the beginning of the next session of the Parliament of the State, or until the election of a successor, whichever first happens.

At the next general election of members of the House of Representatives, or at the next election of senators for the State, whichever first happens, a successor shall, if the term has not then expired, be chosen to hold the place from the date of his election until the expiration of the term.

The name of any senator so chosen or appointed shall be certified by the Governor of the State to the Governor-General.

16. The qualifications of a senator shall be the same as those of a member of the House of Representatives.

17. The Senate shall, before proceeding to the despatch of any other business, choose a senator to be the President of the Senate; and as often as the office of President becomes vacant the Senate shall again choose a senator to be the President.

The President shall cease to hold his office if he ceases to be a senator. He may be removed from office by a vote of the Senate, or he may resign his office or his seat by writing addressed to the Governor-General.

18. Before or during any absence of the President, the Senate may choose a senator to perform his duties in his absence.

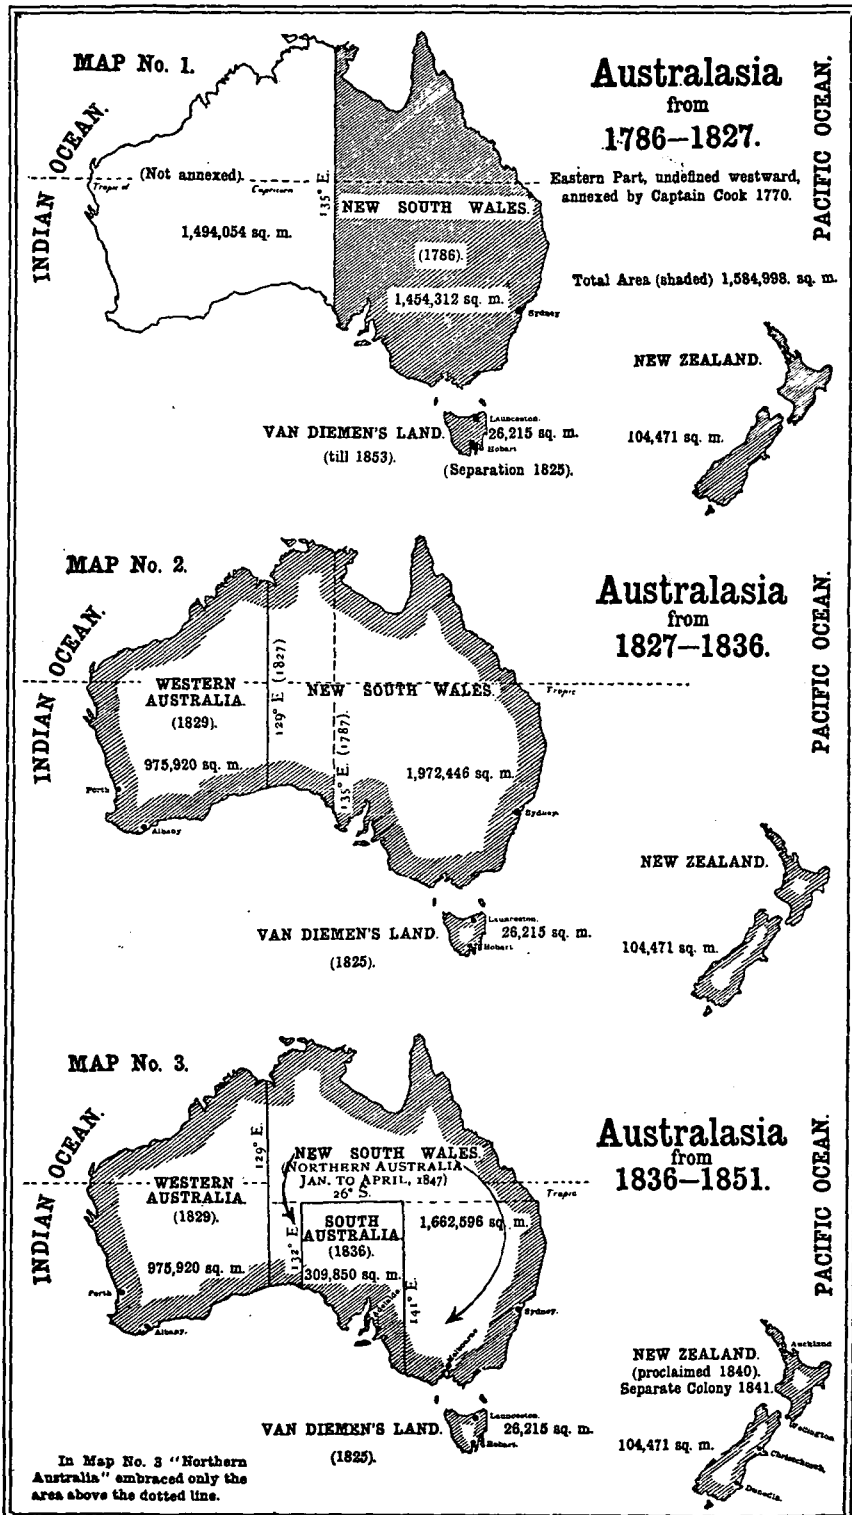

1. As amended by section 2 of the Constitution Alteration (Senate Elections) 1906. The words in square brackets have been repealed; amendments are shewn in italics.

2. Under sections 3 and 4, the Constitution Alteration (Senate Elections) 1906, it was also provided that—

(a) The terms of service of the senators whose places would, but for this Act, become vacant at the expiration of the year One thousand nine hundred and nine are extended until the thirtieth day of June One thousand nine hundred and ten.

(b) The terms of service of the senators whose places would, but for this Act, become vacant at the expiration of the year One thousand nine hundred and twelve are extended until the thirtieth day of June One thousand nine hundred and thirteen.

(c) This Act shall not be taken to alter the time of beginning of the term of service of any senator elected in the year One thousand nine hundred and six.

19. A senator may, by writing addressed to the President, or to the Governor-General if there is no President or if the President is absent from the Commonwealth, resign his place, which thereupon shall become vacant.

20. The place of a senator shall become vacant if for two consecutive months of any session of the Parliament he, without the permission of the Senate, fails to attend the Senate.

21. Whenever a vacancy happens in the Senate, the President, or if there is no President or if the President is absent from the Commonwealth the Governor-General, shall notify the same to the Governor of the State in the representation of which the vacancy has happened.

22. Until the Parliament otherwise provides, the presence of at least one-third of the whole number of the senators shall be necessary to constitute a meeting of the Senate for the exercise of its powers.

23. Questions arising in the Senate shall be determined by a majority of votes, and each senator shall have one vote. The President shall in all cases be entitled to a vote; and when the votes are equal the question shall pass in the negative.

### PART III.—THE HOUSE OF REPRESENTATIVES.

24. The House of Representatives shall be composed of members directly chosen by the people of the Commonwealth, and the number of such members shall be, as nearly as practicable, twice the number of the senators.

The number of members chosen in the several States shall be in proportion to the respective numbers of their people, and shall, until the Parliament otherwise provides, be determined, whenever necessary, in the following manner:—

- (i.) A quota shall be ascertained by dividing the number of the people of the Commonwealth, as shown by the latest statistics of the Commonwealth, by twice the number of the senators:
- (ii.) The number of members to be chosen in each State shall be determined by dividing the number of the people of the State, as shown by the latest statistics of the Commonwealth, by the quota; and if on such division there is a remainder greater than one-half of the quota, one more member shall be chosen in the State.

But notwithstanding anything in this section, five members at least shall be chosen in each Original State.

25. For the purposes of the last section, if by the law of any State all persons of any race are disqualified from voting at elections for the more numerous House of the Parliament of the State, then, in reckoning the number of the people of the State or of the Commonwealth, persons of that race resident in that State shall not be counted.

26. Notwithstanding anything in section twenty-four, the number of members to be chosen in each State at the first election shall be as follows:—

New South Wales	...	23	South Australia	...	6
Victoria	...	20	Tasmania	...	5
Queensland	...	8			

Provided that if Western Australia is an Original State, the numbers shall be as follows:—

New South Wales	...	26	South Australia	...	7
Victoria	...	23	Western Australia	...	5
Queensland	...	9	Tasmania	...	5

27. Subject to this Constitution, the Parliament may make laws for increasing or diminishing the number of the members of the House of Representatives.

28. Every House of Representatives shall continue for three years from the first meeting of the House, and no longer, but may be sooner dissolved by the Governor-General.

29. Until the Parliament of the Commonwealth otherwise provides, the Parliament of any State may make laws for determining the divisions in each State for which

members of the House of Representatives may be chosen, and the number of members to be chosen for each division. A division shall not be formed out of parts of different States.

In the absence of other provision, each State shall be one electorate.

30. Until the Parliament otherwise provides, the qualification of electors of members of the House of Representatives shall be in each State that which is prescribed by the law of the State as the qualification of electors of the more numerous House of Parliament of the State; but in the choosing of members each elector shall vote only once.<sup>1</sup>

31. Until the Parliament otherwise provides, but subject to this Constitution, the laws in force in each State for the time being relating to elections for the more numerous House of the Parliament of the State shall, as nearly as practicable, apply to elections in the State of members of the House of Representatives.

32. The Governor-General in Council may cause writs to be issued for general elections of members of the House of Representatives.

After the first general election, the writs shall be issued within ten days from the expiry of a House of Representatives or from the proclamation of a dissolution thereof.

33. Whenever a vacancy happens in the House of Representatives, the Speaker shall issue his writ for the election of a new member, or if there is no Speaker, or if he is absent from the Commonwealth, the Governor-General in Council may issue the writ.

34. Until the Parliament otherwise provides, the qualifications of a member of the House of Representatives shall be as follows:—

(i.) He must be of the full age of twenty-one years, and must be an elector entitled to vote at the election of members of the House of Representatives, or a person qualified to become such elector, and must have been for three years at the least a resident within the limits of the Commonwealth as existing at the time when he is chosen:

(ii.) He must be a subject of the Queen, either natural-born or for at least five years naturalised under a law of the United Kingdom, or of a colony which has become or becomes a State, or of the Commonwealth, or of a State.

35. The House of Representatives shall, before proceeding to the despatch of any other business, choose a member to be the Speaker of the House, and as often as the office of Speaker becomes vacant the House shall again choose a member to be the Speaker.

The Speaker shall cease to hold his office if he ceases to be a member. He may be removed from office by a vote of the House, or he may resign his office or his seat by writing addressed to the Governor-General.

36. Before or during any absence of the Speaker, the House of Representatives may choose a member to perform his duties in his absence.

37. A member may by writing addressed to the Speaker, or to the Governor-General if there is no Speaker or if the Speaker is absent from the Commonwealth, resign his place, which thereupon shall become vacant.

38. The place of a member shall become vacant if for two consecutive months of any session of the Parliament he, without the permission of the House, fails to attend the House.

39. Until the Parliament otherwise provides, the presence of at least one-third of the whole number of the members of the House of Representatives shall be necessary to constitute a meeting of the House for the exercise of its powers.

40. Questions arising in the House of Representatives shall be determined by a majority of votes other than that of the Speaker. The Speaker shall not vote unless the numbers are equal, and then he shall have a casting vote.

#### PART IV.—BOTH HOUSES OF THE PARLIAMENT.

41. No adult person who has or acquires a right to vote at elections for the more numerous House of the Parliament of a State shall, while the right continues, be

1. The franchise qualification was determined by the Commonwealth Franchise Act 1902.

prevented by any law of the Commonwealth from voting at elections for either House of the Parliament of the Commonwealth.

42. Every senator and every member of the House of Representatives shall before taking his seat make and subscribe before the Governor-General, or some person authorised by him, an oath or affirmation of allegiance in the form set forth in the schedule to this Constitution.

43. A member of either House of the Parliament shall be incapable of being chosen or of sitting as a member of the other House.

44. Any person who—

- (i.) Is under any acknowledgment of allegiance, obedience, or adherence to a foreign power, or is a subject or a citizen or entitled to the rights or privileges of a subject or a citizen of a foreign power: or
- (ii.) Is attainted of treason, or has been convicted and is under sentence, or subject to be sentenced, for any offence punishable under the law of the Commonwealth or of the State by imprisonment for one year or longer: or
- (iii.) Is an undischarged bankrupt or insolvent: or
- (iv.) Holds any office of profit under the Crown, or any pension payable during the pleasure of the Crown out of any of the revenues of the Commonwealth: or
- (v.) Has any direct or indirect pecuniary interest in any agreement with the Public Service of the Commonwealth otherwise than as a member and in common with the other members of an incorporated company consisting of more than twenty-five persons:

shall be incapable of being chosen or of sitting as a senator or a member of the House of Representatives.

But sub-section iv. does not apply to the office of any of the Queen's Ministers of State for the Commonwealth, or of any of the Queen's Ministers for a State, or to the receipt of pay, half-pay, or a pension by any person as an officer or member of the Queen's navy or army, or to the receipt of pay as an officer or member of the naval or military forces of the Commonwealth by any person whose services are not wholly employed by the Commonwealth.

45. If a senator or member of the House of Representatives—

- (i.) Becomes subject to any of the disabilities mentioned in the last preceding section: or
- (ii.) Takes the benefit, whether by assignment, composition, or otherwise, of any law relating to bankrupt or insolvent debtors: or
- (iii.) Directly or indirectly takes or agrees to take any fee or honorarium for services rendered to the Commonwealth, or for services rendered in the Parliament to any person or State:

his place shall thereupon become vacant.

46. Until the Parliament otherwise provides, any person declared by this Constitution to be incapable of sitting as a senator or as a member of the House of Representatives shall, for every day on which he so sits, be liable to pay the sum of one hundred pounds to any person who sues for it in any court of competent jurisdiction.

47. Until the Parliament otherwise provides, any question respecting the qualification of a senator or of a member of the House of Representatives, or respecting a vacancy in either House of the Parliament, and any question of a disputed election to either House, shall be determined by the House in which the question arises.

48. Until the Parliament otherwise provides, each senator and each member of the House of Representatives shall receive an allowance of four hundred pounds a year to be reckoned from the day on which he takes his seat.<sup>1</sup>

49. The powers, privileges, and immunities of the Senate and of the House of Representatives, and of the members and the committees of each House, shall be such as are declared by the Parliament, and until declared shall be those of the Commons House

---

1. By the Parliamentary Allowances Act 1907, assented to on the 23th August, the amount of the allowance was increased to £600 a year.

of Parliament of the United Kingdom, and of its members and committees, at the establishment of the Commonwealth.

50. Each House of the Parliament may make rules and orders with respect to—

- (i.) The mode in which its powers, privileges, and immunities may be exercised and upheld ;
- (ii.) The order and conduct of its business and proceedings either separately or jointly with the other House.

#### PART V.—POWERS OF THE PARLIAMENT.<sup>1</sup>

51. The Parliament shall, subject to this Constitution, have power to make laws for the peace, order, and good government of the Commonwealth with respect to—

- (i.) Trade and commerce with other countries, and among the States :<sup>1</sup>
- (ii.) Taxation ; but so as not to discriminate between States or parts of States :
- (iii.) Bounties on the production or export of goods, but so that such bounties shall be uniform throughout the Commonwealth :
- (iv.) Borrowing money on the public credit of the Commonwealth :
- (v.) Postal, telegraphic, telephonic, and other like services :
- (vi.) The naval and military defence of the Commonwealth and of the several States, and the control of the forces to execute and maintain the laws of the Commonwealth :
- (vii.) Lighthouses, lightships, beacons and buoys :
- (viii.) Astronomical and meteorological observations :
- (ix.) Quarantine :
- (x.) Fisheries in Australian waters beyond territorial limits :
- (xi.) Census and statistics :
- (xii.) Currency, coinage, and legal tender :
- (xiii.) Banking, other than State banking ; also State banking extending beyond the limits of the State concerned, the incorporation of banks, and the issue of paper money :
- (xiv.) Insurance, other than State insurance ; also State insurance extending beyond the limits of the State concerned :
- (xv.) Weights and measures :
- (xvi.) Bills of exchange and promissory notes :

---

1. Two proposed laws for the alteration of the Constitution were submitted to the people for acceptance or rejection on the 26th April, 1911. They were (A) The Constitution Alteration (Legislative Powers) 1910, and (B) the Constitution Alteration (Monopolies) 1910.

(A) *Constitution Alteration (Legislative Powers) 1910.* The object of this proposed law was to extend the powers of the Commonwealth Government (under section 51 of the Constitution) in four directions, viz.—(a) Trade and Commerce, (b) Corporations, (c) Industrial matters, and (d) Trusts and monopolies.

(a) *Trade and Commerce.* In Section 51, para. (i.) of the Constitution it was proposed to omit the words "with other countries, and among the States," so as to give the Commonwealth Parliament power to legislate with respect to trade and commerce, without limitation.

(b) *Corporations.* It was proposed to omit the words (para. xx.) "Foreign corporations, and trading or financial corporations formed within the limits of the Commonwealth," and to insert in lieu thereof the words—"Corporations including (a) the creation, dissolution, regulation, and control of corporations ; (b) corporations formed under the law of a State (except any corporation formed solely for religious, charitable, scientific or artistic purposes, and not for the acquisition of gain by the corporation or its members), including their dissolution, regulation, and control ; and (c) foreign corporations, including their regulation and control."

(c) *Industrial Matters.* In para. xxxv. it was proposed to omit the words "Conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State," and to insert in lieu thereof the words "Labour and employment, including (a) the wages and conditions of labour and employment in any trade, industry, or calling ; and (b) the prevention and settlement of industrial disputes, including disputes in relation to employment on or about railways, the property of any State."

(d) *Trusts and Monopolies.* It was proposed to amend Section 51 of the Constitution by adding at the end thereof the following paragraph:—" (xi.) Combinations and monopolies in relation to the production, manufacture, or supply of goods or services."

(B) *Constitution Alteration (Monopolies) 1910.* The object of this proposed law was to alter the Constitution by inserting, after Section 51 thereof, the following section:—" 51A. When each House of Parliament, in the same session, has by resolution declared that the industry or business of producing, manufacturing, or supplying goods, or of supplying any specified services, is the subject of any monopoly, the Parliament shall have power to make laws for carrying on that industry or business by or under the control of the Commonwealth, and acquiring for that purpose on just terms any property used in connection with the industry or business."

Neither of the proposed laws was approved by the people.

- (xvii.) Bankruptcy and insolvency :
- (xviii.) Copyrights, patents of inventions and designs, and trade marks :
- (xix.) Naturalisation and aliens :
- (xx.) Foreign corporations, and trading or financial corporations formed within the limits of the Commonwealth :<sup>1</sup>
- (xxi.) Marriage :
- (xxii.) Divorce and matrimonial causes ; and in relation thereto, parental rights, and the custody and guardianship of infants :
- (xxiii.) Invalid and old-age pensions :
- (xxiv.) The service and execution throughout the Commonwealth of the civil and criminal process and the judgments of the Courts of the States :
- (xxv.) The recognition throughout the Commonwealth of the laws, the public Acts and records, and the judicial proceedings of the States :
- (xxvi.) The people of any race, other than the aboriginal race in any State, for whom it is deemed necessary to make special laws :
- (xxvii.) Immigration and emigration :
- (xxviii.) The influx of criminals :
- (xxix.) External affairs :
- (xxx.) The relations of the Commonwealth with the islands of the Pacific :
- (xxxi.) The acquisition of property on just terms from any State or person for any purpose in respect of which the Parliament has power to make laws :
- (xxxii.) The control of railways with respect to transport for the naval and military purposes of the Commonwealth :
- (xxxiii.) The acquisition, with the consent of a State, of any railways of the State on terms arranged between the Commonwealth and the State :
- (xxxiv.) Railway construction and extension in any State with the consent of that State :
- (xxxv.) Conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State :<sup>1</sup>
- (xxxvi.) Matters in respect of which this Constitution makes provision until the Parliament otherwise provides :
- (xxxvii.) Matters referred to the Parliament of the Commonwealth by the Parliament or Parliaments of any State or States, but so that the law shall extend only to States by whose Parliaments the matter is referred, or which afterwards adopt the law :
- (xxxviii.) The exercise within the Commonwealth, at the request or with the concurrence of the Parliaments of all the States directly concerned, of any power which can at the establishment of this Constitution be exercised only by the Parliament of the United Kingdom or by the Federal Council of Australasia :
- (xxxix.) Matters incidental to the execution of any power vested by this Constitution in the Parliament or in either House thereof, or in the Government of the Commonwealth, or in the Federal Judicature, or in any department or officer of the Commonwealth.

52. The Parliament shall, subject to this Constitution, have exclusive power to make laws for the peace, order, and good government of the Commonwealth with respect to—

- (i.) The seat of Government of the Commonwealth, and all places acquired by the Commonwealth for public purposes :
- (ii.) Matters relating to any department of the public service the control of which is by this Constitution transferred to the Executive Government of the Commonwealth :
- (iii.) Other matters declared by this Constitution to be within the exclusive power of the Parliament.

53. Proposed laws appropriating revenue or moneys, or imposing taxation, shall not originate in the Senate. But a proposed law shall not be taken to appropriate revenue

1. See footnote on previous page.

or moneys, or to impose taxation, by reason only of its containing provisions for the imposition or appropriation of fines or other pecuniary penalties, or for the demand or payment or appropriation of fees for licenses, or fees for services under the proposed law.

The Senate may not amend proposed laws imposing taxation, or proposed laws appropriating revenue or moneys for the ordinary annual services of the Government.

The Senate may not amend any proposed law so as to increase any proposed charge or burden on the people.

The Senate may at any stage return to the House of Representatives any proposed law which the Senate may not amend, requesting, by message, the omission or amendment of any items or provisions therein. And the House of Representatives may, if it thinks fit, make any of such omissions or amendments, with or without modifications.

Except as provided in this section, the Senate shall have equal power with the House of Representatives in respect of all proposed laws.

54. The proposed law which appropriates revenue or moneys for the ordinary annual services of the Government shall deal only with such appropriations.

55. Laws imposing taxation shall deal only with the imposition of taxation, and any provision therein dealing with any other matter shall be of no effect.

Laws imposing taxation, except laws imposing duties of customs or of excise, shall deal with one subject of taxation only; but laws imposing duties of customs shall deal with duties of customs only, and laws imposing duties of excise shall deal with duties of excise only.

56. A vote, resolution, or proposed law for the appropriation of revenue or moneys shall not be passed unless the purpose of the appropriation has in the same session been recommended by message of the Governor-General to the House in which the proposal originated.

57. If the House of Representatives passes any proposed law, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, and if after an interval of three months the House of Representatives, in the same or the next session, again passes the proposed law with or without any amendments which have been made, suggested, or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor-General may dissolve the Senate and the House of Representatives simultaneously. But such dissolution shall not take place within six months before the date of the expiry of the House of Representatives by effluxion of time.

If after such dissolution the House of Representatives again passes the proposed law, with or without any amendments which have been made, suggested, or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor-General may convene a joint sitting of the members of the Senate and of the House of Representatives.

The members present at the joint sitting may deliberate and shall vote together upon the proposed law as last proposed by the House of Representatives, and upon amendments, if any, which have been made therein by one House and not agreed to by the other, and any such amendments which are affirmed by an absolute majority of the total number of the members of the Senate and House of Representatives shall be taken to have been carried, and if the proposed law, with the amendments, if any, so carried is affirmed by an absolute majority of the total number of members of the Senate and House of Representatives, it shall be taken to have been duly passed by both Houses of the Parliament, and shall be presented to the Governor-General for the Queen's assent.

58. When a proposed law passed by both Houses of the Parliament is presented to the Governor-General for the Queen's assent, he shall declare, according to his discretion, but subject to this Constitution, that he assents in the Queen's name, or that he withholds assent, or that he reserves the law for the Queen's pleasure.

The Governor-General may return to the House in which it originated any proposed law so presented to him, and may transmit therewith any amendments which he may recommend, and the Houses may deal with the recommendation.

59. The Queen may disallow any law within one year from the Governor-General's assent, and such disallowance on being made known by the Governor-General by speech or message to each of the Houses of the Parliament, or by Proclamation, shall annul the law from the day when the disallowance is so made known.

60. A proposed law reserved for the Queen's pleasure shall not have any force unless and until within two years from the day on which it was presented to the Governor-General for the Queen's assent the Governor-General makes known, by speech or message to each of the Houses of Parliament, or by Proclamation, that it has received the Queen's assent.

## CHAPTER II.—THE EXECUTIVE GOVERNMENT.

61. The executive power of the Commonwealth is vested in the Queen and is exercisable by the Governor-General as the Queen's representative, and extends to the execution and maintenance of this Constitution, and of the laws of the Commonwealth.

62. There shall be a Federal Executive Council to advise the Governor-General in the government of the Commonwealth, and the members of the Council shall be chosen and summoned by the Governor-General and sworn as Executive Councillors, and shall hold office during his pleasure.

63. The provisions of this Constitution referring to the Governor-General in Council shall be construed as referring to the Governor-General acting with the advice of the Federal Executive Council.

64. The Governor-General may appoint officers to administer such departments of State of the Commonwealth as the Governor-General in Council may establish.

Such officers shall hold office during the pleasure of the Governor-General. They shall be members of the Federal Executive Council, and shall be the Queen's Ministers of State for the Commonwealth.

After the first general election no Minister of State shall hold office for a longer period than three months unless he is or becomes a senator or a member of the House of Representatives.

65. Until the Parliament otherwise provides, the Ministers of State shall not exceed seven in number, and shall hold such offices as the Parliament prescribes, or, in the absence of provision, as the Governor-General directs.

66. There shall be payable to the Queen, out of the Consolidated Revenue Fund of the Commonwealth, for the salaries of the Ministers of State, an annual sum which, until the Parliament otherwise provides, shall not exceed twelve thousand pounds a year.

67. Until the Parliament otherwise provides, the appointment and removal of all other officers of the Executive Government of the Commonwealth shall be vested in the Governor-General in Council, unless the appointment is delegated by the Governor-General in Council or by a law of the Commonwealth to some other authority.

68. The command in chief of the naval and military forces of the Commonwealth is vested in the Governor-General as the Queen's representative.

69. On a date or dates to be proclaimed by the Governor-General after the establishment of the Commonwealth the following departments of the public service in each State shall become transferred to the Commonwealth :—<sup>1</sup>

Posts, telegraphs, and telephones :	Lighthouses, lightships, beacons, and buoys :
Naval and military defence :	Quarantine.

But the departments of customs and of excise in each State shall become transferred to the Commonwealth on its establishment.

70. In respect of matters which, under this Constitution, pass to the Executive Government of the Commonwealth, all powers and functions which at the establishment of the Commonwealth are vested in the Governor of a Colony, or in the Governor of a

1. As to departments and dates of transfer, see Section XIX.—COMMONWEALTH FINANCE, § 1 hereinafter.

Colony with the advice of his Executive Council, or in any authority of a Colony, shall vest in the Governor-General, or in the Governor-General in Council, or in the authority exercising similar powers under the Commonwealth, as the case requires.

### CHAPTER III.—THE JUDICATURE.

71. The judicial power of the Commonwealth shall be vested in a Federal Supreme Court, to be called the High Court of Australia, and in such other federal courts as the Parliament creates, and in such other courts as it invests with federal jurisdiction. The High Court shall consist of a Chief Justice, and ~~so~~ many other Justices, not less than two, as the Parliament prescribes.

72. The Justices of the High Court and of the other courts created by the Parliament—

- (i.) Shall be appointed by the Governor-General in Council :
- (ii.) Shall not be removed except by the Governor-General in Council, on an address from both Houses of the Parliament in the same session, praying for such removal on the ground of proved misbehaviour or incapacity :
- (iii.) Shall receive such remuneration as the Parliament may fix ; but the remuneration shall not be diminished during their continuance in office.

73. The High Court shall have jurisdiction, with such exceptions and subject to such regulations as the Parliament prescribes, to hear and determine appeals from all judgments, decrees, orders, and sentences—

- (i.) Of any Justice or Justices exercising the original jurisdiction of the High Court :
  - (ii.) Of any other federal court, or court exercising federal jurisdiction ; or of the Supreme Court of any State, or of any other court of any State from which at the establishment of the Commonwealth an appeal lies to the Queen in Council :
  - (iii.) Of the Inter-State Commission, but as to questions of law only :
- and the judgment of the High Court in all such cases shall be final and conclusive.

But no exception or regulation prescribed by the Parliament shall prevent the High Court from hearing and determining any appeal from the Supreme Court of a State in any matter in which at the establishment of the Commonwealth an appeal lies from such Supreme Court to the Queen in Council.

Until the Parliament otherwise provides, the conditions of and restrictions on appeals to the Queen in Council from the Supreme Courts of the several States are applicable to appeals from them to the High Court.

74. No appeal shall be permitted to the Queen in Council from a decision of the High Court upon any question, howsoever arising, as to the limits *inter se* of the Constitutional powers of the Commonwealth and those of any State or States, or as to the limits *inter se* of the Constitutional powers of any two or more States, unless the High Court shall certify that the question is one which ought to be determined by Her Majesty in Council.

The High Court may so certify if satisfied that for any special reason the certificate should be granted, and thereupon an appeal shall lie to Her Majesty in Council on the question without further leave.

Except as provided in this section, this Constitution shall not impair any right which the Queen may be pleased to exercise by virtue of Her Royal prerogative to grant special leave of appeal from the High Court to Her Majesty in Council. The Parliament may make laws limiting the matters in which such leave may be asked, but proposed laws containing any such limitation shall be reserved by the Governor-General for Her Majesty's pleasure.

75. In all matters—

- (i.) Arising under any treaty :
- (ii.) Affecting consuls or other representatives of other countries :
- (iii.) In which the Commonwealth, or a person suing or being sued on behalf of the Commonwealth, is a party :

(iv.) Between States, or between residents of different States, or between a State and a resident of another State :

(v.) In which a writ of Mandamus or prohibition or an injunction is sought against an officer of the Commonwealth :

the High Court shall have original jurisdiction.

76. The Parliament may make laws conferring original jurisdiction on the High Court in any matter—

(i.) Arising under this Constitution, or involving its interpretation :

(ii.) Arising under any laws made by the Parliament :

(iii.) Of Admiralty and maritime jurisdiction :

(iv.) Relating to the same subject-matter claimed under the laws of different States.

77. With respect to any of the matters mentioned in the last two sections the Parliament may make laws—

(i.) Defining the jurisdiction of any federal court other than the High Court :

(ii.) Defining the extent to which the jurisdiction of any federal court shall be exclusive of that which belongs to or is invested in the courts of the States :

(iii.) Investing any court of a State with federal jurisdiction.

78. The Parliament may make laws conferring rights to proceed against the Commonwealth or a State in respect of matters within the limits of the judicial power.

79. The federal jurisdiction of any court may be exercised by such number of judges as the Parliament prescribes.

80. The trial on indictment of any offence against any law of the Commonwealth shall be by jury, and every such trial shall be held in the State where the offence was committed, and if the offence was not committed within any State the trial shall be held at such place or places as the Parliament prescribes.

#### CHAPTER IV.—FINANCE AND TRADE.

81. All revenues or moneys raised or received by the Executive Government of the Commonwealth shall form one Consolidated Revenue Fund, to be appropriated for the purposes of the Commonwealth in the manner and subject to the charges and liabilities imposed by this Constitution.

82. The costs, charges, and expenses incident to the collection, management, and receipt of the Consolidated Revenue Fund shall form the first charge thereon ; and the revenue of the Commonwealth shall in the first instance be applied to the payment of the expenditure of the Commonwealth.

83. No money shall be drawn from the Treasury of the Commonwealth except under appropriation made by law.

But until the expiration of one month after the first meeting of the Parliament the Governor-General in Council may draw from the Treasury and expend such moneys as may be necessary for the maintenance of any department transferred to the Commonwealth and for the holding of the first elections for the Parliament.

84. When any department of the public service of a State becomes transferred to the Commonwealth, all officers of the department shall become subject to the control of the Executive Government of the Commonwealth.

Any such officer who is not retained in the service of the Commonwealth shall, unless he is appointed to some other office of equal emolument in the public service of the State, be entitled to receive from the State any pension, gratuity, or other compensation, payable under the law of the State on the abolition of his office.

Any such officer who is retained in the service of the Commonwealth shall preserve all his existing and accruing rights, and shall be entitled to retire from office at the time, and on the pension or retiring allowance, which would be permitted by the law of the State if his service with the Commonwealth were a continuation of his service with the State. Such pension or retiring allowance shall be paid to him by the Commonwealth ;

but the State shall pay to the Commonwealth a part thereof, to be calculated on the proportion which his term of service with the State bears to his whole term of service, and for the purpose of the calculation his salary shall be taken to be that paid to him by the State at the time of transfer.

Any officer who is, at the establishment of the Commonwealth, in the public service of a State, and who is, by consent of the Governor of the State with the advice of the Executive Council thereof, transferred to the public service of the Commonwealth, shall have the same rights as if he had been an officer of a department transferred to the Commonwealth and were retained in the service of the Commonwealth.

85. When any department of the public service of a State is transferred to the Commonwealth—

- (i.) All property of the State of any kind, used exclusively in connexion with the department, shall become vested in the Commonwealth; but, in the case of the departments controlling customs and excise and bounties, for such time only as the Governor-General in Council may declare to be necessary;
- (ii.) The Commonwealth may acquire any property of the State, of any kind used, but not exclusively used in connexion with the department; the value thereof shall, if no agreement can be made, be ascertained in, as nearly as may be, the manner in which the value of land, or of an interest in land, taken by the State for public purposes is ascertained under the law of the State in force at the establishment of the Commonwealth;
- (iii.) The Commonwealth shall compensate the State for the value of any property passing to the Commonwealth under this section: if no agreement can be made as to the mode of compensation, it shall be determined under laws to be made by the Parliament;
- (iv.) The Commonwealth shall, at the date of the transfer, assume the current obligations of the State in respect of the department transferred.

86. On the establishment of the Commonwealth, the collection and control of duties of customs and of excise, and the control of the payment of bounties, shall pass to the Executive Government of the Commonwealth.

87. During a period of ten years after the establishment of the Commonwealth and thereafter until the Parliament otherwise provides, of the net revenue of the Commonwealth from duties of customs and of excise not more than one-fourth shall be applied annually by the Commonwealth towards its expenditure.

The balance shall, in accordance with this Constitution, be paid to the several States, or applied to the payment of interest on debts of the several States taken over by the Commonwealth.<sup>1</sup>

88. Uniform duties of customs shall be imposed within two years after the establishment of the Commonwealth.<sup>2</sup>

89. Until the imposition of uniform duties of customs—

- (i.) The Commonwealth shall credit to each State the revenues collected therein by the Commonwealth.
- (ii.) The Commonwealth shall debit to each State—
  - (a) The expenditure therein of the Commonwealth incurred solely for the maintenance or continuance as at the time of transfer, of any department transferred from the State to the Commonwealth;
  - (b) The proportion of the State, according to the number of its people, in the other expenditure of the Commonwealth.
- (iii.) The Commonwealth shall pay to each State month by month the balance (if any) in favour of the State.

1. This has been known as the Braddon clause. The Surplus Revenue Act 1910 provides for the termination of this clause as from the 31st December, 1910, and for the payment to the States of twenty-five shillings per head of population until the 30th June, 1920, or thereafter, until Parliament otherwise provides, subject to certain adjustments for the year ended 30th June, 1911. For further information see Section XIX. hereinafter.

2. Uniform customs duties were imposed by the Customs Tariff 1902, Section 5 of which, together with the schedule, and the whole of the Customs Tariff 1906 were repealed by the Customs Tariff 1908 (see Section XV., COMMERCE, § 2, hereinafter).

90. On the imposition of uniform duties of customs the power of the Parliament to impose duties of customs and of excise, and to grant bounties on the production or export of goods, shall become exclusive.

On the imposition of uniform duties of customs all laws of the several States imposing duties of customs or of excise, or offering bounties on the production or export of goods, shall cease to have effect, but any grant of or agreement for any such bounty lawfully made by or under the authority of the Government of any State shall be taken to be good if made before the thirtieth day of June, one thousand eight hundred and ninety-eight, and not otherwise.

91. Nothing in this Constitution prohibits a State from granting any aid to or bounty on mining for gold, silver, or other metals, nor from granting, with the consent of both Houses of the Parliament of the Commonwealth expressed by resolution, any aid to or bounty on the production or export of goods.

92. On the imposition of uniform duties of customs, trade, commerce, and intercourse among the States, whether by means of internal carriage or ocean navigation, shall be absolutely free.

But notwithstanding anything in this Constitution, goods imported before the imposition of uniform duties of customs into any State, or into any Colony which, whilst the goods remain therein, becomes a State, shall, on thence passing into another State within two years after the imposition of such duties, be liable to any duty chargeable on the importation of such goods into the Commonwealth, less any duty paid in respect of the goods on their importation.

93. During the first five years after the imposition of uniform duties of customs and thereafter until the Parliament otherwise provides—

- (i.) The duties of customs chargeable on goods imported into a State and afterwards passing into another State for consumption, and the duties of excise paid on goods produced or manufactured in a State and afterwards passing into another State for consumption, shall be taken to have been collected not in the former but in the latter State :
- (ii.) Subject to the last sub-section, the Commonwealth shall credit revenue, debit expenditure, and pay balances to the several States as prescribed for the period preceding the imposition of uniform duties of customs.<sup>1</sup>

94. After five years from the imposition of uniform duties of customs, the Parliament may provide, on such basis as it deems fair, for the monthly payment to the several States of all surplus revenue of the Commonwealth.

95. Notwithstanding anything in this Constitution, the Parliament of the State of Western Australia, if that State be an original State, may, during the first five years after the imposition of uniform duties of customs, impose duties of customs on goods passing into that State and not originally imported from beyond the limits of the Commonwealth ; and such duties shall be collected by the Commonwealth.

But any duty so imposed on any goods shall not exceed during the first of such years the duty chargeable on the goods under the law of Western Australia in force at the imposition of uniform duties, and shall not exceed during the second, third, fourth, and fifth of such years respectively, four-fifths, three-fifths, two-fifths, and one-fifth of such latter duty, and all duties imposed under this section shall cease at the expiration of the fifth year after the imposition of uniform duties.

If at any time during the five years the duty on any goods under this section is higher than the duty imposed by the Commonwealth on the importation of the like goods, then such higher duty shall be collected on the goods when imported into Western Australia from beyond the limits of the Commonwealth.

<sup>1</sup> The Surplus Revenue Act 1908, which was amended by the Surplus Revenue Act 1910, states that the provisions of Section 93 of the Constitution shall expire on the date of the commencement of the Surplus Revenue Act 1908, that is, on 13th June, 1908, and also makes provisions in lieu of the expired provisions. The Surplus Revenue Act 1910 repeals the greater part of the provisions of the Act of 1908. See foot note to Section 87 of this Act.

96. During a period of ten years after the establishment of the Commonwealth and thereafter until the Parliament otherwise provides, the Parliament may grant financial assistance to any State on such terms and conditions as the Parliament thinks fit.

97. Until the Parliament otherwise provides, the laws in force in any Colony which has become or becomes a State with respect to the receipt of revenue and the expenditure of money on account of the Government of the Colony, and the review and audit of such receipt and expenditure, shall apply to the receipt of revenue and the expenditure of money on account of the Commonwealth in the State in the same manner as if the Commonwealth, or the Government or an officer of the Commonwealth, were mentioned whenever the Colony, or the Government or an officer of the Colony, is mentioned.

98. The power of the Parliament to make laws with respect to trade and commerce extends to navigation and shipping, and to railways the property of any State.

99. The Commonwealth shall not, by any law or regulation of trade, commerce, or revenue, give preference to one State or any part thereof over another State or any part thereof.

100. The Commonwealth shall not, by any law or regulation of trade or commerce, abridge the right of a State or of the residents therein to the reasonable use of the waters of rivers for conservation or irrigation.

101. There shall be an Inter-State Commission, with such powers of adjudication and administration as the Parliament deems necessary for the execution and maintenance, within the Commonwealth, of the provisions of this Constitution relating to trade and commerce, and of all laws made thereunder.

102. The Parliament may by any law with respect to trade or commerce forbid, as to railways, any preference or discrimination by any State, or by any authority constituted under a State, if such preference or discrimination is undue and unreasonable, or unjust to any State; due regard being had to the financial responsibilities incurred by any State in connexion with the construction and maintenance of its railways. But no preference or discrimination shall, within the meaning of this section, be taken to be undue and unreasonable, or unjust to any State, unless so adjudged by the Inter-State Commission.

103. The members of the Inter-State Commission—

- (i.) Shall be appointed by the Governor-General in Council:
- (ii.) Shall hold office for seven years, but may be removed within that time by the Governor-General in Council, on an address from both Houses of Parliament in the same session praying for such removal on the ground of proved misbehaviour or incapacity:
- (iii.) Shall receive such remuneration as the Parliament may fix; but such remuneration shall not be diminished during their continuance in office.

104. Nothing in this Constitution shall render unlawful any rate for carriage of goods upon a railway, the property of a State, if the rate is deemed by the Inter-State Commission to be necessary for the development of the territory of the State, and if the rate applies equally to goods within the State and to goods passing into the State from other States.

105. The Parliament may take over from the States their public debts [as existing at the establishment of the Commonwealth],<sup>1</sup> or a proportion thereof according to the respective numbers of their people as shown by the latest statistics of the Commonwealth, and may convert, renew, or consolidate such debts, or any part thereof; and the States shall indemnify the Commonwealth in respect of the debts taken over, and thereafter the interest payable in respect of the debts shall be deducted and retained from the portions of the surplus revenue of the Commonwealth payable to the several States, or if such surplus is insufficient, or if there is no surplus, then the deficiency or the whole amount shall be paid by the several States.

---

1. Under Section 2 of the Constitution Alteration (State Debts) 1909, the words in square brackets are omitted.

CHAPTER V.—THE STATES.

106. The Constitution of each State of the Commonwealth shall, subject to this Constitution, continue as at the establishment of the Commonwealth, or as at the admission or establishment of the State, as the case may be, until altered in accordance with the Constitution of the State.

107. Every power of the Parliament of a Colony which has become or becomes a State, shall, unless it is by this Constitution exclusively vested in the Parliament of the Commonwealth or withdrawn from the Parliament of the State, continue as at the establishment of the Commonwealth, or as at the admission or establishment of the State, as the case may be.

108. Every law in force in a Colony which has become or becomes a State, and relating to any matter within the powers of the Parliament of the Commonwealth, shall, subject to this Constitution, continue in force in the State; and, until provision is made in that behalf by the Parliament of the Commonwealth, the Parliament of the State shall have such powers of alteration and of repeal in respect of any such law as the Parliament of the Colony had until the Colony became a State.

109. When a law of a State is inconsistent with a law of the Commonwealth, the latter shall prevail, and the former shall, to the extent of the inconsistency, be invalid.

110. The provisions of this Constitution relating to the Governor of a State extend and apply to the Governor for the time being of the State, or other chief executive officer or administrator of the government of the State.

111. The Parliament of a State may surrender any part of the State to the Commonwealth; and upon such surrender, and the acceptance thereof by the Commonwealth, such part of the State shall become subject to the exclusive jurisdiction of the Commonwealth.

112. After uniform duties of customs have been imposed, a State may levy on imports or exports, or on goods passing into or out of the State, such charges as may be necessary for executing the inspection laws of the State; but the net produce of all charges so levied shall be for the use of the Commonwealth; and any such inspection laws may be annulled by the Parliament of the Commonwealth.

113. All fermented, distilled, or other intoxicating liquids passing into any State or remaining therein for use, consumption, sale, or storage, shall be subject to the laws of the State as if such liquids had been produced in the State.

114. A State shall not, without the consent of the Parliament of the Commonwealth, raise or maintain any naval or military force, or impose any tax on property of any kind belonging to the Commonwealth, nor shall the Commonwealth impose any tax on property of any kind belonging to a State.

115. A State shall not coin money, nor make anything but gold and silver coin a legal tender in payment of debts.

116. The Commonwealth shall not make any law for establishing any religion, or for imposing any religious observance, or for prohibiting the free exercise of any religion, and no religious test shall be required as a qualification for any office or public trust under the Commonwealth.

117. A subject of the Queen, resident in any State, shall not be subject in any other State to any disability or discrimination which would not be equally applicable to him if he were a subject of the Queen resident in such other State.

118. Full faith and credit shall be given, throughout the Commonwealth, to the laws, the public Acts and records, and the judicial proceedings of every State.

119. The Commonwealth shall protect every State against invasion and, on the application of the Executive Government of the State, against domestic violence.

120. Every State shall make provision for the detention in its prisons of persons accused or convicted of offences against the laws of the Commonwealth, and for the punishment of persons convicted of such offences, and the Parliament of the Commonwealth may make laws to give effect to this provision. .

---

#### CHAPTER VI.—NEW STATES.

121. The Parliament may admit to the Commonwealth or establish new States, and may upon such admission or establishment make or impose such terms and conditions, including the extent of representation in either House of the Parliament, as it thinks fit.

122. The Parliament may make laws for the government of any territory surrendered by any State to and accepted by the Commonwealth, or of any territory placed by the Queen under the authority of and accepted by the Commonwealth, or otherwise acquired by the Commonwealth, and may allow the representation of such territory in either House of the Parliament to the extent and on the terms which it thinks fit.

123. The Parliament of the Commonwealth may, with the consent of the Parliament of a State, and the approval of the majority of the electors of the State voting upon the question, increase, diminish, or otherwise alter the limits of the State, upon such terms and conditions as may be agreed on, and may, with the like consent, make provision respecting the effect and operation of any increase or diminution or alteration of territory in relation to any State affected.

124. A new State may be formed by separation of territory from a State, but only with the consent of the Parliament thereof, and a new State may be formed by the union of two or more States or parts of States, but only with the consent of the Parliaments of the States affected.

---

#### CHAPTER VII.—MISCELLANEOUS.

125. The seat of Government of the Commonwealth shall be determined by the Parliament, and shall be within territory which shall have been granted to or acquired by the Commonwealth, and shall be vested in and belong to the Commonwealth, and shall be in the State of New South Wales, and be distant not less than one hundred miles from Sydney.

Such territory shall contain an area of not less than one hundred square miles, and such portion thereof as shall consist of Crown lands shall be granted to the Commonwealth without any payment therefor.

The Parliament shall sit at Melbourne until it meet at the seat of Government.

126. The Queen may authorise the Governor-General to appoint any person, or any persons jointly or severally, to be his deputy or deputies within any part of the Commonwealth, and in that capacity to exercise during the pleasure of the Governor-General such powers and functions of the Governor-General as he thinks fit to assign to such deputy or deputies, subject to any limitations expressed or directions given by the Queen; but the appointment of such deputy or deputies shall not affect the exercise by the Governor-General himself of any power or function.

127. In reckoning the numbers of the people of the Commonwealth, or of a State or other part of the Commonwealth, aboriginal natives shall not be counted.

CHAPTER VIII.—ALTERATION OF THE CONSTITUTION.<sup>1</sup>

128. This Constitution shall not be altered except in the following manner :—

The proposed law for the alteration thereof must be passed by an absolute majority of each House of the Parliament, and not less than two nor more than six months after its passage through both Houses the proposed law shall be submitted in each State to the electors qualified to vote for the election of members of the House of Representatives.<sup>2</sup>

But if either House passes any such proposed law by an absolute majority, and the other House rejects or fails to pass it or passes it with any amendment to which the first-mentioned House will not agree, and if after an interval of three months the first-mentioned House in the same or the next session again passes the proposed law by an absolute majority with or without any amendment which has been made or agreed to by the other House, and such other House rejects or fails to pass it or passes it with any amendment to which the first-mentioned House will not agree, the Governor-General may submit the proposed law as last proposed by the first-mentioned House, and either with or without any amendments subsequently agreed to by both Houses, to the electors in each State qualified to vote for the election of the House of Representatives.

When a proposed law is submitted to the electors the vote shall be taken in such manner as the Parliament prescribes. But until the qualification of electors of members of the House of Representatives becomes uniform throughout the Commonwealth, only one-half the electors voting for and against the proposed law shall be counted in any State in which adult suffrage prevails.

And if in a majority of the States a majority of the electors voting approve the proposed law, and if a majority of all the electors voting also approve the proposed law, it shall be presented to the Governor-General for the Queen's assent.

No alteration diminishing the proportionate representation of any State in either House of the Parliament; or the minimum number of representatives of a State in the House of Representatives, or increasing, diminishing, or otherwise altering the limits of the State, or in any manner affecting the provisions of the Constitution in relation thereto, shall become law unless the majority of the electors voting in that State approve the proposed law.

## SCHEDULE.

## OATH.

I, A.B., do swear that I will be faithful and bear true allegiance to Her Majesty Queen Victoria, Her heirs and successors according to law. SO HELP ME GOD!

## AFFIRMATION.

I, A.B., do solemnly and sincerely affirm and declare that I will be faithful and bear true allegiance to Her Majesty Queen Victoria, Her heirs and successors according to law.

(NOTE.—*The name of the King or Queen of the United Kingdom of Great Britain and Ireland for the time being is to be substituted from time to time.*)

1. The Constitution has been altered by the following Acts:—The Constitution Alteration (Senate Elections) 1906 (No. 1 of 1907); and the Constitution Alteration (State Debts) 1909 (No. 3 of 1910).

2. The Referendum (Constitution Alteration) Act, 1906-1910, provides the necessary machinery for the submission to the electors of any proposed law for the alteration of the Constitution.

2. **The Royal Proclamation.**—The preceding Act received the Royal assent on the 9th July, 1900. This made it lawful (see Sec. 3) to declare that the people of Australia should be united in a Federal Commonwealth. This proclamation, made on the 17th September, 1900, constituted the Commonwealth as from the 1st January, 1901: it reads as follows :—

BY THE QUEEN.

A PROCLAMATION.

(Signed) VICTORIA R.

WHEREAS by an Act of Parliament passed in the Sixty-third and Sixty-fourth Years of Our Reign intituled, "An Act to constitute the Commonwealth of Australia," it is enacted that it shall be lawful for the Queen, with the advice of the Privy Council, to declare by Proclamation, that, on and after a day therein appointed, not being later than One Year after the passing of this Act, the people of *New South Wales, Victoria, South Australia, Queensland, and Tasmania*, and also, if Her Majesty is satisfied that the people of *Western Australia* have agreed thereto, of *Western Australia*, shall be united in a Federal Commonwealth under the name of the Commonwealth of Australia.

And whereas We are satisfied that the people of *Western Australia* have agreed thereto accordingly.

We therefore, by and with the advice of Our Privy Council, have thought fit to issue this Our Royal Proclamation, and We do hereby declare that on and after the First day of *January* One thousand nine hundred and one, the people of *New South Wales, Victoria, South Australia, Queensland, Tasmania, and Western Australia* shall be united in a Federal Commonwealth under the name of the Commonwealth of Australia.

Given at Our Court at *Balmoral* this Seventeenth day of *September*, in the Year of Our Lord One thousand nine hundred, and in the Sixty-fourth Year of Our Reign.

GOD SAVE THE QUEEN.

## § 8. Commonwealth Legislation.

1. **The Commonwealth Parliaments.**—The first Parliament of the Commonwealth was convened by proclamation dated 29th April, 1901, by His Excellency the late Marquis of Linlithgow, then Earl of Hopetoun, Governor-General. It was opened on the 9th May by H.R.H. the Duke of Cornwall and York, who had been sent to Australia for that purpose by His Majesty the King; the Rt. Hon. Sir Edmund Barton, P.C., G.C.M.G., K.C., being Prime Minister. It was dissolved on the 23rd November, 1903. The second Parliament was convened on the 2nd March, 1904, by His Excellency the Rt. Hon. Baron Northcote, P.C., G.C.M.G., G.C.I.E., C.B.; the Hon. Alfred Deakin being Prime Minister. The third session closed on the 12th October, 1906, and Parliament was dissolved on the 8th November, 1906. The third Parliament was convened on the 20th February, 1907, and met on that day and the following day only. It was prorogued on the 22nd February, the prorogation eventually extending to the 3rd July, 1907, on which day the second session commenced. The second session was prorogued on the 11th June, 1908, to the 15th July following, and finally to the 16th September, 1908, when it met for the despatch of business; the third session commenced on that

#### PROGRESS OF AUSTRALIAN EXPLORATION.

The above maps compiled by Mr. E. Favenc shew decennially the progress of discovery from 1806 to 1888. The dark shade shews the area of unexplored territory.

day. The third session was prorogued on the 15th December, 1908, the prorogation finally extending to the 26th May, 1909, when the fourth and last session of the third Parliament commenced. This Parliament expired by effluxion of time on 19th February, 1910. The first session of the fourth Parliament was commenced on 1st July, 1910, and was on 29th November of that year prorogued until 7th February, the prorogation finally extending to the 5th September, 1911, when the second session of this Parliament commenced. The Debates of these Parliaments will be found in Volumes I. to LXIII. of the Parliamentary Debates, as follows:—

Home Affairs ... ..	HON. KING O'MALLEY.
Vice-President Executive C'ncl	HON. GREGOR MCGREGOR.
Honorary Ministers ... ..	{ HON. EDWARD FINDLEY. HON. ERNEST ALFRED ROBERTS (from 23/10/11). HON. CHARLES EDWARD FRAZER (to 13/10/11).

A further list of the Ministers of State for the Commonwealth, arranged according to the respective offices occupied, is given in the section of this book dealing with the subject of *General Government* (see Section XXV.).

3. **The Course of Legislation.**—The actual legislation by the Commonwealth Parliament up to the end of the 1910 session is indicated in alphabetical order in "Vol. 9 of the Acts of the Parliament of the Commonwealth of Australia, passed in the session of 1910, with Tables, Appendices and Indexes." A "Chronological Table of Acts passed from 1901 to 1910, shewing how they are affected by subsequent legislation or lapse of time" is also given, and further "A Table of Commonwealth Legislation," for the same period, "in relation to the several provisions of the Constitution," is furnished. Reference may be made to these for complete information. The nature of Commonwealth legislation, up to October, 1911, and its relation to the several provisions of the Constitution, are set forth in the following tabular statement:—

**ANALYTIC TABLE OF COMMONWEALTH LEGISLATION,  
FROM 1901 TO DECEMBER, 1911, IN RELATION TO THE SEVERAL PROVISIONS OF  
THE CONSTITUTION.<sup>1</sup>**

## SECTION III.

### PHYSIOGRAPHY.

#### § 1. General Description of Australia.

1. **Geographical Position.**—The Australian Commonwealth, which includes the island continent of Australia proper and the island of Tasmania, is situated in the Southern Hemisphere, and comprises in all an area of about 2,974,581 square miles, the mainland alone containing about 2,948,366 square miles. Bounded on the west and east by the Indian and Pacific Oceans respectively, it lies between longitudes 113° 9' E. and 153° 39' E., while its northern and southern limits are the parallels of latitude 10° 41' S. and 39° 8' S., or including Tasmania, 43° 39' S. On its north are the Timor and Arafura Seas and Torres Strait, on its south the Southern Ocean and Bass Strait.<sup>1</sup>

(i.) *Tropical and Temperate Regions.* Of the total area of Australia the lesser portion lies within the tropics. Assuming, as is usual, that the latitude of the Tropic of Capricorn is 23° 30' S.,<sup>2</sup> the areas within the tropical and temperate zones are approximately as follows:—

**AREAS OF TROPICAL AND TEMPERATE REGIONS**  
OF STATES WITHIN TROPICS.

Areas.	Queensland.	Northern Territory.	Western Australia.	Total
	Sq. miles.	Sq. miles.	Sq. miles.	Sq. miles.
Within Tropical Zone ...	359,000	426,320	364,000	1,149,320
Within Temperate Zone ...	311,500	97,300	611,920	1,020,720
Ratio of Tropical part to whole State ...	0.535	0.814	0.373	0.530
Ratio of Temperate part to whole State ...	0.465	0.186	0.627	0.470

Thus the tropical part is roughly about one-half (0.530) of the three territories mentioned above, or about five-thirteenths of the whole Commonwealth (0.386). See hereafter Meteorology 3.

2. **Area of Australia compared with that of other Countries.**—That the area of Australia is greater than that of the United States of America, that it is four-fifths of that of Canada, that it is more than one-fourth of the area of the whole of the British Empire, that it is nearly three-fourths of the whole area of Europe, that it is more than 25 times as large as any one of the following, viz., the United Kingdom, Hungary, Italy, the Transvaal, and Ecuador, are facts which are not always adequately realised. It is this great size, taken together with the fact of the limited population, that gives to the problems of Australian development their unique character, and its clear comprehension is essential in any attempt to understand those problems.

1. The extreme points are "Steep Point" on the west, "Cape Byron" on the east, "Cape York" on the north, "Wilson's Promontory" on the south, or, if Tasmania be included, "South East Cape." The limits, according to the 1903-4 edition of "A Statistical Account of Australia and New Zealand," p. 2. and, according to Volume XXV. of the "Encyclopædia Britannica," tenth edition, p. 787, are respectively 113° 5' E., 153° 16' E., 10° 39' S., and 39° 11' S., but these figures are obviously defective. A similar inaccuracy appears in the XI. edition of the Encyclopædia.

2. Its correct value for 1912.0 is 23° 27' 2".64, and it decreases about 6".47 per annum.

The relative magnitudes may be appreciated by a reference to the following table, which shews how large Australia is compared with the countries referred to, or *vice versa*. Thus, to take line 1, we see that Europe is about  $1\frac{2}{10}$  times (1.29775) as large as Australia, or that Australia is about three-quarters (more accurately 0.77) of the area of Europe.

#### SIZE OF AUSTRALIA IN COMPARISON WITH THAT OF OTHER COUNTRIES.

3. **Relative Size of Political Subdivisions.**—As already stated, Australia consists of six States and the Northern Territory. The areas of these, in relation to one another and to the total of Australia, are shewn in the following table :—

**RELATIVE SIZES OF STATES AND COMMONWEALTH.**

State.	Area.	Ratio which the Area of each State and Northern Territory bears to that of other States and Commonwealth.							
		N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	N. Ter.	C'with.
	Sq. miles.								
New South Wales	310,372	1.000	3.532	0.463	0.817	0.318	11.840	0.593	0.104
Victoria ...	87,884	0.283	1.000	0.131	0.231	0.090	3.352	0.168	0.030
Queensland ...	670,500	2.160	7.629	1.000	1.764	0.687	25.577	1.280	0.225
South Australia	380,070	1.225	4.325	0.567	1.000	0.389	14.498	0.726	0.128
West. Australia	975,920	3.144	11.105	1.455	2.568	1.000	37.228	1.964	0.328
Tasmania ...	26,215	0.085	0.298	0.039	0.069	0.027	1.000	0.050	0.009
North. Territory	523,620	1.687	5.958	0.781	1.378	0.537	19.974	1.000	0.176
Commonwealth	2,974,581	9.584	33.847	4.436	7.827	3.048	113.469	5.681	1.000

Thus, looking at the top line, New South Wales is seen to be over three-and-a-half times as large as Victoria (3.532) and less than one-half the size of Queensland (0.463); or again, looking at the bottom line, the Commonwealth is shewn to be more than nine-and-a-half times as large as New South Wales (9.584), and nearly thirty-four times as large as Victoria (33.847).

These relative magnitudes are shewn in the small diagram below. It may be added that Papua (or British New Guinea), with its area of 90,540 square miles, is 0.030 of the area of the Commonwealth.

4. **Coastal Configuration.**—There are no striking features in the configuration of the coast: the most remarkable indentations are the Gulf of Carpentaria on the north and the Great Australian Bight on the south. The York Peninsula on the extreme north is the only other remarkable feature in the outline. In Year Book No. 1 an enumeration of the features of the coast-line of Australia was given (see pp. 60 to 68).

(i.) *Coast-line.* The lengths of coast-line, exclusive of minor indentations, both of each State and of the whole continent, are shewn in the following table:—

**SQUARE MILES OF TERRITORY PER MILE OF COAST LINE.**  
**STATES AND CONTINENT.**

State.	Coast-line.	Area ÷ Coast-line.	State.	Coast-line.	Area ÷ Coast-line.
	Miles.	Sq. miles.		Miles.	Sq. miles.
New South Wales ...	700	443	South Australia ...	1,540	247
Victoria ...	680	129	Western Australia	4,350	224
Queensland ...	3,000	223	Continent† ...	1,310	261
Northern Territory	1,040	503	Tasmania ...	900	29

1. Area 2,948,366 square miles.

For the entire Commonwealth this gives a coast-line of 12,210 miles, and an average of 244 square miles for one mile of coast line. According to Strelbitski, Europe has only 75 square miles of area to each mile of coast-line, and, according to recent figures, England and Wales have only one-third of this, viz., 25 square miles.

(ii.) *Historical Significance of Coastal Names.* It is interesting to trace the voyages of some of the early navigators by the names bestowed by them on various coastal features—thus Dutch names are found on various points of the Western Australian coast, in Nuyt's Archipelago, in the Northern Territory, and in the Gulf of Carpentaria; Captain Cook can be followed along the coasts of New South Wales and Queensland; Flinders' track is easily recognised from Sydney southwards, as far as Cape Catastrophe, by the numerous Lincolnshire names bestowed by him; and the French navigators of the end of the eighteenth and the beginning of the nineteenth century have left their names all along the Western Australian, South Australian, and Tasmanian coasts.

5. *Geographical Features of Australia.*—As indicated in the preceding issues of this Year Book, it is intended each year to give fairly complete information concerning some special geographical element. Thus No. 1 Year Book, pp. 60-68, contains an enumeration of Coastal features, No. 2, pp. 66-77, deals with Hydrology, No. 3, pp. 59-72, with Orography, and No. 4, pp. 59-82 with the Lakes of Australia. In the present issue the Islands of Australia constitute the special feature treated. An orographical or vertical relief map of Australia will be found on page 81.

## § 2. Islands off the Coast of the Commonwealth.

1. *General.*—The following section contains the latest available information regarding the islands off the coast of each State. Many of these islands are merely barren and precipitous rocks, while others are exceedingly fertile. In some cases, owing to incomplete surveys, the details available are extremely meagre.

2. *New South Wales.*—(i.) *Introductory.* The accompanying information regarding the islands of New South Wales has been compiled from particulars furnished by the Lands Department of that State. The name, position, area, etc., of each island will be found in the appended tabular statement.

(ii.) *Fauna.* (a) *Mammals.* Though some species of rats and bats doubtless occur on the islands off the New South Wales coast, there does not appear to be a record of any having been collected. The islands are too small and barren to support any of the larger Marsupialia. Three species of seals are known from the islands and mainland, and may occur anywhere northwards to Seal Rocks or even farther north. The Leopard Seal (*Ogmorhinus leptonyx*, Blainville) is recorded from Sydney and Newcastle; the Australian Fur-seal (*Arctocephalus forsteri*, Lesson), and the Australian Sea-lion (*Zalophus lobatus*, Gray), both occur on Seal Rocks.

(b) *Aves.* The avi-fauna of the insular areas contiguous to the coast of New South Wales is almost alike from its northern to southern boundaries. Naturally it consists principally, if not entirely, of sea or shore birds, on islands where there is no vegetation. Small islands covered with a dense but stunted vegetation are also tenanted by similar species to those found on the near mainland, chiefly by honey-eaters, thorn-bills or tits, warblers, scrub-wrens, silvereyes, swallows, finches, and flycatchers. Should there also be an expanse of open grass land, the Australian pipit or "ground lark" and possibly quail will be found. Islands of larger size carrying trees of great girth, in parts are also resorted to by shrike-thrushes, cuckoo-shrikes, butcher-birds, thick-heads, robins, pigeons, parakeets, etc.

Of all the sea and shore frequenting species inhabiting the contiguous islands of the coast of New South Wales the white-breasted or red-backed fish eagle (*Haliastur girrenera*, Vieillot), and the white-winged petrel (*Estrelata leucoplera*, Gould) are the only two species that are not found farther south than the Hunter River. On the other hand, the farther north one goes the rarer becomes the hooded dotterel (*Ægialitis cucullatus*, Vieillot), and the little penguin (*Eudyptula minor*, Gould). In the following list those

species only are included that one might reasonably expect to find on the different islands, according to their size and formation, for one would not look for shore-frequenting species on a rock-bound island coast; neither are here recorded those that are driven there by winds and gales from other parts:—White-bellied sea eagle (*Haliastur leucogaster*, Gmelin), white-breasted or red-backed sea eagle (*Haliastur girrenera*, Vieillot), white-headed osprey (*Pandion leucocephalus*, Gould), pelican (*Pelecanus conspicillatus*, Gould), gannet (*Sula serrator*, Banks), black cormorant (*Phalacrocorax carbo*, Linn.), little black and white cormorant (*Phalacrocorax melanoleucus*, Vieillot), little black cormorant (*Phalacrocorax sulcirostris*, Brandt), reef heron (*Demigretta sacra*, Gmelin), black swan (*Chenopsis atrata*, Latham), brown duck (*Anas superciliosa*, Gmelin), black duck (*Biziura lobata*, Spaw.), turnstone (*Arenaria interpres*, Linn.), white-breasted oyster-catcher (*Haematopus longirostris*, Vieillot), sooty oyster-catcher (*Haematopus unicolor*, Wagler), golden plover (*Charadrius fulvus*, Gmelin), double-banded dotterel (*Ochthodromus bicinctus*, Jard and Selby), hooded dotterel (*Egialitis cucullatus*, Vieillot), red-capped dotterel (*Egialitis ruficapilla*, Temm.), curlew (*Numeaius cyanopus*, Vieillot), oriental whimbrel (*Numenius variegatus*, Scopoli), godwit (*Limosa novæ-zealandiæ*, Gray), greenshank (*Totanus glottis*, Temm.), sandpiper (*Totanus brevipes*, Vieillot), knot (*Tringa canutus*, Linn.), marsh tern (*Hydrochelidon hybrida*, Paffas), large-crested tern (*Sterna bergii*, Licht.), white-shafted tern (*Sternula sinensis*, Gmelin), Pacific gull (*Gabianus pacificus*, Latham), silver gull (*Larus novæ-hollandiæ*, Steph.), white-faced storm petrel (*Pelagodroma fregata*, Latham), wedge-tailed petrel (*Puffinus chlororhynchus*, Lesson), short-tailed petrel (*Puffinus tenuirostris*, Temm.), giant petrel (*Ossifraga gigantea*, Gmelin), white-winged petrel (*Diastrelata leucoptera*, Gould), prion (*Prion brevirostris*, Gould), crested grebe (*Podiceps cristatus*, Linn.), little penguin (*Eucyptula minor*, Gould).

(c) *Mollusca*. Most of the islands are too small and barren to afford shelter to an invertebrate fauna, but Cabbage Tree Island, off Port Stephens, is clothed with a luxuriant vegetation, and here have been found the following species of snails:—*Thersites jervensis*, Quoy and Gaimard; *rhytida capillares*, Ferussac; *tornatellina jacksonensis*, Cox, *laoma mortii*, Cox; *endodonta sericatula*, Pfeiffer; *vertigo strangei*, Pfeiffer.

(d) *Insecta*, *Arachnida*, etc. The islands off the coast of New South Wales have never been visited by naturalists interested in entomology, hence little or nothing is known of their insect and arachnid faunæ. There cannot be any doubt, however, that if they were systematically "collected" many species peculiar to the mainland would be discovered, because these little dots of land act as "traps" for insects that are wind-borne. In respect of the coleoptera, certain carabs and scarabs would most certainly occur, as also weevils and leaf-beetles. The butterfly fauna would naturally be very small, because these tiny islands are too bleak and barren to afford them suitable breeding grounds. Nevertheless, some of the hardier forms would certainly occur, such as the "Meadow Brown" (*Junonia villida*) and the "Painted Lady" (*Pryameis kershawi*), as well as a few of the sturdier blues, such as *Polyommatus baticus* (an almost cosmopolitan species) and *Zuzera labradus*, another widely distributed form. Again, some of the wandering whites, of which *Belanois java* is the commonest form, may also be found, because large numbers of them are at times met with by ships passing up and down the coast. The same remarks apply to moths, and to grasshoppers and locusts. Where there are trees, cicadas are almost certain to be found.

No matter how bleak the position may be, if there are any insects at all, spiders are sure to be found, and of these animals the hardier argiopidae are certain to occur, such as *Araneus productus*, *A. heroine*, and *A. brisbana*. These species are common, widely distributed, and, naturally, extremely variable in size and colour. Their snares are large and wheel-like, i.e., orbicular. Where there is scrub, certain crab-spiders (*Thomisidae*) and jumping spiders (*Sallicidae*) are certain to occur. The fact that wingless animals, such as spiders, are so widely distributed is due to their "ballooning" habits. Young spiders when leaving the "nursery" to start life on their own account, void long strands of silk. These latter float in the air and lift the baby spider-aviators, and carry them away. Many are drowned by falling into the sea during these journeys, but others succeed in locating themselves in localities that afford protection and an abundance of food.

(iii.) *Flora*. Comparatively little is known of the flora of the islands off the New South Wales coast. The accompanying details refer to those islands which have been more or less closely examined.

*S. Solitary Island*. For the most part smooth rocks, but in crevices *Monotoca elliptica*, *Eugenie australis*, *Nephelium coriaceum*, *Banksia integrifolia* from 6 inches to 3 to 4 feet. *Themeda forskalli* is the prevailing grass.

*North Coffs or Mutton Bird Island*. Covered with *Themeda forskalli* and dwarf *Myoporum* forming a roof over the numerous crevices wherein the birds build, etc., *Banksia integrifolia* being the principal timber. *Pandanus pedunculata* fairly common near the beach.

*South Coffs Island*. Small rocks with black soil (no water) grassed over with *Themeda forskalli*, *Banksia integrifolia*, small to normal size, *Hoya australis*, *Hibbertia volubilis*, *Senecio australis*, *Crotalaria*, *Ipomœa biloba*, *Westringia rosmariniformis*, *Sophora tomentosa*, *Canavalia obtusifolia*, *Lippia nodosa*, *Spinifex hirsuta*, *Convolvulus erubescens*, *Monotoca elliptica*, *Myoporum acuminatum*, var. *Pandanus pedunculatus*.

*Boondelbah Island*. Contains some rich timbers, affording good shade for picnic and fishing parties from Tea Gardens, Nelson's Bay, etc. The timber is composed of *Eucalyptus microcorys* (tallow-wood), *E. botryoides*, *E. saligna* (blue gum), *E. corymbosa* (bloodwood), *E. paniculata* (grey ironbark), *E. acmenioides* (white mahogany), *E. resinifera* (red mahogany), *Banksia serrata* (honeysuckle), *B. ericifolia*, *B. collina*, *B. robur*, var. *minor*, *B. integrifolia*, *Eugenia australis* (native cherry), *E. Smithii* (lilli-pilli), *Rhodomyrtus psidioides* (native guava), *Phyllanthus ferdinandi*, *Cupania anacardioides*, *Synoum glandulosm*, *Nephelium coriaceum*, *Acacia decurrens*, *A. longifolia*, *A. harpophylla* (?), *A. suaveolens*, and *A. linifolia*, *Melaleuca armillaris*, *Angophora lanceolata*. Near and about the trigonometrical station is a large patch of *Lasiopetalum longistamineum*. The south side of the island immediately facing the entrance to the port is precipitous and covered by a wind-swept, densely foliaged, and almost impenetrable scrub.

## ISLANDS OFF THE COAST OF NEW SOUTH WALES.

Name of Island.	Geographical Position.		Area in acres (approximate).	General Description, etc.
	Lat. S.	Long. E.		
Cook, 31 ch. N.E. of Fingal Point...	28 11	153 36	10	Precipitous sides except the north, 70 ft. high. Columnar basalt.
Juan and Julia, 1½ m. N.N.W. from Cape Byron	28 36	153 39	1½	Bare rocks 30 ft. high. Granite. A red fixed light on Cape Byron lighthouse, is visible only over these islets.
North Solitary, 7½ m. E. of Wooli Wooli River	29 55	153 24	52	140 ft. high. No vegetation of any kind. Granite.
N.W. Solitary, 3½ m. S.E. Redbank River	30 0	153 17	15	30 ft. high. No timber. Granite.
S.W. Solitary, 1½ m. E. Bare Bluff	30 9	153 14	16	Hilly country, no timber or trees, poor grass. Schist.
S. Solitary, 11½ m. N.E. of Coffs Harbour	30 11	153 17	38	Hilly country, no timber or trees, poor grass. Schist. Small wharf for boats to land stores. Revolving white light, 8-min. with flash of 7 secs. visible 20 mls.
Split Solitary, 5½ m. N.N.E. of Coffs Harbour	30 13	153 11	6	Hilly country, no timber or trees, poor grass. Schist.
North Coffs or Mutton Bird, 30 ch. from Coffs Harbour (leased)	30 17	153 10	31	Hilly country, no timber or trees, poor grass. Small wharf. Schist.
South Coffs, close to Coffs Harbour (part leased)	30 18	153 9	31	Hilly country, no timber or trees, poor grass. Schist.
Broughton, 9½ m. N.E. Pt. Stephens	32 37	152 20	1145 60	Rocky, 286 ft. high, covered with low scrub and grass. The southern extremity of larger island at low water is connected to a small islet 100 ft. high named South Rock. Carboniferous sandstone and volcanic rocks. Centre of lobster and other fishing. Good landing in Esmeralda Cove on S.E. and N.E. sides.

## ISLANDS OFF THE COAST OF NEW SOUTH WALES—Continued.

Name of Island.	Geographical Position.		Area in acres (approximate).	General Description, etc.
	Lat. S.	Long. E.		
Cabbage Tree, 1½ m. N.E. Yacaaba Head	32 41	152 15	68	Rocky, 475 ft. high, covered with low scrub and grass with cabbage tree palms in the gullies. Porphyry. Landing can be effected on S.W. of island in smooth weather.
Little, 1½ m. E. of Yacaaba Head...	32 42	152 15	3	Bare rock, 30 ft. high. Porphyry.
Boondelbah, 2½ m. of Port Stephens	32 42	152 15	34	Rocky islet, about 180 ft. high, patches of low scrub exist. Porphyry.
Point Stephens, 1½ m. Pt. Stephens	32 45	152 13	270	Rocky Is., 250 ft. high covered with low scrub and grass, connected with mainland by narrow spit covered at high water. Porphyry. A lighthouse on extreme easterly point shewing revolving white and red light alternately; red and white every min., with 10 secs. eclipse between the colors; white light visible 17 miles, red 12 miles.
Moon, ½ m. E. of Lake Macquarie	33 5	151 41	6	Rocky, 20 ft. high, covered with grass and scrub. Sandstone, permo-carbonif.
Flat, 1 m. S. Catherine Hill Bay ...	33 10	151 39	10	Low flat Island, 15 ft. high
Bird, 3 m. N. of North Head, and ½ m. off shore	33 13	151 37	30	Rocky, 175 ft. high, covered with grass and low scrub, is inaccessible except in smooth westerly weather. Sandstones of Narrabeen series. Triassic.
"Five Islands"— Tom Thumb, No. 1, 2½ m. E. from Tom Thumb Lagoon	34 27	150 57	6a 3r	Bare rock, 15 ft. high. Dolerite.
Tom Thumb, No. 2, 2½ m. E. from Tom Thumb Lagoon	34 28	150 58	6b	Bare rock, 20 ft. high. Dolerite.
Big, off Red Pt. ...	34 29	150 57	45a 3r	Rock and sand, light scrub, 70 ft. high. Dolerite.
Small, W. of Big Is., off Red Pt.	34 29	150 56	1a 1r	Bare rock, 50 ft. high. Dolerite.
Small, E. of Big Is., off Red Pt.	34 29	150 57	5a 3r	Bare rock, 30 ft. high, connected with Big Is. at low water. Dolerite.
Windang, ¼ m. E. Lake Illawarra	34 32	150 54	5	Bare rock and sand, about 20 ft. high. Sandstone permo-carboniferous.
Bowen, S. side of ent. to Jervis Bay	35 7	150 47	132	Rocky, with low scrub, 140 ft. high, well grassed. Sandstone, permo-carboniferous.
Green, ½ m. E. of ent. Cunjurong or Conjola Lake	35 16	150 32	22	Sand overlying rock, scrubby. Sandstone, permo-carboniferous.
Crampton (local name Tobouree), ¼ m. E. of Tobouree Lake	35 26	150 26	10	Rocky, partly grassed, about 150 ft. high, connected with main land very low tides.
Stokes, ¼ m. N.E. Termeil Point	35 27	150 25	6	Bare rock.
Brush, ¼ m. Murramarang Point...	35 32	150 26	184	140 ft. high, good soil, well grassed, honey-suckle timber and scrub. Igneous.
Belowla, ¼ m. N.N.E. O'Hara Head	35 33	150 24	20	Rocky, about 50 ft. high, low scrub and coarse vegetation. Igneous.
O'Hara, 1½ m. S.W. O'Hara Head	35 35	150 23	15	Rocks, 15 ft. high.
Dawson, No. 1, ½ m. S. O'Hara Isd.	35 35	150 22	3	Bare rocks, 10 ft. high.
" No. 2	35 35	150 22	1	" 10 "
Grasshopper, ¾ m. N. Point Upright	35 38	150 21	3	" 40 " patches vegetation.
Wasp, 2 m. from Point Upright ...	35 40	150 20	2	Rough rocks, 40 ft. high, lightly covered with sandy soil; surrounded by submerged reefs.
Flat Rock, 3½ m. N. North Head of Bateman Bay	35 41	150 19	1½	Bare rock always awash at high tide.
Tollgate, No. 1, 2½ m. S. Nth. Head	35 45	150 16	12½	Rough rocks, highest being 150 ft., with light covering of sandy soil, covered with a prickly scrub and marine growth and weeds, but no timber. Basalt.
" No. 2 " "	35 45	150 16	7½	
Broulee, 4 m. N. Moruya River ...	35 51	150 12	85	Rough rocks, covered with soil, trees, grass and scrub; surrounded by reefs.
Montague, 10 m. N.E. of Mount Dromedary	36 15	150 14	285	Split by a deep rocky chasm; the southern half attains an elevation of 250 ft. Long rank grass. The southern part is composed of granite formation and the northern of basaltic. Govt. wharf 20 x 15 ft. Landing is effected direct by boat from ship's side. Lighthouse on summit of island. The light is white, the period of system being 70 secs., composed of fixed 33 secs., eclipse 16 secs., flash 5 secs., eclipse 16 secs., visible for 22 miles.
Bullara or Lennards, 5½ m. E. S.E. Noorooma	37 0	149 57	25	Rock-bound island, 30 ft. high, fair soil, scrub-covered. Devonian sandstone.

3. *Victoria.*—(i.) *Introductory.* The accompanying statement regarding the islands of Victoria has been compiled from information furnished by the Department of Lands and Survey, elaborated somewhat chiefly as regards fauna and flora from notes supplied by Mr. A. H. Mattingley, C.M.Z.S.

(ii.) *Origin.* It appears to be generally agreed that the Australian continent at one time extended some miles lower down than its present southern boundary, and that the islands on the Victorian coast represent the denuded summits of mountain ranges that once traversed the mainland. There is, however, some difference of opinion as regards the direction of these mountain chains. Some geologists affirm that the ranges traversed a land bridge connecting Tasmania with the mainland, while others again maintain that the islands are the peaks of mountain ranges that at one time extended along the coast of Southern Australia as far as the Great Australian Bight.

(iii.) *General Characteristics.* In view of their origin, as referred to above, it is not surprising that many of the Victorian islands are remarkable for their fantastic shape. Several of them are merely tremendous masses of wind-swept rock, devoid of all vegetation, with the exception of a few hardy mosses and lichens. In some cases, it is impossible to effect a landing unless under favourable conditions of wind and tide. Others, again, possess a scanty growth of tough grasses and stunted trees, while, as the list shews, a few are well watered and fertile.

(iv.) *Fauna and Flora.* As the islands are mostly small and isolated, and untenanted by predatory animals such as the dingo or native cat, it is not surprising that they are utilised as breeding grounds by large numbers of sea-birds. For example, it is estimated that between one and two millions of mutton birds regularly nest on Phillip Island, despite the fact that about 600,000 eggs are yearly taken from the island. Fur seals, penguins, and mutton birds are found on Griffiths and Lady Julia Percy Islands, etc. Space will permit of merely a passing reference to the variety of fauna and flora characterising the islands in Port Phillip. As far as possible the information given by Mr. Mattingley has been incorporated in the tabular statement below.

(v.) *The Principal Islands and Groups.* The accompanying information regarding the principal islands or island groups may be read in conjunction with that given in the appended tabular statement.

*Anser Group.* This group consists of three small granite islands about 4 miles to the west of Wilson's Promontory, of which Cleft Island is the most picturesque. The group has been reserved for the purposes of a National Park. Two small islets 40 to 50 feet high lie between Cleft and Middle Island, and a third is situated about 200 yards N.W. of Middle Island. There is a landing place on the northern end of Anser Island.

*French Island.* This island, which is situated in Western Port, is the largest of the Victorian Islands. It is sparsely populated, and generally hilly, with the exception of the low and marshy portion at the north-west corner. Mount Wellington, the highest point, is 314 feet above sea level. The shore line is shallow, the range of tides being from 8 to 12 feet. There are six jetties available to vessels of small tonnage. Along the western arm there is a deep water channel navigable for vessels of any size. There is a fair amount of timber on various parts of the island.

*Gabo Island.* This island is situated about 4 miles S.W. of Cape Howe. The northern end consists of low boulders and is separated from the mainland by a channel which sometimes fills with drifting sand. Inland, near the centre of the island, are a few sandhills whose bare sides face S.E. On the N.W. side there is a small sandy bay with good anchorage for one vessel in all but S.W. gales. The lighthouse at the S.E. extremity was built in 1862, and shews a first order catadioptric fixed white light 179

feet above sea level, and visible for 20 miles. A life-saving rocket apparatus is maintained, and the lighthouse which is also a signal station is connected by telephone with Green Cape and thence with Sydney.

*Phillip Island.* The southern coast line of Phillip Island, which is situated at the entrance to Western Port, consists of rugged cliffs and headlands rising in some instances to 150 feet above sea level. The Nobbys and Cape Woolamai are well-known points. Close to the former are the Seal Rocks, while the latter, which rises to a height of 340 feet, is noted as a mutton-bird rookery. The island is undulating and the soil is well adapted for agriculture and grazing. On the north side is the township of Cowes, a well-known holiday resort. There are also settlements at Rhyll, four miles east of Cowes, and at Newhaven opposite San Remo.

*Raymond Island.* In the Gippsland Lakes, this island separates the division known as Lake King from that known as Lake Victoria. The surface of the island consists of low sandy ridges with marshy flats in places. It is used as a village settlement, the soil being well adapted for fruit-growing and for root crops. The native vegetation consists of stunted gum, ti-tree, bracken, and heath. McMillan Strait on the west side of the island is navigable for vessels drawing up to nine feet, and is the approach to Paynesville, a fishing village on the mainland.

*Seal or Direction Group.* This group consists of several small rugged islets almost devoid of vegetation with the exception of a little coarse grass. Seal Island is the northernmost and largest. Close to this island is the White Rock, 33 feet high, and two smaller rocky islets. *Notch Island* is the second largest of the group. The notch is due to the two hills on the island. *Cliffy Island.* On this island a lighthouse was erected in 1884. The light, which is 180 feet above sea level, is a third order dioptric flashing white light giving five flashes and eclipses alternately in every minute, and is visible for 15 miles. A rocket life-saving apparatus is also kept here.

*Snake Island* lies between Corner Inlet and Port Albert. The island, which is reserved as a site for a public park, consists of high sand hills with intervening flats of sandy loam, and is gradually crumbling away into the sea. The narrower portion at the east end is over  $1\frac{1}{4}$  miles in length, and is separated at high water from the main island. The vegetation comprises stunted gum, honeysuckle, ti-tree, bracken, heath, and tussocky grass. Most of the land birds from the adjacent mainland are found on the island. Wallabies, kangaroo, red deer, wild pigs, opossums, and native bears are also met with. Permanent water is available.

*Sunday Island* is situated two miles S.W. of Port Albert, and is composed of sand hills with intervening flats of sandy loam. Like the preceding island, Sunday Island is also gradually crumbling into the sea. At the eastern end there is a pilot station with fixed white light 32 feet above sea level. The vegetation is similar to that on Snake Island.

*Swan Island* lies in Port Phillip Bay, near Queenscliff. It is low and marshy with a ridge of sand hills along the western shore, and is connected with Queenscliff by a tramway across the shallow opening forming the south entrance to Swan Bay. The island is used almost entirely for military purposes.

*Tortoise Island* is in Western Port and close to French Island. It is flat-topped with a conspicuous headland on the southern portion known as Tortoise Head. Twenty acres of the island have been reserved for defence purposes. About 80 acres consist of highlands of rich volcanic soil, the remainder being flat salt marsh.

## ISLANDS OFF THE COAST OF VICTORIA.

Name of Island and Geographical Position.	Highest point above Sea Level. Feet.	Nearest distance to Mainland. Miles.	Greatest Length. Miles.	Greatest Breadth. Miles.	Area. Acres.	Geological Characteristics, Fauna, Flora, etc.
Anser Group—						
Anser, 4½ m. W. of Wilson's Promontory	498	1½	1	¾	190	Granite. Flora and Fauna identical with that of the Glennie Group (see below)
Unnamed, ½ m. S.W. Anser	312	2½	¾	¾	80	Granite
Cleft, ¾ m. W. Middle Island	371	2½	¾	¾	15	
Barton (1) in Lake Victoria	—	—	—	—	88	Tertiary, sand, and mud
Baxter (1) or Pelican, in L. King	—	—	—	—	22	
Benison, in Corner Inlet	—	1½	—	—	—	Granite. Reserved for National Park and set apart for the preservation of native game
Bird Rocks, S. of Waratah Bay	60	—	—	—	—	3 in number. Fauna—Sooty oyster catchers ( <i>haematopus unicolor</i> ), terns. Flora— <i>Mesembrianthemum</i> , moss.
Breakwater, nr. Warrnambool 200 yds. E. of Middle Island	18	¾	—	—	—	Tertiary, calcareous and sandy beds. The Breakwater pier, connected by rail with the Town of Warrnambool, extends from this rock about 1000 ft. in a N.E. direction, and is connected with the shore at the East of Merri Creek entrance by a timber viaduct
Bullock, near Welshpool, ½ m. E. of Little Dog Island	—	¾	1½	¾	170	Tertiary, sand and mud. See the remarks against Dog Island. 118 acres alienated
Bullock (1) in Lake King, at entrance to Cunningham Arm	—	¾	¾	¾	12	Tertiary, sand, and mud. A white light, visible 3 miles in clear weather, is shewn from the outer end of the rocky wall extending S.E. from Bullock Island, and marks the North side of the entrance to Cunningham Arm
Churchill, in Western Port, 1 mile N.W. of Newhaven	—	1½	1½	¾	140	Tertiary, older. Separated from Phillip Id. by a narrow passage. 140 acres alienated
Citadel	—	—	—	—	—	See Glennie Group
Cleft	—	—	—	—	—	See Anser Group
Cliffy	—	—	—	—	—	See Seal or Direction Group
Clonmel, 1 m. S.E. Sunday Id.	—	—	—	—	—	This Island has recently disappeared, the sea waters now breaking over it
Crescent (1) in Lake Victoria	—	¾	¾	¾	24	Tertiary, sand, and mud
Direction Group, nr. Wilson's Promontory	—	—	—	—	—	See Seal or Direction Group
Do-Boy, in Corner Inlet, 2 m. from W. Shore	—	2½	—	—	—	Granite. Reserved for National Park and the preservation of native game. Fauna—Mutton birds. Flora— <i>Mesembrianthemum</i> and coarse grasses
Dog, near Corner Inlet	—	¾	1½	¾	460	Tertiary, sand, and mud. Connected with mainland at low water. Flat, sandy loam. Vegetation—Ti-tree, bracken, and coarse tussocky grass. 415 acres alienated
Eagle's Nest Rock, 3 m. E. of Cape Patterson	59	¾	—	—	—	Mesozoic, sandstone shales and mudstones. A conspicuous rock. Ospreys ( <i>pandion leucocephalus</i> ) use it as a breeding ground
Elizabeth, in Western Port, ½ m. S. of French Island	60	2½	¾	¾	64	Tertiary, older basalt. Grass covered, no timber. 64 acres alienated
Flannagan's (1) in Lake King	—	¾	2	¾	250	Tertiary, sand, and mud. Separated from mainland by Reeves Channel. 193 a. alien.
Fraser (1) in Lake King	—	¾	¾	¾	96	Tertiary, sand, and mud. Separated from the islands on either side by a narrow channel. 70 acres alienated
French, in Western Port	314	1½	11	7½	41300	Tertiary, older basalt; Mesozoic, sandstone shales, and mudstones. 18,200 a. alienated
Gabo, 4 m. S.W. of Cape Howe	171	¾	1½	¾	372	Syenite
Glennie Group—						
Great Glennie, 4 m. W. from Oberon Point, Wilson's Promontory	455	4½	1½	¾	340	Saddle-shaped, and strewn over with blocks of granite which give it a castellated appearance. This group has been set apart as a sanctuary for game. Flora— <i>Mesembrianthemum</i> , coarse grasses, and some unnamed shrubs. Fauna—Cape Barren geese, mutton birds, penguins, lizards
Unnamed, S. Great Glennie	251	4½	¾	¾	65	Granite
Citadel, S. Unnamed Island	367	4½	¾	¾	40	Granite. Is circular in shape and so named owing to resemblance of ancient fortress
Unnamed, E. Citadel Island	215	4½	¾	¾	25	Granite
Granite, in Corner Inlet	—	1½	—	—	—	Granite. Reserved for National Park and set apart for preservation of native game

## ISLANDS OFF THE COAST OF VICTORIA—Continued.

Name of Island and Geographical Position.	Highest point above Sea Level, Feet.	Nearest distance to Mainland, Miles.	Greatest Length, Miles.	Greatest Breadth, Miles.	Area, Acres.	Geological Characteristics, Fauna, Flora, etc.
Griffith, off Port Fairy ...	74	$\frac{1}{2}$	$\frac{5}{8}$	$\frac{1}{2}$	76	Tertiary, newer basalt. The low portion at its N.E. end was formerly known as Rabbit Is. but has been joined by artificial means. Sand hummocks are the principal features of the island. On the E. end is a dioptric flash red light of the 4th order, elevated 41 ft. above sea level and visible 9 miles in clear weather. Fauna—Mutton birds in small numbers; also visited by smaller land birds from mainland. Flora—Similar to that of Lady Julia Percy Is. (see below)
Helen Rock, 6 m. W. Warrnambool	—	1 $\frac{1}{2}$	—	—	—	Tertiary, calcareous, and sandy beds. This rock is of pinnacle shape
Lady Julia Percy, 21 m. E. of Cape Nelson	155	5 $\frac{1}{2}$	1	$\frac{1}{2}$	—	Tertiary, newer basalt. Is of triangular form flat topped and cliffs on all sides. Fauna—Rabbits, some few thousand seals, penguins, mutton birds. Flora—Native mallow, coastal wattle, mosses, lichens, pig-faced weed (mesembrianthemum), coarse grasses
Latrobe ...	—	—	—	—	—	See Snake Island
Lawrence Rocks, 1 m. S.E. of Danger Point, near Portland	132	1 $\frac{1}{2}$	—	—	—	Tertiary, newer basalt. Two small but conspicuous islets, visited by gannets, whale birds, mutton birds, penguins. On smaller islet—cormorants, black cheeked falcons. Flora—Mesembrianthemum (aquilaterale), moss, lichen
Little Dog, near Welshpool ...	—	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	170	Tertiary, sand, mud. See remarks Dog Isd.
Little Snake, N.W. Snake Isd.	—	$\frac{1}{2}$	3	1 $\frac{1}{2}$	1200	Tertiary, sand, and mud. Flat, sandy loam. Connected with Snake Isd. at low water. Vegetation—Messmate and gum, honey-suckle, ti-tree, heath, and bracken
Mangrove, in Corner Inlet ...	—	—	1 $\frac{1}{2}$	$\frac{1}{2}$	750	Tertiary, sand and mud
Merri, 100 yds. S.E. Pickering Point, Warrnambool	47	1 $\frac{1}{2}$	1 $\frac{1}{2}$	$\frac{1}{2}$	14	Tertiary, calcareous, and sandy beds. Connected with the shore at low water
Middle, near Warrnambool ...	18	$\frac{1}{2}$	—	—	—	Tertiary, calcareous, and sandy beds. This island, together with Merri Is. and Breakwater Rock, form the Warrnambool Harbour, and is almost joined by rocks to Merri Island
Mud, in Port Phillip Bay ...	—	3 $\frac{1}{2}$	1	$\frac{1}{2}$	—	Tertiary, raised beaches, sand, and mud. Low mud and sand banks. Fauna—Frequented by storm petrel (pelagodroma marina) and hosts of other sea birds. About 40 species of birds use island as a nesting place. Flora—About 20 varieties
Norman, 1 $\frac{1}{2}$ m. S. of Tongue Point, Wilson's Promontory	315	1 $\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	125	Granite. May be known by its two peaks, the highest and northern of which is 315 ft. Reserved for National Park purposes. Fauna—Penguins, mutton birds, Cape Barren geese, hooded dotterel, oyster catchers. Flora—Mesembrianthemum, coarse grass
Notch ...	—	—	—	—	—	See Seal or Direction Group
Pelican Islet, in Western Port	4	$\frac{1}{2}$	$\frac{1}{2}$	1 $\frac{1}{2}$	—	Tertiary, older basalt
Phillip, at entrance ..	340	$\frac{1}{2}$	12	5 $\frac{1}{2}$	24300	Tertiary, older basalt, granite. 21,500 acres alienated. Fauna—Mutton birds, petrels, penguins, wallabies, rabbits and hares, snakes, lizards. Flora—Similar to mainland
Quail, in Western Port ...	—	60 yds	—	—	2000	Tertiary, sand, and mud. A low, marshy island, scrub covered (ti-tree)
Rabbit, E. of Wilson's Prom.	194	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	50	Granite. Reserved for National Park. Is a good mark for vessels proceeding northward to Corner Inlet
Rabbit Rock, between Rabbit Island and the mainland	50	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	—	Granite. Fauna—Rabbits (introduced), penguins, silver gulls, oyster catchers. Flora—Mesembrianthemum, coarse grasses
Rag ...	—	—	—	—	—	See Seal or Direction Group
Raymond, E. of Paynesville...	—	$\frac{1}{2}$	3 $\frac{1}{2}$	1	1950	Tertiary, sand, and mud. 1310 ac. alienated
Reef, in the east arm, Western Port	—	$\frac{1}{2}$	$\frac{1}{2}$	1 $\frac{1}{2}$	—	Tertiary, older basalt. Surrounded by rocks that also connect it with mainland

## ISLANDS OFF THE COAST OF VICTORIA—Continued.

Name of Island and Geographical Position.	Highest point above Sea Level. Feet.	Nearest distance to Mainland. Miles.	Greatest Length. Miles.	Greatest Breadth. Miles.	Area. Acres.	Geological Characteristics, Fauna, Flora, etc.
Rigby (1) in Lake King ...	—	$\frac{1}{2}$	$1\frac{1}{2}$	$\frac{1}{2}$	350	Tertiary, sand, and mud. Except the alienated land this island is reserved for public purposes. On an iron beacon, 28 ft. above sea level, is a fixed white light (shows red between S. 40 E. and S. 86 E.) 40 a. alien.
Rotamah (1) at entrance Lake Reeve, off Sperm Whale Hd.	—	$\frac{1}{2}$	$2\frac{1}{2}$	$\frac{1}{2}$	680	Tertiary, sand, and mud. 88 ac. alienated
Rotten (1) in Lake Victoria ...	—	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	36	
Sandstone, in Western Port ...	50	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	55	Palæozoic, sandstone, and slate. 55 a. alien.
Seal or Direction Group—						
Seal, 16 m. N.E. Wilson's P.	154	$9\frac{1}{2}$	$2\frac{1}{2}$	$\frac{1}{2}$	45	Granite
Notch, 1 m. S.E. of Seal Isd.	123	$10\frac{1}{2}$	$1\frac{1}{2}$	$\frac{1}{2}$	20	"
Rag, $\frac{1}{2}$ m. S. of Notch Island	94	$10\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	12	"
Cliffy, $1\frac{1}{2}$ m. S.E. "	144	$11\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	20	Granite. Fauna—A few hundreds of fur seals, penguins, mutton birds, terns. Flora—Mesembrianthemum, coarse grass
Shellback, $1\frac{1}{2}$ m. N.W. of Tongue Point, Wilson's Prom.	357	$1\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	70	Granite. The northernmost of the islands on the W. coast of Wilson's Promontory. Permanently reserved for National Park purposes. Summit 357 ft. high. Fauna—Penguins, mutton birds. Flora—Mesembrianthemum, coarse grass
Snake or Latrobe, between Corner Inlet and Port Albert	60	$1\frac{1}{2}$	$8\frac{1}{2}$	3	11500	Tertiary, sand and mud
Snake (1) in Lake King ...	—	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	7	
St. Margarets or McCrae in Shoal Inlet, 5 m. N.E. of Port Albert	72	$\frac{1}{2}$	$4\frac{1}{2}$	$2\frac{1}{2}$	4500	Tertiary, sand and mud. Flat sandy loam. Vegetation, small gum, ti-tree, bracken, heath, and coarse tussocky grass. 22 ac. alienated
Sunday, 2 m. S.W. Port Albert	41	$1\frac{1}{2}$	$4\frac{1}{2}$	2	2650	Tertiary, sand, and mud. 1858 ac. alien.
Swan, in Port Phillip Bay ...	—	$\frac{1}{2}$	2	1	773	Tertiary, raised beaches, sand, and mud. Flora and fauna similar to Mud I., except that petrels are absent. Brown snakes occasionally met with. 773 ac. alienated
The Skerries (Rocks) South of Wingan Pnt., Croajingolong	42	—	—	—	—	Granite. Three in number, height 42 feet above the sea. Small colony of fur seals.
Tortoise, in Western Port ...	101	$1\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	220	Tertiary, older basalt. 174 ac. alienated
Tullaburga, 3 m. W. Gabo Isd.	28	—	—	—	—	Granite, (?) Covered with mesembrianthemum & coarse grass. Infested by rabbits
Unnamed (1) one of a group in Lake Victoria	—	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	56	Tertiary, sand, and mud. Separated from Waddy Is. and Jubilee Head by narrow channels
Unnamed (1) one of a group in Lake Victoria	—	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	20	Tertiary, sand, and mud. Separated from Waddy Is. and Jubilee Head by narrow channels
Unnamed (Two) near Wilson's Promontory	—	—	—	—	—	See Glennie group
Unnamed, nr. Wilson's Prom.	—	—	—	—	—	See Anser group
Unnamed (1) in Lake Reeve ...	20 y	$1\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	—	Tertiary, sand, and mud
Unnamed (1) S. end Lake Reeve	—	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	270	Tertiary, sand, and mud. 230 ac. alienated
Waddy (1) in Lake Victoria ...	—	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	56	"
Wallaby (1)	—	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	12	"
Wattle, 1 m. S.E. of Wilson's Promontory	270	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	60	Granite. Permanently reserved for National Park purposes. Flora—Mesembrianthemum, coarse grass, etc. Fauna—Penguins, mutton birds, oyster catchers

NOTE.—(1) Islands in the Gippsland Lakes. Slightly undulating with sand ridges. Vegetation—Apple, honeysuckle, ti-tree, and bracken.

4. **Queensland.**—The accompanying information regarding the islands off the coast of Queensland has been compiled from particulars supplied by the Lands Department of that State. These islands are all Crown lands, except where mentioned.

## ISLANDS OFF THE COAST OF QUEENSLAND.

Name of Island.	Geographical Position.		Distance from Main'nd. Miles	Area in Acres.	Description.

5. **South Australia.**—The accompanying information in regard to the Islands of South Australia has been compiled from particulars furnished by the Lands Department of that State.

## ISLANDS OFF THE COAST OF SOUTH AUSTRALIA.

Names of Islands.	Geographical Position.		Distance from Mainland Miles	Area in acres (approximate).	Description.
	Lat. S.	Long. E.			
Albatross (c) ...	35 3	136 12	12	15	Rocky Island, South of Thistle Island.
Althorpe Islands (c) ...	35 22	136 54	5	300	Three islets with several rocks and reef, highest part 285 ft., lighthouse, cable communication
Beatrice (c) ...	35 38	137 43	24	25	Near Nepean Bay, low and sandy.
Bicker Islands (c) ...	34 44	135 58	3	50	Two small rocky islands near Port Lincoln.
Blyth (c) ...	34 33	136 18	12	10	In Sir Joseph Banks' Group.
Boston (f) ...	34 42	135 57	2	2,000	Near Pt. Lincoln, hilly, light wooded, 319 ft. high
Boucaut (c) ...	34 38	136 22	17	25	In Sir Joseph Banks' Group.
Busby (c) ...	35 37	137 40	26	25	Near Nepean Bay, low and sandy.
Cap (c) ...	33 57	135 8	5	20	West of Eyre's Peninsula.
Casuarina (c) ...	36 3	136 42	57	10	Near Cape De Coudie, known as 'The Brothers'
Dalby (c) ...	34 33	136 15	8	30	In Sir Joseph Banks' Group.
Dog (c) ...	32 39	133 22	20	150	One of St. Francis' Group in Nuyt's Archipelago
Duffield (c) ...	34 39	136 20	15	22	In Sir Joseph Banks' Group, includes sand spit, and rock.
Eba (c) ...	32 41	134 17	1	300	In Streaky Bay.
Egg (c) ...	32 38	133 21	20	150	One of St. Francis' Group, in Nuyt's Archipelago
English (l) ...	34 38	136 12	9	10	In Sir Joseph Banks' Group.
Evans (c) ...	32 22	133 30	13	300	In Nuyt's Archipelago.
Ewe (l) ...	35 33	138 57	1	548	In Lower Murray, swampy.
Eyres (c) ...	32 21	133 50	3	2,500	In Nuyt's Arch., sandridges & mangrove swamps
Fenelon (c) ...	32 34	133 20	27	200	In St. Francis' Grp., steep, rocky, highest 189 ft.
Flinders (l) ...	33 44	134 31	18	9,000	Largest of Investigator's Group, limestone cliff, sandy beach, undulating, wooded, pasture.
Franklin Islands (c) ...	32 27	133 39	12	1,000	Two ids. and a pyramidal rock in Nuyt's Arch.
Freeling (c) ...	32 29	133 22	20	40	One of St. Francis Group, Nuyt's Archipelago.
Four Hummocks The (c)	34 44	135 3	17	200	Four Islands in Whidbey Group, highest 362 ft.
Gambier Islands ...	...	...	...	2,500	Comp. Wedge Id. and 3 islets, Spencer's Gulf.
Germeins (c) ...	33 13	134 41	1	500	In Venus Bay.
Goat (c) ...	32 18	133 32	10	700	In Nuyt's Archipelago, highest part 195 ft.
Goose (c) ...	34 27	137 23	3	5	In Spencer's Gulf, near Port Victoria.
Godfrey's Islands (c) ...	37 5	139 43	2	100	Near Cape Jaffa.
Granite (c) ...	35 33	133 37	1	80	Connected mainland by jetty, highest 140 ft., breakwater, pleasure resort, in Encounter Bay
Grantham (c) ...	34 46	135 53	1	100	Near Port Lincoln.
Greenly (c) ...	34 49	134 49	18	500	S.W. Coffin Bay, peaked summit 755 ft. high, locally known as "The Cow and Calf."
Grindal (l) ...	34 54	136 2	2	250	In Thorny Passage, 84 ft. high.
Harts (c) ...	32 35	133 10	27	30	One of St. Francis' Group, Nuyt's Archipelago
Hareby (c) ...	34 34	136 19	12	60	In Sir Joseph Banks' Group.
Hindmarsh (f 11,047 ac.)	35 30	138 54	1	11,500	Flat and swampy, near mouth of Murray River.
Hopkins (l) ...	34 57	136 4	3	400	Near Port Lincoln.
Investigator's Group ...	...	...	...	...	W. of Eyre's Peninsula, consists Waldegrave, Topgallant, Ward, Pearson's & Flinders Ids.
Jones (l) ...	33 11	134 23	1	22	In Beard's Bay.
Kangaroo (f 112,039 ac., l 417,125 ac., c 546,036 ac.)	35 32	136 34	1	1075,200	3 lighthouses, cable communication, highest point 900 ft., reserve for native fauna & flora.
Kirkby (c) ...	34 32	136 13	7	50	In Sir Joseph Banks' Group.
Lacy Islands (c) ...	32 23	133 23	13	300	Two rocky islets & detached reef in Nuyt's Arc.
Langton or Milne (l) ...	34 35	136 15	10	60	In Sir Joseph Banks' Group.
Lewis (l) ...	34 57	136 3	2	75	Near Port Lincoln.
Liguanea (c) ...	34 59	135 38	3	500	S. of Eyre's Peninsula, highest part 127 ft., flat and barren, cliffs on coast, coral bottom.
Little (c) ...	34 56	136 2	2	50	Near Port Lincoln.
Lounds (c) ...	32 16	133 23	5	50	In Nuyt's Archipelago, highest part 67 ft.
Louth (c) ...	34 34	135 58	2	450	In Louth Bay, Spencer's Gulf, highest part 76 ft., rocky points and sandy bays.
Long (l) ...	35 31	139	1	1,315	In mouth of River Murray, swampy.
Lusby (c) ...	34 32	136 16	9	30	In Sir Joseph Banks' Group.
Marum (c) ...	34 30	136 15	8	10	
Masilion (c) ...	32 33	133 20	25	500	One of St. Francis' Group, Nuyt's Archipelago.
Milne or Langton (l) ...	34 35	136 15	10	60	In Sir Joseph Banks' Group.
Mundoo (f 2202 a., l 1942 a.)	35 32	138 56	1	3,144	In mouth of River Murray, sandy and swampy.
Neptune Ids.—South (c)	35 22	136 7	26	500	Three small rocky islands, lighthouse, granite cliff N.W. of Isle, 160 ft. high.
North (c) ...	35 14	136 4	18	600	
Nobby (c) ...	35 58	137 18	52	30	In Vivonne Bay, South of Kangaroo Island.
Nuyt's Archipelago ...	...	...	...	...	Comprises 4 Groups: St. Francis Isles, Franklin Ids., Purdies Ids., Lacy Isles, also St. Peter's, Goat, Eyre's and Evans' Islands.
Olive (c) ...	32 44	133 58	5	30	Near Streaky Bay, rocky, 60 ft. high.

## ISLANDS OFF THE COAST OF SOUTH AUSTRALIA—Continued.

Name of Island.	Geographical Position.		Distance from Mainland, Miles	Area in Acres (approximate).	Description.
	Lat. S.	Long. S.			
Pages, The (c) ...	35 45	138 18	8	50	Two groups of barren rocks about 60 ft. high, in Backstair's Passage, area 100 ac. at low water.
Partney (c) ...	34 31	136 15	89	100	In Sir Joseph Banks' Group.
Pearsons (c) ...	33 57	134 18	40	700	In Investigator's Group, sanctuary for seals and wallaby.
Perforated (c) ...	34 44	135 11	10	300	In Whidbey Group, S.W. of Eyre's Peninsula.
Penguin (c) ...	37 30	140	2	5	Rivoli Bay North, lighthouse station.
Pelorus (c) ...	36 5	137 33	5	50	Three islets S. of E. part of Kangaroo Island.
Price (c) ...	34 42	135 21	1	145	Near Coffin's Bay, one of Whidbey Group.
Purdies (c) ...	32 16	132 17	5	100	The N.W. of Nuyt's Archipelago, islet & rocks.
Pullens (c) ...	35 33	138 42	4	25	Near Port Elliot, rocky.
Rabbit No. 1 (l) ...	34 36	136	3	50	N.E. Port Lincoln.
" 2 (c) ...	34 51	136 1	3	20	S.E. "
" 3 " ...	34 36	135 27	1	10	In Coffin's Bay.
Reevesby (l) ...	34 30	136 17	10	915	In Sir Joseph Banks' Group.
Reedy (c) ...	35 33	139 1	2	387	Within mouth of River Murray.
Rocky No. 1 (c) ...	34 15	135 18	3	40	North of Coffin's Bay rocky islet, 17 ft. high.
" 2 " ...	34 50	134 44	28	20	S.W. Eyre's Peninsula, granite islet, 17 ft. high.
Roxby (l) ...	34 35	136 20	13	200	In Sir Joseph Banks' Group, highest part 74 ft.
Seal (c) ...	35 34	138 33	2	3	In Encounter Bay, rocky islet.
Sibsey (l) ...	34 33	136 11	10	50	In Sir Joseph Banks' Group, highest part 80 ft.
Sinclair (c) ...	32 9	133	24	6	In the Great Bight, rocky, highest part 53 ft.
Sir Joseph Banks Group	...	...	...	...	Comprises Spilsby, Reevesby, Stickney, Roxby, Partney, Winceby, Tumby, Hareby, Milne, Langton, Kirkby, Sibsey, Lusby, Boucaut, Duffield, Blyth, English, Marum, and Dangerous Reef, all in Spencer's Gulf.
Smooth (c) ...	32 29	133 21	21	30	One of St. Francis' Group, steep, round, and smooth, 115 ft. high.
Smith (c) ...	34 58	136 2	2	90	Near Port Lincoln, highest part 73 ft., slightly undulating with coarse herbage.
Spilsby (l) ...	34 39	136 21	17	1,050	In Sir Joseph Banks' group, low cliffs, sandy beaches, fresh water, wooded, 163 ft. highest.
St. Peters (l) ...	32 17	133 36	3	8,200	In Nuyt's Archipelago, part hilly, part sand bank, granite rock, fresh water, 144 ft. highest.
St. Francis Islands	...	...	...	...	S.W. Group of Nuyt's Archipelago, comprising St. Francis, Masillon, Fenelon, Egg, Dog, West No. 1, Harts, Smooth and Seal Islands.
St. Francis (l) ...	32 30	133 20	22	2,000	Largest of St. Francis' Group, in Nuyt's Archipelago, steep cliffs, highest part 264 ft.
Stickney (l) ...	34 40	136 17	15	200	In Sir Joseph Banks' Group, 100 ft. high, slightly undulating, with coarse herbage.
Tauwicheerie (c) ...	35 34	139	1	356	Near mouth of River Murray, swampy.
Taylor's (l) ...	34 52	136 1	2	600	Near Port Lincoln, fair pasture, rocky outline, highest part 227 feet.
Thistle (l) ...	35	136 10	6	9,700	At entrance to Spencer's Gulf, white and brown cliffs, fair pasture, highest part 772 feet.
Topgallant (c) ...	33 43	134 38	15	50	Small high islet, and 3 rocks in Investigator's Group, cliff 250 ft., rounded summit 330 ft.
Torrens (c) ...	34 47	138 32	3	1,900	In N. arm of Port Adelaide River, Quarantine Station, parts sandy and swampy, fair pasture
Troubridge (c) ...	35 7	137 50	4	5	In Gulf St. Vincent, Low Island, 15 ft. high, shoal and reef, lighthouse.
Tumby (l) ...	34 24	136 9	1	75	In Sir Joseph Banks' Group, cliffs 37 ft. high.
Waldegrave (l) ...	33 36	134 49	2	800	Two islands in Investigator's Group, steep cliff, flat top, grassy, 120 ft. high.
Ward Isles (c) ...	33 45	134 19	33	50	Two small islets in Investigator's Group, cliff, flat top, 162 ft. high.
Wauralte or Wardang (l) ...	34 30	137 22	3	5,000	In Spencer's Gulf, near Port Victoria, bold outline, sandy beaches, cliffs, 107 ft. high, pasture
West No. 1 (c) ...	32 30	133 19	22	150	In St. Francis' Group, in Nuyt's Archipelago, narrow bare island, highest part 25 ft.
" 2 " ...	35 36	138 36	1	25	Near Port Elliot, stony islet, scant herbage.
Wedge (f) ...	35 9	136 23	24	2,340	One of Gambier Islands, 3 sides cliffs, highest part S.E. end, 662 ft., good pasture.
Whidbey Isles	...	...	...	...	S.W. of Eyre's Peninsula, consisting of Perforated, Four Hummocks, Price, etc.
Williams (c) ...	35 1	135 59	2	350	S. of Cape Catastrophe, Eyre's Peninsula, rugged, nearly flat.
Winceby (l) ...	34 23	136 17	10	100	In Sir Joseph Banks' Group, slightly undulating with coarse herbage.
Wright's (c) ...	35 35	138 37	3	5	At Encounter Bay, stony islet, scant herbage.

(c) Crown Lands. (f) Freshhold Lands. (l) Leased Lands.

**6. Northern Territory of Australia.**—(i.) *Introductory.* The accompanying information regarding the islands off the coast of the Northern Territory has been compiled from particulars supplied by the Secretary to the Department of External Affairs. A systematic survey of the whole of the islands has not yet been carried out, hence the number of lacunæ in the table.

(ii.) *The Goulburn and Other Islands.* In 1910, Mr. Nicholas Holtze, curator of the Botanic Gardens at Darwin, was instructed by the Government Resident of the Northern Territory to inspect the North and South Goulburn Islands, and as many other islands in the vicinity as time would permit. The notes herewith have been taken from Mr. Holtze's report.

*South Goulburn Islands.* Area 30 square miles. A fine sheet of fresh water was discovered in the north-western portion of the island. Separated from the sea by a sandy beach about 88 yards wide it follows the coast for  $1\frac{1}{4}$  miles, and then turns at right angles into a paper bark swamp carrying water for another half-mile. This expanse is about four feet deep, and varies in width from 120 to 140 yards. The surrounding country is of a light sandy nature, but is eminently suitable for india rubber, sisal hemp, cocoanuts, peanuts, or cotton. Indeed, cotton of good quality of the sea island type was discovered growing wild. There are between 4000 and 5000 acres of this class of country. Other portions of the island would be very suitable for Para rubber and cocoanuts, while there is some fair pastoral country. Large quantities of chicken pearl-shell were noticed lying about the different natives' camps. The shell had been gathered for food from the inshore reefs, and its profusion would seem to indicate good pearling grounds in the deeper waters.

*North Goulburn Island.* Area 14 square miles. This island contains a large paper bark swamp surrounded with good loamy soil suitable for Para rubber, cocoanuts, or upland rice. Much of the remaining area could be used for growing sisal hemp, or for pastoral purposes. Fresh water can be obtained by sinking shallow wells.

*Valentia Island.* The higher ground on this island is composed of stony ironstone soil heavily timbered, chiefly with *Eucalyptus tetradonta*, and suitable for the cultivation of sisal hemp. The lower portions consist of light sandy soil well adapted for the growth of cocoanuts and sisal. Depressions along the coast contain well-grown trees of paper bark (*Melaleuca leucadendron*) and evidence the presence of water.

*Templer's Island.* Portions of this island could be utilised for the growth of sisal hemp and cocoanuts. Water could be obtained by shallow sinking.

*Darch Island* is about 3 miles long, with a width of  $1\frac{1}{2}$  miles. There is some good timber, principally woolly-butt (*Eucalyptus miniata*), on the north-eastern point. The lower levels carry a heavy growth of grass. About 1000 acres would be suitable for upland rice, Ceará rubber, cocoanuts, and cotton, and the remainder of the island could be utilised for sisal hemp.

*Croker Island.* Area 126 square miles. Mr. Holtze reports that this island contains a large area of land very suitable for agricultural purposes. Surface water is plentiful. Numerous tracks of pigs, the progeny of those turned out years ago, were constantly met with. The southern point of a large bay on the north-west is well timbered with different species of eucalypts, and the soil appears fitted for the growth of upland rice, Ceará rubber, tobacco, cocoanuts, cotton, and sisal hemp. Inland, the soil is of a lighter texture, but well timbered and suitable for the growth of several tropical products. A large portion of the island consists of low, swampy country, which, when drained, would undoubtedly prove very fertile.

*Melville Island.* Area 2400 square miles. Here the first landing was effected at an unnamed point about 10 miles N.E. of Cape Keith. A jungle of large extent borders the long sandy beach, and the soil, though light in texture, would grow Ceará rubber, cocoanuts, cotton, or sisal hemp. A second landing was made at Cape Keith. The country in the vicinity consists of open forest, with light loamy soil of good character, well suited for the growth of tropical products. At Cape Gambier, where a third landing was made, the soil was found to be a light sandy loam, suitable for cocoanuts and sisal. Water can be obtained by shallow sinking in addition to that furnished by more or less permanent creeks. The buffalo was introduced on the island some years ago and there are now fairly large herds roaming in a wild state.

## ISLANDS OFF THE COAST OF THE NORTHERN TERRITORY OF AUSTRALIA.

Name of Island.	Area. Acres.	Nearest Point to Main- land.	Locality.
		Miles.	
Alger ... ..	—	4	N.E. of Point Napier
Astel ... ..	—	4	One of English Co. Is., N.E. of Buckingham Bay
Bathurst ... ..	503,040	39	Adjoining Melville Is.
Barron ... ..	—	1	Near mouth of South Alligator River
Burford ... ..	—	3	Dundas Strait
Banyan ... ..	—	3	Castlereagh Bay, mouth of Goyder River
Bromby Isles ... ..	—	5	N.E. of Cape Wilberforce
Bickerton ... ..	—	4	Near Blue Mud Bay
Bustard ... ..	—	19	Near Groote Eylandt
Beatrice ... ..	—	3	Mouth of Limmen Bight River
Buchanan Islets ... ..	—	—	Near S. entrance of Apsley's Strait
Bosanquet ... ..	—	4½	One of English Co. Is., N.E. of Buckingham Bay
Clump ... ..	—	3	Near entrance to Fitzmaurice and Victoria Rivers
Croker (L) ... ..	80,640	2	Bowen Strait
Cowlard ... ..	—	5½	Mount Norris Bay
Copeland ... ..	—	1½	" "
Crocodile ... ..	—	—	Castlereagh Bay
Connexion ... ..	—	20	Near Groote Eylandt, Gulf of Carpentaria
Chasm ... ..	—	27	" "

7. **Western Australia.**—(i.) *Introductory.* The information given herewith regarding the islands off the coast of Western Australia has been prepared from returns furnished by the Department of Lands and Survey of that State, and from notes dealing principally with geology and physiography furnished by Mr. H. P. Woodward, Assistant Government Geologist.

(ii.) *General.* In view of the fact that a complete survey has not yet been made, it is impossible to give a detailed description of the whole of the islands. They have therefore been divided into groups commencing from the north, and the salient features of each group are described below.

(iii.) *The Various Groups.* (a) In the first group are included the islands off the coast of the Kimberley division, between Cape Londonderry on the east to Collier Bay on the west. These islands consist of severed portions of the mainland tableland, and are composed of horizontally bedded shales and quartzites, presumably of Lower Carboniferous age. They rise abruptly from the sea to a height of 100 feet or more, and in many cases it is difficult, if not impossible, to effect a landing on them. Some of them are of considerable extent, as the list shews, but so far they have not been put to any practical use, while they do not promise to be of any value in the future except for pastoral purposes.

(b) *The Buccaneer Archipelago.* This group consists of a number of rough islands composed of crystalline rocks. Little is known about them, and with the exception of the magnificent iron lodes on Koolan Island they have not yet yielded anything of commercial value.

(c) *Lacepede Islands.* This group of islands, surrounded by shoals, is, as the list shews, situated in lat. 17.47 and long. 122.10 at about 17 miles from the mainland. They were at one time leased to a company which proposed to work the phosphate deposits found thereon, but, owing to the limited extent of the deposits, the project was abandoned.

(d) *The Dampier Archipelago.* This group consists of a number of large rock-bound islands lying off the N.W. coast, between long. 115° and 116° and lat. 20° to 21°. They are composed of andesites and vesicular lavas belonging to the older volcanic series. Nothing of any commercial value has, up to the present, been found in this group, but some of the larger islands are used as sheep runs. Depuch, which is an island of similar type, lies about 50 miles to the eastward of the group.

(e) *Monte Bello Islands.* The largest island of this group is Barrow Island, upon which, some years ago, a turtle fishery and preserving works were in operation, but the works have been abandoned.

(f) *Shark's Bay Group.* In this group are found the three largest islands on the coast, viz., Dirk Hartog, Bernier, and Dorre. They are composed of tertiary limestones. The first is used as a sheep station, while on the two latter are situated the Aboriginal Lock Hospitals maintained by the Government.

(g) *Houtman's Abrolhos.* This is a group of low limestone islands between 40 and 50 miles from the coast. They contain extensive deposits of phosphorised limestone, which, in consequence of the large number of sea-fowl nesting there, are slightly impregnated with ammonia, and hence are largely used as fertilisers. Owing to their position the islands were a constant menace to the old Dutch navigators, who, after rounding the Cape, made for the coast in their vicinity.

(h) *Rottneest, Garden, Carnac Islands.* These are recent limestone islands near Fremantle. Rottneest is used as a native penal settlement, and until recently salt was manufactured there by evaporation of sea water. The three islands are now being converted into health resorts.

(i) *Islands near Albany.* In this group are a number of rugged granite islands of which Breaksea is one of the largest. The islands are unproductive, and the pasturage is too scanty to maintain sheep.

(j) *Recherche Group.* This group consists of a number of small, low, granite islands on the south coast between Esperance and Israelite Bay. They contain limited deposits of phosphate of lime. On Middle Island, about the largest of the group, salt works have been established at some brine lakes.

NOTE.—The whole of these islands are Crown Lands with the exception of the greater portion of Garden Island. Houtman Abrolhos, West Island of Lacepede Group, and La Crosse Islands are, however, at present under lease for the collection of guano.

8. *Tasmania*.—(i.) *Introductory*. The information regarding the islands of Tasmania in the tabular statement herewith is furnished on the authority of the State Crown Lands Office. Additional particulars concerning the more important islands have been extracted from the Crown Lands Guide and embodied in the paragraphs below.

(ii.) *The Principal Islands*. (a) *Furneaux Group*. This group, the largest islands in which are Flinders, containing about 513,000 acres, Cape Barren 110,000 acres, and Clarke Island 20,000 acres, lies in Bass Strait off the north-eastern corner of the mainland from which it is separated by Banks Strait, the latter being about 15 miles across in its narrowest part. Situated almost in a direct line between Cape Portland and Wilson's Promontory it forms one of the remaining links in the mountain system, which, according to some geologists, at one time connected Tasmania with the Continent of Australia. The rock formation of the group is almost exclusively granitic and tertiary, with, in places, metamorphic schists and sandstones. Tin has been found in small quantities on each of the islands in the group. Clarke Island is used for pastoral purposes, for which it is well adapted. As the list shews, a large proportion of Flinders has been taken up by selectors, and there are some small patches of good soil still available. Cape Barren Island is broken and rugged, and the soil is of poor quality. Some 4000 acres in the western end have been set apart as a reserve for the use of half-caste inhabitants. Some of the smaller islands such as Great Dog, Green, Preservation, and Kangaroo are very fertile. The sooty petrel, or mutton bird, resorts in great numbers to these islands, and their capture forms a profitable industry to the islanders. During the month of March the young birds are taken at night in hundreds from their rookeries. Large quantities of oil are obtained from the birds, which are then pickled for the outside market. Wild ducks are plentiful on the islands, and swans and Cape Barren geese are also found.

(b) *King Island*. This island is situated in Bass Strait, midway between the northern extremity of the mainland and Victoria. From north to south it is about 30 miles long, with an average width of 10 miles, and contains about 272,000 acres. The surface is undulating with a few hills here and there, of which the highest, known as Mount Stanley, is situated towards the southern end, and reaches an altitude of 700 feet.

The west coast of the island has so far proved the most attractive to settlers, and consists of open country with patches of ti-tree and comparatively young timber of the *E. globulus* variety. There is, however, evidence that large trees were plentiful at an earlier period, and that they have been destroyed by bush fires. On the sandy rises near the coast-line, mangrove, boobyalla, and ti-tree form the characteristic vegetation. Inland the flat open country is clothed with a thick growth of needle-rush, with tussocks of white native grass, and patches of low ti-tree scrub and bracken fern, and is moderately watered. There is some excellent land at the southern end of the island in the vicinity of Surprise Bay. Occasional outcrops of limestone are met with in this district. From Surprise Bay to Fitzmaurice Bay the unselected land is of poor quality, and is covered with stunted bracken, heath and ti-tree. At Fitzmaurice Bay there is some fine dairying country, and land of equal class extends almost along to the Ettrick River and Currie Harbour. Eight miles northward from Currie Harbour is found the settlement known as Porky Lagoon, where there is some fine well-watered country. Near Yellow Rock is the fine estate called Yambacoona, which contains about 7000 acres, including a fair amount under cultivation. From the south-east end of the island there is a fairly large extent of forest country extending northward beyond the Fraser River. The timber consists of blue and swamp gum, with some patches of blackwood. From sand and limestone the country changes along the east coast to granite formation for some miles.

Generally speaking the soil on the island is of a light, sandy nature, but it has been proved to form excellent pasturage land, while potatoes, turnips, mangolds, and all kinds of vegetables thrive to perfection.

(c) *Maria Island*. This island, so named by Tasman in 1642, is a prominent feature of the eastern coast, with which its principal place of communication is Triabunna,

distant 9 miles by boat. Along its north-eastern shore the island is rugged and precipitous, reaching its highest point in Mount Maria, 2329 feet in altitude. In the early days, Maria Island was a penal settlement, and the best land is found in the vicinity of the site of that settlement. Although the soil is suitable for cultivation, the great bulk of the available area is used for pastoral purposes.

The peaks of Mount Maria are composed of grey granite, while in the north-east corner of the island there are immense masses of fossiliferous limestone and on the west coast diabasic greenstone or trap, and sandstone. Tin, gold, and silver have been discovered in small quantities.

(d) *Bruni Island* (North and South) is separated from the mainland by D'Entrecasteaux Channel, and extends northerly from Bruni Head, off Southport, to the estuary of the Derwent, which is distant 13 miles from Hobart. The island is of very irregular shape, the two portions being joined by a narrow neck or isthmus at Adventure Bay. Of the total area, 90,000 acres, there still remains about 40,000 acres unalienated. The island possesses a very agreeable climate, and the soil has been proved to be very suitable for fruit-growing. Anthracite coal has been found on both divisions, but so far has not been turned to profitable account. Excellent fishing may be obtained at various spots. Beautiful land and seascapes are afforded at several points, while at Adventure Bay, with its sandy beach extending for several miles, the conchologist may reap a rich harvest.

(e) *Schouten Island*. This island lies to the south of Freycinet Peninsula, off Little Swanport. Its 8500 acres of more or less stony soil, while unsuitable for cultivation, form nevertheless excellent pasturage for sheep.

(f) *The Macquarie Group*. This group of islands, discovered in 1811 by seal-fishers from New South Wales, is situated in the South Pacific Ocean in lat. 54° 35' S., long. 159° east, and is distant about 600 miles in a south-westerly direction from New Zealand. Included in the group are Macquarie Island, 18 miles long by 5 miles broad; Bishop and Clerk, 30 miles to the south; and Judge and Clerk, 7 miles to the north of the main island. The surface is low-lying and destitute of timber. For many years the group was worked as a birding and sealing ground under the authority of the New Zealand Government in the belief that the islands came within the Dominion jurisdiction, but in recent years the licenses have been granted by Tasmania.

## ISLANDS OFF THE COAST OF TASMANIA.

## § 3. The Fauna of Australia.

An authoritative article describing in some detail the principal features of the Fauna of Australia was given in Year Books No. 1 (see pp. 103 to 109) and No. 2 (see pp. 111 to 117), while a synoptical statement appeared in No. 3 (see pp. 73 to 76). Considerations of space will, however, preclude the inclusion in this issue of more than a passing reference to the subject.

### § 4. The Flora of Australia.

In Year Books No. 1 (see pp. 109 to 114) and No. 2 (see pp. 117 to 122) a fairly complete though brief account was given of the Flora of Australia, and in Year Book No. 3 similar information in a greatly condensed form will be found on pp. 76 to 78. Space in this issue will not permit of more than a mere reference to preceding volumes.

### 5. Seismology in Australia.

A brief statement regarding the position of seismology and seismological record in Australia appears in Year Book No. 4, pp. 82 and 83.

*Barisal Guns.* Reference may be made here to an interesting pamphlet published by Dr. J. Burton Cleland, in which the author sums up the available information regarding the peculiar explosive or booming noises heard at times in Australia as well as in other parts of the world. As far as inland Australia, at all events, is concerned, it seems clear that the explosions are of earth origin, and are probably due to the sudden sundering of immense rock masses, either as a result of climatic influences, or through folding movements in the earth's crust.

### § 6. The Geology of Australia.

1. **General.**—Independent and authoritative sketches of the geology of each State were given in Year Books No. 1 (see pp. 73 to 103) and No. 2 (see pp. 78 to 111). Want of space has precluded the insertion of these sketches in the present issue of the Year Book, and it has not been considered possible to give anything like a sufficient account of the geology of Australia by presenting here a mere condensation of these sketches. Reference must, therefore, be made to either Year Book No. 1 or No. 2, *ut supra*.

2. **Geological Map of Australia.**—The map of the Geology of Australia on page 82, shews the geographical distribution of the more important geological systems and formations.

### § 7. Climate and Meteorology of Australia.<sup>1</sup>

1. **Introductory.**—In preceding Year Books some account was given of the history of Australian meteorology, including reference to the development of magnetic observations and the equipment for the determination of various climatological records. (See Year Book 3, pp. 79, 80). In Year Book No. 4, pp. 84 and 87, will be found a short sketch of the creation and organisation of the Commonwealth Bureau of Meteorology and a resumé of the subjects dealt with at the Meteorological Conference of 1907. Space will not permit of the inclusion of this matter in the present issue.

2. **Meteorological Publications.**—The following publications are issued daily from the Meteorological Bureau, viz.:—(i.) Weather charts. (ii.) Rainfall maps. (iii.) Bulletins, Victorian and Interstate, shewing pressure, temperature, wind, rain, cloud extent, and weather.

---

<sup>1</sup> Prepared from data supplied by the Commonwealth Meteorologist, H. A. Hunt, Esquire, F.R.M.S.

The Bulletins of Climatology are as follows:—(a) No. 1.—A general discussion of the climate and meteorology of Australia, illustrated by one map and diagrams. (b) No. 2.—A discussion of the rainfall over Australia during the ten years (1897-1906) compared with the normal, illustrated by one map. No. 3.—Notes and statistics of the remarkable flood rains over south-eastern Australia during the winter of 1909, illustrated by five maps and diagrams. No. 4.—A discussion of the monthly and seasonal rainfall over Australia, illustrated by one map and diagram. No. 5.—An investigation into the possibility of forecasting the approximate winter rainfall for Northern Victoria, illustrated by two diagrams. No. 6.—The physiography of the proposed Federal Territory at Canberra, illustrated by a relief map and 21 plates. No. 7.—On the climate of the Yass-Canberra district, illustrated by one map. No. 8.—Physiography of Eastern Australia, with 28 text illustrations.

Commencing with January, 1910, the "Australian Monthly Weather Report," containing statistical records from representative selected stations, with rain maps and diagrams, etc., is being published. It is proposed to publish in an annual volume of meteorological statistics, complete rainfall and other climatological data.

**3. General Description of Australia.**—In the general description of Australia, page 45, it is pointed out that a considerable portion (0.530) of three States of the Australian Commonwealth is north of the tropic of Capricorn, that is to say, within the States of Queensland, the Northern Territory and Western Australia, no less than 1,149,320<sup>1</sup> square miles belong to the tropical zone, and 1,020,720 to the temperate zone. The whole area of the Commonwealth within the temperate zone, however, is 1,825,261<sup>2</sup> square miles, thus the tropical part is about 0.386, or about five-thirteenths of the whole, or the "temperate" region is half as large again as the "tropical" (more accurately 1.591). By reason of its insular geographical position, and the absence of striking physical features, Australia is, on the whole, less subject to extremes of weather than are regions of similar area in other parts of the globe; and latitude for latitude Australia is, on the whole, more temperate.

The altitudes of the surface of Australia range up to a little over 7300 feet, hence its climate embraces a great many features, from the characteristically tropical to what is essentially alpine, a fact indicated in some measure by the name Australian Alps given to the southern portion of the great Dividing Range.

While on the coast the rainfall is often abundant and the atmosphere moist, in some portions of the interior the rainfall is very limited, and the atmosphere dry. The distribution of forest, as might be expected, and its climatic influence, is consequently very variable. In the interior there are on the one hand fine belts of trees, on the other there are large areas which are treeless, and where the air is hot and parched in summer. Again, on the coast, even as far south as latitude 35°, the vegetation is tropical in its luxuriansness and also somewhat so in character. Climatologically, therefore, Australia may be said to present a great variety of features. The various climatological characteristics will be referred to in detail.

**4. Meteorological Divisions.**—The Commonwealth Meteorologist has divided Australia, for climatological and meteorological purposes, into five divisions. The boundaries between these may be thus defined:—(a) Between divisions I. and II., the boundary between South and Western Australia, viz., the 129th meridian of east

1. In the article "Australia" in the *Encyclopædia Britannica*, Vol. XXX., p. 796, this area is given as 1,145,000 square miles.

2. Given as 1,801,700 square miles in the work above quoted, where, however, the statistics are said "to refer only to the continental States of the Federation, not to Tasmania."

longitude; (b) between divisions II. and III., starting at the Gulf of Carpentaria, along the Norman River to Normanton, thence a straight line to Wilcannia on the Darling River, New South Wales; (c) between divisions II. and IV., from Wilcannia along the Darling River to its junction with the Murray; (d) between divisions II. and V., from the junction of the Darling and Murray Rivers, along the latter to Encounter Bay; (e) between divisions III. and IV., starting at Wilcannia, along the Darling, Barwon, and Dumaresq Rivers to the Great Dividing Range, and along that range and along the watershed between the Clarence and Richmond Rivers to Evans Head on the east coast of Australia; (f) between divisions IV. and V., from the junction of the Darling and Murray Rivers along the latter to its junction with the Murrumbidgee, along the Murrumbidgee to the Tumut River, and along the Tumut River to Tumut, thence a straight line to Cape Howe; (g) division V. includes Tasmania.

The population included within these boundaries on the 3rd April, 1911, was approximately as follows:—

Division	I.	II.	III.	IV.	V.
Population	282,000	429,000	607,000	1,540,000	1,597,000

In these divisions the order in which the capitals occur is as follows:—(i.) Perth, (ii.) Adelaide, (iii.) Brisbane, (iv.) Sydney, (v.) Melbourne, (vi.) Hobart, and for that reason the climatological and meteorological statistics will be set forth in the indicated order in this publication.

(i.) *Special Climatological Stations.* The latitudes, longitudes, and altitudes of special stations, the climatological features of which are graphically represented herein-after, are as follows:—

#### SPECIAL CLIMATOLOGICAL STATIONS.

Locality.	Height above Sea Level.	Latitude.		Longitude.		Locality.	Height above Sea Level.	Latitude.		Longitude.	
		S.	E.	S.	E.			S.	E.	S.	E.
Perth ...	197	31	57	115	51	Port Darwin ...	97	12	28	130	51
Adelaide ...	140	34	56	138	35	Daly Waters ...	700	16	16	133	23
Brisbane ...	137	27	28	153	2	Alice Springs ...	1926	23	38	133	37
Sydney ...	146	33	52	151	12	Dubbo ...	870	32	18	148	35
Melbourne ...	115	37	50	144	59	Laverton ...	1530	28	40	122	23
Hobart ...	160	42	53	147	20	Coolgardie ...	1402	30	57	121	10

5. *Temperatures.*—In respect of Australian temperatures generally it may be pointed out that the isotherm for 70° Fahrenheit extends in South America and South Africa as far south as latitude 33°, while in Australia it reaches only as far south as latitude 30°, thus shewing that, on the whole, Australia has a more temperate climate when compared latitude for latitude with places in the Southern Hemisphere.

The comparison is even more favourable when the Northern Hemisphere is included in the comparison, for in the United States the 70° isotherm extends in several of the western States as far north as latitude 41°. In Europe the same isotherm reaches almost to the southern shores of Spain, passing, however, afterwards along the northern shores of Africa till it reaches the Red Sea, when it bends northward along the eastern shore of the Mediterranean till it reaches Syria. In Asia nearly the whole of the land area south of latitude 40° N. has a higher isothermal value than 70°.

The extreme range of shade temperatures in summer and winter in a very large part of Australia amounts to probably only 81°. In Siberia, in Asia, the similar range is no less than 171°, and in North America 153°, or approximately double the Australian range.

Along the northern shores of the Australian continent the temperatures are very equable. At Port Darwin, for example, the difference in the means for the hottest and

coldest months is only  $8.6^{\circ}$ , and the extreme readings for the year, that is, the highest maximum in the hottest month and the lowest reading in the coldest month, shew a difference of under  $50^{\circ}$ .

Coming southward the extreme range of temperature increases gradually on the coast, and in a more pronounced way inland.

The detailed temperature results for the several capitals of the States of Australia are shewn in the Climatological Tables hereinafter. It will suffice here to briefly refer to special features.

(i.) *Perth*. Meteorological observations were taken in the Perth Botanical Gardens as far back as 1876, but since the conditions surrounding the instruments and the situation of the station relative to Perth cannot be regarded as quite satisfactory, the more exact climate history of Perth did not properly commence until 1897, when the present Observatory was established. During the period 1897 to 1910, the mean annual shade temperature of Perth was  $64^{\circ}$ , about a degree higher than that for Sydney and Adelaide, nearly  $6^{\circ}$  higher than that for Melbourne, and  $10^{\circ}$  above that for Hobart, but, on the other hand,  $5^{\circ}$  below that for Brisbane. The average temperature for the month of January is  $73.5^{\circ}$ , and for July  $54.9^{\circ}$ .

The extreme maximum shade record of  $107.9^{\circ}$  was registered in December, 1904, and the lowest minimum shade temperature was  $35.3^{\circ}$ , in August, 1908.

(ii.) *Adelaide*. In Adelaide the climate is drier and more sunny than in the other capitals, and, consequently, radiation is less hindered. The extremes of heat are consequently somewhat more marked, especially in the summer months. The mean shade temperature for January is  $74.2^{\circ}$ , and February  $74.0^{\circ}$ , and that of July  $51.5^{\circ}$ . Records of the temperature having reached  $100^{\circ}$  exist for each of the six summer months from October to March, and of having exceeded  $110^{\circ}$  exist for each of those months with the exception of March and October. The highest record of shade temperature in Adelaide is  $116.3^{\circ}$ , registered in January, 1858, and the lowest  $32.0^{\circ}$ , a range of  $84.3^{\circ}$ . The freezing point has only once been reached by the shade temperature thermometers, notwithstanding the fact that records have been kept for fifty-four years. Frosts have, however, occurred on the grass (four feet below the shade thermometers) at various times between the beginning of April and the end of November.

(iii.) *Brisbane*. In Brisbane the monthly mean shade temperature ranges from  $77.2^{\circ}$  in January to  $58.0^{\circ}$  in July, a difference of  $19.2^{\circ}$ . The extremes have varied from  $108.9^{\circ}$  in January to  $36.1^{\circ}$  in July, viz., through a range of  $72.8^{\circ}$ .

(iv.) *Sydney*. In Sydney the highest monthly mean is  $71.6^{\circ}$ , recorded in January, while the lowest, again in July, is  $52.3^{\circ}$ , giving a range of  $19.3^{\circ}$ .

The extremes of shade temperature recorded at Sydney over a period of half a century are  $108.5^{\circ}$  in January, 1896, and  $35.9^{\circ}$  in July, 1890, i.e., a range of  $72.6^{\circ}$ .

(v.) *Melbourne*. In Melbourne the January mean shade temperature averages  $67.5^{\circ}$ , and that of July  $48.5^{\circ}$ , the highest reading ever recorded being  $111.2^{\circ}$  in January, 1862, and the lowest  $27.0^{\circ}$  in July, 1869.

(vi.) *Hobart*. The mean temperature for the hottest month at Hobart is  $62.1^{\circ}$  in February, and that of the coldest  $45.8^{\circ}$ , in July, the highest reading ever recorded being  $105.2^{\circ}$  in December, 1897, and the lowest  $27.7^{\circ}$  in July, 1895, nearly a degree higher than the lowest experienced in Melbourne.

(vii.) *Hottest and Coldest Parts*. A comparison of the temperatures recorded at coast and inland stations shews that, in Australia as in other continents, the range increases with increasing distance from the coast.

In the interior of Australia, and during exceptionally dry summers, the temperature occasionally reaches or exceeds  $120^{\circ}$  in the shade, and during the dry winters the major

portion of the country to the south of the tropics is subject to ground frosts. An exact knowledge of temperature disposition cannot be determined until the interior becomes more settled, but from data procurable, it would appear that the hottest area of the continent is situated in the northern part of Western Australia about the Marble Bar and Nullagine goldfields, where the maximum shade temperature during the summer sometimes exceeds  $100^{\circ}$  for days, and even weeks continuously. The coldest part of the Commonwealth is the extreme south-east of New South Wales and extreme east of Victoria, namely, the region of the Australian Alps. Here the temperature seldom, if ever, reaches  $100^{\circ}$  even in the hottest of seasons.

In Tasmania also, although occasionally hot winds may cross the Straits and cause the temperature to rise to  $100^{\circ}$  in the low-lying parts, yet the island as a whole enjoys a most moderate and equable range of temperature throughout the year.

(viii.) *Monthly Maximum and Minimum Temperatures.* The mean monthly maximum and minimum temperatures can be best shewn by means of graphs, which exhibit the nature of the fluctuation of each for the entire year. In the diagram (on page 103) for nine representative places in Australia, the upper heavy curves shew the mean maximum, the lower heavy curves the mean minimum temperatures based upon daily observations. On the same diagram the thin curves shew the relative humidities (see next paragraph).

**6. Relative Humidity.**—Next after temperature the degree of humidity may be regarded as of great importance as an element of climate; and the characteristic differences of relative humidity between the various capitals of Australia call for special remark. For six representative places the variations of humidity are shewn on the graph on page 103, which gives results based upon daily observations of the dry and wet bulb thermometers. Hitherto difficulties have been experienced in many parts of Australia in obtaining satisfactory observations for a continuous period of any length. For this season it has been thought expedient to refer to the record of humidity at first order stations only, where the results are thoroughly reliable. Throughout, the degree of humidity given will be what is known as *relative humidity*, that is, the percentage of aqueous vapour actually existing to the total possible if the atmosphere were saturated.

(i.) *Perth.* At Perth the mean annual humidity at 9 a.m. is 63; the greatest monthly mean is 83, and is in June, and the lowest 45, in January.

(ii.) *Adelaide.* At Adelaide the mean annual humidity at 9 a.m. is only 56; the mean monthly humidity has been as low as 33 in January and December, and as high as 87 in July.

(iii.) *Brisbane.* In Brisbane the mean annual humidity at 9 a.m. is 68; the lowest monthly mean recorded is 47, and is in September, and the highest 85 in the months of March and May.

(iv.) *Sydney.* In Sydney the mean annual humidity at 9 a.m. is 73; the greatest monthly average, which occurred in May, 1891, was 90, while the lowest monthly mean, 54, occurred in the month of November, 1910.

(v.) *Melbourne.* The mean annual humidity derived from the 9 a.m. 3 p.m. and 9 p.m. observations in Melbourne is 71; the greatest monthly average 88, in June and July, 1858, and the lowest 49, in December, 1908.

(vi.) *Hobart.* Hobart's mean annual humidity at 9 a.m. is 71, the highest monthly mean 92, in June, and the lowest 51, in February and December.

From the above results, it is seen that, in respect of relative humidity, Sydney has the first place, while Hobart, Melbourne, Brisbane, Perth, and Adelaide follow in the order stated, Adelaide being the driest. The graphs on page 103 shew the annual variations in humidity. It will be observed that the *relative* humidity is ordinarily but not invariably great when the temperature is low.

7. **Evaporation.**—The rate and quantity of evaporation in any territory is influenced by the prevailing temperature, and by atmospheric humidity, pressure and movement. In Australia the question is of perhaps more than ordinary importance; since in its drier regions water has often to be conserved in "tanks"<sup>1</sup> and dams. The magnitude of the economic loss by evaporation will be appreciated from the following records, which have been obtained from either jacketed tanks sunk into the ground, or in the case of Laverton (W.A.) from a jacketed vessel (8 inches in diameter) exposed on the surface.

The average total evaporation at Sydney is 37.42 inches; at Melbourne, 38.30 inches; at Adelaide, 54.44 inches; and at Perth, 66.01 inches, these results being based respectively upon 10, 38, 41, and 12 years' observations. For Brisbane the evaporation for the year 1910 was 48.61 inches.

In the interior of New South Wales the annual evaporation is as high as 84 inches; in Central Australia at Alice Springs the average for 20 years is 97.10 inches; at Coolgardie, Western Australia, the mean for twelve years is 86.60 inches, and at Laverton, in the same State, the yearly amount derived from the last 5 years is 146.79 inches, or over 12 feet.

(i.) *Monthly Evaporation Curves.* The curves shewing the mean monthly evaporation in various parts of the Commonwealth will disclose how characteristically different are the amounts for the several months in different localities. The evaporation for characteristic places is shewn on diagram shewing also rainfalls (see page 104).

(ii.) *Loss by Evaporation.* In the interior of Australia the possible evaporation is often greater than the actual rainfall. Since, therefore, the loss by evaporation depends largely on the exposed area, tanks and dams so designed that the surface shall be a minimum are advantageous. Similarly, the more protected from the direct rays of the sun and from winds, by means of suitable tree planting, the less will be the loss by evaporation: these matters are of more than ordinary concern in the drier districts of Australia.

8. **Rainfall.**—As even a casual reference to climatological maps, indicating the distribution of rainfall and prevailing direction of wind, would clearly shew, the rainfall of any region is determined mainly by the direction and route of the prevailing winds, by the varying temperatures of the earth's surface over which they blow, and by the physiographical features generally.

Australia lies within the zone of the south-east and westerly trade winds. The southern limit of the south-east trade strikes the eastern shores at about 30° south latitude. Hence we find that, with very few exceptions, the heaviest rains of the Australian continent are precipitated along the Pacific slopes to the north of that latitude, the varying quantities being more or less regulated by the differences in elevation of the shores and of the chain of mountains, upon which the rain-laden winds blow, from the New South Wales northern border to Thursday Island. The converse effect is exemplified on the north-west coast of Western Australia from the summer south-east trade winds. Here the prevailing winds, blowing from the interior of the continent instead of from the ocean, result in the lightest coastal rain in Australia.

The westerly trade winds, which skirt the southern shores, are responsible for the very reliable, although generally light, rains enjoyed by the south-western portion of Western Australia, by the south-eastern agricultural areas of South Australia, by a great part of Victoria, and by the whole of Tasmania.

(i.) *Factors determining Distribution and Intensity of Rainfall.* The distribution and intensity of rainfall in the interior of the continent, and also to some extent in the areas already mentioned, are governed by the seasonal peculiarities of three distinct atmospheric control systems, the most important of which is, undoubtedly, the anticyclonic stream. This stream, which girdles the earth and embraces approximately the region between 15° and 40° south latitude, breaks up into vast elliptically-shaped bodies

---

1. In Australia artificial storage ponds or reservoirs are called "tanks."

of circulating atmosphere, measuring frequently 3000 miles in their major and 2000 miles in their minor axes. In passing over Australia from west to east, these great bodies of circulating air cause moist-laden winds to sweep across the continent from the surrounding oceans. The front-circulation brings in winds from the Southern Ocean, and the rear-circulation those from the equatorial seas.

The rain-invoking agent second in order of importance because of its reliability is the well-known "V-shaped depression." The sphere of operation of this latter disturbance is ordinarily the southern half of the continent, although occasionally it may extend its influence to tropical latitudes. The western half of this type of disturbance, with a southerly wind circulation, is the portion from which rain is most frequently to be expected, but occasionally good falls of rain, attended with electrical manifestations, are liberated from the warm eastern portion.

The third agent associated with the production of rain is the tropical depression more popularly known as the "monsoonal depression." This disturbance may be in active evidence for a succession of seasons, and then be conspicuously absent for a number of years, thus raising the question whether, after all, it can be regarded as in any way a distinctive feature of Australian meteorology.

When these disturbances are actively operative in the production of rain, the effect on the country generally, and the economic results for the succeeding season, are very pronounced. The interior of the continent becomes transformed. The plains, which ordinarily have so profound an effect on the heat winds of the summer, are deluged with rain, and respond immediately with an astonishingly luxurious growth of grass and herbage. The air is both tempered in heat, and loses its dryness for considerable periods after their visitations.

The distribution of rain by monsoonal disturbances is, however, very capricious in comparison with that precipitated by the southern "depressions." During some seasons the whole of the northern half of the continent will benefit to a fairly uniform degree, at another time some special region will be favoured. A remarkable example of this peculiarity occurred in 1902, for when monsoonal rains were copiously falling over the major portion of Western Australia, the eastern half of the continent was suffering from severe drought conditions.

During other seasons, tongue-shaped regions extending southwards from the northern shores of the continent will be particularly favoured in regard to rain. These regions may extend to the interior of Western Australia, and simultaneously others may occur in the Central Territory, in Western Queensland, and in the interior of New South Wales.

It is thus obvious that different parts of the continent are mainly dependent upon forms of atmospheric disturbances for what may be called their fundamental rains, and since there is a seasonal tendency for a particular class of storms to predominate, it rarely happens that any year passes in which the rains are universally good. Again, the condition of drought can hardly affect the whole of the continent at the same time. Nevertheless a more than ordinarily fortunate condition in one part of the continent ordinarily implies drought conditions in another, or *vice-versâ*. Thus in New South Wales, monsoonal rains, so beneficial to its north-western districts, rarely extend during the same season to coastal areas, or to Southern Riverina. For this reason it may happen occasionally that sheep may with advantage be sent 500 or 600 miles from the coast for feed and water. Should the southern or antarctic low-pressure be the predominating influence, the country to the south of the Murrumbidgee River is benefiting at the expense of the remainder of the State. A good coastal season ordinarily depends upon an anticyclonic control; when such exists, the country west of the tablelands usually wants water.

A good season for Australia as a whole is dependent upon many circumstances. Not only must the main rain-giving storms be well represented, but other favourable conditions must also coexist. The general rate of translation of the atmosphere across the continent is a factor of the utmost importance. Another is the latitude the cyclones and

anti-cyclones are moving in, and, further, the daily or periodic surgings of high and low pressures to and from the equator are also factors of considerable moment.

(ii.) *Time of Rainfall.* Monsoonal rains affect the northern parts of the continent in the summer months, and may continue with diminishing energy for nearly six months of the year. As they penetrate into higher latitudes the period of action is delayed, but is not shortened, though the quantities of the fall materially lessen. Antarctic rains are experienced during the winter months of the year, the resultant quantities being reliable and consistently regular. The heaviest totals from this source are precipitated on the west coast of Tasmania. Thus at Mount Lyell the total for one year exceeded 140 inches, and even the average is 116.32 inches.

Anticyclonic rains occur at all times of the year, but more markedly from March to September. They benefit particularly the southern area of the continent, and are responsible for many of the heaviest rainfalls and floods on the coastal districts of New South Wales.

(iii.) *Wettest and Driest Regions.* The wettest known part of Australia is on the north-east coast of Queensland, where three stations situated on, or adjacent to, the Johnstone and Russell Rivers have an average annual rainfall of between 150 and 166 inches. The maximum and minimum falls there are:—Goondi, 241.53 and 76.24 inches, or a range of 165.29 inches; Geraldton, 211.24 and 69.87 inches, or a range of 141.37 inches; Harvey Creek, 238.45 and 80.47 inches, or a range of 157.98 inches.

On three occasions more than 200 inches have been recorded at Goondi, the last of these being in 1910 when 204.82 inches were registered. The record at this station covers a period of 18 years.

Harvey Creek in the shorter period of 14 years has twice exceeded 200 inches, the total for 1910 being 201.28 inches.

The driest known part of the continent is about the Lake Eyre district in South Australia (the only part of the continent below sea level), where the annual average is but 5 inches, and where it rarely exceeds 10 inches for the twelve months.

The inland districts of Western Australia have until recent years been regarded as the driest part of Australia, but authentic observations taken during the past decade at settled districts in the east of that State show that the annual average is from 10 to 12 inches.

(iv.) *Quantities and Distribution of Rainfall generally.* The departure from the normal rainfall increases greatly and progressively from the southern to the northern shores of the continent, and similarly also at all parts of the continent, subject to capricious monsoonal rains, as the comparisons hereunder will shew. The general distribution is best seen from the map on page 107, shewing the areas subject to average annual rainfalls lying between certain limits. The areas enjoying varying quantities of rainfall determined from the latest available information are shewn in the following table:—

DISTRIBUTION OF AVERAGE RAINFALL.

Average Annual Rainfall.	N.S.W.	Victoria.	Queensland.	South Aust.	Northern Territory.	Western Aust.	Tasmania.	Commonwealth.

NOTE.—Western Australia and Queensland are subject to alteration.

Referring first to the southern capitals, it may be noted that the average at Melbourne from 67 years' records is 26.13 inches; the maximum 44.25, and minimum 15.61; the range therefore is 28.64 inches. At Adelaide the average determined from 71 years' totals is 21.15, the maximum 30.87, the minimum 13.43 and the range therefore 17.44 inches. At Hobart 23.38 inches is the average annual rainfall, 40.67 is the highest total for one year, 13.43 is the lowest; thus 27.24 inches is the extreme range. The average for Perth is 33.54 inches, 46.73 being the maximum and 20.48 inches the minimum; the range is therefore 26.25 inches. These figures appear to constitute an exception to the general rule, but it should be mentioned as a possible explanation that records have there been taken only since 1876, whereas the records at the other cities date from 1840 or thereabouts.

Continuing the comparison of rainfall figures, Sydney's average annual total is 48.26 inches, its maximum 82.81 in 1860, and minimum 21.48 in 1849, thus the range is 61.33 inches. At Brisbane the disparities are greater still. There the average is 46.98 inches—a trifle lower than that of Sydney—the annual maximum was 88.26 inches in 1893, the minimum 16.17 inches in 1902, and the range therefore 72.09 inches.

In order to shew how the rainfall is distributed throughout the year in various parts of the continent, the figures of representative towns have been selected. Port Darwin, typical of the Northern Territory, shews that in that region nearly the whole of the rainfall occurs in the summer months, while little or nothing falls in the middle of the year. The figures of Perth, as representing the south-western part of the continent, are the reverse, for while the summer months are dry, the winter ones are very wet. In Melbourne and Hobart the rain is fairly well distributed throughout the twelve months, with a maximum in October in the former, and in November in the latter. The records at Alice Springs and Daly Waters indicate that in the central parts of Australia the wettest months are in the summer and autumn. In Queensland, as in the Northern Territory, the heaviest rains fall in the summer months, but good averages are also maintained during the other seasons.

On the coast of New South Wales, the first six months of the year are the wettest, with slight excesses in April and July; the averages during the last six months are fair and moderately uniform. In general it may be said that one-fourth of the area of the continent, principally in the eastern and northern parts, enjoys an annual average rainfall of from 20 to 50 inches, the remaining three-fourths receiving generally from 10 to 15 inches.

(v.) *Curves of Rainfall and Evaporation.* The relative amounts of rainfall and evaporation at different times through the year are best seen by referring to the graphs for a number of characteristic places. It will be recognised at once how large is the evaporation when water is fully exposed to the direct rays of the sun, and to wind, etc.

(vi.) *Tables of Rainfall.* The table of rainfall for a long period of years for each of the various Australian capitals affords information as to the variability of the fall in successive years, and the list of the more remarkable falls furnishes information as to what may be expected on particular occasions.

10. **Snowfall.**—Light snow has been known to fall even as far north, occasionally, as latitude 31° S., and from the western to the eastern shores of the continent. During exceptional seasons it has fallen simultaneously over two-thirds of the State of New South Wales, and has extended at times along the whole of the Great Dividing Range, from its southern extremity in Victoria as far north as Toowoomba in Queensland. During the winter snow covers the ground to a great extent on the Australian Alps for several months, where also the temperature falls below zero Fahrenheit during the night, and in the ravines around Kosciusko and similar localities the snow never entirely disappears.

The antarctic "V"-shaped disturbances are always associated with our most pronounced and extensive snowfalls. The depressions on such occasions are very steep in the vertical area, and the apexes are unusually sharp-pointed and protrude into very low latitudes, sometimes even to the tropics.

11. **Hail.**—Hail falls throughout Australia most frequently along the southern shores of the continent, and in the summer months. The size of the hailstones generally increases with distance from the coast, a fact which lends strong support to the theory that hail is brought about by ascending currents. Rarely does a summer pass without some station experiencing a fall of stones exceeding in size an ordinary hen-egg, and many riddled sheets of light-gauge galvanised iron bear evidence of the weight and penetrating power of the stones.

Hail storms occur most frequently in Australia when the barometric readings indicate a flat and unstable condition of pressure. They are invariably associated with

tornadoes or tornadic tendencies, and on the east coast the clouds from which the stones fall are generally of a remarkable sepia-coloured tint.

**12. Barometric Pressures.**—The mean annual barometric pressure (corrected to sea-level and standard gravity) in Australia varies from 29.80 inches on the north coast to 29.92 inches over the central and 30.03 inches in the southern parts of the continent. In January the mean pressure ranges from 29.70 inches in the northern and central areas to 29.91 inches in the southern. The July mean pressure ranges from 29.90 inches at Port Darwin to 30.13 at Alice Springs. Barometer readings, corrected to mean sea-level, have, under anticyclonic conditions in the interior of the continent, ranged from 30.81 inches to as low as 28.44 inches. This lowest record was registered at Townsville during a hurricane on the 9th March, 1903. The mean annual fluctuations of barometric pressure for the capitals of Australia are shewn on page 105.

**13. Wind.**—(i.) *Trade Winds.* The two distinctive wind currents in Australia are, as previously stated, the south-east and westerly trade winds. As the belt of the earth's atmosphere in which they blow apparently follows the sun's ecliptic path north and south of the equator, so the area of the continent affected by these winds varies at different seasons of the year. During the summer months the anticyclonic belt travels in very high latitudes, thereby bringing the south-east trade winds as far south as 30° south latitude. The westerly trade winds are forced a considerable distance to the south of Australia, and are very rarely in evidence in the hot months. When the sun passes to the north of the equator, the south-east trade winds follow it, and only operate to the north of the tropics for the greater part of the winter. The westerly winds, by the same force, are brought into lower latitudes during the same period of the year. They sweep across the southern areas of the continent from the Leeuwin to Cape Howe, and during some seasons are remarkably persistent and strong. They occasionally penetrate to almost tropical latitudes, and though usually cold and dusty inland, are of the greatest service to the country, for being rain-bearing winds, moisture is by their agency precipitated over vast areas in the south of the continent.

(ii.) *Land and Sea Breezes.* The prevailing winds second in order of importance are the land and sea breezes. These generally blow at right angles to the coast-line in their early stages, but are deflected to the north and south in the middle and later periods of the blows.

On the east coast the sea breezes which come in from the north-east, when in full force, frequently reach the velocity of a gale during the afternoon in the summer months, the maximum hourly velocity, ordinarily attained about 3 p.m., not unfrequently attaining a rate of 35 to 40 miles per hour. This wind, although strong, is usually shallow in depth, and does not ordinarily penetrate more than 9 or 12 miles inland.

The land breezes on the east coast blow out from a south-westerly direction during the night.

On the western shores of the continent the directions are reversed. The sea breezes come in from the south-west, and the land breezes blow out from the north-east.

(iii.) *Inland Winds.* Inland, the direction of the prevailing winds is largely regulated by the seasonal changes of pressure, so disposed as to cause the winds to radiate spirally outwards from the centre of the continent during the winter months, and to circulate spirally from the seaboard to the centre of Australia during the summer months.

(iv.) *Prevailing Direction at the State Capitals.* In *Perth*, southerly (south-west to south-east) is the prevailing direction for August to April inclusive, and north-north-west to north-north-east for the midwinter months.

In *Adelaide* the summer winds are from the south-west and south, and in the winter from north-east to north.

In *Brisbane*, south-east winds are in evidence all the year round, but more especially during the months January, February, March and April.

In *Sydney* from May to September the prevailing direction is westerly, and for the remaining seven months north-easterly.

*Melbourne* winter winds are from north-west to north-east, and those of the summer from south-west to south-east.

At *Hobart* the prevailing direction for the year is from north-west.

Over the greater part of Australia January is the most windy month, i.e., is the month when the winds are strongest on the average, though the most violent wind storms occur at other times during the year, the time varying with the latitude.

**14. Cyclones and Storms.**—(i.) *General.* The "elements" in Australia are ordinarily peaceful, and although severe cyclones have visited various parts, more especially coastal areas, such visitations are rare, and may be properly described as erratic.

During the winter months the southern shores of the continent are subject to cyclonic storms, evolved from the V-shaped depressions of the southern low-pressure belt. They are felt most severely over the south-western parts of Western Australia, to the south-east of South Australia, in Bass Straits, including the coast line of Victoria, and on the west coast of Tasmania. Apparently the more violent wind pressures from these cyclones are experienced in their northern half, that is, in that part of them which has a north-westerly to a south-westerly circulation.

Occasionally the north-east coast of Queensland is visited by hurricanes from the north-east tropics. During the first three months of the year these hurricanes appear to have their origin in the neighbourhood of the South Pacific Islands, their path being a parabolic curve of south-westerly direction. Only a small percentage, however, reach Australia, the majority recurring in their path before reaching New Caledonia.

Anemometrical records for these storms do not exist, but the fact that towns visited by them have been greatly damaged indicates that the velocity must be very great. Fortunately the area covered by these storms is very small when compared with the southern cyclones, and the region affected during an individual visitation is very limited. The heaviest blows are experienced to the west of the vortex with south-east to south-west winds.

(ii.) *Severe Cyclones.* Very severe cyclones, popularly known as "Willy Willies," are peculiar to the north-west coast of Western Australia from the months of December to March inclusive. They apparently originate in the ocean, in the vicinity of the Cambridge Gulf, and travel in a south-westerly direction with continually increasing force, displaying their greatest energy near Cossack and Onslow, between latitudes 20° and 22° South. The winds in these storms, like those from the north-east tropics, are very violent and destructive, causing great havoc amongst the pearl-fishers. The greatest velocities are usually to be found in the south-eastern quadrant of the cyclones, with north-east to east winds. After leaving the north-west coast, these storms either travel southwards, following the coast-line, or cross the continent to the Great Australian Bight. When they take the latter course their track is marked by torrential rains, as much as 29.41 inches, for example, being recorded at Whim Creek from one such occurrence. Falls of 10 inches and over have frequently been recorded in the interior of Western Australia from similar storms.

Cyclones occasionally develop from incipient monsoonal low-pressures in the interior of the continent. Their formation is apparently materially assisted by the advancing high-pressures to the west of them, for they seldom or never appear without this accompaniment. The velocity and duration of the resultant gales, too, have a distinct relation to the magnitude of pressure in the anticyclones. Evidence of excess of high pressures on such occasions indicates severe gales in the cyclones, and in the case of moderate pressures, moderate gales.

These cyclones do not attain their severest phases until they reach the seaboard. The most violent winds occur in the south-western quadrant, with south-west to south-east winds. The area affected on the coast-line is not usually very great. During the visitation of one of these storms, about 500 miles in diameter, in July, 1903, a strip of

land, only 80 miles in extent, was affected. But so severe was the gale within this region that steamers of from 8000 to 10,000 tons, leaving Port Jackson, were buffeted and tossed about like corks by the turbulent sea. Notwithstanding this, vessels 200 miles to the east lay becalmed and had no indication of the violent atmospheric upheaval relatively so near.

Though storms of this type may occur at any time of the year, they are more frequent during the months of August and September. The velocity of the wind has on one occasion reached the rate of 120 miles per hour.

(iii.) *Southerly Bursters.* The "Southerly Burster" is a characteristic feature of the eastern part of Australia. It is a cool, or cold, wind peculiar to the coastal districts of New South Wales, south of latitude 30°. In a modified form, however, it also appears in the interior of that State, in Victoria, and the western districts of Queensland.

The "Southerly Bursters" invariably follow periods of hot weather, and are a great relief to the population settled over the favoured areas. They occur in all months from August to May inclusive, but most frequently in November. The preceding winds in the early and late summer months are from a north-westerly, and in the midsummer months from a north-easterly direction. A rise in the barometer always takes place before their advent, but no relation has been established between the time this rise begins and the moment of the arrival of the wind itself, neither is there any apparent connection between the velocity of the wind and the rate of gradient of the barometric rise, notwithstanding that records of nearly fifteen hundred "Bursters," extending over a period of forty years, have been analysed with a view of ascertaining if such a connection could be established. All that can be said is that, should the rise be sharp and rapid, the life of the blow will be short, while a slow and gradual one indicates a long and steady blow from the south, after the initial "Burster" has passed. "Southerly Bursters" are usually first noted on the extreme south coast, and travel northward at a rate of 20 miles an hour. The rate of translation has ordinarily no definite relation to the velocity attained by the wind itself.

"Bursters" frequently occur simultaneously at several places along the seaboard, and occasionally they have been known to progress down the coast from north to south. While they may arrive at any time during the day or night, the interval between sundown and midnight is that in which they ordinarily occur.

This type of storm is usually associated with "V"-shaped depressions, but occasionally a condition of relatively high barometric pressures in Victoria will induce their occurrence. It is most frequent during seasons of sporadic rains, and very rare during good years in the interior. In the summer of 1890, the year of the great Darling River flood, only sixteen visitations occurred, and even these were of a very mild character. The series of good years in the interior of Australia, since 1903, has been remarkable for the small annual number of "southerly bursters."

The greatest number ever experienced in a single summer was sixty-two, the average being thirty-two.

In the months of December and January they are usually short lived, and two may occur within the twenty-four hours. In the early and late summer months the intervening periods of warm weather are longer, and the winds are longer sustained, the energy being supplied from the more pronounced high pressures prevailing at these seasons of the year. The velocity varies from a rate of a few miles an hour to over 80 miles per hour, the maximum puffs occurring about an hour after the arrival of the burster. During recent years there has been a falling-off both in their number and strength, the reason for which is not yet understood, but it is suspected that the gradual extension of the agricultural and pastoral industries to the interior of the country may be one of the causes of the change.

Winds of a like character, and possibly derived from similar atmospheric actions and conditions, are—

In Europe—"The Bora," a sharp, cold north-east wind, which blows from the Croatian and Illyrian Mountains along the coast of Dalmatia from Trieste southward ;

and the "Mistral," a violent northerly wind which blows from France to the Gulf of Lyons.

In North America, the "Northers" of Texas have similar characteristics, and in South America "The Pampero," a cold and strong southerly wind which blows over the Pampas of Argentina, is almost identical with the "Southerly Bursters." The "Tehuantepec" winds that blow on the Pacific side of Central America are also very similar.

All parts of Australia are subject during the summer months to hot, desiccating winds, of two kinds. The most common and general class are associated with low-pressure isobars. The more rare and local hot winds are caused by the heating of descending air on the lee-side of mountains. In Victoria the former class are known as "Brick Fielders," a name originally applied to the "Southerly Bursters" in Sydney, because of the dust they raised from the brickfields to the south of the city. When the goldfields were discovered in Victoria the miners hailing from Sydney gave the name to the dusty winds from the opposite quarter.

The hot winds on the south-eastern littoral are analogous to the "Chinook" winds which blow at the eastern foot of the Rocky Mountains; to the "Föhn" winds of the Alpine Valleys; and to the "North-Westers" of the Canterbury Plains in the Middle Island of New Zealand.

**15. Influences affecting Australian Climate.**—Australian history does not cover a sufficient period, nor is the country sufficiently occupied, to ascertain whether or not the advance of settlement has materially affected the climate as a whole. Local changes therein, however, have taken place, a fact which suggests that settlement and the treatment of the land have a distinct effect on local conditions. For example, the mean temperature of Sydney shews a rise of two-tenths of a degree during the last twenty years, a change probably brought about by the great growth of residential and manufacturing buildings within the city and in the surrounding suburbs during that period. Again, low-lying lands on the north coast of New South Wales, that originally were seldom subject to frosts, have with the denudation of the surrounding hills from forests experienced annual visitations, the probable explanation being that, through the absence of trees, the cold air of the high lands now flows, unchecked and untempered, down the sides of the hills to the valleys and lower lands.

It is pointed out by Abercromby,<sup>1</sup> as shewing the influence of irrigation on climate, that "Before the Suez Canal was made, the desert through which it is cut was said to be rainless; now since the Bitter Lakes have been filled up with water, rain falls on an average eight days in the year at Ismailia." And in the United States, General A. W. Greely<sup>2</sup> says, concerning "Heat Waves:" "It seems possible that the frequency and intensity of such visitations have diminished on the Pacific coast, since Tennant's record of hot days (classing as such those on which the temperature rose to 80° or above, at San Francisco) indicates that their annual number has very materially diminished since 1859. For seven years prior to 1859 such days averaged thirteen yearly, and since that time, up to 1871, the average yearly number is but four. The immense quantity of land placed under irrigation and the vast increase in vegetation are obvious reasons why there should be some diminution in this respect."

(i.) *Influences of Forests on Climate.* As already indicated, forests doubtless exercise a great influence on local climate, and hence, to the extent that forestal undertakings will allow, the weather can be controlled by human agency. The direct action of forests is an equalising one; thus, especially in equatorial regions and during the warmest portion of the year, they considerably reduce the mean temperature of the air. They also reduce the diurnal extremes of their shade temperatures, by altering the extent of radiating surface, by evaporation, and by checking the movement of air. While decreasing

1. "Seas and Skies," Hon. Ralph Abercromby. 8vo, London, 1888, p. 30.

2. "American Weather." 8vo, London, 1888, p. 253.

evaporation from the ground, they increase the relative humidity. Vegetation greatly diminishes the rate of flow-off of rain, and the washing away of surface soil. Thus, when a region is protected by trees, steadier water supply is ensured, and the rainfall is better conserved. In regions of snowfall the supply of water to rivers is similarly regulated, and without this and the sheltering influence of ravines and "gullies," watercourses supplied mainly by melting snow would be subject to alternate periods of flooding and dryness. This is borne out in the inland rivers. Thus, the River Murray, which has never been known to run dry, derives its steadiness of flow mainly through the causes above indicated.

(ii.) *Direct Influences of Forest on Rainfall.* Whether forests have a direct influence on rainfall is a debatable question, some authorities alleging that precipitation is undoubtedly induced by forests, while others contend the opposite. According to Dr. Hann, observations have been made in India and Germany which support the idea that the destruction of trees has had a most deteriorating effect upon the climate.<sup>1</sup> In the Cordilleras, clouds with rain falling from them can be seen hanging over forests, while over contiguous lands covered with shrubs or used for agriculture the sky is blue and the sun is shining.

In America the influence of forests on the rainfall is still debated, but in Europe authorities contend that forests encourage frequent rainfalls. Hann states that a surface which keeps the air moist and cool, and from which there is as great an evaporation as takes place from extended forests, must have a tendency to increase the amount and frequency of precipitation, as contrasted with an open country which is dry, but over which conditions are otherwise similar.

Obviously the settlement of this very important question is difficult. Observations would have to be taken, with different treatments of the land, over very extended periods. Sufficient evidence exists, however, to establish that, even if the rainfall has not increased, the beneficial effect of forest lands in tempering the effects of the climate is more than sufficient to disclose the importance of their protection and extension. Curtis, in a paper read before the Meteorological Congress in 1893, sets forth important evidence of the ill-effects on orchard and wheat country of the felling of trees for the timber trade.

In Michigan, where half a century ago peach trees flourished and were rarely injured by cold, the crops have now nearly disappeared, owing to the removal by timbermen of the shelter afforded by the forests. In Northern Kansas, too, from the same cause, the growing of peaches has been largely abandoned. Many of the South Californian citrus fruit-growers protect their orchards from the destructive effects of wind by the judicious planting of eucalyptus and other trees.

It is the rapid rate of evaporation (says Dr. Fernow), induced by both hot and cold winds, which injures crops and makes life uncomfortable on the plains. Whether the forest aids in increasing precipitation there may be doubt, but nobody can say that it does not check the winds and the rapid evaporation due to them.

Trees as wind-breaks have been successfully planted in central parts of the United States, and there is no reason why similar experiments should not be successful in many parts of our treeless interior. The belts should be planted at right angles to the direction of the prevailing parching winds, and if not more than half a mile apart will afford shelter to the enclosed areas.<sup>2</sup>

**16. Comparison of Rainfalls and Temperatures.**—For the purpose of comparison the following lists of rainfalls and temperatures are given for various important cities throughout the world, for the site of the federal capital, and for the capitals of the Australian States:—

1. "Climatology," p 194.

2. See A. Woeikof, Petermann's Mittheilungen, 1835; and W. M. Fulton and A. N. Salisbury, "Convention of U.S.A. Weather Bureau Officials, 1898."

GRAPHS SHEWING ANNUAL FLUCTUATIONS OF MEAN MAXIMUM AND MINIMUM TEMPERATURE AND HUMIDITY IN SEVERAL PARTS OF THE COMMONWEALTH OF AUSTRALIA.

**EXPLANATION OF THE GRAPHS OF TEMPERATURE AND HUMIDITY.**—In the above graphs, in which the heavy lines denote 'temperature' and the thin lines 'humidity,' the fluctuations of mean temperature and mean humidity are shewn throughout the year. These curves are plotted from the data given in the Climatological Tables hereinafter. The temperatures are shewn in degrees Fahrenheit, the inner columns giving the corresponding values in Centigrade degrees. Humidities have not been obtained for Port Darwin, Daly Waters, and Alice Springs.

For the thin lines the degree numbers represent relative humidities, or the actual percentages of actual saturation on the total for the respective temperatures.

The upper temperature line represents the mean of the maximum, and the lower line the mean of the minimum results; thus the curves also shew the progression of the range between maximum and minimum temperatures throughout the year. The humidity curves shew the highest and lowest values of the mean monthly humidity at 9 a.m. recorded during a series of years.

**INTERPRETATION OF THE GRAPHS.**—The curves denote mean monthly values. Thus, taking, for example, the temperature graphs for Perth, the mean readings of the maximum and minimum temperatures for a number of years on 1st January would give respectively about 83° Fahr. and 62° Fahr. Thus the mean range of temperature on that date is the difference, viz., 21°. Similarly, observations about 1st June would give respectively about 66° Fahr. and 51° Fahr., or a range of 15°.

In a similar manner it will be seen that the greatest mean humidity, say for March, is about 62° and the least mean humidity for the month 48°; in other words, at Perth, the degree of saturation of the atmosphere by aqueous vapour for the month of March ranges between 62 % and 48 %

GRAPHS SHEWING ANNUAL FLUCTUATIONS OF MEAN RAINFALL AND MEAN EVAPORATION IN SEVERAL PARTS OF THE COMMONWEALTH OF AUSTRALIA.

(For Explanation see next page.)

**EXPLANATION OF THE GRAPHS OF RAINFALL AND EVAPORATION.**—On the preceding graphs thick lines denote rainfall and thin lines evaporation, and shew the fluctuation of the mean rate of fall *per month* throughout the year. The results, plotted from the Climatological Tables hereinafter, are shewn in inches (see the outer columns), and the corresponding metric scale (centimetres) is shewn in the two inner columns. The evaporation is not given for Hobart, Port Darwin, and Daly Waters.

**INTERPRETATION OF THE GRAPHS.**—The distance for any date from the zero line to the curve, represents the average number of inches, reckoned as per month, of rainfall at that date. Thus, taking the curves for Adelaide, on the 1st January the rain falls on the average at the rate of about four-fifths of an inch per month, or, say, at the rate of about  $9\frac{1}{2}$  inches per year. In the middle of June it falls at the rate of nearly 3 inches per month, or, say, at the rate of about 36 inches per year. At Dubbo the evaporation is at the rate of nearly 17 inches per month about the middle of January, and only about  $1\frac{1}{2}$  inches at the middle of June.

TABLE SHEWING MEAN ANNUAL RAINFALL AND EVAPORATION IN INCHES OF THE PLACES SHEWN ON PRECEDING PAGE, AND REPRESENTED BY THE GRAPHS.

—	Rainfall.	Evapora- tion.	—	Rainfall.	Evapora- tion.
Perth ...	33.54	66.01	Port Darwin ...	62.12	—

GRAPHS SHEWING ANNUAL FLUCTUATIONS OF MEAN BAROMETRIC PRESSURE FOR THE STATE CAPITAL CITIES.

**EXPLANATION OF THE GRAPHS OF BAROMETRIC PRESSURE.**—On the above graphs the lines representing the yearly fluctuation of barometric pressure at the State capital cities are means for long periods, and are plotted from the Climatological Tables given hereinafter. The pressures are shewn in inches on about  $2\frac{1}{2}$  times the natural scale, and the corresponding pressures in centimetres are also shewn in the two inner columns, in which each division represents one millimetre.

**INTERPRETATION OF THE BAROMETRIC GRAPHS.**—Taking the Brisbane graph for purposes of illustration, it will be seen that the mean pressure on 1st January is about 29.88 inches, and there are maxima in the middle of May and August of about 30.10 and 30.08 respectively. The double maxima appear clearly on each graph.

Chart indicating the area affected and period of duration of the Longest Heat Waves when the Maximum Temperature for consecutive 24 hours reached or exceeded 90° Fah.

NOTE.—The figures on the lines indicate number of consecutive days.

Diagram showing the greatest number of consecutive days on which the Temperature in the shade was over 100° and also over 90° at the places indicated.

The above are the meteorological sub-divisions adopted by H. A. HUNT, Esq., C'wealth Meteorologist.

### EXPLANATION OF GRAPH.

The six continuous curves on the upper part of the diagram shew the fluctuations of mean monthly temperatures of the Australian capitals from 1901 to 1909. The base of each small square denotes one month, and the vertical side  $2^{\circ}$  Centigrade or  $3.6^{\circ}$  Fahrenheit.

The six curves in lower portion of the diagram similarly shew the fluctuations of the mean annual temperatures, from 1871 in the case of Adelaide, Sydney and Melbourne, from 1883, 1887 and 1897 in the case respectively of Hobart, Brisbane and Perth. The base of each rectangle represents one year, and the vertical side  $0.3^{\circ}$  Centigrade or  $0.54^{\circ}$  Fahrenheit.

The map shews the areas affected by given amounts of annual rainfall, and is elsewhere given.

## SECTION IV.

## POPULATION.

## § 1. Census of 3rd April, 1911.

1. **Numbers Enumerated.**—As the estimates of population depend on the Census, the recent Census, viz., that of the 3rd April, 1911, is first referred to. The Census for the whole of the Australian Commonwealth was taken as for the night between the 2nd and the 3rd of April, 1911, and was the first Census under the provisions of the Commonwealth Census and Statistics Act 1905, which provides for the enumeration of the whole of Australia being dealt with from one centre instead of each State being responsible for its own count as on previous occasions. The numbers recorded in the several States and Territories of the Commonwealth were as follows:—

**POPULATION OF THE COMMONWEALTH, 3rd APRIL, 1911,  
(EXCLUSIVE OF FULL-BLOODED ABORIGINALS.)**

States and Territories.	Males.	Females.	Persons.
<b>States—</b>			
New South Wales ...	857,698	789,036	1,646,734
Victoria ...	655,591	659,960	1,315,551
Queensland ...	329,506	276,307	605,813
South Australia ...	207,358	201,200	408,558
Western Australia ...	161,565	120,549	282,114
Tasmania ...	97,591	93,620	191,211
<b>Territories—</b>			
Northern Territory ...	2,734	576	3,310
Federal Capital Territory ...	992	722	1,714
<b>Total Commonwealth ...</b>	<b>2,313,035</b>	<b>2,141,970</b>	<b>4,455,005</b>

2. **Growth during Last Three Decennia.**—The total increase of population of the Commonwealth between the Census of 31st March, 1901, and that of 3rd April, 1911, was 681,204, of which 335,107 were males and 346,097 were females, as compared with a total increase of 599,409, comprising 273,889 males and 325,520 females, for the preceding ten years. The population of each sex enumerated at the Census of 3rd April, 1881, 5th April, 1891, 31st March, 1901, and 3rd April, 1911, was as follows:—

**POPULATION OF COMMONWEALTH AT LAST FOUR CENSUSES.  
(EXCLUSIVE OF FULL-BLOODED ABORIGINALS.)**

Date of Census.	Males.	Females.	Persons.	*Masculinity.
3rd April, 1881 ...	1,214,913	1,035,281	2,250,194	117.35
5th April, 1891 ...	1,704,039	1,470,353	3,174,392	115.89
31st March, 1901 ...	1,977,928	1,795,873	3,773,801	110.14
3rd April, 1911 ...	2,313,035	2,141,970	4,455,005	107.99

\* Number of males per 100 females.

The increases in the populations of the several States during the past three decennia have been as follow :—

### DECENNIAL INCREASES IN THE TOTAL POPULATION.

State.	1881-1891.		1891-1901.		1901-1911.	
	Numerical.	Per cent.	Numerical.	Per cent.	Numerical.	Per cent.
N.S. Wales* ...	374,129	49.90	230,892	20.54	293,602	21.67
Victoria ...	278,274	32.30	61,230	5.37	114,481	9.53
Queensland ...	180,193	84.39	104,411	26.52	107,684	21.62
South Australia ...	39,119	14.15	42,813	13.57	50,212	14.01
West. Australia ...	20,074	67.57	134,342	269.86	97,990	53.22
Tasmania ...	30,962	26.76	25,808	17.60	18,736	10.86
N. Territory ...	1,447	41.93	†— 87	†— 1.78	†— 1,501	†— 31.20
Commonwealth ...	924,198	41.07	599,409	18.88	681,204	18.05

\* Including Federal Capital Territory. † Decrease.

For the Commonwealth as a whole the increase in population during the decennium 1901-11 was greater by 81,795 than that for the decennium 1891-1901. The rate of increase per cent. was, however, not so great, being 18.05 per cent. for 1901-11, as against 18.88 for 1891-1901. The former corresponds to an increase of 1.67 per cent. per annum, the latter to an increase of 1.74 per cent. per annum.

As regards the separate States, the numerical increases in the case of New South Wales, Victoria, Queensland and South Australia were greater for 1901-11 than for 1891-1901. On the other hand, Western Australia and Tasmania experienced greater numerical increases in the earlier than in the later decennium, while the Northern Territory, which exhibited an actual loss of population in both decennia, experienced a much heavier loss in 1901-11 than in 1891-1901. In the matter of rates of increase per cent. New South Wales, Victoria and South Australia were higher in 1901-11 than in 1891-1901, while Queensland, Western Australia and Tasmania were lower, and the rate of decrease in the Northern Territory was much heavier.

## § 2. Special Characteristics of Commonwealth Population.

1. **Sex Distribution.**—In respect of the relative proportions of the sexes in its population, Australia has, since the first settlement of the continent in 1788, differed materially from the older countries of the world. In the latter, the populations have, in general, grown by natural increase, and their composition usually reflects that fact, the numbers of males and females being in most countries approximately equal, with a more or less marked tendency, however, for the females to slightly exceed the males. The excess of females arises from a variety of causes, amongst which may be mentioned—(a) higher rate of mortality amongst males; (b) greater propensity on the part of males to travel; (c) the effects of war; (d) employment of males in the army, navy, and mercantile marine; (e) preponderance of males amongst emigrants. On the other hand, the last-mentioned cause has tended naturally to produce an excess of males in Australia, since the majority of those emigrating to Australia have been males. The circumstances under which the colonisation of Australia was first undertaken, and the remoteness of this country from Europe, have combined to accentuate this feature.

There is little doubt that the continent presented few attractions to the explorers who visited its shores, mainly on the west and north, during the sixteenth, seventeenth, and early part of the eighteenth centuries, and it was only when the Declaration of Independence of the United States, in 1776, closed to the British prison authorities the North American plantations, which had previously been used as receptacles for the deportation of convicts, that the overcrowding of the gaols caused them to consider the advisability of converting the great southern continent into a convict settlement. This idea was put into practice in 1787, when the first consignment left England, arriving in Sydney Cove on 26th January, 1788. Reports concerning the number of persons actually landed are conflicting, but it appears that the total may be set down approximately at 1035, including the military. Details as to the sexes are not available, but the males must have largely preponderated. Indeed, nearly nine years later, on the 31st December, 1796, in a total population of 4100, there were 257 males to every 100 females.

The subsequent progress of Australia resulting from extensive mineral discoveries and the development of its great natural resources, pastoral, agricultural, forestal, etc., have tended to attract male rather than female immigrants, particularly in view of the distance from the principal centres of European population. Even at the Census of 3rd April, 1911, after more than 123 years of settlement, there were 108 males to each 100 females, and this notwithstanding the equalising tendency due to additions to the population by means of births and to deductions therefrom by the deaths of immigrants.

The terms "masculinity" and "femininity" have been used to express the proportion of the sexes in any group, the former indicating the ratio of males to females, the latter the reciprocal of this, viz., the ratio of females to males. The term "masculinity" is that which has been adopted by the Commonwealth Bureau of Census and Statistics, and the masculinity of any group is usually expressed numerically as the number of males to each 100 females. The masculinity of the population of the Commonwealth at intervals of five years from 1800 to 1910 is as follows:—

#### MASCULINITY OF THE COMMONWEALTH POPULATION. 1800 to 1911.

Year.	Number of Males to each 100 Females.	Year.	Number of Males to each 100 Females.	Year.	Number of Males to each 100 Females.
1800	263.05	1840	201.75	1880	117.28
1805	233.35	1845	163.38	1885	118.33
1810	190.53	1850	143.20	1890	116.06
1815	188.84	1855	145.48	1895	113.41
1820	243.71	1860	140.15	1900	110.55
1825	329.77	1865	125.38	1905	108.65
1830	308.30	1870	121.10	1910	107.87
1835	260.71	1875	118.25	Census 1911	107.99

The curious inequalities of the increases in the number of males and in the number of females for the Commonwealth as a whole, and for the individual States respectively, will be seen by referring to the graphs on pages 158 and 159.

The significance of the rates of masculinity shewn in the above table will perhaps be better understood by a comparison with the corresponding information for other countries. This has been made in the next table, which shews, for some of the principal countries of the world for which such particulars are available, the masculinity of the population according to the most recent statistics:—

## MASCULINITY OF THE POPULATION OF VARIOUS COUNTRIES.

Country.	Year.	No. of Males to each 100 Females.	Country.	Year.	No. of Males to each 100 Females.
New Zealand...	1911	111.61	Netherlands	1909	98.48
Australia	1911	107.99	Prussia	1910	97.70
India (Feudatory States)	1901	106.02	German Empire	1910	97.40
Servia	1905	105.87	Russia (European)	1897	97.18
Canada	1901	105.04	France	1901	96.85
United States of America	1900	104.87	Austria	1900	96.65
Rumania	1899	103.30	Sweden	1909	95.67
British India	1901	103.26	Spain	1900	95.36
Japan	1910	102.10	Denmark	1906	94.52
Poland (Russian)	1897	101.42	Norway	1900	94.37
Greece	1907	101.37	Scotland	1911	94.12
Ireland	1911	99.62	England and Wales	1911	93.67
Belgium	1900	98.70	Portugal	1900	91.53

2. **Age Distribution.**—The causes which operated to bring about an excess of males in the population of the Commonwealth have been equally effective in rendering the age distribution essentially different from that of older countries. The majority of the immigrants, whether male or female, were in the prime of life, and as the Australian birth-rate in earlier years was a comparatively high one, the effect produced is a population in which the number of young and middle-aged persons is somewhat above, and the number for advanced ages somewhat below the normal.

Thus in the Commonwealth at the Census of 3rd April, 1911, the age distribution of the population was as shewn in the table hereunder; that for England and Wales for the Census of 1901, the latest available, is given also for the sake of comparison :—

## AGE DISTRIBUTION OF POPULATION.

## COMMONWEALTH AND ENGLAND AND WALES.

Age Group.	Population of COMMONWEALTH, 3rd April, 1911.*	Percentage on Total Population.	Population of ENGLAND and WALES, 31st March, 1901.	Percentage on Total Population.
Under 15	1,414,484	31.75	10,545,739	32.42
15 and under 65	2,848,941	63.95	20,464,351	62.91
65 and upwards	191,580	4.30	1,517,753	4.67
Total	4,455,005	100.00	32,527,843	100.00

\* Preliminary figures, subject to revision.

During the past 50 years, the age distribution of the Australian population has varied considerably, as will be seen from the following table, which gives for each sex the proportion per cent. of the total population in the age groups "under 15," "15 and under 65," and "65 and over." The figures upon which these percentages have been computed are those furnished by the Censuses of the several States and the Commonwealth Census of 1911. Those for 1861 include the results of the Western Australian Census of 1859, while those for 1871 include the results of the Western Australian and Tasmanian Censuses of 1870 :—

## AGE DISTRIBUTION OF COMMONWEALTH POPULATION, 1861 to 1911.

Census Year.	Males.				Females.				Persons.			
	Under 15 Years.	15 and under 65.	65 and over.	Total.	Under 15 Years.	15 and under 65.	65 and over.	Total.	Under 15 Years.	15 and under 65.	65 and over.	Total.
	%	%	%	%	%	%	%	%	%	%	%	%
1861	31.41	67.42	1.17	100	43.03	56.20	0.77	100	36.28	62.72	1.00	100
1871	38.84	59.11	2.05	100	46.02	52.60	1.38	100	42.09	56.17	1.74	100
1881	36.37	60.85	2.78	100	41.89	56.07	2.04	100	38.91	58.65	2.44	100
1891	34.77	62.02	3.21	100	39.36	58.08	2.56	100	36.90	60.20	2.90	100
1901	33.87	61.82	4.31	100	36.50	59.85	3.65	100	35.12	60.88	4.00	100
1911*	30.98	64.66	4.36	100	32.58	63.19	4.23	100	31.75	63.95	4.30	100

\* Preliminary figures, subject to revision.

The excess of males over females, previously referred to, is found mainly in ages of 21 and upwards. In the total population under the age of 21 there were, at the date of the last Census, less than 103 males to each 100 females, while in that aged 21 and upwards there were more than 122 males to each 100 females. In the absence of a large immigration of males in excess of females, therefore, the disparity between the sexes in Australia would soon be eliminated.

3. *Race and Nationality.*—(i.) *Constitution of Australia's Population.* As regards race, the population of the Commonwealth may be conveniently divided into two main groups, one comprising the aboriginal natives of Australia, and the other the various immigrant races which, since the foundation of settlement in 1788, have made the Commonwealth their home. Under the head of "immigrant races" would, of course, be included not only those residents of Australia who had been born in other countries, but also their descendants born in Australia.

(a) *The Aborigines.* It would appear that the aboriginal population of Australia was never large, and that the life led by them was, in many parts of the country, a most precarious one. With the continued advance of settlement the numbers have shrunk to such an extent that in the more densely populated States they are practically negligible. Thus, at the Census of 1911 the number of full-blooded aboriginals who were employed by whites or were living in proximity to settlements of whites was stated to be only 19,939. In some of the States, however, more particularly in Queensland, South Australia, Western Australia, and the Northern Territory, there are, in addition, considerable numbers of natives still in the "savage" state, numerical information concerning whom is of a most unreliable nature, and can be regarded as little more than the result of mere guessing.

Ethnologically interesting as is this remarkable and rapidly-disappearing race, practically all that has been done to increase our knowledge of them, their laws, habits, customs, and languages, has been the result of more or less spasmodic and intermittent effort on the part of enthusiasts either in private life or the public service. An enumeration of them has never been seriously undertaken in connection with any Australian Census, though a record of the numbers who were in the employ of whites, or living in contiguity to the settlements of whites, has on the occasion of the recent Censuses usually been made. As stated above, various guesses at the number of aboriginal natives at present in Australia have been made, and the general opinion appears to have prevailed that 150,000 might be taken as a rough approximation to the total. More recent estimates, however, have given results considerably below this total. Thus, in his report of June, 1908, the Queensland Chief Protector of Aborigines estimates the total at 74,030, distributed as follows:—New South Wales, 6960; Victoria, 270; Queensland, 20,000; South Australia (including the Northern Territory), 19,800; Western Australia, 27,000. A somewhat similar estimate made by Dr. Roth, formerly Chief Protector of Aborigines in Queensland, gives Queensland at least 18,000; Western Australia at least 24,000, and the Northern Territory from

20,000 to 22,000. In view of these figures it would appear that the number of aboriginal natives in Australia may be said to be not more than 100,000. The whole matter, however, is involved in considerable doubt.

The number of aboriginal natives enumerated in the several States and Territories of the Commonwealth at the Census of 1911 was as shewn hereunder, the figures given relating as before stated only to those in a civilised or semi-civilised condition.

#### ABORIGINAL NATIVES ENUMERATED AT CENSUS OF 1911.

Persons, etc.	N.S.W.	Victoria.	Queens- land.	South Australia.	Western Australia.	Tas- mania.	Northern Territory.	Federal Capital Territory	C'wth.
Males ...	1,152	103	5,145	802	3,433	2	743	5	11,385
Females ...	860	93	3,542	637	2,936	1	480	5	8,554
Total	2,012	196	8,687	1,439	6,369	3	1,223	10	19,939
Masculinity 1	133.9	110.8	145.3	125.9	116.9	200.0	154.9	100.0	133.1

1. Number of males per hundred females.

These figures, as noted above, refer only to those natives who were, at the date of the Census, in the employ of whites or were living in contiguity to the settlements of whites.

In the Commonwealth Constitution Act provision is made for aboriginal natives to be excluded for all purposes for which statistics of population are made use of under the Act, but the opinion has been given by the Commonwealth Attorney-General that, "in reckoning the population of the Commonwealth, half-castes are not aboriginal natives within the meaning of section 127 of the Commonwealth of Australia Constitution Act, and should therefore be included." It may be added, however, that as "half-castes," living in the nomadic state, are practically undistinguishable from aborigines, it has not always been found practicable to make the distinction, and further, that no authoritative definition of "half-caste" has yet been given.<sup>1</sup>

(b) *Immigrant Races.* As regards the immigrant races, it may be said that they consist mainly of natives of the three divisions of the United Kingdom and their descendants. The proportion of Australian-born contained in the population of the Commonwealth has in recent years, increased rapidly, and at the Census of 31st March, 1901, out of a total population of 3,765,879 persons whose birthplaces were specified, no fewer than 2,908,303, or 77.23 per cent., were Australian born, while of the remainder, 679,159, or 18.03 per cent., were natives of the United Kingdom, and 25,788, or 0.68 per cent., were natives of New Zealand, that is, 95.94 per cent. of the total population at the date of the Census had been born in either Australasia or the United Kingdom. The other birthplaces most largely represented in the Commonwealth were Germany, 38,352 (1.02 per cent.); China, 29,907 (0.79 per cent.); Scandinavia (comprising Sweden, Norway and Denmark), 16,144 (0.43 per cent.); Polynesia, 10,363 (0.28 per cent.); British India, 7637 (0.20 per cent.); United States of America, 7448 (0.20 per cent.); and Italy, 5678 (0.15 per cent.). The total population of Asiatic birth was 47,014 (1.25 per cent.), of whom 3593 were born in Japan.

At the time of writing, similar particulars for the Census of 1911 are not available, but a summary of the results will be found in the Census Appendix.

1. An article on the Aborigines of Australia, specially written for the Year Book by W. Ramsay Smith, D.Sc., M.B., C.M., F.R.S.E., Permanent Head of the Department of Public Health of South Australia, will be found in Section IV., § 12, page 158, Year Book No. 3.

(c) *Non-European Races.* The Census taken on the 3rd April, 1911, was the first occasion on which a systematic attempt had been made to ascertain the number of persons of non-European races in Australia. On former occasions the inquiry did not usually extend further than a request that in all cases in which the person enumerated was an Aboriginal or a Chinese, whether of the full-blood or of the half-blood, the fact should be specially noted in the column on the Census schedule relating to birthplace. At the recent Census the inquiry as to race was made one of the leading items, and all persons of non-European race were required to have their race specified. From the figures so obtained the following table has been compiled:—

### PERSONS OF NON-EUROPEAN RACE IN THE COMMONWEALTH, 3rd APRIL, 1911.

(ii.) *Biological and Sociological Significance.* As regards race and nationality, therefore, the population of Australia is fundamentally British, and thus furnishes an example of the transplanting of a race into conditions greatly differing from those in which it had been developed. The biological and sociological significance of this will ultimately appear in the effects on the physical and moral constitution produced by the complete change of climatic and social environment, for the new conditions are likely to considerably modify both the physical characteristics and the social instincts of the constituents of the population. At present the characteristics of the Australian population, whether physical, mental, moral, or social, are only in the making, and probably it will not be possible to point to a distinct Australian type until three or four generations more have passed. Even then it is hardly likely that with the great extent of territory and varying conditions presented by the Commonwealth there will be but one type; on the contrary, a variety of types may be expected. The Australian at present is little other than a transplanted Briton, with the essential characteristics of his British forbears, the desire for freedom from restraint, however, being perhaps more strongly accentuated. The greater opportunity for an open-air existence, and the absence of the restrictions of older civilisations, may be held to be in the main responsible for this.

4. *Differences among the States.*—(i.) *Sex Distribution.* The varying circumstances under which the settlement of the several States has been effected, and the essentially different conditions experienced in the due development of their respective resources, have naturally led to somewhat marked differences in the constitution of their populations. In the matter of sex distribution the States in which the normal condition of older countries is most nearly represented are those of Victoria, South Australia, and Tasmania, in the first-mentioned of which the females have, for some years, exceeded the males. In Western Australia and Queensland, on the other hand, the position of affairs is quite abnormal, the numbers of males to each 100 females being respectively 133 and 119.

The variation in the masculinity of the estimated population of the several States and of the Commonwealth as a whole during the past eleven years will be seen from the following table:—

#### MASCULINITY\* OF THE POPULATION, 31st DECEMBER, 1900 to 1910.

(COMMONWEALTH.)

Year.	Masculinity of the Population on 31st December.						
	N.S.W.	Vict.	Qld.	S. Aust.	W. Aust.	Tas.	C'wealth.
1900 ... ..	111.14	101.23	125.33	104.04	157.54	107.97	110.55
1901 ... ..	110.12	101.16	125.78	102.71	155.69	107.90	110.15
1902 ... ..	110.56	100.07	124.64	100.72	153.55	108.96	109.78
1903 ... ..	110.71	99.20	124.26	99.45	148.04	108.56	109.28
1904 ... ..	110.01	98.29	123.23	100.26	145.01	107.55	109.02
1905 ... ..	111.05	97.69	121.75	101.65	141.35	106.09	108.65
1906 ... ..	111.10	97.07	120.07	103.12	138.23	104.73	108.24
1907 ... ..	111.55	96.61	119.08	102.60	135.08	104.69	107.93
1908 ... ..	110.77	96.76	118.70	103.30	133.47	104.43	107.64
1909 ... ..	109.96	97.68	119.41	103.54	132.33	104.13	107.71
1910 ... ..	109.23	98.71	119.02	104.19	132.90	104.14	107.87

\* Number of males to each 100 females.

(ii.) *Age Distribution.* The disparity in sex distribution exhibited by the several States is accompanied by a corresponding inequality in the matter of age distribution.

The number of persons in each State at the Census of 3rd April, 1911, at what are commonly known as the "dependent," "supporting," and "old" ages, and the proportion of same to total of each State and Commonwealth, were as follows :—

**NUMBER AND PROPORTION OF PERSONS IN THE COMMONWEALTH OF  
DEPENDENT, SUPPORTING, AND OLD AGE, 3rd APRIL, 1911.**

State.	Number of Persons of				Proportion of Population of		
	Dependent age (under 15).	Supporting age (15 and under 65).	Old age (65 and upwards).	All ages.	Dependent age (under 15).	Supporting age (15 and under 65).	Old age (65 and upwards).
New South Wales* ...	529,465	1,052,068	66,915	1,648,448	32.12	63.92	4.06
Victoria ...	401,256	846,110	68,185	1,315,551	30.50	64.32	5.18
Queensland ...	200,688	382,433	22,692	605,813	33.13	63.13	3.74
South Australia† ...	127,940	264,715	19,213	411,868	31.06	64.27	4.67
Western Australia ...	88,135	187,299	6,680	282,114	31.24	66.39	2.37
Tasmania ...	67,000	116,816	7,895	191,211	35.04	60.83	4.13
Commonwealth ...	1,414,484	2,848,941	191,580	4,455,005	31.75	63.95	4.30

\* Including Federal Capital Territory. † Including the Northern Territory.

Thus in Western Australia a larger proportion of its population was of supporting age than in any other State. In Tasmania the proportion was the lowest. On the other hand, in Tasmania the proportion of dependent age was the highest for the Commonwealth, while the Western Australian proportion was the lowest. Victoria had the highest and Western Australia the lowest proportion of persons aged 65 years and upwards.

(iii.) *Birthplaces.* The following table exhibits, in a very condensed form, the distribution of the population of the several States according to birthplace :—

**BIRTHPLACES AT CENSUS OF 31st MARCH, 1901.  
(COMMONWEALTH.)**

Birthplace.	Total Population of Commonwealth at Census.						
	N.S.W.	Victoria.	Qld.	S. Aust.	W. Aust.	Tas.	C'wealth.
Australia ...	1,079,154	940,830	323,436	289,993	126,952	147,938	2,908,303
New Zealand ...	10,589	9,020	1,571	711	2,704	1,193	25,788
United Kingdom	220,401	214,371	126,159	56,862	41,551	19,815	679,159
Other European Countries ...	20,151	16,548	21,174	9,326	6,076	1,398	74,673
Asia ...	14,208	8,793	13,878	4,376	4,810	949	47,014
Africa ...	986	926	378	235	243	101	2,869
America ...	4,813	3,659	1,688	811	1,151	385	12,507
Polynesia ...	1,139	203	8,877	39	78	27	10,363
At Sea ...	1,967	1,564	634	539	317	182	5,203
Unspecified ...	1,438	5,156	334	265	242	487	7,922
Total ...	1,354,846	1,201,070	498,129	363,157	184,124	172,475	3,773,801

The proportions for the several States for each of the birthplaces shewn in the foregoing table expressed as percentages of the total population, the birthplaces of which were specified, are as follows:—

### PERCENTAGE OF COMMONWEALTH POPULATION ACCORDING TO BIRTHPLACE,

31ST MARCH, 1901.

Birthplace.	Percentage of Total Population.						
	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Commonwealth.
	%	%	%	%	%	%	%
Australia ...	79.74	78.67	64.97	79.91	69.04	86.02	77.23
New Zealand ...	0.78	0.75	0.32	0.20	1.47	0.69	0.68
United Kingdom ...	16.28	17.93	25.34	15.67	22.60	11.52	18.03
Other European Countries ...	1.49	1.38	4.25	2.57	3.30	0.81	1.98
Asia ...	1.05	0.74	2.79	1.21	2.62	0.55	1.25
Africa ...	0.07	0.08	0.08	0.06	0.13	0.06	0.08
America ...	0.36	0.30	0.34	0.22	0.63	0.22	0.33
Polynesia ...	0.08	0.02	1.78	0.01	0.04	0.02	0.28
At Sea ...	0.15	0.13	0.13	0.15	0.17	0.11	0.14
Total ...	100.00	100.00	100.00	100.00	100.00	100.00	100.00

As regards distribution according to birthplace, the population of New South Wales is very similar to that of Victoria, the proportions born in Australia and Asia being slightly higher, and that born in the United Kingdom slightly lower, in the case of New South Wales. There is also a rough similarity between the population distributions of Queensland and Western Australia. In both, the Australian-born represent a much smaller, and those born in the United Kingdom, in "Other European Countries" and in Asia, a much larger proportion than is the case with the remaining States. Polynesians were, however, much more numerously represented in Queensland at the date of the Census than in any other State, but this position has been considerably modified by the subsequent deportation of Kanakas. Natives of New Zealand were, proportionately, most numerous in Western Australia. Tasmania had the largest proportion of Australian-born population, viz., 86 per cent., while Queensland, with 65 per cent., had the smallest. On the other hand, more than 25 per cent. of Queensland's population consisted of natives of the United Kingdom, while only 11½ per cent. of the population of Tasmania had been born there. For the Commonwealth as a whole 98 per cent. of the population were from Australasian or European birthplaces.

### § 3. Commonwealth Population—Its Distribution and Fluctuation.

1. **Present Population.**—The estimated population of the several States of the Commonwealth at the end of each of the last eleven years is as shewn in the following table. These estimates have, since the last issue of the Year Book, been amended on the basis of the results disclosed by the Census of 3rd April, 1911.

## POPULATION OF COMMONWEALTH, on 31st DECEMBER, 1900 to 1910.

Year.	*New South Wales.	Victoria.	Queens-land.	† South Australia.	Western Australia.	Tasmania.	Commonwealth.

\* Including the Federal Capital Territory. † Including the Northern Territory.

2. *Growth of Population.*—(i.) 1788 to 1824. From 1788, when settlement first took place in Australia, until December 1825, when Van Diemen's Land became a separate colony, the whole of the British Possessions in Australia were regarded as one colony, viz., that of New South Wales. The population during this period increased very slowly, and at the end of 1824 had reached only 48,072.

The population with which settlement in Australia was inaugurated, and that at the end of each year until 1824, are as follows:—

## POPULATION OF COMMONWEALTH ON 31st DECEMBER, 1788 to 1824.

Year.	Males.	Females.	Total.	Year.	Males.	Females.	Total.
1788 <sup>1</sup>	...	...	1,035	1806	5,389	2,521	7,910

1805	5,395	2,312	7,707	1824	36,871	11,201	48,072

1. On 26th January.

(ii.) *1825 to 1858.* The period extending from 1825 to 1859 witnessed the birth of the colonies of Tasmania (then known as Van Diemen's Land), Western Australia, South Australia, Victoria, and Queensland. The years in which these came into existence as separate colonies were as follows:—Tasmania, 1825; Western Australia, 1829; South Australia, 1834; Victoria, 1851; Queensland, 1859.

The estimated population of the Commonwealth during each year of this transition period is as follows:—

## POPULATION OF COMMONWEALTH ON 31st DECEMBER, 1825 to 1858.

Year.	Males.	Females.	Total.	Year.	Males.	Females.	Total.
1825	40,288	12,217	52,505	1842	153,758	87,226	240,984
1826	41,289	12,593	53,882	1843	158,846	92,002	250,848
1827	43,053	13,247	56,300	1844	165,034	99,253	264,287

(iii.) *1859 to 1910.* From 1859, the year in which Queensland came into existence as a separate colony, until the beginning of 1901, when the Commonwealth of Australia was inaugurated under the provisions of the Commonwealth Constitution Act, Australia consisted of six States, practically independent of each other in all matters of government. During this period, the population of the Commonwealth increased from 1,050,828 at the end of 1858 to 3,765,339 on the 31st December, 1900. The particulars for this period are given in the table hereunder.

During the ten years that have elapsed since the federation of the States was effected the population of the Commonwealth has increased by 659,744, from 3,765,339 on 31st December, 1900, to 4,425,083 on 31st December, 1910. See table hereunder:—

**POPULATION OF COMMONWEALTH ON 31st DECEMBER, 1859 to 1910.**

Year.	Males.	Females.	Total.	Year.	Males.	Females.	Total.
1859	644,376	452,929	1,097,305	1885	1,460,394	1,234,124	2,694,518

1878	1,132,573	959,591	2,092,164	1904	2,072,783	1,901,367	3,974,150
1879	1,168,781	993,562	2,162,343	1905	2,100,118	1,932,859	4,032,977
1880	1,204,514	1,027,017	2,231,531	1906	2,126,730	1,964,755	4,091,485
1881	1,247,059	1,059,677	2,306,736	1907	2,160,213	2,001,509	4,161,722
1882	1,289,892	1,098,190	2,388,082	1908	2,193,981	2,038,297	4,232,278
1883	1,357,423	1,148,313	2,505,736	1909	2,242,215	2,081,745	4,323,960
1884	1,411,996	1,193,729	2,605,725	1910	2,296,308	2,128,775	4,425,083

It will be seen from the foregoing tables that the population of Australia attained its first million in 1858, seventy years after settlement was first effected; its second million nineteen years later, in 1877; its third million twelve years later, in 1889; and its fourth million sixteen years later, in 1905.

The growth of the total population of the Commonwealth generally, and of each State therein, is graphically shewn on page 157, and of each sex considered separately on pages 158 and 159.

**3. Variations in Masculinity.**—In the second issue of this publication, on pages 163 to 165, an extended table was published shewing the masculinity of the population of each of the States for each year from 1796 to 1907. The following table gives similar particulars for every fifth year from 1800 to 1910. The graphs corresponding to these figures will be found on page 163:—

## MASCULINITY OF COMMONWEALTH POPULATION, 1800 to 1910.

Year.	N.S.W.*	Victoria.	Queensland.	South Aust.†	West Aust.	Tasmania.	C'wealth.

#### § 4. Influences affecting Growth and Distribution of Population.

1. **Mineral Discoveries.**—The discovery of gold in Australia in 1851 was undoubtedly one of the most influential factors in bringing about a rapid settlement of the country. Its effect may be gauged by a comparison of the increase during the ten years preceding, with that during the ten years succeeding the discovery. From 31st December, 1840, to 31st December, 1850, the increase was only 214,948 (viz., from 190,408 to 405,356). The rush of people to the newly-discovered goldfields during the succeeding decennium caused an increase of no less than 740,229, the population advancing to 1,145,585 on 31st December, 1860. In 1861, owing to the opening up in that year of the New Zealand goldfields, a rush of population from Australia set in, the result being that the net increase of population of the Commonwealth, which in 1855 amounted to 98,343, and even in 1860 was as much as 48,280, fell in 1861 to 22,564. In fact, during the year 1861 the departures from Australia exceeded the arrivals by 5958, the gain of 22,564 being due to the births exceeding the deaths by 28,522.

In more recent years the gold discoveries of Western Australia in 1886 and subsequent years, led to such extensive migration to that State, that its population, which on 31st December, 1885, amounted to only 35,959, increased in 25 years by no less than 240,873, totalling 276,832 on 31st December, 1910. In this case, however, the additions to the population of the western State were largely drawn from those of the eastern States, so that the actual gain of population to the Commonwealth was but slight.

2. **Pastoral Development.**—Very early in the colonisation of Australia it was recognised that many portions were well adapted for pastoral pursuits, and pastoral developments have led to a considerable distribution of population in various directions. As the numbers engaged in connection therewith, compared with the value of the interests involved, are relatively small, and as pastoral occupancy tends to segregation rather than aggregation of population, the growth of the pastoral industry is but slightly reflected in the population statistics of the Commonwealth.

**3. Agricultural Expansion.**—At the present time the area annually devoted to crops in the Commonwealth is nearly 12 millions of acres. Although considerable in itself, this area, viewed in relation to the total area of the Commonwealth, is relatively small, and represents only about  $\frac{1}{5}$  per cent. of the total area. Per head of population of the Commonwealth the area under crop, however, is  $2\frac{3}{4}$  acres, a fairly high amount when allowance is made for the recency of Australian settlement. About 80 per cent. of the area under crop is devoted to the production of wheat and hay, which require for their profitable production in Australia a considerable area in the one holding. Thus on the whole the agricultural districts of Australia are somewhat sparsely populated, though in a less marked degree than is the case in the pastoral areas.

**4. Progress of Manufacturing Industries.**—One direct effect of the development of manufacturing industries is the concentration of population in places offering the greatest facilities for the production of the particular commodities. In Australia, where manufacturing industries are as yet in their infancy, the tendency throughout has been to concentrate the manufacturing establishments in each metropolis. This has accentuated the growth of the capital cities, which growth, when compared with that of the rest of the country, appears somewhat abnormal.

**5. Influence of Droughts.**—The droughts, which at times so seriously affect the agricultural and pastoral prospects of Australia, have a marked influence on the distribution of population. Districts, which in favourable seasons were fairly populous, have, in times of drought, temporarily become more or less depopulated until the return of better conditions. This movement, however, ordinarily affects only the internal distribution of the population and not the total, but severe drought may even make its influence felt in the statistics of the total population of Australia. Thus in the case of the drought of 1902-3, the departures from the Commonwealth exceeded the arrivals for the two years 1903 and 1904 by 12,859. It may be noted also, that for the former of these years, the natural increase of population by excess of births over deaths was abnormally low, being only 51,150, as compared with 54,698 in the preceding and 60,541 in the succeeding year. As the solution of the problem of dealing with droughts is advanced, their influence will be less marked.

**6. Other Influences.**—(i.) *Commercial Crises.* The effect on population of a commercial crisis, such as that which occurred in Australia in the early years of the final decade of the last century, is clearly indicated on comparing the migration statistics of the Commonwealth for the five years 1887-91 with those for the five years 1892-96. During the former period, the arrivals in the Commonwealth exceeded the departures by no less than 146,872. In the latter period, the corresponding excess amounted to only 2064.

(ii.) *South African War.* The war in South Africa has apparently also left its impress on the population statistics of the Commonwealth, the departures during 1899 and 1900 exceeding the arrivals for the same period by no less than 10,546.

A reference to the graphs of population on pages 157 to 162 will illustrate the preceding observations.

## § 5. Elements of Growth of Population.

**1. Natural Increase.**—The two factors which contribute to the growth of a population are the "natural increase" by excess of births over deaths, and the "net immigration," i.e., the excess of arrivals over departures. While the relative potency of these factors depends upon a variety of causes, it may be said that, in general, in the case of a new country, "net immigration" occupies an important position as a source of increase of population, while in an old country "natural increase," modified more or less by "net emigration," or excess of departures over arrivals, is the only element causing growth of population. The table hereunder gives the total natural increase, as well as that of males and females:—

**NATURAL INCREASE<sup>1</sup> OF THE POPULATION**  
OF STATES AND COMMONWEALTH, FROM 1861 TO 1910.

MALES.

1. Excess of Births over Deaths.

With a single exception, viz., Tasmania, for the period 1906 to 1910, the natural increase of females exceeded that of males throughout the 50 years referred to in the foregoing table. This excess, for the total period 1861 to 1910, is shewn in the table both in

absolute numbers and as percentages of the male increase. The quinquennial period in which the largest natural increase of population took place was that of 1906-10 with a total for the Commonwealth of 334,828. For the individual States the quinquennia of maximum natural increase were as follows:—New South Wales, Queensland, Western Australia and Tasmania, 1906-10; Victoria, 1891-5, and South Australia, 1881-5.

2. **Comparison with other Countries.**—Notwithstanding its comparatively low birth-rate, Australia has a high rate of natural increase, owing to the fact that its death-rate is a very low one. The following table furnishes a comparison between the average rates of natural increase for some of the principal countries of the world for which such information is available, and those for the several States of the Commonwealth and the Dominion of New Zealand:—

**NATURAL INCREASE PER 1000 OF MEAN POPULATION (VARIOUS COUNTRIES).**

The graphs of natural increase for each of the States, as well as for the Commonwealth, are shewn on page 162.

3. **Net Immigration.**—The other factor of increase in the population, viz., the excess of arrivals over departures, known as "net immigration," is, from its nature, much more subject to marked and extensive variation than is the factor of "natural increase." These variations are due to numerous causes, many of which have already been referred to in dealing with the influences which affect the growth of population. An important cause not yet referred to, is that of assisted immigration. The number of persons so introduced varies considerably in different years.

Throughout the minus sign (—) signifies that the number of departures was in excess of arrivals.

During the period 1861-1910, viz., 50 years, the gain to the Commonwealth population by excess of arrivals over departures was 806,799 persons, while the gain by excess of births over deaths for the same period was 2,472,699. That is, nearly 25 per cent. of the increase for the Commonwealth during the past 50 years has been due to "net immigration" and about 75 per cent. to "natural increase." In regard to the contribution of individual States to the total net immigration of 806,799, it may be said that for two, viz., Victoria and Tasmania, the departures for the period in question actually exceeded the arrivals, viz., by 22,544 in the case of the former, and 13,303 in that of the latter, while in South Australia the total gain for the period was only 12,570. In New South Wales, Queensland, and Western Australia, on the other hand, the additions due to net immigration during the 50 years were respectively 368,750, 274,577, and 186,749.

The quinquennial period in which the greatest net immigration to the Commonwealth occurred was that of 1881-5 with a total of 224,040, whilst in the period 1901 to 1905, the departures exceeded the arrivals by 16,793. The quinquennial periods in which maximum net immigration occurred in the several States were as follows:—New South Wales and Queensland 1881-5, Victoria 1886-90, South Australia 1876-80, Western Australia and Tasmania 1896-1900. In all the States quinquennial periods have occurred in which the departures for the five years have exceeded the arrivals. The periods in which such net emigration from the several States was greatest were as follows:—New South Wales and Victoria 1896-1900, Queensland 1901-5, South Australia 1886-90, Western Australia 1871-5 and Tasmania 1906-10.

The graphs shewing net increase, both for the Commonwealth as a whole and for each of the States, will be found on pages 160 and 161.

4. **Total Increase.**—(i.) *Rates for various Countries.* The table hereunder furnishes particulars concerning rates of increase in population for the Commonwealth, its component States, and other countries:—

— Decrease. \* 1906 to 1908. † 1906 to 1909.

(ii.) *Variations in the Commonwealth Rate.* During the thirty years 1881-1911, the annual rate of increase in the population of the Commonwealth has exhibited a marked decline, falling from an average of 3.86 per cent. for the five years 1881-6 to an average of 1.39 for 1901-6. During the succeeding quinquennium, however, an improvement took place, the rate of increase being 2.03 per cent. As regards the separate States of the Commonwealth, the rates of increase in all cases except that of South Australia were lower, and in most instances considerably lower, for the period 1906-11 than for 1881-6.

(iii) *Comparison of Rates of Increase.* It may be noted that the highest rates of increase for the latest available period shewn in the above table are those for Canada,

New Zealand and Australia in the order named. The United States and Denmark rank next in order.

5. **Density of Population.**—From one aspect population may be less significant in respect of its absolute amount than in respect of the density of its distribution. The Commonwealth of Australia, with an area of 2,974,581 square miles, and a population on 3rd April, 1911, of 4,555,005 including aboriginals, has a density of only 1.53 persons to the square mile, and is, therefore, the most sparsely populated of the civilised countries of the world. For the other continents the densities are approximately as follows:—Europe, 116; Asia, 56; Africa, 12; and America, 11. The population of the Commonwealth has thus about 14 per cent. of the density of that of America, about 13 per cent. of that of Africa, about 2½ per cent. of that of Asia, and about 1½ per cent. of that of Europe.

Particulars concerning the number and density of the population of the various countries of the world for the latest dates for which such information is available are given in the following table. These figures have in the main been derived from the 1911 issue of the "Statesman's Year Book," and in some instances, more particularly in the case of Africa, must be considered as rough approximations only, complete data not being obtainable:—

## § 6. Seasonal Variations of Population.

1. **Natural Increase.**—For the Commonwealth as a whole the natural increase of the population is greatest in the quarter ending 30th September, and least in that ending 31st March. The birth rate is usually at its highest, and the death rate at its lowest, in the September quarter, and *vice versa* in the March quarter. The average natural increase in population of the several States for each of the quarters, based upon the experience of the ten years 1901 to 1910, is given in the following table, from which it will be seen that the quarter in which the rate of natural increase is highest is that ended 30th June for Victoria and Queensland, that ended 30th September for New South Wales and Western Australia, that ended 31st December for Tasmania, while for South Australia the rate for the quarters ending 30th June and 30th September was almost identical. The rate of natural increase is lowest in the quarter ended 31st March in all the States except Western Australia, in which the lowest rate occurs in the quarter ended 31st December.

### AVERAGE QUARTERLY NATURAL INCREASE, STATES AND COMMONWEALTH, 1901 to 1910.

State.	* Average Natural Increase for Quarter ended on last day of—								Average Natural Increase per annum, 1901-10.	
	March.		June.		September.		December.			
	Persons	%o	Persons	%o	Persons	%o	Persons	%o	Persons	%o

South Australia	1,208	3.25	1,444	3.89	1,459	3.93	1,263	3.39	5,374	14.47
W. Australia ...	1,011	4.33	1,051	4.59	1,302	5.42	988	4.07	4,352	18.64
Tasmania ...	767	4.16	807	4.40	838	4.57	908	4.97	3,320	18.03
Commonwealth	14,373	3.57	15,892	3.94	16,355	4.04	15,155	3.73	61,775	15.37

\* The symbol ‰ denotes "per thousand."

2. **Net Immigration.**—For the Commonwealth as a whole the excess of arrivals over departures for the years 1901 to 1910 was greatest in the December quarter, while in the March quarter the average excess of departures over arrivals was 1660. In New South Wales the September quarter gives the greatest excess of arrivals over departures. In Western Australia the largest excess is in the June quarter. In South Australia and Tasmania the arrivals largely exceeded the departures in the December quarter, but in all the other quarters the departures were in excess. In Queensland, the December quarter showed an excess of departures over arrivals. Victoria shows an excess of departures for every quarter, except that ended 31st December. Particulars concerning the average net immigration of the several States are as follows:—

### AVERAGE QUARTERLY NET IMMIGRATION, STATES AND COMMONWEALTH, 1901 to 1910.

State.	Quarter ended on last day of—								Average Net Immigration per annum, 1901-10.

Throughout, the minus sign (—) denotes that the departures were in excess of arrivals, and ‰ denotes per thousand of population.

## § 7. Urban Population.

1. **The Metropolitan Towns.**—A feature of the distribution of population in Australia is the tendency to accumulate in the capital cities. To such an extent is this metropolitan aggregation carried, that in every State the population of the capital far outnumbers that of any other town therein, and ranges between 21 and 46 per cent. of the entire population of the State. The estimated populations of the several capitals on 3rd April, 1911, and the percentages of such populations on the totals for the respective States, are shewn in the table hereunder. That this metropolitan concentration is phenomenal, may be readily seen by comparing the percentage on the total population with the similar figures for the principal countries of Europe, also given in the table hereunder:—

### METROPOLITAN POPULATION.

\*Population of Greater London 1911, 7,252,963.

2. **Urban Population Generally.**—In connection with the particulars shewing the tendency in Australia to concentrate population in the metropolis, it should be borne in mind that in most of the European States the capital is but one of many populous cities, and in some instances is by no means the most populous. In Australia, on the other hand, the metropolis is in every instance the most populous city, and, in some of the States, is also the only town of considerable magnitude. It will be seen from the table on the next page, that there are in all, only seventeen towns in the Commonwealth having a population upwards of 20,000. Of these six are in New South Wales, four in Victoria, two in Queensland, one in South Australia, two in Western Australia, and two in Tasmania.

In the following table are given the estimated populations of the principal Australian towns as at the date of the recent Census, 3rd April, 1911. In all cases the populations given for the towns include those of contiguous suburban areas, and comprise the area contained within a circle of two, five or ten mile radius of the principal post office.

The figures for Metropolitan towns are also inserted, but will be seen to differ slightly in some instances from those given in the table on page 138, the reason being that the figures given below relate to the population within a circle of 10 mile radius of the G.P.O., whilst, except in the case of Melbourne and Brisbane, this 10 mile circle does not exactly constitute the accepted Metropolitan area.

## POPULATION OF PRINCIPAL TOWNS IN THE COMMONWEALTH, 3rd APRIL, 1911.

### § 8. Assisted Immigration.

In the earlier days of settlement in Australia, State-assisted immigration played an important part. Such assistance practically ceased in South Australia in 1886, in Tasmania in 1891, and for the time being, in Victoria in 1873. In New South Wales general State-aided immigration was discontinued in the year 1887, but those who arrived under that system and were still residing in New South Wales might, under special regulations, send for their wives and families. A certain amount of passage money, graduated according to the age of the immigrant, was required to be paid in each case. Under the provisions of these regulations, immigrants to the number of 1994 received State assistance during the years 1888 to 1899 inclusive. From 1900 to 1905 no assistance of any kind was given, but from 1906 onwards assistance has again been afforded, a total of 5058 State-assisted immigrants being recorded for the year 1910. In Queensland and Western Australia, such assistance, although varying considerably in volume from year to year, has been accorded for many years past. The numbers so assisted during 1910 were 6918 in Queensland, and 3115 in Western Australia. Assistance to immigrants, which in the case of Victoria, had practically ceased in 1873, has recently been again afforded, and such assistance was rendered by the Victorian Government to 652 immigrants in 1909, while in 1910 the number so assisted was 1690. In South Australia, assistance was rendered to 665 immigrants in 1911, in which year the principle of State assistance was again introduced by that State.

The total number of immigrants to Australia from the earliest times up to the end of 1910, the cost of whose introduction was wholly or partly borne by the State, is approximately as follows:—

#### ASSISTED IMMIGRANTS UP TO END OF 1910.

##### STATES AND COMMONWEALTH.

State ... ..	N.S.W.	Victoria.	Qld.	S. Aust.	W.A.	Tas.	C'wealth.
No. of Assisted Immigrants	227,759	142,931	183,867	95,348	15,062	21,699	686,636

### § 9. Enumerations and Estimates.

1. **Musters.**—Actual enumerations of Australia's population, of varying accuracy, have been made from the earliest times onward. Originally known as "Musters," these were first undertaken with a view to estimating the food and other requirements of the settlements. These musters, the results of which are said to have been very unreliable, appear to have been carried out at least annually from 1788 to 1825, when they were discontinued.

2. **Census-taking.**—The first regular Census in Australia was that of New South Wales, in November, 1828. The dates on which Censuses have been taken in the several States, and the populations enumerated thereat, are as shewn in the table on page 142.

**3. The Census of 1901.**—A conference of the State Statisticians of Australia and New Zealand held in Sydney in February and March, 1900, aimed at securing uniformity in the collection and compilation of the Census of 1901. The householder's schedule which it drafted made provision for the collection of information in all the States under the following heads, viz.:—Name, Sex, Age, Conjugal Condition, Relation to Head of Household, Occupation, Sickness and Infirmary, Birthplace, Length of Residence in Colony, Religion, Education, Materials of Houses and Number of Rooms. In addition to these, it was agreed that States so desiring might include further inquiries relating to Land, Live Stock, Crops, and certain other matters.

Provision was made for uniformity in the classification and compilation of the data by formulating rules for dealing with cases in which differences of opinion as to methods of treatment might exist. Thus, although conducted by six different States, the Census of the Commonwealth, as taken in 1901, was carried out on a fairly uniform plan, and consequently furnished data in many ways suitable for purposes of aggregation or comparison. A detailed examination of the results, however, gives many indications of departure from a common line of action, which, in the absence of a central authority, can hardly be avoided in an undertaking of this nature.

**4. The Census of 1911.**—Under Section 51, sub-section (xi.) of the Constitution Act, power is given to the Parliament of the Commonwealth to make laws with respect to "Census and Statistics." This power was brought into requisition in 1905, when the Census and Statistics Act 1905 became law, being assented to on 8th December, 1905. Under this Act provision is made for the appointment of a Commonwealth Statistician, and amongst other duties that officer is charged with the taking of a Census in the year 1911 and in every tenth year thereafter.

The particulars which the Act requires to be included in the Census schedule are almost identical with those which were contained in the 1901 schedule, the principal alterations being that "Length of Residence in Australia" is specified instead of "Length of Residence in the Colony of Enumeration," that "Duration of Marriage" was to be asked in all cases, and that nationality was to be ascertained in addition to birthplace. As already stated in § 1 of the present section, the Census was taken as at 3rd April, 1911.

In each State a Census supervisor was appointed to control the collection within that State under the direction of the Commonwealth Statistician. Each State was then divided into Census districts, each of which was placed in the charge of an enumerator, and each Census district was further subdivided into collectors' districts, one collector for each district. The results are, at the time of writing, in course of tabulation, and a summary of the latest results available to the date of going to press will be found in a special Census Appendix hereto.

It should be noted, in connection with the census of 1911, that a slight change in defining the date of reference has been made in order to accord with the English practice. In previous Australian censuses the date of the census has been taken to be that of the day preceding the midnight which is adopted as the determining point. Thus, at the census of 1901, where the figures given relate approximately to midnight between the 31st March and the 1st April, the Australian census was stated to be that of the 31st March, while in a precisely similar case in England it was stated to be that of 1st April. At the census of 1911, taken as at midnight between the 2nd and 3rd April, the date of the census has, in accordance with the English practice, been stated to be the 3rd April, and that day was gazetted as the day of the census.

The total population enumerated at the several Australian Censuses are shown in the following table:—

### AUSTRALIAN CENSUSES.

Census Year.	Population Enumerated (exclusive of Aborigines).						
	New South Wales.	Victoria.	Queensland	South Australia.	Western Australia.	Tasmania.	Commonwealth. (Total)

\* Including Northern Territory, 3310, previously included in South Australia; and Federal Capital Territory, 1714, previously included in N.S.W.

1. Including Port Phillip District, which afterwards became the Colony of Victoria. 2. Previously included with New South Wales. 3. 3rd April. 4. 5th April. 5. 31st March. 6. 3rd April.

**5. Estimates of Population.**—In the absence of an annual enumeration of the population, it becomes necessary to adopt some method of estimating it for intercensal periods, basing such estimates on the results of the most recent Censuses. The manner in which

this is effected varies, however, in different parts of the world. In England, for example, the assumption made is that the rate of increase of the preceding intercensal period will continue unchanged during the current period. Again, in the United States, it has been assumed, in certain cases, that the numerical increase per annum ascertained for the preceding intercensal period will hold good for the current period. From the earliest times in Australia, "statistics of fluctuation" have been obtained from the records of births, deaths, arrivals and departures. With reasonable thoroughness in the collection of such statistics, the deduced estimates possess much greater weight than those based on the mere assumption of a continuation of the increase experienced in the preceding period. In most cases, however, estimates of population, based on statistics of fluctuation, are found to be in excess at the Census, thus indicating a uniform tendency to over-estimation, and the necessity for a correction. In the population figures given in the earlier portion of the present section, the estimates of the population of the several States have been carefully revised, the results of the various Censuses being taken in conjunction with the records of births, deaths, arrivals and departures. It is believed that by this means the population of the Commonwealth from the date of settlement onwards has been obtained with a high degree of accuracy, and that the figures supplied represent a reasonably close approximation to the actual numbers. Particulars for the several States from the date of settlement onwards are given in the following tables, and are shewn by graphs on pages 157 to 159:—

COMMONWEALTH POPULATION FROM EARLIEST DATE.

\* Previously included with New South Wales.

† Details not available.

The tables on the two preceding pages, shewing the quinquennial figures for the male, female, and total population of each State and the Commonwealth, give sufficient indication, for general purposes, of its progress. A reference to the diagrams given hereinafter (pp. 157 to 159), on which the graphs shew the particulars for *each* year, is also desirable. The characteristics of the fluctuations of each element, or of the totals, will be more readily perceived by reference to the graphs than they possibly can by reference to these numerical tables. The earliest date for which particulars as to sex were available is 1796. The figures from 1788 to 1825 inclusive are based upon the results of the musters taken in those years; those for subsequent years are founded upon estimates made on the basis of the Census results and the annual returns of births and deaths and immigration and emigration.

## § 10. Principal Results of Census of 1901.

1. **Census Results.**—In the first issue of the Official Year Book tables are given shewing in some detail particulars concerning the Census of 1901 for the several States under the headings of Ages, Birthplaces, Occupations, Religions, and Conjugal Condition. Similar information in a very condensed form is given hereunder. For fuller particulars for the 1901 Census reference should be made to the first issue (see Year Book No. 1, pp. 164 to 179). In the special Census Appendix hereto is given a summary of the latest particulars concerning the Census of 1911, available to date of going to press.

2. **Ages.**—The numbers of persons of each sex in some of the more important age groups enumerated in the several States of the Commonwealth at the Census of 31st March, 1901, are as follows:—

### AGE DISTRIBUTION OF COMMONWEALTH POPULATION ON 31st MARCH, 1901.

3. **Birthplaces.**—In the next table is given a summary of the populations of the several States of the Commonwealth on 31st March, 1901, classified according to sex and birthplace, the birthplaces being grouped under the five continental divisions of the globe, with two additional headings for those born in Polynesia, and those born at sea. Of the total population of 3,773,801 those of unspecified birthplace numbered only 7922, or little more than 2 per thousand :—

4. **Occupations.**—In the compilation of the results of the Census of 31st March, 1901, the populations of the several States were tabulated according to occupation in the following classes:—

(i.) *Professional.* Embracing all persons not otherwise classed, mainly engaged in the government and defence of the country, and in satisfying the moral, intellectual, and social wants of its inhabitants.

(ii.) *Domestic.* Embracing all persons engaged in the supply of board and lodging, and in rendering personal services for which remuneration is usually paid.

(iii.) *Commercial.* Embracing all persons directly connected with the hire, sale, transfer, distribution, storage, and security of property and materials.

(iv.) *Transport and Communication.* Embracing all persons engaged in the transport of persons or goods, or in effecting communication.

(v.) *Industrial.* Embracing all persons not otherwise classed who are principally engaged in various works of utility, or in specialities connected with the manufacture, construction, modification, or alteration of materials so as to render them more available for the various uses of man, but excluding, as far as possible, all who are mainly or solely engaged in the service of commercial interchange.

(vi.) *Agricultural, Pastoral, Mineral, and other Primary Producers.* Embracing all persons mainly engaged in the cultivation or acquisition of food products, and in obtaining other raw materials from natural sources.

(vii.) *Indefinite.* Embracing all persons who derive incomes from services rendered, but the direction of which services cannot be exactly determined.

(viii.) *Dependents.* Embracing all persons dependent upon relatives or natural guardians, including wives, children, and others, not otherwise engaged in pursuits for which remuneration is paid, and all persons depending upon private charity, or whose support is a burthen on the public revenue.

Particulars concerning the number contained in each of these classes are given in the table hereunder:—

5. **Religions.**—In the Acts under which the Census of 1901 was taken in the several States, persons enumerated were required under penalty to furnish replies to all the inquiries contained in the schedule, with the exception of that relating to religion. In this case, any person objecting to give such particulars was allowed to insert the words "Object to state" in the column provided for religion. Of the total population of 3,773,801 there were 42,131, or 1.12 per cent., who availed themselves of this option. There were also 14,060, or 0.37 per cent., concerning whom no particulars as to religion were obtained.

Of the remainder, 3,626,449, or 97.55 per cent., were members of the various Christian denominations, 53,371 were members of non-Christian religions, 31,011 were of indefinite religious belief, and 6779 stated that they were of no religion.

Amongst the Christian denominations, that most numerously represented was the Church of England, with 1,497,576 adherents, the next in order being the Roman Catholic (850,620), the Methodist (504,101), the Presbyterian (426,105), the Baptist (89,338), the Lutheran (75,021), the Congregational (73,561), and the Salvation Army (31,100).

The principal non-Christian religions represented in Australia were the Hebrew, Mahomedan, Buddhist and Confucian, the members of the Hebrew congregation totalling 15,239.

Those included under the head of "Indefinite" in the attached table consist mainly of persons who stated that they were "Freethinkers" or "Agnostics," or returned themselves as being of "No Denomination," while under the head of "No Religion" are given those who were so returned on the schedules as well as a small number who stated that they were "Atheists."

6. **Conjugal Condition.**—In the following tables are given summaries of the particulars concerning the population of the several States on 31st March, 1901, classified according to age and conjugal condition. In the case of South Australia divorced persons and persons whose conjugal condition was not stated were included under other heads. The figures given in these tables are exclusive of 1553 half-castes in Queensland, and 553 in South Australia, whose ages and conjugal condition were unspecified :—

## § 11. Naturalisation.

1. **The Commonwealth Act.**—The Commonwealth Constitution empowers the Commonwealth Parliament to make laws with respect to "Naturalisation and Aliens," a power which was exercised when the "Naturalisation Act of 1903" was passed. This Act was assented to on 13th October of that year, and came into force on 1st January, 1904, in accordance with a proclamation by *Gazette* of 14th November, 1903.

Prior to the passing of this Act the issue of certificates of naturalisation had been a function of the State Governments, carried out under Acts of the several State Legislatures, which, however, did not differ materially from each other, and furnished the basis on which the Commonwealth Act was drafted. From 1st January, 1904, when the Commonwealth Act became operative, the right to issue certificates of naturalisation in the Commonwealth has been vested exclusively in the Federal Government, but all certificates or letters of naturalisation issued under the several State Acts prior to that date entitle the recipients to be deemed to be naturalised under the Commonwealth Act.

The grant of a certificate of naturalisation entitles the recipient within the limits of the Commonwealth to all the rights and privileges, and renders him subject to all the obligations, of a natural-born British subject, with the exception that where, by any Commonwealth or State Constitution or Act, a distinction is made between natural-born British subjects and naturalised persons, such distinction shall hold good in the case of all persons naturalised under the Commonwealth Act.

Applications for certificate of naturalisation must be made to the Governor-General, the qualifications required in an applicant being:—

- (i.) That he is not a British subject.
- (ii.) That he is not an aboriginal native of Asia, Africa, or the Islands of the Pacific, excepting New Zealand.
- (iii.) That he intends to settle in the Commonwealth.
- (iv.) (a) That he has resided in Australia continuously for two years immediately preceding naturalisation; or
- (b) That he has obtained in the United Kingdom a certificate or letters of naturalisation.

An applicant who has already obtained a certificate or letters of naturalisation in the United Kingdom is required to furnish, in support of his application—

- (i.) His certificate or letters of naturalisation.
- (ii.) His statutory declaration—
  - (a) That he is the person named therein.
  - (b) That he obtained the certificate or letters without fraud or intentional false statement.
  - (c) That the signature and seal thereto are, to the best of his knowledge and belief, genuine.
  - (d) That he intends to settle in the Commonwealth.

If the applicant is not already naturalised in the United Kingdom the particulars which he is required to furnish in support of his application are as follows:—

- (i.) His own statutory declaration stating—
  - (a) Name; (b) Age; (c) Birthplace; (d) Occupation; (e) Residence; (f) Length of residence in Australia; (g) Intention to settle in the Commonwealth.
- (ii.) A certificate signed by a Justice of the Peace, a postmaster, a teacher of a State school, or an officer of police, that the applicant is known to him and is of good repute.

In connection with any application for naturalisation, the Governor-General in Council is authorised to grant or withhold a certificate as he thinks most conducive to the public good, but the issue of a certificate to any person who is not already naturalised in the United Kingdom is not admissible until the applicant has taken an oath or affirmation of allegiance. The grant of a certificate is made free of charge.

In addition to naturalisation by grant of certificate, the Act makes provision for—

(i.) Naturalisation by marriage.

(ii.) Naturalisation by residence with naturalised parent.

The former relates to the case of a woman who is not herself a British subject, but is married to a British subject; the latter to that of an infant who is not a natural-born British subject, but who has resided at any time in Australia with a father or mother who is a naturalised British subject. In each instance the person concerned is deemed to be naturalised under the Commonwealth Act.

The administration of the Act is carried out by the Department of External Affairs, and the Governor-General is authorised to make such regulations as are necessary or convenient for giving effect to the Act.

2. **Statistics of Naturalisation.**—Particulars relative to the nationalities of the recipients of certificates of naturalisation issued under the Act during each of the five years 1906 to 1910, and to the countries from which such recipients had come, are shewn in the following table:—

#### COMMONWEALTH NATURALISATION CERTIFICATES GRANTED, 1906 to 1910.

**3. Census Particulars.**—On the Personal Card used at the Census of 3rd April, 1911, an inquiry as to naturalisation was made, all persons who were British subjects by naturalisation being required to indicate the fact by inserting the letter N in the place provided for the purpose on the card. In addition, in checking the cards in the Census Bureau, instructions were given that cases of women naturalised by marriage to British subjects, and of children naturalised by residence with parents who have become British subjects, should be duly taken into account by the insertion of the letter N if originally omitted. The results of the tabulation are not available at the date of writing, but will be found in the Census Appendix. The corresponding figures obtained at the Census of 31st March, 1901, were as follows:—

**NUMBER OF NATURALISED BRITISH SUBJECTS.**

1. Not ascertained.      2. Exclusive of Queensland.

## § 12. Graphical Representation of Growth of Population.

1. **General.**—The nature of the fluctuations of the numbers representing (a) total population, or those representing (b) births and deaths from year to year, or (c) the natural increase, *i.e.*, the difference of births and deaths, or (d) the net immigration, all of which taken together make up the element of increase of total population, cannot be readily discerned from mere numerical tables. It has been deemed desirable therefore to furnish a series of graphical representations, shewing in some cases the characteristics of these elements from 1788 to 1910, and in others from 1860 to 1910. The graphs furnish at a glance a clear indication of the changes taking place, and of their significance from year to year. The great importance of such representations is that only by their means can the most recent changes be justly apprehended, either in their relation to the past, or their meaning for the future.

2. **Graphs of Total Population** (page 157).—These graphs furnish interesting evidence of the comparatively slow rate of growth of the several States and of the Commonwealth as a whole, during the period from the foundation of settlement in 1788 until 1832. From that year onwards to 1851, a moderately increased rate of progress was experienced. In 1851 gold was discovered in Australia, and the effect of this discovery on the population of the Commonwealth is shewn by the steepness of the curves for New South Wales and Victoria, and also for the Commonwealth, from this point onwards for a series of years. The sudden breaks in the continuity of the curves for New South Wales indicate the creation of new colonies, and their separation from the mother colony. Thus, Tasmania came into existence in 1825, Victoria in 1851, and Queensland in 1859. Owing to the extensive gold discoveries in Victoria, its population increased so rapidly that in 1854 its total passed that of New South Wales, and remained in excess until 1892, when the mother State again assumed the lead, which it has since maintained. The rate of increase in New South Wales is large, but the State is only sparsely populated. A feature of the New South Wales curve is its comparative regularity as compared with that of Victoria, the population of which State increased with great rapidity from 1851 to 1860, less rapidly from 1861 to 1878, with a further period of increased rapidity from 1878 to 1891, and a period of very slow and fluctuating growth from the latter year to 1910. Victoria, however, has a population density more than double that of Tasmania, and nearly three times that of New South Wales.

In the case of Queensland, the curve indicates a rate of growth which, though varying somewhat, has on the whole been satisfactory, and at times very rapid. Periods of particularly rapid increase occurred from 1862 to 1865, from 1873 to 1877, and from 1881 to 1889. The population of Queensland passed that of Tasmania in 1867, and that of South Australia in 1885. The population density of Queensland is less than one-sixteenth of that of Victoria.

The curve for South Australia indicates that with fluctuations more or less marked, the population increased at a moderate rate from the date of the foundation of the colony in 1834 until 1884, and that from that point onwards a diminished rate of increase was experienced. The population of South Australia passed that of Tasmania in 1852. Its density is about half of that of Queensland, about one-twelfth of that of New South Wales, and about one-thirty-third of that of Victoria.

The curve for Western Australia indicates that the population increased regularly but very slowly until 1886, when the discovery of gold in the Kimberley division caused an influx of population. The effects of the further rich discoveries of gold in the Murchison and Coolgardie districts in 1891 and 1892, are clearly shewn in the rapid increase of population in those and subsequent years to 1897. Two years of retarded progress then occurred, followed by a satisfactorily rapid rate of increase from 1899 to 1906, a slight decline in 1907 and a further advance in 1908, 1909, and 1910. The population of Western

GRAPHS OF TOTAL POPULATION OF THE COMMONWEALTH OF AUSTRALIA  
AND EACH STATE THEREIN, 1788-1910.

(See Tables pages 126 to 128.)

**EXPLANATION OF GRAPHS.**—The base of each small square represents two years' interval for both States and Commonwealth; and the vertical height 80,000 persons for Commonwealth or 20,000 for States. The zero line for the States is the bottom line; for the Commonwealth it is the line marked "Commonwealth." The scale on the left above the Commonwealth zero line relates to the Commonwealth, and that on the right relates to the States.

Where the population falls suddenly the fall denotes the creation of a new colony, e.g., New South Wales 1825, loses the whole population of Tasmania, then erected into a separate colony.

The curves are as follows:—Commonwealth, an unbroken line; New South Wales, — — — Victoria, - - - - -; Queensland, - - - - -; South Australia, - - - - -; Western Australia, - - - - -; Tasmania, - - - - -; the names on the curves also shew which State each represents.

The manner in which the population of the Commonwealth would have grown from 1860 to 1910 if, during that period, there had been in operation the rate of increase actually experienced the United States from 1790 to 1860, is shewn for purposes of comparison.

GRAPHS OF MALE AND FEMALE POPULATIONS, COMMONWEALTH OF  
AUSTRALIA, 1796-1910.

(See Tables pages 126 to 128.)

EXPLANATION OF GRAPHS.—The base of each small square represents two years' interval, and the vertical height 80,000 persons. The distances upward from the heavy zero line denote the number of males, and downward the number of females. From 1860 onward is shewn, for purposes of comparison, the manner in which the numbers of each sex in the Commonwealth would have grown from 1860 to 1908 (1910 for females), if, during that period, there had been in operation the rate of increase actually experienced in the United States from 1790 to 1860.

The asymmetry of the two graphs reveals the want of uniformity in the increase of the two sexes.

# GRAPHS OF MALE AND FEMALE POPULATION OF THE STATES OF AUSTRALIA, 1796-1910.

(See Tables pages 126 to 128.)

**EXPLANATION OF GRAPHS.**—The base of each small square represents two years' interval, and the vertical height 20,000 persons. The distances upward from the zero line represent the number of males, and downward the number of females.

The sudden falls denote the creation of new colonies.

The names on the curves denote the States to which they refer, and the curves are as follows:—New South Wales, ———; Victoria, - - - - -; Queensland, . . . . .; South Australia, - · - · - ·; Western Australia, - - - - -; Tasmania, ————.

The asymmetry of the two series of graphs reveals the want of uniformity in the increase of the two sexes.

GRAPHS SHEWING NET INCREASE OF POPULATION OF THE COMMONWEALTH OF AUSTRALIA AND THE STATES OF NEW SOUTH WALES AND VICTORIA, 1860-1910.

(For explanation see foot of next page.)

GRAPHS SHEWING NET INCREASE OF POPULATION OF THE STATES OF QUEENSLAND, LAND, SOUTH AUSTRALIA, WESTERN AUSTRALIA, AND TASMANIA, 1860-1910.

EXPLANATION OF GRAPHS SHEWING NET INCREASE.—The base of each small square represents an interval of a year for both States and Commonwealth; the vertical height represents 2000 for the Commonwealth and 1000 for the States. In the first graph two zero lines are taken (i.) for the Commonwealth and (ii.) for New South Wales and Victoria. The scale on the left relates to the Commonwealth and that on the right relates to New South Wales and Victoria. In the second graph two zero lines are taken (i.) for Queensland and South Australia, and (ii.) for Tasmania and Western Australia. The scale on the left relates to Queensland and South Australia, and that on the right relates to Tasmania and Western Australia.

NET DECREASES in population are shown by carrying the graph in such cases below the zero line, the distance of the graph below the zero line indicating the extent of the decrease.

The lines used are as follows:—Commonwealth, an unbroken line; New South Wales, — — — —; Victoria, — — — —; Queensland, — — — —; South Australia, — — — —; Western Australia, — — — —; Tasmania, — — — —.

The names on the curves denote the States to which they refer.

GRAPHS OF NATURAL INCREASE OF THE POPULATION OF THE COMMONWEALTH  
AND STATES OF AUSTRALIA, 1860-1910.

EXPLANATION OF GRAPHS.—The base of each small square represents one year for both States and Commonwealth, and the vertical height 1000 persons for the States and 2000 persons for the Commonwealth.

The distances upward from the zero line, marked 0 for both Commonwealth and States, denote the excess of births over deaths. The scale on the left relates to the Commonwealth, and that on the right to the States. The names shew the States to which the curves refer, they are as follows:—Commonwealth — ; New South Wales, — — — ; Victoria, — — — — ; Queensland, — — — — — ; South Australia, — — — — — — ; Western Australia, — — — — — — — ; Tasmania, — — — — — — — — .

GRAPHS SHEWING MASCULINITY OF THE COMMONWEALTH AND STATES  
OF AUSTRALIA, 1796-1910,

(See Tables pages 123 and 129.)

EXPLANATION OF GRAPHS.—The base of each small square represents an interval of five years and the vertical height an excess of forty per cent. of males over females. The basic lines (shewn thickened) for Commonwealth and all the States are at 100 per cent., equivalent to a numerical equality of the sexes.

# DISTRIBUTION OF POPULATION THROUGHOUT THE COMMONWEALTH OF AUSTRALIA, ACCORDING TO CENSUS OF 1911.

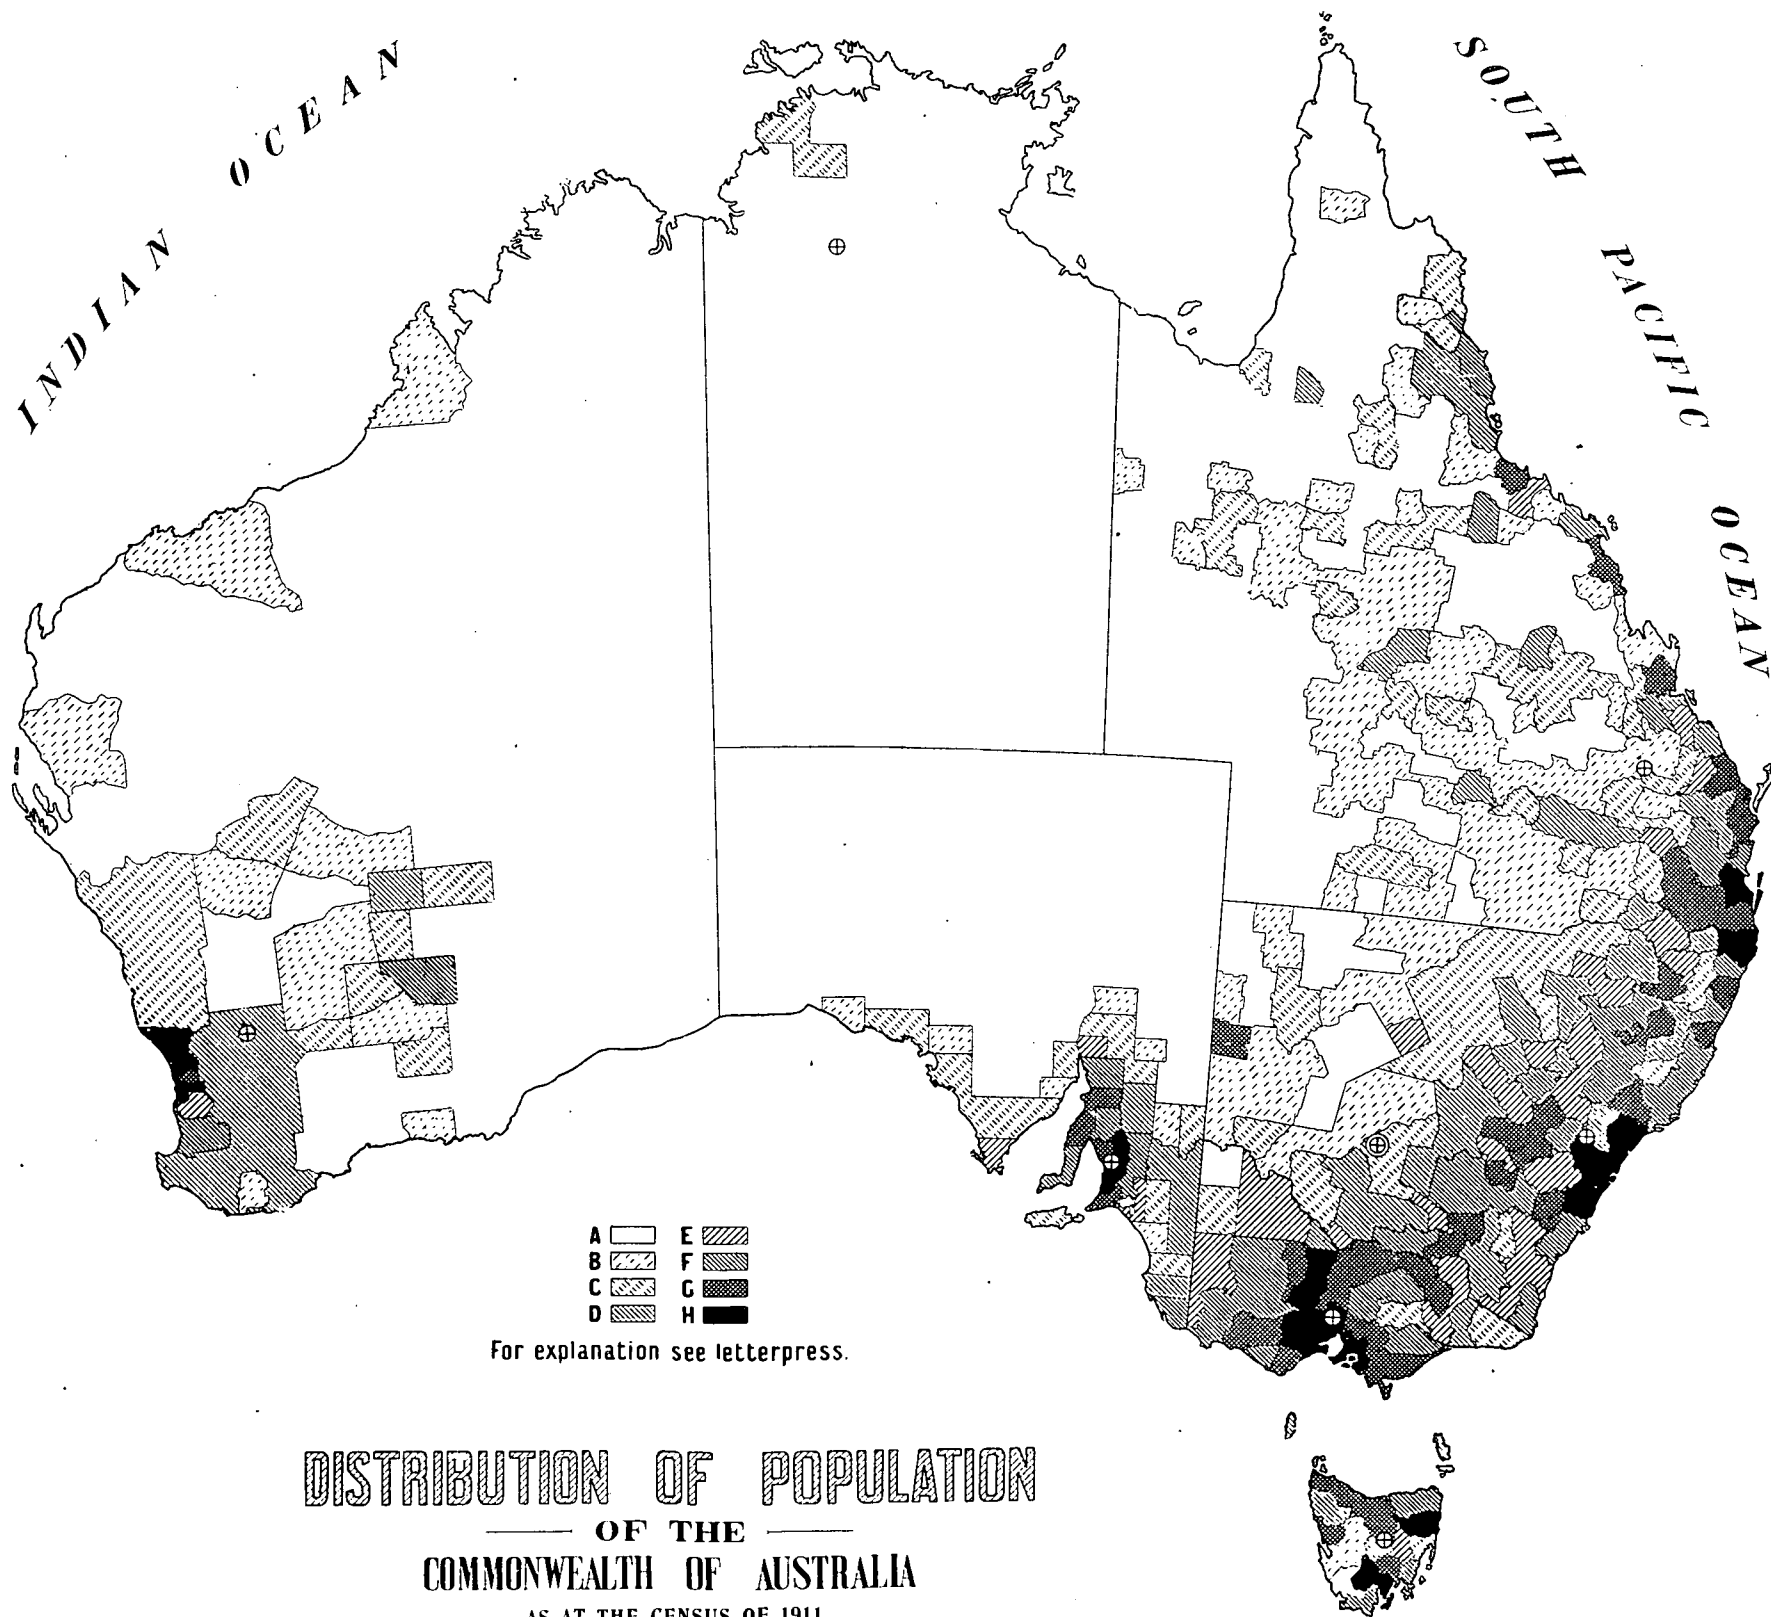

The folding map opposite furnishes a graphic representation of the distribution of the population of the Commonwealth at the date of the census of 1911. For this purpose the density of the population has been computed for the counties of each State, and the areas representing these counties have been shaded in accordance with the following scale of density:—

A—Less than 1 inhabitant to 16 sq. miles							
B—From 1 inhabitant in 16 sq. miles to less than 1 in 4 sq. miles							
C—	"	1	"	4	"	"	1 in 1 sq. mile
D—	"	1	"	1 sq. mile	"	2 in 1	"
E—	"	2 inhabitants in 1	"	"	"	4 in 1	"
F—	"	4	"	1	"	"	8 in 1
G—	"	8	"	1	"	"	16 in 1
H—16 inhabitants and upwards in 1 square mile							

A map drawn upon such a small scale must, of course, be considered as furnishing only a rough approximation as to the true distribution of the population, owing to the fact that a small densely-populated area may exist in certain cases within a comparatively large district, the balance of which is but sparsely populated. Thus, in such a case, owing to the density of the whole district being alone taken into account, the fact of a concentration of population within a small area is lost for purposes of representation. It is evident that the larger the district is for which the density has been calculated, the less will the map represent the true facts. It is, however, believed that by the calculations being made in each State for counties this feature has been minimised, as the areas of the counties of New South Wales, Victoria, Queensland, South Australia, and Tasmania are fairly equal in area, and do not average much more than 2000 square miles. The areas of counties in the Northern Territory and in Western Australia average 4000 and 8000 square miles respectively. It is evident that, so far as the States of Queensland, Western Australia, and Tasmania are concerned, the map now published cannot be compared with the map contained in previous issues of this Year Book, as the density had been computed for that map for Registration Districts in Queensland, Magisterial Districts in Western Australia, and Electoral Districts in Tasmania.

An area of about 1,136,000 square miles, equal to 38 per cent. of the total area of the Commonwealth, and belonging to South Australia, Western Australia, and the Northern Territory, is not subdivided into counties. As the total population of that area is under 5000, it appears white on the map, together with a considerable number of adjoining counties, in which the population is less than one inhabitant to 16 square miles.

The concentration of population about the capitals, and, to a lesser extent, about some mining and agricultural centres, is obvious on reference to the map. The centres of gravity of the population of the several States and of the Commonwealth as a whole have been ascertained, and are shewn in the map by crosses surrounded by circles. It is evident that the greater the percentage of the population of a State concentrated in the immediate neighbourhood of its capital, the closer to the capital the centre of gravity will be located, and the map shews this plainly. The centre of gravity of the population of the whole Commonwealth lies within the State of New South Wales, in county Nicholson, practically on the parallel of Sydney and the meridian of Melbourne, and almost in the centre of a straight line joining Sydney and Adelaide.

Australia became greater than that of Tasmania in 1899. Its density is little more than half of that of South Australia, one-third of that of Queensland, one-nineteenth of that of New South Wales, and about one-fiftieth of that of Victoria.

The Tasmanian population curve indicates a comparatively slow rate of growth throughout. Its most noticeable feature is a retardation in increase in 1852 and subsequent years, brought about by the discovery of gold on the mainland. The population density of Tasmania is nearly 40 per cent. greater than that of New South Wales, and a little less than half of that of Victoria.

**3. Graphs for Commonwealth of Male and Female Population** (page 158). These curves shew the relative growth of male and female population of the Commonwealth, and it will be seen that the former are far more liable to marked fluctuations than the latter. The curves representing an increase of population on the basis of the United States rate for 1790 to 1860, indicate that on the whole the female rate of increase in the Commonwealth has been a fairly satisfactory one, and that from 1860 to 1893 the same might be said of the male population. From 1893 onwards, however, the male population of the Commonwealth has fallen considerably below this rate, and it may be added that the rapid lowering of the rate of increase of the male population must be regarded as unsatisfactory from a national standpoint.

Although the rate of increase of the female population from 1860 onwards is on the whole very satisfactory, it should be noted that the total number at the beginning of this period was relatively very small, and that from 1894 there is an unsatisfactory falling off in the rate of increase, similar to that experienced in the case of males.

**4. Graphs for each State of Male and Female Population** (page 159).—These graphs, shewing the relative progress in male and female population for each of the States, disclose the fact that in all cases the female population is much less liable to marked fluctuations than the male, and further, that in cases where rapid increases have taken place in the latter a similar, but much more gradual, increase is in evidence in the former, commencing usually, however, somewhat later than in the case of the males. A comparison of the graphs of each of the States with that of the Commonwealth shews that the fluctuations in the latter case are smaller than in the former. This is largely due to internal migrations of the male element of the population, brought about by various causes, amongst which mining developments figure prominently.

**5. Graphs of Natural Increase of Population, Commonwealth and States** (page 162).—The graphs indicate that, with the exception of certain marked variations, the natural increase of the population of the Commonwealth, viz., the excess of births over deaths, advanced with fair rapidity from 1860 to 1892, in which year it attained its maximum, when, however, it fell rapidly till 1898. A subsequent rise to 1900 was followed by a continuous fall for the three years succeeding, viz., to 1903. The recovery shows a fairly rapid rise to 1909, during which year the natural increase was 16.35 per 1000 of mean population; 1910 showed a very slight decrease, the rate falling to 16.29. The years in which the natural increase of the Commonwealth was at its highest were 1865, 1871, 1881, 1892, 1900, 1909, and 1910; and the years of extraordinarily low rates of natural increase were 1866, 1875, 1882, 1898, and 1903. The low rate of 1898 was due in large measure to a phenomenally high death rate experienced in practically all the States in that year, when an epidemic of measles was prevalent throughout the Commonwealth. The low rate of 1903 was brought about by the low birth rates and high death rates which accompanied the drought of 1902-3, while the advance in the rate of natural increase since 1903 has been collateral with the marked improvement in material conditions experienced throughout the Commonwealth during that period.

**6. Graphs shewing Net Increase of Population** (pages 160 and 161).—The graphs disclose the fact that the most notable years of large net increases of population of the

Commonwealth as a whole were 1864, 1877, 1883, 1888, 1909, and 1910. The highest increase was attained in 1883. The net increase for 1910 was higher than for any year, since 1888. The years in which low net increases were noticeable were 1861, 1867, 1872, 1878, 1889, 1893, 1898, and 1903.

The graph for New South Wales indicates a high net increase of population between 1876 and 1893, advancing to a maximum in 1883, and then declining to 1901. From the latter year onwards to 1907 an advance in the net increase was in evidence, followed by a decline in 1908, and a recovery in 1909, which was maintained in 1910.

Some features of the graph shewing the Victorian net increase are the height attained in 1864, 1870, 1888, and 1901, the smallness of the increase for the years 1861 and 1875, and the decreases for 1896 and 1903.

For Queensland it will be seen that the years of high net increases were 1862, 1875, 1883, 1895, 1901, 1909, and 1910, while the years in which these were at very low level were 1869, 1878, 1891, and 1903.

In South Australia the net increases were exceptionally high in 1865, 1876, 1883, and 1892, 1908, and 1910, and correspondingly low in 1870, 1886, 1896, 1902, and 1903.

In Western Australia the net increase graph indicates no very marked advance until about 1884, from which it rises somewhat rapidly to 1886, and then declines to 1888. This is followed by an exceedingly rapid rise to 1896, and a subsequent fall to 1899, succeeded by a further rise to 1902, and a fall thereafter to 1907, followed by a rise to 1910.

In the case of the Tasmanian graph, indications of a very varied net increase are in evidence, the principal high points being those for the years 1887, 1891, 1897, 1902, and 1907, while actual decreases were experienced in 1874; 1875, 1892, and 1906.

**7. Graphs shewing Masculinity of Population, Commonwealth and States (page 163).**—These graphs furnish information concerning the variations which have taken place in the relative numbers of males and females in the populations of the Commonwealth and the several States during the years 1796 to 1910, and incidentally serve to indicate special features of growth in the respective populations. In general it will be noted that in recent years there has been a marked tendency towards a masculinity of 100, that is, to a condition in which the numbers of males and females in the population were equal, but that with the exception of Victoria in 1902 and subsequent years the masculinity has never fallen below 100. The early experience of the Commonwealth exhibits a fairly rapid decline in masculinity to 1812, followed by an even more rapid rise to 1828 and a subsequent fall with more gentle slope to 1850. From 1850 onwards the decline in masculinity has been fairly continuous though subject to fluctuations. It should be noted that the marked variations of the earlier as compared with the later years have been due to a considerable extent to the fact that, owing to the smallness of the population, any considerable influx of male immigrants had a marked effect in increasing the masculinity of the population, while an influx of female immigrants tended to considerably reduce it. Two points of special interest in the graphs of the separate States are the maxima attained in 1852 in Victoria and 1896 in Western Australia, as the result of extensive male immigration consequent on the gold discoveries in the respective States.

## SECTION V.

## VITAL STATISTICS.

NOTE.—The rates quoted throughout this Section for the years 1902 to 1911 have been calculated in accordance with the corrected populations as determined by the results of the Census of 1911.]

## § 1. Births.

1. Male and Female Births, 1901 to 1910.—The total number of male and female births registered in the Commonwealth during the years 1901 to 1910 is as shewn in the two tables hereunder:—

## TOTAL MALE BIRTHS, COMMONWEALTH, 1901 to 1910.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust. <sup>1</sup>	W. Aust.	Tasmania.	C'wealth.
1901 ... ..	19,149	15,876	7,281	4,687	2,946	2,570	52,509
1902 ... ..	19,322	15,583	7,279	4,587	3,241	2,604	52,616
1903 ... ..	18,377	15,115	6,427	4,484	3,433	2,570	50,406
1904 ... ..	19,857	15,313	7,134	4,686	3,666	2,702	53,358
1905 ... ..	20,206	15,523	6,978	4,514	3,862	2,812	53,895
1906 ... ..	21,066	15,716	7,280	4,617	4,043	2,792	55,514

1909 ... ..	21,318	15,448	7,598	4,856	3,718	2,651	55,589
1910 ... ..	22,076	15,025	7,909	5,157	3,730	2,698	56,595

1. Including Northern Territory.

2. Total Births, 1901 to 1910.—While the total number of births for the Commonwealth was higher in 1910 than in any of the preceding nine years, the following table of particulars discloses also the fact that apart from New South Wales, Queensland, and Western Australia, the excess of births in 1910 over those in 1901 was very small:—

## TOTAL BIRTHS, COMMONWEALTH, 1901 to 1910.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust. <sup>1</sup>	W. Aust.	Tas.	C'wealth.
1901 ...	37,875	31,008	14,303	9,111	5,718	4,930	102,945
1902 ...	37,835	30,461	14,216	8,947	6,232	5,085	102,776
1903 ...	35,966	29,569	12,621	8,508	6,699	5,080	98,443
1904 ...	38,667	29,763	14,082	9,133	7,176	5,292	104,113
1905 ...	39,501	30,107	13,626	8,868	7,582	5,257	104,941
1906 ...	40,948	30,844	14,019	8,946	7,800	5,333	107,890
1907 ...	42,201	31,365	14,540	9,238	7,712	5,291	110,347
1908 ...	42,458	31,097	14,830	9,790	7,755	5,615	111,545
1909 ...	43,782	31,544	15,552	10,091	7,602	5,500	114,071
1910 ...	45,444	31,437	16,169	10,580	7,585	5,586	116,801

1. Including Northern Territory.

3. **Birth Rates, 1901 to 1910.**—(i.) *Crude Birth Rate.* The birth rate for the whole Commonwealth was lower in 1910 than in 1901, and New South Wales, South Australia and Tasmania are the only States in which an increase in the rate took place, as will be seen from the following table, which gives also the number of persons per square mile in each State :—

CRUDE BIRTH RATE,<sup>1</sup> COMMONWEALTH, 1901 to 1910.<sup>2</sup>

Year.	N.S.W.	Vic.	Qld.	S.A. <sup>4</sup>	W.A.	Tas.	Cwltth.
1901 ...	27.78	25.77	28.52	25.16	30.39	28.58	27.16
1902 ...	27.23	25.23	27.85	24.82	30.44	29.03	26.71
1903 ...	25.44	24.53	24.53	23.65	30.50	28.16	25.29
1904 ...	26.85	24.74	26.99	25.29	30.67	28.92	26.41
1905 ...	26.85	24.96	25.76	24.36	30.74	28.50	26.23
1906 ...	27.21	25.41	26.15	24.37	30.66	28.94	26.57
1907 ...	27.34	25.59	26.79	24.86	30.18	28.63	26.76
1908 ...	26.99	25.07	26.79	25.65	30.08	29.95	26.59
1909 ...	27.40	25.01	27.29	25.74	28.87	28.91	26.69
1910 ...	27.83	24.51	27.33	26.38	27.99	29.25	26.73
Density <sup>3</sup> (No. per square mile)	5.30	14.81	0.89	0.45	0.28	7.99	1.49

1. Number of Births per 1000 of the mean annual population.

2. Rates corrected in view of Census Returns, 1911.

3. On 31st December, 1910.

4. Including Northern Territory.

The population density of each State and of the Commonwealth has been given for the purpose of considering the influence, if any, of concentration of population on birth-rate, in connection with the disparities of the rate in different parts of Australia.

(ii.) *Objections to Crude Birth Rate.* The figures just given represent the "crude birth rate," i.e., the number of births per thousand of mean annual population. The number of births per thousand of the female population of child-bearing ages, i.e., from 15 to 45, would furnish a more significant rate. To calculate this, would, of course, involve assumptions concerning the variations of the age and sex constitution of the population since the Census of 1901. Calculations of this nature at the present time would be subject to so large an uncertainty that it has been decided to defer computing the rates of fecundity and fertility on other and better bases until the results of the Census of 1911 are available. The calculation has, however, been made for the last three Census periods, and covers in each case the Census year together with the year immediately preceding and the year immediately following. The following results have been obtained:—Total births per 1000 women (married and unmarried) of ages 15 to 45 :—

Years 1880-82, 169.69; years 1890-92, 158.81; years 1900-02, 117.26. Nuptial births per 1000 married women of ages 15 to 45:—Years 1880-82, 320.96; 1890-92, 332.03; years 1900-02, 235.84.

4. **Birth Rates of Various Countries.**—A comparison with other countries shows that the Australian States occupy a very low position, which is, however, fortunately counterbalanced by a still lower position in regard to their death rates, as will be seen from the table hereinafter in the section dealing with "Deaths."

#### CRUDE BIRTH RATE<sup>1</sup> OF VARIOUS COUNTRIES.<sup>2</sup>

Country.	Year.	Rate.	Country.	Year.	Rate.
Russia, European ...	1903	48.1	Western Australia ...	1910	28.0
Rumania ...	1909	41.7	New South Wales ...	1910	27.8
Bulgaria ...	1908	40.4	Queensland ...	1910	27.3
Chile ...	1909	38.8	Switzerland ...	1908	27.1

Finland ...	1909	31.3	Victoria ...	1910	24.5
Tasmania ...	1910	29.3	Ireland ...	1909	23.5
Netherlands ...	1909	29.1	France ...	1909	19.6
Denmark ...	1909	28.0			

1. Number of births per 1000 of the mean population.

2. Rates corrected in view of Census Returns, 1911.

5. **Masculinity at Birth.**—The masculinity of births, *i.e.*, the number of males per 100 females, registered during the last ten years in the several States of the Commonwealth has varied from 100.75 in Tasmania in 1908 to 115.01 in Tasmania in 1905. The following table, which gives the values for the States and Commonwealth for 1901 to 1910, shews the remarkable fact that for the Commonwealth there was a steady increase of masculinity from 1901 to 1906, with a sharp decrease in 1907, a further increase in 1908 and 1909, and a sharp increase in 1910:—

#### MASCULINITY<sup>1</sup> OF BIRTHS REGISTERED, COMMONWEALTH, 1901 to 1910.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
1901 ...	102.26	104.92	103.69	105.94	106.28	108.90	104.11
1902 ...	104.37	104.74	104.93	105.21	108.36	104.96	104.90
1903 ...	104.48	104.57	103.76	111.43	105.11	102.39	104.93
1904 ...	105.57	105.97	102.68	105.37	104.44	104.32	105.13
1905 ...	104.72	106.44	104.96	103.67	103.82	115.01	105.58
1906 ...	105.96	103.89	108.03	106.65	107.61	109.88	105.99
1907 ...	104.89	103.95	105.11	103.08	105.65	112.15	104.89
1908 ...	103.61	106.95	107.33	102.23	106.14	100.75	104.93
1909 ...	105.38	104.19	104.69	107.80	104.46	107.47	105.20
1910 ...	105.85	109.23	104.44	105.16	103.35	107.04	106.39

1. Number of males to each 100 females.

There is ordinarily a very small difference between the masculinity of nuptial and ex-nuptial births. Thus, according to Bodio, whose figures are quoted in the following

table, for the period about 1887-1891, the masculinity ranged from 108.3 to 103.6, and from 107.9 to 101.6 for total and ex-nuptial births respectively.

### MASCULINITY OF BIRTHS IN VARIOUS COUNTRIES.

Country.	Masculinity of Births. <sup>1</sup>		Country.	Masculinity of Births. <sup>1</sup>	
	All Live Births.	Ex-nuptial Live Births.		All Live Births.	Ex-nuptial Live Births.
Spain ...	108.3	107.9	German Empire ...	105.2	104.7
Rumania ...	107.7	103.4	Finland ...	105.0	105.2
Portugal ...	107.5	106.4	Hungary ...	105.0	102.9
Austria ...	105.8	105.5	Sweden ...	105.0	104.3
Italy ...	105.8	104.4	Denmark ...	104.8	105.0
Norway ...	105.8	105.9	Servia ...	104.7	103.5
Ireland ...	105.5	104.8	France ...	104.6	102.9
Netherlands ...	105.5	104.7	Belgium ...	104.5	102.2
Scotland ...	105.5	105.9	Switzerland ...	104.5	101.6
Russia, European ...	105.4	104.5	England ...	103.6	104.4

1. Number of males to each 100 females.

The masculinity of ex-nuptial births in the Commonwealth was as follows:—

### MASCULINITY<sup>1</sup> OF EX-NUPTIAL BIRTHS REGISTERED, COMMONWEALTH,

1901 TO 1910.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
1901 ...	108.46	102.22	107.84	100.56	100.00	102.07	105.50
1902 ...	103.67	106.78	100.23	106.91	111.11	93.17	103.96
1903 ...	97.79	114.83	95.22	100.00	114.29	122.66	104.10
1904 ...	100.80	108.68	95.77	83.50	107.28	93.71	100.98
1905 ...	102.50	102.52	105.63	96.94	98.75	102.80	102.44
1906 ...	103.10	102.23	104.17	116.97	118.13	124.92	105.44
1907 ...	104.91	105.59	100.90	113.56	115.94	100.00	105.11
1908 ...	108.60	105.38	96.83	97.30	89.33	108.51	104.00
1909 ...	105.46	102.16	103.90	104.81	129.14	129.01	106.25
1910 ...	104.96	103.59	100.39	102.62	89.70	106.94	103.05

1. Number of males to each 100 females.

It is curious to note that while, so far as the total births are concerned, there has always been an excess of male births over female births, this has not been the case in regard to ex-nuptial births, where in South Australia in 1904 the masculinity was only 83.50. On the other hand it rose as high as 129.14 in Western Australia in 1909. Little weight, however, can be attached to these results on account of the small totals on which they are based.

6. **Ex-nuptiality of Births.**—The total ex-nuptial births fell from 1901 to 1903, then rose rapidly to 1908 and remained almost stationary till 1909, when the number again decreased. The total for 1910 was the lowest number recorded since 1906. See the table on the following page.

It is, of course, possible that the number of ex-nuptial births is somewhat understated, owing to diffidence in proclaiming the fact of ex-nuptiality, and it is not unlikely that the majority of unregistered births are ex-nuptial.

**TOTAL EX-NUPTIAL BIRTHS REGISTERED IN THE COMMONWEALTH, 1901 to 1910.**

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
1901 ...	2,712	1,729	848	361	222	293	6,165
1902 ...	2,497	1,677	859	389	247	311	5,980
1903 ...	2,413	1,695	857	354	315	285	5,919
1904 ...	2,755	1,707	971	367	313	308	6,421
1905 ...	2,912	1,689	950	386	318	290	6,545
1906 ...	2,882	1,721	1,076	358	373	308	6,718
1907 ...	2,920	1,764	1,117	378	298	306	6,783
1908 ...	2,887	1,793	1,118	438	337	294	6,867
1909 ...	2,821	1,870	1,097	426	346	300	6,860
1910 ...	2,853	1,759	1,034	464	313	298	6,721

(i.) *Rate of Ex-nuptiality, 1901 to 1910.* The rate of ex-nuptiality, i.e., the percentage of ex-nuptial to total births, shews on the whole a slight increase from 1901 to 1905; with a decrease during the last five years, as the subjoined table shews:—

**PERCENTAGE OF EX-NUPTIAL ON TOTAL BIRTHS, COMMONWEALTH, 1901 to 1910.**

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth

A comparison of greater significance would be obtained by calculating the number of ex-nuptial births per thousand of the single and widowed female population between the ages of 15 and 45, but until the Census of 1911 has once more shewn the composition of the population, such a calculation would be liable to considerable error, and will, therefore, be deferred. The calculation has, however, been made for the three last Census periods, and covers in each case the Census year, together with the year immediately preceding and the year immediately following. The number of ex-nuptial births per 1000 unmarried women of ages 15 to 45 has been found to be as follows:—Years 1880-82, 14.49; years 1890-92, 15.93; years 1900-02, 13.30.

(ii.) *Causes of Increase.* Since the rate of ex-nuptiality might appear to increase by the mere decrease in the general birth rate, the following table has been prepared:—

**CRUDE EX-NUPTIAL, NUPTIAL, AND TOTAL BIRTH RATES,<sup>1</sup> COMMONWEALTH, 1901 TO 1910.<sup>2</sup>**

Births.	1901.	1902.	1903.	1904.	1905.	1906.	1907.	1908.	1909.	1910.
Ex-nuptial ...	1.63	1.55	1.52	1.63	1.64	1.65	1.64	1.64	1.60	1.54
Nuptial ...	25.53	25.16	23.77	24.78	24.59	24.92	25.12	24.95	25.09	25.19
Total ...	27.16	26.71	25.29	26.41	26.23	26.57	26.76	26.59	26.69	26.73

<sup>1</sup> Number of births per 1000 of mean population.

<sup>2</sup> Rates corrected in view of Census Returns, 1911.

(iii.) *Ex-nuptiality—Rates of Various Countries.* The rate for the Commonwealth is higher than that for England and Wales, slightly lower than that for Scotland, and considerably below the rates for many of the countries for which returns are available, as the table hereunder shews. The rates shewn below refer to three triennial periods, 1880-2, 1890-2, and 1900-2, and are given per thousand of the unmarried and widowed female population:—

**EX-NUPTIAL BIRTHS PER THOUSAND OF UNMARRIED AND WIDOWED FEMALE  
POPULATION IN VARIOUS COUNTRIES.**

Country.	Rate.			Country.	Rate.		
	1880-2.	1890-2.	1900-2.		1880-2.	1890-2.	1900-2.
	%	%	%		%	%	%
Ireland ...	4.4	3.9	3.8	Belgium ...	20.0	20.6	17.8
Netherlands ...	9.7	9.0	6.8	France ...	17.6	17.7	19.1
England and Wales ...	14.1	10.5	8.5	Italy ...	25.4	...	19.4
New Zealand ...	13.4	9.0	8.9	Russia ...	25.8	25.1	23.7
Switzerland ...	10.8	10.0	9.8	Denmark ...	26.9	24.5	24.2
Commonwealth ...	14.5	15.9	13.3	Sweden ...	22.6	22.9	24.3
Scotland ...	21.4	17.1	13.4	German Empire ...	29.6	28.7	27.4
Spain ...	16.0	17.5	15.5	Austria ...	43.4	42.7	40.1
Norway ...	19.7	16.9	17.2				

It may be added that the general circumstances in Australia with regard to opportunity for marriage are probably relatively easy as compared with those in older established countries.

**7. Multiple Births.**—Among the total number of 116,801 births registered in the Commonwealth in 1910 there were 114,420 single births, 2342 twins, and 39 triplets. The number of cases of twins was 1176, ten children being still-born, and the number of cases of triplets 13. The total number of mothers was, therefore, 115,609, the proportion of mothers of twins being one in every 98, and of mothers of triplets one in every 8893 of total mothers. The proportion of multiple births is a fairly constant one. In 1907 they numbered 1043 out of a total of 109,306, or one in 105; in 1908, 1065, or one in 104; in 1909, 1142, or one in 99; and in 1910, 1189, or one in 99. The number of cases of triplets is so small that a slight alteration in the total will completely change the proportion. Thus, there were 14 cases in 1907, or one in 7872 of total mothers, as compared with one in 18,415 in 1908; one in 8066 in 1909, and one in 8893 in 1910.

**8. Ages of Parents.**—The relative ages of the parents of children registered in 1910 have been tabulated, twins and triplets being distinguished from single births, and are shewn for single ages and for every State in "Bulletin of Population and Vital Statistics, No. 25; Vital Statistics of the Commonwealth for the Year 1910." In the present work the exigencies of space allow only the insertion of corresponding tables shewing the relative ages of parents in groups of five years. It will be seen from the tables that the largest number both of single and of twin births occurred where the ages of both father and mother were between 25 and 29. The largest number of mothers was found at ages 25 to 29.

11. Mothers' Age, Duration of Marriage, and Issue.—A tabulation has been made shewing, in age-groups, the duration of marriage and issue of mothers. The total number of nuptial confinements in 1910 was 108,940, viz., 107,803 single births, 1125 cases of twins, and 13 cases of triplets. From this number 349 mothers must be deducted, viz., 274 in whose case the necessary particulars either as to date of marriage or as to previous issue were not stated, while 75 registrations of births under the New South Wales Legitimation Act are also excluded. The tables refer, therefore, to a total of 108,591 mothers. They exclude children by former marriages and still-born children, but include ex-nuptial children, previous issue by the same father. The tables cannot be given *in extenso*, but the following are their most salient features. The complete tabulations are shewn in "Commonwealth Bulletin of Population and Vital Statistics, No. 25; Vital Statistics of the Commonwealth for the Year 1910."

Total Mothers	3,864	24,442	31,634	24,707	16,648	6,602	694	108,591

The tables shew a fairly regular increase in the number of children up to the period where the marriage has lasted twenty-one years, and it appears that the average interval between successive confinements up to that period was rather less than two and a half years. One mother of the age-group 40 to 44 years, had her seventeenth child in the twenty-fifth year of her marriage. The average number of children of all marriages was 3.41, the corresponding figure for 1909 having been 3.42.

A similar table has been prepared shewing the previous issue of mothers of twins and triplets, from which it appears that 241 mothers had twins at their first confinement; 173 at their second; 177 at their third; 154 at their fourth; 111 at their fifth; 77 at their sixth; 70 at their seventh; 40 at their eighth; 36 at their ninth; 19 at their tenth; 14 at their eleventh; 5 at their twelfth; 4 at their thirteenth; 1 at her fourteenth; 2 at their fifteenth; and one at her sixteenth.

Of the twelve cases of triplets 5 occurred at the first confinement; 1 at the third; 2 at the fourth; 1 at the fifth; 1 at the sixth; 1 at the seventh; and 1 at the tenth.

12. **Interval between Marriage and First Birth.**—The following table shews the interval between marriage and first birth. Twins and triplets are included, the eldest born only being enumerated.

**INTERVAL BETWEEN MARRIAGE AND FIRST BIRTH, COMMONWEALTH, 1910.**

Interval.	Number of First Children.	Interval.	Number of First Children.	Interval.	Number of First Children.
Under 1 month	474	1 year	6,919	13 years	16
1 month	565	2 years	1,882	14 "	6
2 months	849	3 "	803	15 "	11
3 "	987	4 "	387	16 "	4
4 "	1,231	5 "	230	17 "	3
5 "	1,441	6 "	120	18 "	3
6 "	1,784	7 "	101	19 "	1
7 "	1,435	8 "	70	20 "	1
8 "	1,255	9 "	51	24 "	1
9 "	3,314	10 "	37	25 "	1
10 "	2,439	11 "	23		
11 "	1,747	12 "	20	Total	28,211

Of these 28,211 children 14,604 were males and 13,607 were females; the masculinity of first births was therefore 107.33 as compared with 106.39 for total births.

The previous issue of mothers of ex-nuptial children is not recorded, but for the purposes of the following table all ex-nuptial births have been assumed to be first births. The table shews the ages of mothers of ex-nuptial births, of nuptial births occurring less than nine months after marriage, and of nuptial births occurring nine months or more after marriage. A comparison of the combined total of the first two columns with the total of nuptial children born nine months or more after marriage, reveals the fact that for all ages the ratio of the two was as 9 is to 10. At all ages up to and including 21, however, there was a great preponderance of ex-nuptial births and of births following on ante-nuptial conception. It must, of course, be understood that a certain number of premature births are necessarily included among the births which occurred less than nine months after marriage, but there is no means of arriving at the proportion of those births.

**AGES OF MOTHERS AND INTERVAL BETWEEN MARRIAGE AND FIRST BIRTH, etc.  
COMMONWEALTH, 1910.**

Age of Mother at Birth of Child.	Ex-nuptial Births.	Nuptial Births less than nine months after Marriage.	Total of two preceding columns.	Nuptial Births nine months after Marriage and later.	Total Nuptial First Births.	Nuptial First Births and Ex-nuptial Births.

## § 2. Marriages.

1. **Marriages, 1901 to 1910.**—The number of marriages registered in the Commonwealth in 1910 was 36,592, the highest number ever recorded. There has been a steady increase in the annual number of marriages in each State since 1903, and the crude marriage-rate increased similarly in all the States until 1907, with the exception of Western Australia, where a further diminution may reasonably be expected until the composition of the population as to sexes and ages approaches more closely to that of the other States. In 1908 all the States, with the exception of New South Wales and Tasmania, had a lower marriage rate than in 1907, but the rate recovered in 1909 and 1910, and was considerably higher in the latter year than in 1907 in all the States with the exception of Western Australia. The number of marriages in each State since 1901 is shewn below. The rate for 1910 was the highest experienced since 1864.

## TOTAL MARRIAGES, COMMONWEALTH, 1901 to 1910.

Year.	N.S.W.	Victoria.	Qld.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
1901 ...	10,538	8,406	3,341	2,309	1,821	1,338	27,753

1909 ...	8.15	7.48	7.97	8.38	7.59	7.85	7.90
1910 ...	8.76	7.98	8.06	9.17	7.77	7.82	8.37

<sup>1</sup> Number of marriages (not persons married) per 1000 of mean annual population.

<sup>2</sup> Rates corrected in view of Census Returns, 1911.

As in some international tabulations the marriage rates are calculated per 1000 of the unmarried population of 15 years and over, the corresponding rates have been worked out for the Commonwealth for the three last Census periods. The figures comprise in each case the Census year with the year immediately preceding, and the year immediately following, and are as follows :—Years 1880-82, 48.98; years 1890-92, 45.74; years 1900-02, 42.14. These rates refer, of course, to persons married and not to marriages, as do the rates in the preceding table.

3. **Marriage Rates in Various Countries.**—A comparison of the Australian marriage rate with that of European countries shews it to be considerably below the rates prevailing in the East of Europe, almost identical with those of Central and Western Europe, and higher than those of the North of Europe :—

**CRUDE MARRIAGE RATES.—VARIOUS COUNTRIES.<sup>1</sup>**

Country.	Year.	Crude Marriage Rate.	Country.	Year.	Crude Marriage Rate.
Canada (Ontario) ...	1908	9.45	Italy ...	1909	7.70
Rumania ...	1909	9.35	Austria ...	1908	7.60

Switzerland ...	1908	7.80			

<sup>1</sup> Rates corrected in view of Census Returns, 1911.

4. **Age at Marriage.**—(a) The age at marriage of bridegrooms and brides will be found in the following table, the previous conjugal condition of the contracting parties being distinguished. It will be seen that no less than 1386 males were married during 1910 who were less than twenty-one years of age. The corresponding number of females was 7629, of whom six were widows and three were divorced. At the other extreme there were thirty men of sixty-five years and upwards, who described themselves as bachelors, and nine spinsters of corresponding ages.

**AGES AND CONJUGAL CONDITION OF PERSONS MARRIED, 1910.**

Not stated ...	8	...	1	1	...	...	...	...	1	5
Total Brides ...	36,592	7	5,070	15,818	9,020	3,380	1,654	761	874	8

5. **Previous Conjugal Condition.**—In a previous table the total number of bachelors and spinsters, widowed and divorced persons, who were married during the year 1910, was shewn. In the following table the relative conjugal condition of the contracting parties is given:—

**RELATIVE CONJUGAL CONDITION OF PERSONS MARRIED, COMMONWEALTH, 1910.**

Conjugal Condition.		Total Bridegrooms.	Brides.		
			Spinsters.	Widows.	Divorced.
Bridegrooms {	Bachelors ...	34,150	32,786	1,168	196
	Widowers ...	2,244	1,531	666	47
	Divorced ...	198	140	42	16
Total Brides ...		36,592	34,457	1,876	259

6. **Birthplaces of Persons Married.**—Information as to the birthplaces of persons who were married in 1910 was not obtained in the State of Western Australia; the following figures refer, therefore, only to New South Wales, Victoria, Queensland, South Australia and Tasmania. As might be expected, there were more brides than bridegrooms who were natives of the Commonwealth. In "Bulletin No. 25 of Population and Vital Statistics" the relative birthplaces of bridegrooms and brides will be found tabulated.

### BIRTHPLACES OF PERSONS MARRIED, 1910.

1. Exclusive of Western Australia.

7. **Occupations and Ages of Bridegrooms.**—A tabulation has been made of the occupations and ages of all males married in the Commonwealth in the years 1907, 1908, 1909, and 1910. In "Bulletin No. 25" the 1910 tabulation is shewn for orders of occupations: here it is repeated for classes only, with a subdivision of the Industrial class and of the class of Primary Producers. The average ages of the persons falling under those twelve subdivisions were determined, and it appears that, apart from the Indefinite class, which consists chiefly of persons who have retired from business and

who are living on their own means, and where a high average age may naturally be expected, the average age ranges from 28.29 in the Manufacturing class to 32.33 years in the Pastoral class. The averages, calculated on the basis of the 1907, 1908 and 1909 figures, have been added for the purposes of comparison. The figures for four years are, however, rather small to allow of definite conclusions being drawn. The results obtained are shewn in the following table:—

### OCCUPATIONS AND AGES OF BRIDEGROOMS, COMMONWEALTH, 1910.

Ages at Marriage.	Professional.	Domestic.	Mercantile.	Transport and Communication.	Industrial.			Primary Producers.				Indefinite.
					Manu- facturing.	Building and Construction.	Indefinite Industrial Workers.	Agricultural.	Pastoral.	Mines and Quarries.	Other Primary Producers.

The average age at marriage of brides has slowly risen from 25.56 years in 1907 to 25.77 years in 1910. The figures for the four years are:—1907, 25.56 years; 1908, 25.67 years; 1909, 25.74 years; and 1910, 25.77 years, while for the four years combined the average age was 25.69 years.

**8. Fertility of Marriages.**—The quotient obtained by division of the nuptial births registered, say during the five years 1906 to 1910, by the number of marriages registered during the five years 1901 to 1905, *i.e.*, the period antecedent by five years to the period of the births, has been called the "fertility of marriages." This works out at 4.05, or in other words, the number of children to be expected from every marriage in the Commonwealth is four. This method, while not professing any claim to accuracy, furnishes results which agree fairly well with those found by more elaborate and careful investigation.

**9. Registration of Marriages.**—In all the States of the Commonwealth marriages may be celebrated either by ministers of religion, whose names are registered for that purpose with the Registrar-General, or by certain civil officers, in most cases district registrars. The percentage of marriages celebrated by ministers of religion has increased from 96.25 per cent. in 1901 to 97.18 per cent. in 1910. The figures for the individual States in 1910 were: New South Wales, 98.03 per cent.; Victoria, 98.41 per cent.; Queensland, 95.91 per cent.; South Australia, 96.03 per cent.; Western Australia, 89.75

per cent.; and Tasmania, 98.85 per cent. The registered ministers in 1910 belonged to forty different denominations, some of which, however, can hardly be regarded as having any valid existence. The extraordinary number of marriages credited to some denominations, the number of whose adherents, according to the Census returns, was very small indeed, is not inconsistent with the supposition that some of these denominations have been created for the purpose of obtaining the registration necessary to conduct marriages, or to be connected with a so-called "Matrimonial Agency." The figures for 1910 are shewn in the following table:—

#### MARRIAGES IN EACH DENOMINATION, COMMONWEALTH, 1910.

10. **Mark Signatures.**—The marriage registers afford some clue, even if an imperfect one, to the illiteracy of the adult population, since a small and constantly diminishing percentage of bridegrooms and brides sign the registers with marks.

(i.) *Males and Females, 1901 to 1910.* For a number of years, with the exception of 1905, 1908 and 1910, mark signatures by males have been slightly more numerous than those by females, the percentages for the Commonwealth during the past ten years having been as follows :—

**PERCENTAGE OF MARK SIGNATURES AT MARRIAGE, COMMONWEALTH, 1901 to 1910.**

Year. ...	1901.	1902.	1903.	1904.	1905.	1906.	1907.	1908.	1909.	1910.
Male ...	1.35	1.21	1.17	0.95	0.91	0.92	0.81	0.71	0.65	0.56
Female	1.29	1.11	1.02	0.91	0.93	0.86	0.70	0.73	0.62	0.59

(ii.) *Mark Signatures in Commonwealth States, 1901 to 1910.* The following table shews that while the Tasmanian percentage has been the highest, and the Victorian the lowest, in each of the ten years under review, there has been a marked decrease in every State :—

**PERCENTAGE OF MARK SIGNATURES AT MARRIAGE, COMMONWEALTH, 1901 to 1910.**

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
1901 ...	1.34	0.53	2.56	0.95	0.99	4.11	1.32
1902 ...	1.22	0.61	1.93	1.15	0.69	3.12	1.16
1903 ...	1.10	0.60	1.86	1.32	0.75	2.38	1.10
1904 ...	0.90	0.54	1.72	0.65	0.53	2.85	0.93
1905 ...	1.12	0.44	1.39	0.83	0.57	2.12	0.92
1906 ...	0.94	0.43	1.67	0.67	0.66	2.18	0.89
1907 ...	0.87	0.36	1.14	0.55	0.64	2.02	0.76
1908 ...	0.79	0.33	1.20	0.56	0.82	1.57	0.72
1909 ...	0.60	0.22	1.16	0.64	0.68	2.07	0.64
1910 ...	0.61	0.29	0.92	0.57	0.52	1.17	0.55

A complete disappearance of mark signatures is hardly to be expected, for the available information tends to shew that two-thirds of those who sign with marks are natives of their respective States, who apparently have not made use of the advantages offered to them by the State schools.

### § 3. Deaths.

1. *Male and Female Deaths, 1901 to 1910.*—The total number of deaths registered in the Commonwealth from 1901 to 1910 inclusive, gives an annual average of 26,209 males and 19,252 females, the details being as follows :—

**MALE DEATHS, COMMONWEALTH, 1901 to 1910.**

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
1901 ...	9,327	9,035	3,838	2,289	1,653	1,001	27,143

Rate,* 1910 ...	8.75	10.19	7.98	9.45	8.41	10.94	9.24

\* Number of deaths per 1000 of mean population.

2. **Male and Female Death Rates, 1910.**—The crude male and female death rates for 1910 only are given, viz., in the last line of the preceding tables. Victoria has the highest rate for males and Tasmania for the females, while New South Wales has the lowest male and Queensland the lowest female death rate.

Owing to differences in the age constitution of the six States, the crude rates are not, however, strictly comparable, but as has been pointed out in the case of the births, the available data, at a period so remote from the Census, are insufficient for a satisfactory distribution of the population according to ages. For the purposes of calculating the "Index of Mortality" (see page 198) a distribution into five age-groups has, however, been made.

3. **Death Rates of Various Countries.**—A comparison with foreign States is, for the same reason, apt to show the Commonwealth in too favourable a light, but even if an allowance for the different age constitution were made, it would still be found occupying a very enviable position. The following table gives particulars of the death rates of various countries for the latest available years :—

## DEATH RATES\* OF VARIOUS COUNTRIES.

Country.	Year.	Crude Death Rate.	Country.	Year.	Crude Death Rate.
New Zealand ...	1910	9.7	German Empire ...	1908	18.1
<b>Commonwealth</b> ...	<b>1910</b>	<b>10.4</b>	France ...	1909	19.3
Denmark ...	1909	13.1	Japan ...	1908	21.0
Norway ...	1909	13.5	Italy ...	1909	21.4
Sweden ...	1909	13.7	Jamaica ...	1909	21.7
Netherlands ...	1909	13.7	Austria ...	1908	22.3
Canada (Ontario) ...	1908	13.9	Spain ...	1909	23.4
England and Wales ...	1909	14.5	Bulgaria ...	1908	24.3
United Kingdom ...	1908	15.1	Hungary ...	1909	25.1
Scotland ...	1909	15.3	Rumania ...	1909	27.8
Switzerland ...	1908	16.2	Servia ...	1909	29.3

Finland ...	1909	16.7	Ceylon ...	1909	30.3
Ireland ...	1909	17.2	Chile ...	1909	31.5

\* Number of deaths per 1000 of mean population.

4. **Total Deaths, 1901 to 1910.**—The total number of deaths in each of the Commonwealth States during the ten years 1901 to 1910, is shewn below :—

## TOTAL DEATHS, COMMONWEALTH, 1901 to 1910.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
1901 ...	16,021	15,904	6,007	4,065	2,519	1,814	46,330
1902 ...	16,646	16,177	6,204	4,314	2,823	1,914	48,078
1903 ...	16,497	15,595	6,346	3,951	2,788	2,116	47,293
1904 ...	15,360	14,393	5,250	3,778	2,817	1,974	43,572
1905 ...	14,978	14,676	5,503	3,804	2,709	1,844	43,514
1906 ...	14,975	15,237	5,095	3,931	3,084	2,011	44,333
1907 ...	16,411	14,539	5,598	3,828	2,931	1,998	45,305
1908 ...	16,055	15,766	5,680	3,917	2,879	2,129	46,426
1909 ...	15,810	14,436	5,530	3,850	2,704	1,842	44,172
1910 ...	16,158	14,732	5,744	4,096	2,740	2,120	45,590

5. **Crude Death Rates, 1901 to 1910.**—The death rate for 1910 showed an increase on that for 1909 in four States, New South Wales and Western Australia being the exceptions. The rates, with the exception of that for Tasmania, are, however, considerably lower than those experienced during the early years of the decade. The Commonwealth rate for 1910 was considerably lower than in any of the other years of the period under review excepting the year 1909.

CRUDE DEATH RATES<sup>1</sup> COMMONWEALTH, 1901 to 1910.<sup>2</sup>

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
1901 ...	11.75	13.22	11.98	11.23	13.39	10.51	12.22
1902 ...	11.98	13.40	12.15	11.97	13.79	10.93	12.49
1903 ...	11.67	12.94	12.33	10.98	12.69	11.73	12.15
1904 ...	10.67	11.97	10.06	10.46	12.04	10.79	11.05
1905 ...	10.18	12.17	10.40	10.45	10.98	10.00	10.88
1906 ...	9.95	12.55	9.50	10.71	12.12	10.91	10.92
1907 ...	10.63	11.86	10.31	10.30	11.47	10.81	10.99

1909 ...	9.89	11.45	9.70	9.82	10.27	9.68	10.33
1910 ...	9.89	11.49	9.71	10.21	10.11	11.10	10.43

1. Number of deaths per thousand of mean population for year.

2. Rates corrected in view of Census Returns.

6. **Male and Female Death Rates, 1901 to 1910.**—The rise in the Commonwealth rate from 1905 to 1907 was due to an increase in the female death rate, while the increase in 1908 was practically limited to the male death rate, as the subjoined table shews. The decrease from 1908 to 1909 was fairly equal for the male and female rates:—

MALE AND FEMALE DEATH RATES,<sup>1</sup> COMMONWEALTH, 1901 to 1910.<sup>2</sup>

Year.	1901.	1902.	1903.	1904.	1905.	1906.	1907.	1908.	1909.	1910.
Male rate ...	13.66	13.83	13.37	12.12	12.14	12.01	12.11	12.24	11.51	11.54
Female rate ...	10.64	11.02	10.80	9.88	9.50	9.73	9.77	9.81	9.06	9.24
Crude total rate ...	12.22	12.49	12.15	11.05	10.88	10.92	10.99	11.07	10.33	10.43

1. Number of deaths per thousand of mean population.

2. Rates corrected in view of Census Returns.

7. **Infantile Death Rate.**—(i.) *Deaths and Death Rates of Male and Female Infants, 1901 to 1910.* A marked improvement has taken place in the infantile death rate since

1901, in which year it stood at 103.61 per thousand births registered, while in 1909 it had fallen to 71.56 per thousand, a rate lower than that experienced in any previous year. In 1910, however, the rate rose to 74.81 per thousand, every State except Queensland shewing an increased rate. In the following table, which shews both the total number of deaths of children under one year and the rate per thousand births since 1901, males and females are distinguished. The universal experience that during the first few years of life the excess of male births disappears as a consequence of the higher death rate of male infants is shewn by the fact that out of 550,588 male infants born from 1901 to 1910, 51,896 died during their first year of life, while of 523,284 female infants the number who died was only 41,343:—

**NUMBER OF INFANTILE DEATHS AND RATE OF INFANTILE MORTALITY,  
COMMONWEALTH, 1901 to 1910.**

Year.	Registered Deaths under one year.			Rate of Infantile Mortality. <sup>1</sup>		
	Males.	Females.	Total.	Males.	Females.	Total.
1901	5,888	4,778	10,666	112.13	94.73	103.61
1902	6,008	5,004	11,012	114.19	99.76	107.15
1903	6,003	4,960	10,963	119.09	103.25	111.36
1904	4,713	3,800	8,513	88.33	74.87	81.77
1905	4,884	3,696	8,580	90.62	72.41	81.76
1906	5,002	3,981	8,983	90.10	76.01	83.26
1907	4,993	3,952	8,945	88.39	73.38	81.06
1908	4,885	3,791	8,676	85.53	69.65	77.78
1909	4,604	3,559	8,163	78.73	64.02	71.56
1910	4,916	3,822	8,738	81.65	67.53	74.81

1. Number of deaths under 1 year per 1000 births registered.

(ii.) *Infantile Mortality, 1901 to 1910.* Divided among the six States, the rate of infantile mortality during the last ten years was as follows:—

**RATE<sup>1</sup> OF INFANTILE MORTALITY, COMMONWEALTH, 1901 to 1910.**

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
1901 ...	103.74	102.94	101.94	99.99	128.89	89.05	103.61
1902 ...	109.74	108.60	100.17	94.00	142.01	79.06	107.15
1903 ...	110.35	106.40	119.88	97.09	141.22	110.83	111.36
1904 ...	82.42	77.92	76.13	70.51	113.02	90.70	81.77
1905 ...	80.55	83.30	75.52	72.96	104.19	80.65	81.76
1906 ...	74.53	92.92	74.68	75.90	110.00	90.19	83.26
1907 ...	88.46	72.60	77.65	66.57	97.51	82.97	81.06
1908 ...	75.20	86.05	70.67	69.46	84.72	75.16	77.78
1909 ...	73.87	71.36	71.50	61.04	78.01	64.91	71.56
1910 ...	74.73	76.88	62.90	70.70	78.18	101.68	74.81

1. Number of deaths under 1 year per 1000 births registered.

The movement has been a fairly regular one, shewing an increase in the rate during 1902 and 1903, and a fall since the latter year, so that the 1909 rate was lower than that for 1901 in every State. The regrettable increase in the Victorian rate for 1908 over that of 1907 was wholly due to the large mortality caused by the phenomenal heat of January, 1908. With the exception of Queensland, where the 1908 rate was exceptionally low, the 1909 rate was the lowest ever experienced in any of the States. A further rise occurred in every State in 1910, with the exception of Queensland, in which State the rate has fallen to the remarkably low proportion of 62.90 per thousand births. Infantile diarrhoea was largely responsible for the great increase in the Tasmanian rate in 1910.

(iii.) *Infantile Mortality in Various Countries and Cities.* Compared with European countries the cities and States of the Commonwealth occupy a very enviable position, and it may be pointed out that experience has shewn that a high birth rate is often, though not invariably, accompanied by a high infantile death rate. The figures in the subjoined tables relate to the latest years for which returns are available:—

### RATE<sup>1</sup> OF INFANTILE MORTALITY IN VARIOUS COUNTRIES.

Country.	Year.	Rate of Infantile Mortality. <sup>1</sup>	Crude Birth Rate. <sup>2</sup>	Country.	Year.	Rate of Infantile Mortality. <sup>1</sup>	Crude Birth Rate. <sup>2</sup>

1. Number of deaths under 1 year per 1000 births registered. 2. Number of births per 1000 of mean population.

(iv.) *The Effect of Infantile Mortality on Birth Rate.* It has been contended by certain investigators that the birth-rate question is intimately related to that of infantile mortality, and that in many cases a declining birth rate may be to a large extent accounted for by a decline in the infantile death rate, since, in the case in which an infant has survived, the period elapsing before the birth of the next child is likely to be longer than in the case in which the infant has died. It may indeed be readily admitted that in any community the birth rate may be affected in a definite way by variations of infantile mortality, but careful investigation of the question serves to shew that, whether considered from the theoretical aspect with a view to determining the *maximum* and the *probable* effects which a given change in the rate of infantile mortality would produce in the birth rate, or from the practical point of view by observing the fluctuations in the birth rates of various countries which have been collateral with changes in their rates of infantile mortality, there is little ground for the contention that the rate of infantile mortality is an important factor in determining the variations in the birth rate. One calculation which has been made on the basis of normal Australian conditions indicates that the *maximum* effect of increasing the rate of infantile mortality 100 per cent. would, in the absence of other disturbing causes, be to increase the birth rate by only  $3\frac{1}{4}$  per cent., whilst the *probable* effect would be considerably less than this. In other words, the *maximum* effect of an increase in the rate of infantile mortality from 100 to 200 per 1000 births would be to increase the birth rate from say 30 to 31 per 1000 of population. It may be noted too, that although in some countries an increase in birth-rate accompanies an increase in the rate of infantile mortality, in others the birth rate would appear to be quite unaffected by such an increase, while in the case of England and Wales, Scotland, and Ireland, the tendency apparently exhibited is for an increase in the rate of infantile mortality to be associated with a decrease in the birth rate. The conclusion which these results appear to warrant is that although infantile mortality undoubtedly tends on the whole to increase the birth rate, the practical effect produced is so slight that the existence of such a relation may in any instance be quite masked by more important causes of variation.

8. **Deaths in Age-Groups, 1901 to 1910.**—A distribution into age-groups has been made of the 454,613 deaths which occurred in the Commonwealth from 1901 to 1910, and the results are tabulated for each State. It is, however, sufficient here to shew the results for the Commonwealth as a whole, which are as follows:—

**DEATHS IN AGE-GROUPS, COMMONWEALTH, 1901 to 1910.**

Ages.	Males.	Females.	Total.	Percentage of Total Males.	Percentage of Total Females.	Percentage of Total.
Under 1 year ...	51,897	41,842	93,239	19.80	21.47	20.51
1 year and under 5 ...	15,302	14,013	29,315	5.84	7.28	6.45
5 years and under 20 ...	15,316	13,628	28,944	5.84	7.08	6.37
20 years and under 40 ...	36,299	31,834	68,133	13.85	16.54	14.99

<b>Total ...</b>	<b>262,094</b>	<b>192,519</b>	<b>454,613</b>	<b>100.00</b>	<b>100.00</b>	<b>100.00</b>

9. Deaths at Single Ages and in Age-Groups, 1910.—The 45,590 deaths which were registered in the Commonwealth in the year 1910 will be found tabulated under single years, and in groups of five years for each State, in "Bulletin No. 25, Population and Vital Statistics, 1910." It has been thought advisable to tabulate the deaths during the first year of life in greater detail. The first month has, therefore, been shewn in weeks, and the remainder of the year in months. This tabulation shews a great number of children dying during the first week, the number gradually diminishing towards the end of the year. The particulars relating to the Commonwealth are given in the following table:—

## DEATHS AT SINGLE AGES AND IN AGE-GROUPS, 1910.

## COMMONWEALTH.

10. Deaths of Centenarians, 1910.—Particulars as to the thirty persons who died in 1910, aged 100 years and upwards, are given in the following table. It must, of course, be understood that while the Registrars-General of the various States take the greatest care to have statements as to abnormally high ages verified as far as possible, no absolute reliance can be placed on the accuracy of the ages shewn, owing to the well-known tendency of very old people to overstate their ages. The fact must not be lost sight of in connection with this question, that while parish registers in the United Kingdom often date very far back, compulsory registration of births dates practically only from 1874, the Act passed in 1836 having left many loop-holes open for those unwilling to register the births of their children.

14. **Index of Mortality.**—The death rates so far shewn are crude rates, i.e., they simply shew the number of deaths per thousand of mean population, without taking the age constitution of that population into consideration. It is, however, a well-known fact that the death rate and age constitution of a people are intimately related, thus, other conditions being equal, the death rate of a country will be lower if it contain a large percentage of young people (not infants). In order to have a comparison of the mortality of various countries on a uniform basis, so far as age constitution is concerned, the International Statistical Institute in its 1895 session recommended the universal adoption of the population of Sweden in five age-groups, as ascertained at the Census of 1890, as the standard population by which this "Index of Mortality," as distinguished from the crude death rate, should be ascertained. The calculation for 1910 is shewn below for each of the six States and for the Commonwealth, the distribution of the mean population of 1910 into age-groups being in accordance with the distribution as found at the Census of 1911:—

## INDEX OF MORTALITY, 1910.—(STATES AND COMMONWEALTH.)

Age-Group.	Mean Population, 1910, distributed according to Results of Census of 1911.	Number of Deaths, 1910.	No. of Deaths per 1000 of Mean Population, 1910, in each Age-Group.	Age Distribution per 1000 of Standard Population.	Index of Mortality.

NOTE.—The small number of persons whose ages were not ascertained at the 1911 Census have been proportionately distributed among the various age-groups, and the same plan has been followed in regard to the 84 persons who died in 1910, and whose ages were not stated in the certificates of death.

It will be seen that Victoria and Tasmania have, respectively, the highest and second highest index and crude rates, while New South Wales has the lowest index and second lowest crude rate. Queensland with the lowest crude rate has fallen to the third place in the index of mortality. The range of the indexes is slightly less than that of the crude death rates, thus, while the latter in 1910 rose from 9.71 per thousand in Queensland to 11.49 per thousand in Victoria, a range of 1.78 per thousand, the indexes varied from 12.36 per thousand in New South Wales to 14.11 per thousand in Victoria, a range of 1.75 per thousand.

The tabulated Indexes of Mortality for the years 1902 to 1909, which appeared in Year Book No. 4, p. 198, have been omitted. They will, if possible, be given in the Appendix of this Volume, or, failing this, in the next issue of the Year Book, with the proper corrections for ages according to the census of 1911.

It may here be mentioned that, in a series of papers recently communicated to the Australasian Medical Congress of 1911,\* which met in Sydney in September last, the following diseases were specially considered in various aspects, viz.:—Infantile mortality, pulmonary tuberculosis and cancer—the two diseases combined, and the age incidence of both; typhoid fever and whooping cough; diarrhoea, diphtheria, and croup; measles and scarlet fever. The fluctuation for cancer, pulmonary tuberculosis, typhoid, whooping cough, diarrhoea, diphtheria, croup, etc., for the various months of the year was also ascertained, as well as the number of persons dying at different ages in the case of diarrhoea, dysentery, enteritis, and pulmonary tuberculosis; and the frequency, according to age of deaths, from pulmonary tuberculosis. These various matters will be dealt with hereinafter *seriatim*.

15. **Causes of Death.**—(i.) *Changes in Classification from 1903 to 1906.* The causes of death were classified in all the States of the Commonwealth to the end of 1903 according to the system originally devised by Dr. William Farr, and modified in 1886 by Dr. William Ogle. A conference of the State Statisticians, held at Hobart in January, 1902, decided to substitute for that system the classification adopted since 1901 by the Registrar-General of England. While New South Wales, Queensland, and Tasmania remodelled their vital statistics on that plan, Victoria, South Australia, and Western Australia continued to tabulate according to the Farr-Ogle system, and a comparison of the causes of death in the six States during the years 1903, 1904, 1905, and 1906 is, therefore, a matter of extreme difficulty. The differences in tabulation will be seen in the following statement:—

#### TABULATION OF CAUSES OF DEATH.

State.	1902.	1903.	1904.	1905.	1906.	State.	1902.	1903.	1904.	1905.	1906.
N.S.W. ...	Old	Old	Old	New	International	S. Australia	Old	Old	Old	Old	Old
Victoria ...	Old	Old	Old	Old	Old	W. Australia	Old	Old	Old	Old	Old
Queensland	Old	New	New	New	New	Tasmania ...	Old	New	New	New	New

Old= Farr-Ogle classification. New= New classification by Registrar-General of England.  
International—See next paragraph.

(ii.) *The Classification of the International Institute of Statistics.* At a conference held in Melbourne in November and December, 1906, the Commonwealth Statistician

\* By the Commonwealth Statistician, in his capacity as honorary member. The papers *in extenso* will appear in the transactions of the Congress itself, to which reference should be made for detailed information.

recommended the adoption of the classification of the International Institute of Statistics, generally known as the Bertillon Index, and after some discussion that recommendation was accepted, a course which has met with wide approval in medical circles. This index, as also the one now used by the Registrar-General of England, is based on the original Farr-Ogle classification, but approximates more closely to the present English system than to the older one. The chief advantage possessed by the international classification is that it presents a very extensive field for comparison, the countries which have adopted it representing a population which is probably not less than 200,000,000. Commencing with 1910, the statistics of the United Kingdom will also be compiled in accordance with this system. Provision is made for a decennial revision of the classification, as it has been recognised that finality is impossible in the present state of medical science. The committee charged with the first revision met in Paris in July, 1909, and, in accordance with a resolution of the Australasian Medical Congress, held in Melbourne in October, 1908, a number of recommendations were made to it, dealing particularly with tropical diseases occurring in the northern parts of Australia. Most of these recommendations, together with many others, have been adopted. The number of categories is the same as in the 1900 nomenclature, but these have been subdivided into 189 causes instead of 179, the ten additional causes being obtained by shewing deaths from violence in greater detail than formerly.

The detailed classification groups causes of death under 179 (increased to 189 by the revised classification) different headings, in fourteen categories, as follows:—

- |                                                                 |                                                 |
|-----------------------------------------------------------------|-------------------------------------------------|
| i. General Diseases.                                            | viii. Diseases of the Skin and Cellular Tissue. |
| ii. Diseases of the Nervous System and Organs of Special Sense. | ix. Diseases of the Organs of Locomotion.       |
| iii. Diseases of the Circulatory System.                        | x. Malformations.                               |
| iv. Diseases of the Respiratory System.                         | xi. Infancy.                                    |
| v. Diseases of the Digestive System.                            | xii. Old Age.                                   |
| vi. Diseases of the Genito-urinary System and Adnexa.           | xiii. Violence.                                 |
| vii. Puerperal Condition.                                       | xiv. Ill-defined Diseases.                      |

(iii.) *Compilation of Vital Statistics for 1907, 1908, 1909 and 1910 in Commonwealth Bureau.* The vital statistics of the six Commonwealth States for 1907, 1908, 1909 and 1910 have been tabulated according to this classification in the Commonwealth Bureau, and the system is being employed in the majority of the State offices in the preparation of their monthly and quarterly bulletins of vital statistics.

(iv.) *Classification of Causes of Death, 1907 to 1910, according to Abridged Bertillon Index.* An abridged classification, which enumerates thirty-five diseases and groups of diseases (increased to thirty-eight by the revised classification), is in use in many European and American States, while the Commonwealth Statistics for 1907, 1908, and 1909 have been compiled on the detailed classification of 179 headings and 1910 for 189 headings. A table has been compiled shewing the causes of death according to the abridged classification, so that the results may be compared with those of countries which use the abridged index.

The compilations for 1907, 1908, 1909, and 1910 will be found in full in "Bulletins Nos. 8, 14, 20, and 25 of Population and Vital Statistics"; here it will suffice to give the abridged classification under thirty-eight headings for the year 1910:—

(d) The classification for the years 1907, 1908, and 1909 is shewn for the Commonwealth in the following table, and for purposes of comparison the figures for the year 1910 have been repeated from the preceding table. Male and female deaths for 1905,

1906, and 1907 are shewn separately on page 237 of the second issue, those for 1908 on pages 211 and 212 of the third issue, and for 1909 on pages 200 and 201 of the fourth issue of this Year Book, while the figures for 1910 are given on the two preceding pages.

The figures for 1907, 1908, and 1909, which were compiled under thirty-five headings, have here been distributed among the corresponding headings of the revised classification.

16. **Certification of Deaths.**—Information was obtained in 1910 as to the persons by whom the 45,590 deaths which occurred in the Commonwealth were certified. The

result of the enquiry shews that approximately 88.1 per cent. (in 1909, 87.7 per cent.) were certified by medical practitioners, and 11.1 per cent. (in 1909, 11.5 per cent.) by coroners after inquests, or magisterial enquiries, while in 0.8 per cent. (in 1909, 0.8 per cent.) of the cases there was either no certificate given, or particulars were not forthcoming. The results are shewn in detail in Bulletin No. 25; a short summary will therefore suffice here:—

### CERTIFICATION OF DEATHS, COMMONWEALTH, 1910.

Death Certified by—	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Cwlth.
Medical practitioner ...	14,200	12,908	5,094	3,666	2,324	1,960	40,152
Coroner ... ..	1,942	1,804	410	397	366	157	5,076
Not certified or not stated ...	16	20	240	33	50	3	362
Total Deaths ... ..	16,158	14,732	5,744	4,096	2,740	2,120	45,590

Of the cases certified by coroners, violent deaths numbered 2477, ill-defined causes 302, organic heart disease 419, senile decay 352, congenital debility 189, diarrhœa and enteritis 135, Bright's disease 65, congestion and hæmorrhage of brain 114, tuberculosis of lungs 80, pneumonia 107, infantile convulsions 74, broncho-pneumonia 28, diseases of arteries, aneurisms, etc. 58, and acute and chronic alcoholism 36; a total of 4436 out of 5076.

Of uncertified causes of death, violent deaths numbered 56, senile debility 46, ill-defined causes 32, infantile convulsions 19, congenital debility 51, diarrhœa and enteritis 11, tuberculosis of the lungs 8, organic heart disease 14, and pneumonia 8; a total of 245 out of 362.

**17. Deaths from Special Causes.**—The table on p. 205 furnishes comparisons for the last four years only, and comparisons will, therefore, be restricted to that period.

(i.) *Typhoid Fever.* Deaths from typhoid fever were more numerous in 1908 than in 1907, numbering 736, against 564 in 1907. In 1909 the number fell to 661, and to 648 in 1910, of which 291 occurred in New South Wales, 141 in Victoria, 99 in Queensland, 25 in South Australia, 51 in Western Australia, and 41 in Tasmania.

(ii.) *Typhus.* The death of one woman was registered in 1906 in Victoria as being due to typhus, but this registration may have been due to an error in the death certificate, and the death may possibly have been one of typhoid (enteric) fever.

(iii.) *Intermittent Fever and Malarial Cachexia.* Deaths from malarial diseases are practically confined to the tropical districts of Northern Queensland and Western Australia, and to the Northern Territory, 24 out of 55 deaths registered in 1910 having occurred in Queensland, and 16 in the Northern Territory.

(iv.) *Small-pox.* No deaths from small-pox occurred during the two years 1907 and 1908, but in 1909 one death was registered in Western Australia. In 1910 one death was registered in New South Wales, and three in Victoria.

(v.) *Measles.* No serious epidemic of measles has occurred for several years; the deaths in 1908 were less numerous than in 1907, numbering 125, against 147. In 1909 the deaths numbered 31, while 124 were registered in 1910.

(vi.) *Scarlet Fever.* 58 deaths were registered in 1910, 23 of which occurred in New South Wales, and 27 in Victoria.

(vii.) *Whooping Cough*. A rather severe epidemic of whooping cough visited New South Wales in the early part of 1907, causing 592 deaths out of a total of 1070 registered in the Commonwealth. The deaths in 1908 fell to 249, with a slight increase to 257 in 1909, and a much greater increase to 476 in 1910.

(viii.) *Diphtheria and Croup*. Deaths in 1907, 403; in 1908, 421; in 1909, 435, and in 1910, 555, of which 238 occurred in New South Wales, 114 in Victoria, 70 in Queensland, and 68 in Western Australia.

(ix.) *Influenza*. This disease was rather more prevalent in 1907 than in the two previous years, the deaths numbering 902, against 428 and 539. Of the deaths occurring in 1907, 309 were registered in New South Wales, 275 in Victoria, and 209 in Queensland. The deaths in 1908 were 588; in 1909, 326, and 324 in 1910, of which 115 occurred in New South Wales, 100 in Victoria, and 57 in Queensland.

(x.) *Asiatic Cholera*. No cases of Asiatic cholera have ever occurred in the Commonwealth.

(xi.) *Cholera Nostras*. Isolated cases only of choleric form diarrhœa occurred in each of the four years.

(xii.) *Other Epidemic Diseases*. The number of deaths registered under this heading was 276 in 1907, 268 in 1908, 221 in 1909, and 184 in 1910. The list in 1910 includes the following diseases:—Dysentery 97, erysipelas 56, leprosy 13, of which 10 occurred in Queensland, other epidemic diseases, 18. Prior to 1910 beri beri was included in other epidemic diseases. The sixty cases occurring in 1910 have been included in No. 37 of the revised classification. Of the 41 deaths from leprosy in the years 1907 to 1910, 33 occurred in Queensland. There were no deaths from plague in the Commonwealth during 1910. In 1907, 48 deaths were registered; in 1908, 14 deaths; and in 1909, 13 deaths.

(xiii.) *Tuberculosis of the Lungs*. The deaths in 1910 numbered 3059, viz., 1711 males and 1348 females. The figures for 1907, 1908, and 1909 were 3206, 3409, and 3169 respectively. Of the deaths in 1910, 1044 occurred in New South Wales, 1040 in Victoria, 303 in Queensland, 332 in South Australia, 210 in Western Australia, and 130 in Tasmania. In accordance with the revised classification, 50 deaths from tuberculosis of the larynx have been included with tuberculosis of the lungs in 1910, instead of in class 15 in previous years. In the table on page 205 deaths from tuberculosis of the larynx have been included with tuberculosis of the lungs, so that the figures allow of correct comparison.

(xiii.a) *Tuberculosis of the Respiratory System*. Of the various forms of tuberculosis prevalent in the Commonwealth, that which has probably attracted the most attention and has been the subject of the widest comment is phthisis, or tuberculosis of the lungs. The intimate relation, however, between tuberculosis of the lungs and that of other parts of the respiratory system renders it desirable that all forms of tuberculosis of the respiratory system should be brought under one head for various investigations concerning the age incidence and duration of this disease.

In the matter of the age incidence of death from tuberculosis of the respiratory system, diagrams were given in Year Books 2, 3, and 4, pp. 239, 217, and 206 respectively, shewing the frequency of deaths at successive ages in England and Wales during 1906 (Fig. 1), and in the Commonwealth during 1907 (Fig. 2). These are now superseded and a fuller reference based on later results is made hereinafter to this and other diseases. The results given depended upon intercensal estimates of population, and these having now been adjusted to agree with the Census of 3rd April, 1911, some slight amendment of the figures is necessary.

The figures dealt with furnish the following death-rates from tuberculosis of the respiratory system for the years specified:—

Particulars.	Males.	Females.	Total.
ENGLAND AND WALES, 1906—			
Population ... ..	16,689,707	17,857,309	34,547,016*
Deaths from tuberculosis of the respiratory system ... ..	22,645	17,101	39,746
Death-rate per 100,000 of population ... ..	135.68	95.76	115.05
COMMONWEALTH OF AUSTRALIA, 1907—			
Population ... ..	2,141,727	1,982,002	4,123,729
Deaths from tuberculosis of the respiratory system ... ..	1,891	1,477	3,368
Death-rate per 100,000 of population ... ..	88.29	74.52	81.67

\* Not corrected to Census.

(xiv.) *Tuberculosis of the Meninges.* The number of deaths registered in 1907, 237; in 1908, 205; in 1909, 220; and in 1910, 215.

(xv.) *Other Forms of Tuberculosis.* Deaths numbered in 1907, 415; in 1908, 352; in 1909, 332; and in 1910, 343. The deaths in 1910 include the following forms of tuberculosis:—Tuberculosis of the peritonæum, 143; Pott's disease, 50; tuberculosis of other organs, 90; and disseminated tuberculosis, 60. Tuberculosis of the larynx (see paragraph xiii.)

(xv.a) *All Forms of Tuberculosis.* A complete tabulation of all the different tubercular diseases from which deaths occurred in 1910, will be found in Bulletin No. 25 of Population and Vital Statistics. Here it will suffice to show a few of the features of the tabulation mentioned. The total number of deaths due to tubercular diseases was 3617, viz., 2012 males and 1605 females. The following table shews the ages of these 3617 persons:—

#### AGES OF PERSONS WHO DIED FROM TUBERCULAR DISEASES, 1910.

##### COMMONWEALTH.

Ages.	Male.	Female	Total.	Ages.	Male.	Female	Total.
Under 5 years ...	137	104	241	55 years and under 60	110	56	166
5 years and under 10	33	22	55	60 " " 65	85	36	121
10 " " 15	32	40	72	65 " " 70	51	27	78
15 " " 20	93	151	244	70 " " 75	37	15	52

50 " " 55	190	63	253	Total Deaths ...	2,012	1,605	3,617

The length of residence in the Commonwealth of persons who died from tubercular diseases has been tabulated for the year 1910 for all the Commonwealth States, with the following results :—

**LENGTH OF RESIDENCE IN COMMONWEALTH  
OF PERSONS WHO DIED FROM TUBERCULAR DISEASES, 1910.**

Length of Residence in Commonwealth.	Male.	Fem.	Total	Length of Residence in Commonwealth.	Male.	Fem.	Total.
Born in Commonwealth ...	1,286	1,353	2,639	Resident 10 yrs. & under 15	29	10	39
Resident under 1 year ...	26	3	29	"    15    "    under 20	30	9	39
"    1 year ...	22	6	27	"    20    "    over ...	412	170	582

"    4    "    ... ..	9	4	13				
"    5    "    & under 10	39	4	43	Total Deaths ...	2,012	1,605	3,617

There would not appear, therefore, to be much ground for the statement sometimes heard that many persons arrive in Australia in the last stages of consumption.

In order to shew the prevalence of tuberculosis in the several States, the death rates from tubercular diseases are shewn in the following table, together with the percentage which deaths from tuberculosis bear on the total number of deaths registered :—

**DEATH RATES FROM TUBERCULOSIS AND PERCENTAGE ON TOTAL DEATHS  
COMMONWEALTH.**

State.	Death Rates* from Tuberculosis.			Percentage on Total Deaths.		
	Males.	Females.	Total.	Males.	Females.	Total.
New South Wales	0.80	0.70	0.75	7.34	8.01	7.62
Victoria ...	1.05	0.90	0.97	8.22	8.83	8.49
Queensland ...	0.74	0.40	0.59	6.68	5.02	6.06
South Australia ...	0.95	1.04	0.99	8.68	10.96	9.72
Western Australia	1.03	0.63	0.86	9.03	7.55	8.50
Tasmania ...	0.67	0.96	0.81	5.92	8.81	7.31
Commonwealth	0.89	0.76	0.83	7.69	8.26	7.93

\* Number of deaths from tuberculosis per 1000 of mean population.

In the first issue of this book a series of figures was given shewing the rates of mortality from phthisis in various countries, and it was shewn that these ranged from 570 per million in New Zealand to 4415 per million in Hungary, with a rate of 808 for the Commonwealth. It is not considered necessary to repeat those figures here in detail, and it may suffice to state that while deaths from all tubercular diseases in the Commonwealth were 0.83 per thousand in 1910, they were 1.40 per thousand in Belgium in 1904; 1.65 per thousand in England and Wales in 1906; 1.80 per thousand in the Netherlands in 1906; 2.04 per thousand in the German Empire in 1905; and 2.72 per thousand in Switzerland in 1905. The Commonwealth occupies, therefore, a very enviable position in regard to tubercular diseases, when compared with European countries.

(xvi.) *Cancer and other Malignant Tumours.* Deaths from cancer shew a tendency to increase, the figures for 1907 being 2940 deaths; for 1908, 2921 deaths; for 1909,

3112 deaths; and 1910, 3205 deaths. Of the deaths registered in 1910, 1696 were those of males, viz., 617 in New South Wales, 555 in Victoria, 230 in Queensland, 158 in South Australia, 74 in Western Australia, and 62 in Tasmania; while 1509 were those of females; viz., 549 in New South Wales, 516 in Victoria, 160 in Queensland, 164 in South Australia, 61 in Western Australia, and 59 in Tasmania. Bulletin No. 25 contains a complete tabulation of the various types of cancer and of the seat of the disease, of which the following is a summary:—

#### DEATHS FROM CANCER, COMMONWEALTH, 1910.

Seat of Disease.	Male.	Female	Total.
Cancer, etc., of the buccal cavity ... ..	238	24	262
„ „ the stomach and liver ... ..	746	481	1,227
„ „ the peritonæum, the intestines, and the rectum ...	186	184	370
„ „ the female genital organs ... ..	...	305	305
„ „ the breast ... ..	...	210	210
„ „ the skin ... ..	64	34	98
„ „ other organs ... ..	462	271	733
Total Deaths ... ..	1,696	1,509	3,205

Of these deaths 1016 were described as cancer, 1309 as carcinoma, 158 as epithelioma, 388 as "malignant disease," 73 as "malignant tumour," 4 as neoplasm, 29 as "rodent ulcer," 211 as sarcoma, and 17 as scirrhus.

The ages of the 3205 persons who died from cancer in 1910, are shewn in the following table, from which it will be seen that while the ages below 35 are not by any means immune from the disease, the great majority of deaths occurred at ages from 35 upwards, the maximum being found in the age group 65 to 70.

#### AGES OF PERSONS WHO DIED FROM CANCER, 1910.

##### COMMONWEALTH.

Ages.	Males.	Female	Total.	Ages.	Males.	Female	Total.
Under 15 years ...	25	17	42	65 years and under 70	250	204	454

				Total Deaths ...	1,696	1,509	3,205

A tabulation has been made of the occupations of the males who died from cancer, which the following is a summary:—

## OCCUPATION OF MALES WHO DIED FROM CANCER, 1910.

## COMMONWEALTH.

Occupation.	No. of Deaths.	Occupation.	No. of Deaths.
Professional class ... ..	79	Pastoral class ... ..	81
Domestic class ... ..	51	Working in mines and quarries...	95
Mercantile class ... ..	162	Other primary producers ... ..	19
Engaged in transport and communication ... ..	95	Independent means ... ..	82
Manufacturing class ... ..	169	Dependents ... ..	55
Engaged in building and construction ... ..	122	Occupation not stated ... ..	48
Indefinite industrial workers ... ..	341		
Agricultural class ... ..	297	Total Male Deaths ... ..	1,696

As the following tables shew, the death rates from cancer are below those for tubercular diseases in all the States (with the exception, however, of the female death rates in New South Wales and Queensland), but while the latter have a general tendency to decrease, the former have, on the contrary, shewn an increase in nearly every recent year.

## DEATH RATES\* FROM CANCER AND PERCENTAGE ON TOTAL DEATHS, 1910.

## COMMONWEALTH.

State.	Death Rates* from Cancer.			Percentage on Total Deaths.		
	Males.	Females.	Total.	Males.	Females.	Total.
New South Wales	0.72	0.70	0.71	6.61	8.05	7.22
Victoria ...	0.87	0.80	0.83	6.83	7.81	7.27
Queensland ...	0.71	0.59	0.66	6.40	7.44	6.79
South Australia...	0.77	0.83	0.80	7.07	8.81	7.86
Western Australia	0.48	0.52	0.50	4.20	6.22	4.93
Tasmania ...	0.64	0.63	0.63	5.65	5.77	5.71
Commonwealth	0.75	0.72	0.73	6.48	7.76	7.03

\* Number of deaths from Cancer per 1000 of mean population.

The table shewing the death rates from cancer in various countries, which was given in the first issue of this work, is not here repeated. It may, however, be stated that while the death rate of the Commonwealth from cancer in 1910 was 0.73 per thousand, that of Belgium in 1908 was 0.54; that of the German Empire in 1905, 0.80; that of England and Wales in 1909, 0.95; that of the Netherlands in 1909, 0.90; and that of Switzerland in 1908, 1.11 per thousand.

(xvii.) *Simple Meningitis.* The table shews 648 deaths in 1907, 676 deaths in 1908, 616 deaths in 1909, and 567 in 1910.

(xviii.) *Congestion, Hæmorrhage, and Softening of the Brain.* The deaths registered under this heading in 1907 were 1901, viz., 1038 males and 863 females; in 1908, 1867, viz., 991 males and 876 females; in 1909, 1665, viz., 869 males and 796 females; and in 1910, 1704, viz., 864 males and 840 females. The 1910 figures are made up of congestion and hæmorrhage of the brain—803 males, 778 females, total 1581; and softening of the brain—61 males, 62 females, total 123.

(xix.) *Organic Diseases of the Heart.* The number of deaths registered in 1910 was 4378, viz., 2369 males and 2009 females. Of these deaths, New South Wales was responsible for 848 males and 648 females; Victoria for 780 males and 774 females; Queensland for 337 males and 210 females; South Australia for 217 males and 237 females; Western Australia for 116 males and 68 females; and Tasmania for 71 males and 72 females. To the figures for 1910 correspond the following death rates and percentages to total deaths:—

**DEATH RATES\* FROM ORGANIC HEART DISEASE AND PERCENTAGE ON TOTAL DEATHS, COMMONWEALTH, 1910.**

State.	Death Rates* from Organic Heart Disease.			Percentage on Total Deaths.		
	Males.	Females.	Total.	Males.	Females.	Total.
New South Wales	0.99	0.83	0.92	9.08	9.50	9.26
Victoria ...	1.23	1.19	1.21	9.59	11.72	10.55
Queensland ...	1.04	0.78	0.92	9.38	9.77	9.52
South Australia ...	1.06	1.20	1.13	9.71	12.74	11.09
Western Australia	0.75	0.58	0.68	6.59	6.94	6.71
Tasmania ...	0.73	0.77	0.75	6.46	7.04	6.75
Commonwealth ...	1.04	0.96	1.00	9.06	10.34	9.60

\* Number of deaths from Organic Heart Disease per 1000 of mean population.

(xx.) *Acute Bronchitis.* The classification of causes of deaths requires deaths of persons under five years of age, which are merely ascribed to "bronchitis," to be classified under "acute bronchitis," and similarly certified deaths of older persons under "chronic bronchitis." This rule has been followed throughout in compiling the tables for 1907, 1908, 1909, and 1910, with the result that acute bronchitis is credited with 514 deaths in 1907, 412 deaths in 1908, 422 deaths in 1909, and 420 in 1910, viz., 236 males and 184 females.

(xxi.) *Chronic Bronchitis.* The adjustment mentioned in the preceding paragraph gives a total of 844 deaths in 1907, 818 deaths in 1908, 897 deaths in 1909, and 859 in 1910, viz., 490 males and 369 females.

(xxii.) *Pneumonia.* The 1910 figures were 986 males and 626 females, a total of 1612 deaths.

(xxiii.) *Other Diseases of the Respiratory System.* This head was established in 1910, the figures previously being included in "Other Diseases" (paragraph xxxvii.). Deaths in 1907 numbered 1689; in 1908, 1569; in 1909, 1565, and in 1910, 1544. The total for 1910 is made up as follows, viz.:—Diseases of the nasal fossæ, 12 deaths; diseases of the larynx, 90 deaths; diseases of the thyroid body, 19 deaths; broncho-pneumonia, 701 deaths, pleurisy, 168 deaths; pulmonary congestion and apoplexy, 150 deaths; gangrene of the lung, 30 deaths; asthma, 148 deaths; pulmonary emphysema, 12 deaths; fibroid phthisis, miners' complaint, 129 deaths; other diseases of the respiratory system (tuberculosis excepted), 85 deaths.

(xxiv.) *Diseases of the Stomach (Cancer excepted).* In 1910 this heading includes: Ulcer of the stomach, 48 males, 59 females; and other diseases of the stomach (cancer excepted), 104 males, 86 females; a total of 297 deaths. The corresponding figures for 1907, 1908, and 1909, were 334, 308, and 272 respectively.

(xxv.) *Diarrhœa and Enteritis (Children under two years only).* In 1907, deaths numbered 2733, viz., 1513 boys and 1220 girls; in 1908, 3236, viz., 1814 boys and 1422 girls; in 1909, 2803, viz., 1544 boys and 1259 girls; and in 1910, 3145, viz., 1713 boys and 1432 girls. The 1910 deaths were distributed amongst the six States as follows:—New South Wales, 660 males, 553 females, total 1213; Victoria, 540 males, 428 females, total 968; Queensland, 161 males, 148 females, total 309; South Australia, 132 males, 103 females, total 235; Western Australia, 116 male.. 104 females, total 220; and Tasmania, 104 males, 96 females, total 200.

The following are the death rates and percentages on total deaths due to infantile diarrhœa and enteritis in the six States for the year 1910:—

**DEATH RATES\* FROM INFANTILE DIARRHŒA AND ENTERITIS, AND PERCENTAGE ON TOTAL DEATHS, COMMONWEALTH, 1910.**

State.	Death Rate* from Infantile Diarrhœa and Enteritis.			Percentage on Total Deaths.		
	Males.	Females.	Total.	Males.	Females.	Total.
New South Wales	0.77	0.71	0.74	7.06	8.11	7.51
Victoria ...	0.85	0.66	0.75	6.64	6.48	6.57
Queensland ...	0.50	0.55	0.52	4.48	6.88	5.39
South Australia ...	0.65	0.52	0.59	5.91	5.53	5.74
Western Australia	0.75	0.89	0.81	6.59	10.61	8.03
Tasmania ...	1.07	1.03	1.05	9.47	9.39	9.43
Commonwealth	0.76	0.68	0.72	6.55	7.37	6.89

\* Number of deaths from these diseases per 1000 of mean population.

As a large number of these deaths is directly due to improper feeding, it would be interesting to know the percentage of infants who were bottle-fed, but, unfortunately, no provision exists for the registration of this information. The number of deaths was larger than usual in 1908, particularly in Victoria, and to a lesser degree in South Australia and in Tasmania, owing to the phenomenal heat experienced in the early part of that year. The death rates for the three States named were 0.83, 0.61, and 0.71 per 1000 respectively in 1908, compared with 0.55, 0.45 and 0.48 in 1907, and with 0.75, 0.59 and 1.05 in 1910.

(xxvi.) *Appendicitis and Typhlitis.* Prior to 1910 deaths from these causes were included in Other Diseases, paragraph xxxvii. Deaths numbered 305 in 1907, 293 in 1908, 344 in 1909, and 315 in 1910, viz., 181 males and 134 females.

(xxvii.) *Hernia, Intestinal Obstructions.* The number of deaths has not varied much from year to year, the number registered in 1907 being 411; in 1908, 389; in 1909, 396; and in 1910, 398, viz., 233 males and 165 females.

(xxviii.) *Cirrhosis of the Liver.* The deaths in 1907 numbered 325; in 1908, 362; in 1909, 331; and in 1910, 368, viz., 234 males and 134 females.

(xxix.) *Nephritis and Bright's Disease.* The number of deaths attributable to these diseases from year to year is a very large one. In 1907 there were registered the deaths of 1065 males and 695 females; in 1908, those of 1140 males and 724 females; in 1909, those of 1076 males and 728 females; and in 1910, 1771, 1077 males and 694 females. Of the deaths registered in 1910, those of 82 males and 78 females

were ascribed to acute nephritis, and those of 995 males and 616 females to Bright's disease. New South Wales was responsible for 632 deaths; Victoria for 601; Queensland for 243; South Australia for 160; Western Australia for 81; and Tasmania for 54; making a total of 1771.

(xxx.) *Non-cancerous Tumours and other Diseases of the Female Genital Organs.* Deaths in 1907 numbered 128; in 1908, 159; in 1909, 130; and in 1910, 149. Included in the 149 deaths registered in 1910 were the following:—Non-puerperal uterine hæmorrhage, 3; non-cancerous uterine tumours, 35; other diseases of the uterus, 24; cysts and other ovarian tumours, 31; other diseases of the female genital organs, 56.

(xxxi.) *Puerperal Septicæmia (Puerperal Fever, Puerperal Peritonitis, Puerperal Phlebitis).* Deaths in 1907 were 179; in 1908, 202; in 1909, 201; and in 1910, 218.

(xxxi.) *Other Puerperal Accidents of Pregnancy and Confinement.* The deaths in 1907 numbered 435; in 1908, 404; in 1909, 376; and in 1910, 373. Included in the 373 deaths registered in 1910 were the following:—Accidents of pregnancy, 112; puerperal hæmorrhage, 76; other accidents of childbirth, 31; puerperal albuminuria and convulsions, 77; puerperal phlegmasia alba dolens, embolus, sudden death, 29; death following childbirth, 48.

(xxxi.a) *All Puerperal Diseases.* The 591 deaths registered in 1910 under the two preceding headings will be found tabulated in "Bulletin No. 25 of Population and Vital Statistics" under various aspects. It will suffice to repeat here the following facts:—

Of the 591 mothers who died in childbirth during the year 1910, 533 were married and 58 were single. As the total number of nuptial confinements was 108,940, and of ex-nuptial confinements 6619, it follows that one in 204 of married mothers, and one in 114 of single mothers, died of puerperal disease, the general proportion being one in 196, as against one in 195 in 1909, one in 181 in 1908, and one in 178 in 1907.

The ages of the mothers who died varied from 14 to 47 years, and are shewn in the following table:—

#### AGES OF MOTHERS WHO DIED IN CHILDBIRTH, COMMONWEALTH, 1910.

Age at Death.	Married Women.	Single Women.	Total.	Age at Death.	Married Women.	Single Women.	Total.
14 years ...	...	1	1	33 years ...	25	...	25
16 " ...	...	4	4	34 " ...	24	1	25

31 " ...	24	2	26				
32 " ...	28	1	29	Total deaths	533	58	591

Of the 533 married women shewn in the above table, 28 died in Tasmania; in regard to these no information is available as to previous issue and as to duration of marriage.

Of the remaining 505 women, 160 died at their first confinement, 80 at their second, 54 at their third, 53 at their fourth, 49 at their fifth, 29 at their sixth, 28 at their seventh, 17 at their eighth, 11 at their ninth, 9 at their tenth, 9 at their eleventh, 3 at their twelfth, 1 at her thirteenth, 1 at her fourteenth, and 1 at her fifteenth confinement. The total number of children of the 505 mothers was 1618.

Twenty-four of the mothers who died had been married less than one year, 79 between one and two years, 41 between two and three years, the duration of marriage ranging up to 27 years. This tabulation will be found in detail, and distinguishing the ages at marriage, in "Bulletin No. 25 of Population and Vital Statistics," as will a further tabulation shewing the duration of marriage and previous issue in combination. These tables shew, for instance, that one mother, who had been married at the age of 23 years, died at the age of 45, in the 22nd year of her marriage, at her fourteenth confinement. The mother who died at her fifteenth confinement had been married for 21 years, and was at the time of her death 40 years old.

(xxxiii.) *Congenital Debility and Malformations.* The figures for 1910 include children under one year of age, of whom 2772 were under three months. The 1910 figures include:—Malformations, 220 males, 149 females, total 369; and congenital debility, icterus, and sclerema of children under one year of age, 1629 males and 1223 females, total 2852; or a grand total of 3221. Of these deaths, 1215 were registered in New South Wales, viz., 713 males and 502 females; 918 in Victoria, viz., 524 males and 394 females; 371 in Queensland, viz., 201 males and 170 females; 289 in South Australia, viz., 169 males and 120 females; 210 in Western Australia, viz., 121 males and 89 females; and 218 in Tasmania, viz., 121 males and 97 females.

(xxxiv.) *Senile Debility.* The deaths ascribed to "old age" form a large group, and are slightly in excess of those due to infantile debility. In 1907 they numbered 3136, viz., 1721 males and 1415 females; in 1908, 3466, viz., 2027 males and 1439 females; in 1909, 3194, viz., 1829 males and 1365 females; and in 1910, 3353, viz., 1905 males and 1448 females. Of the deaths registered in 1910, 1094 occurred in New South Wales, viz., 666 males and 428 females; 1283 in Victoria, viz., 694 males and 589 females; 298 in Queensland, viz., 188 males and 110 females; 336 in South Australia, viz., 156 males and 180 females; 121 in Western Australia, viz., 86 males and 35 females; and 221 in Tasmania, viz., 115 males and 106 females.

Of the males whose death was described as due to senility, 1 was aged between 40 and 44; 3 were between 50 and 54; 9 were between 55 and 59; 34 between 60 and 64; 105 between 65 and 69; 320 between 70 and 74; 472 between 75 and 79; 490 between 80 and 84; 302 between 85 and 89; 121 between 90 and 94; 35 between 95 and 99; while 12 were 100 years old and upwards; and of one the age was not stated.

Of the females, 2 were between 50 and 54; 2 between 55 and 59; 23 between 60 and 64; 70 between 65 and 69; 209 between 70 and 74; 331 between 75 and 79; 384 between 80 and 84; 256 between 85 and 89; 129 between 90 and 94; 33 between 95 and 99; while 9 were 100 years old and upwards.

(xxxv.) *Violence.* A very large number of deaths is every year due to external violence, and, as might be expected from the fact that their occupations expose them much more to accidents, males largely predominate. The figures quoted are exclusive of suicides, which have been treated as a separate group. Deaths ascribed to violence numbered in 1907, 2679, viz., 2033 males and 641 females; in 1908, 2922, viz., 2187 males and 735 females; in 1909, 2664, viz., 2050 males and 614 females; and in 1910, 2738, viz., 2128 males and 610 females. Of the deaths registered in 1910, those of 761 males and 208 females occurred in New South Wales; those of 506 males and 201 females in Victoria; those of 404 males and 80 females in Queensland; those of 201

males and 49 females in South Australia; those of 187 males and 51 females in Western Australia; and those of 69 males and 21 females in Tasmania.

The following table shews the various kinds of accidental deaths which occurred in 1910, distinguishing males and females:—

### DEATHS FROM VIOLENCE, COMMONWEALTH, 1910.

Cause of Death.	Males.	Females.	Total.
Poisoning by food ... ..	13	19	32
Venomous bites and stings ... ..	8	4	12
Other acute poisonings ... ..	28	24	52
Conflagration ... ..	6	4	10
Burns (conflagration excepted) ... ..	106	183	289
Absorption of deleterious gases ... ..	12	9	21
Accidental drowning ... ..	470	77	547
Traumatism by firearms ... ..	70	13	83
Traumatism by cutting or piercing instruments ... ..	5	...	5
Traumatism by fall ... ..	341	74	415
Traumatism in mines or quarries ... ..	128	...	128
Traumatism by machines ... ..	29	...	29
Traumatism by other crushing (vehicles, railways, etc.) ... ..	303	46	349
Injuries by animals ... ..	52	6	58
Starvation, thirst, fatigue ... ..	26	5	31
Excessive cold ... ..	4	...	4
Effects of heat ... ..	77	32	109
Lightning ... ..	5	...	5
Electricity (lightning excepted) ... ..	6	...	6
Homicide by firearms ... ..	12	10	22
Homicide by cutting or piercing instruments... ..	2	5	7
Homicide by other means ... ..	43	24	67
Fractures (cause not specified) ... ..	84	20	104
Other external violence ... ..	298	55	353
Total Deaths ... ..	2,128	610	2,738

In every kind of accidental death there was, therefore, a large excess of males, with the exception of burning accidents, in which female deaths largely predominated, poisoning by food, and homicide by cutting or piercing instruments.

The excessive heat of January, 1908, was responsible for an increase in the number of deaths caused by insolation, i.e., sunstroke and heat apoplexy, from 64 in 1907 to 246 in 1908, distributed as follows:—New South Wales, 46; Victoria, 130; Queensland, 14; South Australia, 39; Western Australia, 15; Tasmania, 2. In 1910, as the preceding table shews, the deaths fell to 109.

(xxxvi.) *Suicide*.\* Although their number in 1908, 1909, and 1910 was greater than it was in 1907, it may be said that suicides have shewn a tendency to decrease during recent years, the number in 1905 having been 520, viz., 431 males and 89 females; while in 1906 it was 499, viz., 403 males and 96 females; in 1907, 461, viz., 385 males and 76 females; in 1908, 497, viz., 413 males and 84 females; in 1909, 495, viz., 398 males and 97 females; and in 1910, 516, viz., 432 males and 84 females. Of the last named, those of 132 males and 24 females happened in New South Wales; those of 100 males and 30 females in Victoria; those of 100 males and 14 females in Queensland; those of 27 males and 6 females in South Australia; those of 63 males and 7 females in Western Australia; and those of 10 males and 3 females in Tasmania.

The modes adopted by persons who committed suicide in the years 1907 to 1910 were as follows:—

\* See also Appendix to this section, page 240.

## NUMBER OF MALE AND FEMALE SUICIDES, COMMONWEALTH, 1907 to 1910.

				Total Deaths ...	432	84	516

The following table shews the occupations of the 432 males who committed suicide:—

**OCCUPATIONS OF MALE PERSONS WHO COMMITTED SUICIDE, 1910.**  
COMMONWEALTH.

Occupations.	Deaths.	Occupations.	Deaths.
Professional class ...	17	Pastoral class ...	22
Domestic class ...	31	Working in mines and quarries ...	33
Mercantile class ...	63	Other primary producers ...	9
Engaged in transport and communication ...	29	Independent means ...	6
Manufacturing class ...	39	Dependents ...	3
Engaged in building and construction ...	18	Occupation not stated ...	14
Indefinite industrial workers ...	106		
Agricultural class ...	42	Total Deaths ...	432

The assertion has been made that suicide has become more frequent during recent years, but an examination of the figures from the year 1871 onwards hardly bears this out. The absolute figures have certainly increased, but proportionately to the population the figures for 1906-10 are practically the same as those for 1886-90. No particulars are available for Western Australia prior to 1886, and from 1886 to 1895 the sexes are not distinguished. All figures for the first five periods are, therefore, exclusive of Western Australia:—

**SUICIDES, COMMONWEALTH, 1871-75 to 1906-10.**

Period.	Number of Suicides.			Suicides per One Million.			Suicides of Females to 100 Suicides of Males. Based on	
	Males.	Females.	Total.	Males.	Females.	Total.	Absolute Figures.	Rates.
1871-75	715	150	865	150.94	37.56	99.07	20.93	24.88
1876-80	878	145	1,023	159.69	31.06	100.62	16.51	19.45
1881-85	999	183	1,182	152.58	32.90	97.61	18.32	21.56
1886-90	1,894	292	<sup>1</sup> 1,686	179.20	43.97	<sup>3</sup> 116.92	20.95	24.51
1891-95	1,574	337	<sup>2</sup> 1,911	181.34	44.09	<sup>4</sup> 117.07	21.41	24.31
1896-1900	1,838	410	2,248	191.11	47.88	123.65	22.31	25.05
1901-05	2,054	380	2,434	201.78	40.88	124.98	18.50	20.26
1906-10	2,031	437	2,468	186.11	43.22	117.39	21.51	23.22

1. 1705 inclusive of Western Australian figures. 2. 1984 inclusive of Western Australian figures.  
3. 116.49 inclusive of Western Australian figures. 4. 119.11 inclusive of Western Australian figures.

(xxxvii.) *Other Diseases.* The number of causes included under this heading is a very large one, amounting to no less than 79 of the items shewn in the detailed classification, and deaths were recorded under every one of these with the exception of the following six:—Glanders and farcy, rabies, pellagra, diseases of the eyes, and non-venereal diseases of the male genital organs. The total number of deaths under "other diseases" in 1907 was 6677, viz., 3933 males and 2744 females; in 1908, 7417, viz., 4351 males and 3066 females; in 1909, 7419, viz., 4344 males and 3075 females; and in 1910, 7794, viz., 4590 males and 3204 females. Following the revised edition of the classification the following changes have been made in this heading during 1910: beri-beri (60 deaths) is now included under this heading instead of under xii., "Other Epidemic Diseases." Other diseases of the respiratory system (1544 deaths) are now shewn under a new head (xxiii.), and appendicitis and typhlitis (315 deaths) under head xxvi. Some of the diseases included here account for very considerable numbers of deaths. Thus there were 846 deaths ascribed to diarrhoea and enteritis of children over two years of age and of adults, 485 to convulsions of children under five years of age; 420 to diabetes; 374 to paralysis without indicated cause; and 491 to diseases of the arteries, atheroma, and aneurism. Particulars of the deaths included in 1910 are shewn in the following table:—

**CAUSES OF DEATH INCLUDED UNDER "OTHER DISEASES," COMMONWEALTH, 1910.**

Causes.	M.	F.	T'tal.	Causes.	M.	F.	T'tal.

(xxxviii.) *Unspecified or Ill-defined Diseases.* The number of cases which has to be included here is a considerable one from year to year, having numbered 1275 in 1907, 1262 in 1908, 1087 in 1909, and 598, viz., 376 males and 222 females, in 1910. The detailed classification distinguishes these ill-defined diseases under three headings:—Dropsy, including such definitions as anasarca, ascites, general oedema, etc.; sudden death, including syncope; and unspecified or ill-defined causes, of which the following are specimens:—Asthenia, coma, dentition, exhaustion, heart failure, etc. In 1910 the number of cases of death which would have to be classed under the first of these categories was 17; those belonging to the second, 39; and those belonging to the third, 542. It is, of course, true that there must always occur some cases where the disease is not well characterised, or where sufficient information is not procurable to allow of a clear definition being given in the certificate of death, but in the majority of cases included under this heading a more complete diagnosis and consequently a more satisfactory certificate would no doubt have been possible.

**18. Causes of Death in Classes.**—The figures presented in the preceding paragraphs relate to certain definite causes of death. It is almost generally acknowledged that figures of this kind are of greater value in medical statistics than is a classification under general headings. The classification under fourteen general headings adopted by the compiler of *The International Nomenclature* is, however, shewn in the following table, together with the death rates and percentages on total deaths pertaining to those classes:

### DEATHS, DEATH RATES\*, AND PERCENTAGES ON TOTAL DEATHS IN CLASSES, 1910.

\* Number of deaths per 1000 of mean population.

**19. Deaths of Children under 1 Year.**—“Bulletin No. 25 of Population and Vital Statistics” contains tables for the first time for the year 1910 shewing the age at death of children dying during the first year of life from nineteen causes. In the Bulletin mentioned the particulars are published for the States and Commonwealth, but the totals for the Commonwealth only are here shewn.

The figures for death from lack of care and other diseases peculiar to early infancy include children under four months of age only.

Total under 1 year			277	194	2,592	76	347	2,852	484	22	55

It will be seen that the maximum number of deaths from convulsions, pneumonia, malformations, congenital debility, icterus and sclerema, other diseases peculiar to early infancy, and lack of care, occurred during the first month of life, while acute bronchitis

and broncho-pneumonia were most fatal during the second month. Diarrhoea and enteritis carried off more children in the fourth month than in any other, the numbers gradually decreasing toward the end of the year. Whooping cough and syphilis reached their maxima during the third month of life.

20. **Age at Death of Married Males and Females, and Issue.**—"Bulletin No. 25 of Population and Vital Statistics" contains a number of tables, for the Commonwealth, exclusive of Tasmania, shewing the age at marriage, age at death, duration of life after marriage, birthplaces, and occupations, in combination with the issue, of married persons who died in 1910. A short summary of the tables mentioned is given hereunder. Deaths of married males in 1910 numbered 10,771, and of married females, 10,159. The ages at death of the males ranged from 18 to 109 years, and those of the females, from 17 to 105 years. The total number of children in the families of the 10,771 males was 58,817, the maximum in one family being 23; and of the 10,159 females, 54,188, with a maximum of 22. The average number of children is shewn for various age-groups in the following table:—

### AGE AT DEATH OF MARRIED MALES AND FEMALES, AND AVERAGE ISSUE.

COMMONWEALTH (EXCLUSIVE OF TASMANIA), 1910.

Age at Death.	Average Family of Males.	Average Family of Females.	Age at Death.	Average Family of Males.	Average Family of Females.
Under 20 years ...	0.50	0.78	70 to 74 years ...	6.50	6.55
20 to 24 years ...	1.06	1.12	75 " 79 " ...	6.75	6.69
25 " 29 " ...	1.53	1.74	80 " 84 " ...	6.54	6.01
30 " 34 " ...	2.02	2.64	85 " 89 " ...	6.58	5.66
35 " 39 " ...	2.72	3.72	90 " 94 " ...	6.67	5.66
40 " 44 " ...	3.65	4.31	95 " 99 " ...	6.66	4.74
45 " 49 " ...	4.30	4.75	100 years and upwards	5.22	6.00
50 " 54 " ...	4.89	5.37	Age not stated ...	6.20	2.62
55 " 59 " ...	5.45	5.81			
60 " 64 " ...	5.62	6.00			
65 " 69 " ...	6.33	6.42	All ages ...	5.46	5.33

The figures shewn in the preceding table include the issue both living and dead; the proportion between the two, taking deceased males and females together, was about as 1000 to 326, or, roughly speaking, as three to one. The totals are shewn in the following table:—

### ISSUE OF MARRIED MALES AND FEMALES.

COMMONWEALTH (EXCLUSIVE OF TASMANIA), 1910.

Issue of Married Males.	Males.	Females.	Total.	Issue of Married Females.	Males.	Females.	Total.
Living ...	23,127	22,427	45,554	Living ...	20,135	19,595	39,730
Dead ...	7,173	6,090	13,263	Dead ...	7,539	6,919	14,458
Total ...	30,300	28,517	58,817	Total ...	27,674	26,514	54,188

These figures shew a masculinity in the births of 105.35, which agrees fairly well with the experience of the birth statistics, the masculinity of the births in the Commonwealth from 1901 to 1910 having ranged from 104.11 to 106.39.

As a matter of curiosity it may be mentioned that the family of twenty-three belonged to a father who died at the age of 82, and that it had originally comprised twelve sons and eleven daughters, of whom nine sons and eight daughters survived their father.

**21. Age at Marriage of Males and Females, and Issue.**—While the table giving the average families of married males and females naturally shows an increase in the averages with advancing ages at death, the following table, which gives the average families of males and females according to the age at marriage of the deceased parents, shews a corresponding decrease in the averages as the age at marriage advances:—

#### AGE AT MARRIAGE OF MALES AND FEMALES, AND AVERAGE ISSUE.

COMMONWEALTH (EXCLUSIVE OF TASMANIA), 1910.

Age at Marriage.	Average Family of Males.	Average Family of Females.	Age at Marriage.	Average Family of Males.	Average Family of Females.
Under 20 years ...	6.91	7.13	55 to 59 years ...	2.49	...
20 to 24 years ...	6.43	5.75	60 „ 64 „ ...	1.86	...
25 „ 29 „ ...	5.69	4.35	65 years and upwards ...	0.76	...
30 „ 34 „ ...	4.99	3.01	Age not stated ...	4.64	4.79
35 „ 39 „ ...	4.31	1.85			
40 „ 44 „ ...	3.46	0.68			
45 „ 49 „ ...	3.25	0.22			
50 „ 54 „ ...	1.70	...	All ages ...	5.46	5.33

It will be seen that of women who were married at ages from 40 to 44 years, seven in every ten gave birth to a child, while in the case of women who were married at ages from 45 to 49 years, the proportion fell to about one in every five.

**22. Duration of Life after Marriage of Males and Females.**—The duration of life after marriage has been tabulated for males and females both in combination with the age at marriage, and with the total and average issue. The tables shewing the result do not, however, lend themselves to condensation, and are, therefore, omitted here. They will be found in “Bulletin No. 25 of Population and Vital Statistics,” pages 142 to 147.

**23. Birthplaces of Married Males and Females, and Issue.**—The following table shews the birthplaces of married males and females whose deaths were registered in 1910, together with their average issue. No generalisations can, of course, be made in those cases where the number of deaths is small, and where the average family had to be worked out on small figures. But where the figures are comparatively large, as in the case of natives of the Commonwealth, differences occur between the averages of the individual States which appear inexplicable on any other ground than that of inefficient registration in some of the States. It will be noted that the differences occur both in the male and female averages. Although the figures apply to the Commonwealth as a whole, with the exception of Tasmania, it must be borne in mind that the vast majority of deaths of natives of any one State are registered in that particular State. For the whole Commonwealth the average family of deceased males was 4.81, and of deceased females, 4.55.

24.—**Occupations of Married Males, and Issue.**—A final tabulation shews the average issue in combination with the occupation of deceased males. When these figures are available for a number of years they will afford some clue to the much debated question as to the decrease in the birth rate among various classes of the population.

25. **Commonwealth Rates of Infantile Mortality.**—In the diagram hereunder the rates of infantile mortality, as they actually occurred for the years 1881 to 1910, are shewn for males, for females, and for persons by the three series of zig-zag lines in the figure (see curves A, C, and B respectively). These hardly shew what may be called the general trend of this rate, but in order to discover it quinquennial means for successive quinquennia, differing only one year, were calculated. These means are shewn by black dots, then freehand curves were drawn following what may be called the mean position of these dots. These freehand curves, then, represent the general drift of the rates of

COMMONWEALTH OF AUSTRALIA.—RATES OF INFANTILE MORTALITY, 1881 to 1910.

EXPLANATION OF GRAPHS.—The base of each small square represents an interval of half a year, while the vertical height represents an increment in infantile death rate of one per 1000 births, an infantile death rate of sixty per 1000 births being taken as base line for the diagram. The figures on the left hand margin of the diagram represent rates of infantile mortality per 1000 births, while those on the lower margin denote calendar years. The black dots represent a yearly succession of quinquennial means, from which the general trend of the rate of infantile mortality has been ascertained; the upper curve (A) shewing the trend for males, the lower (C) for females, and the middle curve (B) for persons (both sexes combined).

infantile mortality during the period above referred to, unaffected by specially favourable or specially unfavourable years. They prove to be substantially identical in form for males and females, but shew that the death rate for males is about 15 per 1000 greater than that for females throughout. In considering the significance of this result we may, therefore, confine our attention solely to the infantile rate for persons, that is, for both sexes combined.

It will thus be seen that the general improvement in the conditions of infantile life continued from 1881 down to 1894-5, when, however, there was a slight retrogression till 1896, from which date onward there was again continued and marked improvement, that is to say, a rapid falling-off in the rate of infantile mortality. The great significance of this decrease is seen in the fact that the general trend of infantile mortality was about 129 in 1880, and only about 72 in 1910 per 1000 births.

The large differences between the results for individual years shewn by the zigzag lines, and the general trend shewn by curved lines, enable one to discern what year or series of years were specially favourable or specially unfavourable. Thus, it will be seen that the infantile mortality was high in the years 1882, 1889, 1898, and 1903.

It is somewhat remarkable that with the great decrease in infantile mortality there seems to be increasing difficulty in saving male infants as compared with females, and this can be expressed very accurately by a formula giving the number of males per 1000 females. Thus, the number of male infants dying under twelve months of age per 1000 female infants so dying is found to increase as the square of the elapsed time, and may be expressed by the formula:  $M = 1136 + 0.09 (T - 1880)^2$ , in which T denotes the date-year.

It is evident from the above results that the care of infantile life is comparatively in a very satisfactory position in the Commonwealth.

**26. Progressive Diminution of Deaths of Infants during First Twelve Months of Life.**—During the first few days of life the rate of infantile mortality is very high indeed, but falls off at the end of one month after birth, and then, relatively, is fairly steady. In the first few days of life the mode of decrease of the death rate presents certain somewhat remarkable features, which can be fairly well made out for the Commonwealth.\* The results, shewing in 100,000 births the number who die in successive days for the first thirty days of life, is given for Australia by curve 1, for Sweden by curve 2, and Saxony by curve 3. For child-life, Australia furnishes more favourable results than Saxony for each day in the whole period of thirty days; but Sweden, however, shews more favourable results for the first five days, after which the results are distinctly more favourable in Australia than in Sweden. At the end of thirty days the mortality is, in 100,000 births, somewhat under twenty-eight in Australia per diem, somewhat over forty-one for Sweden, and about 134 in Saxony. In Australia the infantile mortality falls off very rapidly for about seven or eight days, and then slowly for the balance of the period. In Saxony there is a sharp recrudescence of mortality, the maximum occurring at fifteen or sixteen days after birth, and the minimum being at eight days after birth. There is also a slight recrudescence in Sweden, occurring at about twelve or thirteen days after birth; but there is no sign of this in the Australian results. In Saxony, the falling-off is again very sharp after the recrudescence attains its maximum.

---

\* Unfortunately, the registration records give clear indications that the number of days of life are only approximately stated, and a certain amount of redistribution has preliminarily to be undertaken.

Curve 4, in the diagram, shows how rapidly the rate of infantile mortality diminishes for about the first thirty-three days of life, and how slowly, relatively, the rate diminishes afterwards. Hence, any great change in the preservation of infant life means supreme care for the first month.

RATES OF INFANT MORTALITY.—AUSTRALIA, SWEDEN, AND SAXONY.

EXPLANATION OF GRAPHS.—For curves 1, 2, and 3, the base of each small square represents one day, while the height represents ten infantile deaths per day from 100,000 births. For these curves the left hand marginal marking represents the number of infantile deaths in successive days from 100,000 births.

For curve 4, the base of each large square (comprising twenty-five small squares) represents one month, while the height of each of the component small squares represents ten infantile deaths per day from 1,000,000 births. For this curve the left-hand marginal marking represents number of infantile deaths per day from 1,000,000 births.

The following table exhibits the phenomena of infantile mortality for quinquennial periods:—

INFANTILE MORTALITY IN AUSTRALIA, 1881 to 1910.

Period.	Masculinity of Births.	Average Mortality per 10,000 Births.			Mean Masculinity for Period.	Average Values derived from Curves of General Trend.		
		Males.	Females.	Persons.		Males.	Females.	Persons.
1881-85 ...	1,050	1,338	1,177	1,259	1,136	1,352	1,181	1,278

1901-05 ...	1,049	1,049	890	971	1,183	1,050	894	969
1906-1910 ...	1,055	852	704	780	1,211	844	695	770

27. **Pulmonary Tuberculosis and Cancer in Australia, 1881-1910.**—In examining the characteristics of various diseases in Australia, perhaps the most striking feature that presents itself is the remarkable diminution during the past thirty years in the death rates from pulmonary tuberculosis, and the equally remarkable rise in the death rate from cancer. In fact, the advantage in the former case is so well counterbalanced by the disadvantage in the latter, that the combined diseases indicate very little reduction in the death rate.

**DEATH RATES FROM PULMONARY TUBERCULOSIS AND CANCER IN AUSTRALIA  
FOR THE PAST THIRTY YEARS (1881-1910) PER 100,000 OF THE CORRESPONDING  
SEX AND POPULATION.**

Period.	Pulmonary Tuberculosis.			Cancer.			Pulmonary Tuberculosis and Cancer Together.		
	Males.	Females.	Persons.	Males.	Females.	Persons.	Males.	Females.	Persons.
1881-1885	146	113	131	35	36	36	181	149	166
1886-1890	139	101	121	42	43	42	181	144	164
1891-1895	124	88	107	51	48	50	176	136	157
1896-1900	106	81	95	59	58	58	165	140	153
1901-1905	100	77	89	64	61	63	164	139	152
1906-1910	81	69	75	71	70	70	152	139	146

The general results can be seen most strikingly in the diagram hereunder, in which the upper (dotted zigzag) line shews the rates for individual years of pulmonary tuberculosis, and the lower firm (zigzag) line the similar rates for cancer. The middle (zigzag) line, consisting of dots and dashes, shews the rates for the two diseases combined, also for individual years. The death rate for males from pulmonary tuberculosis is, roughly, 36 per cent. greater than for females, while for cancer it is only 3 per cent. greater for males than for females. It has been found that the death rates can be very accurately expressed by a simple formula based upon the lapse of time since 1880. These are given in the note hereunder.\*

It will be observed that for the two diseases combined there is still a decrease in the rate of mortality, but it is only very slight; in other words, the advantages arising from advances in medicine, hygiene, etc., so far as tuberculosis is concerned, are nearly masked by the development of cancer.

The masculinity of pulmonary tuberculosis is diminishing as time advances; in other words, death from this disease, at present striking at male life more forcibly than at female life, is tending towards equality of incidence.

It is proper here to observe it does not follow that it is unimportant, from the economical standpoint, which disease preponderates, for the reason that the incidence of cancer is more marked at a late period of life, when life's economic value is diminishing; while the marked incidence of tuberculosis is in the earlier periods of life, viz., before the human being has recouped the economic expenditure involved in his rearing and education.

\* P denotes deaths from pulmonary tuberculosis in a population of 100,000 persons of same sex, or of both sexes combined, as the case may be; and the subscript letter m, f, or p denotes males, females, persons; T denotes the date year.

Pulmonary Tuberculosis.

$$P_m = 157 - 2.6 (T - 1880)$$

$$P_f = 115 - 1.7 (T - 1880)$$

$$P_p = 137 - 2.2 (T - 1880)$$

Cancer.

$$C_m = 32 + 1.4 (T - 1880)$$

$$C_f = 31 + 1.4 (T - 1880)$$

$$C_p = 31 + 1.4 (T - 1880)$$

For both diseases combined, the formula may be found by adding the constants and coefficients, i.e.,  $P_p + C_p = 168 - 0.8 (T - 1880)$ .

In order to make this point quite clear the two lower curves (see the diagram hereunder) are given, the upper (or middle) curve shewing the number of persons dying at each age from pulmonary tuberculosis, the lower one shewing the number dying from cancer in a population of 10,000,000. Restricting the consideration to both sexes combined (persons) it will be seen that the heaviest incidence of pulmonary tuberculosis is at the age of twenty-six or twenty-seven, while that for cancer is at the age of sixty-seven.

COMMONWEALTH OF AUSTRALIA.—DEATH RATES FOR PULMONARY TUBERCULOSIS AND CANCER, 1881 to 1910.

EXPLANATION OF GRAPHS.—The base of each small square represents an interval of one year, while the height in the cases of curves A and B represents one death per 50,000 of population; and in the case of C, one death per 25,000 of population. In the cases of A and B, the base line (15) represents thirty deaths per 100,000; and in the case of C, it represents sixty deaths per 100,000. Thus, for curves A and B, the numbers on the left-hand column have to be doubled; and in the case of curve C, have to be quadrupled to give the number per 100,000. These curves indicate the linearity of trend of the diseases, and the fact that this trend is in opposite directions.

COMMONWEALTH OF AUSTRALIA.—DEATHS AT VARIOUS AGES, FOR VARIOUS DISEASES.

EXPLANATION OF GRAPHS.—The curves represent the number of deaths per annum at each age in a total population of 10,000,000, corresponding to the Australian experience for the four years 1907-10, the population of 10,000,000 being assumed to be distributed according to sex and age in the same proportions as the mean Australian population for 1907-10. In each case the continuous line represents persons, the broken line represents females, and the dot and dash line represents males. The base of each small square represents one year of age, while the height represents 200 deaths in a total population of 10,000,000 in the case of curve A 1, ten deaths in the case of curve A 2, and five deaths in the case of curves B and C.

In the above diagrams the curve marked "A" indicates the result for persons, while the curves marked "B" and "C" represent the similar results for males and females respectively.

28. **Frequency of Pulmonary Tuberculosis and Cancer according to Age.**—If the death rates be based on the actual number of persons living at each age, that is, if they be deduced from the number who die from the diseases in question in various age-groups and the number of persons of the same age actually living, then we find for those affected with pulmonary tuberculosis that the lowest incidence occurs at about five years of age. Then the rate quickly increases till the age twenty-eight or twenty-nine is reached. The death rate then falls off slightly, and increases again until the maximum is reached at about forty-eight or forty-nine years of age, after which the death rate of the number at risk again fairly rapidly falls off. These results are shewn on the diagram hereunder.

COMMONWEALTH OF AUSTRALIA.—DEATH RATES OF PERSONS OF DIFFERENT  
AGES, PULMONARY TUBERCULOSIS, 1907 TO 1910.

EXPLANATION OF GRAPHS.—The curves represent the number of deaths per 10,000,000 of population at each age, the continuous line representing the number of deaths per 10,000,000 of total population, the broken line representing the number of female deaths per 10,000,000 of female population, and the dot and dash line representing the number of male deaths per 10,000,000 of male population. The base of each small square represents one year of age, and the vertical height a death rate of 300 per 10,000,000. The figures on the left-hand margin represents the death rate per 10,000,000, those on the lower margin represent years of age.

The death rate for cancer, based on the total number living of the corresponding age, shews quite different characteristics. Thus, it attains its maximum value at the age of about two, falls to a minimum at about age eleven or twelve, and then continually and very rapidly increases for all later ages, as is evident in the following diagram on page 234.

Of the two diseases it will thus be seen that, economically, pulmonary tuberculosis is the more serious. Thus, although cancer is so increasing as nearly to obliterate the effect of decrease in death from tuberculosis, it is still a matter for congratulation that the ravages of tuberculosis have been greatly reduced. In other words, pulmonary tuberculosis strikes at the race at a period of life when its promise lies in the future, and before the heavy expenses of rearing and education have borne fruit in the various economic activities. Cancer, on the other hand, strikes at life later, after the period of highest economic activity, in fact when that activity is declining.

COMMONWEALTH OF AUSTRALIA.—DEATH RATES OF PERSONS OF DIFFERENT AGES, CANCER, 1907 TO 1910.

EXPLANATION OF GRAPHS.—The broken line with dots — — — — — denotes the results for males; the plain broken line — — — — — denotes those for females, and the continuous line those for persons (both sexes combined).

The base of each small square represents one year of age, while the height represents a death rate of twenty per 1,000,000 of population in the curve on the left of the diagram, and a death rate of 2000 per 1,000,000 of population in the curves on the right. The marginal figures on the left of the respective curves denote rates of mortality per 1,000,000 of population at the respective ages which are indicated in the lower margin of the diagram.

29. The Incidence of Scarlet Fever, Measles, Whooping Cough, Diphtheria and Croup, Typhoid, Diarrhoea, Enteritis, and Dysentery. — In the following table is shewn the average quinquennial incidence of these diseases from 1881 to 1910 inclusive:—

DEATHS PER MILLION OF THE CORRESPONDING SEX PER ANNUM FOR VARIOUS DISEASES, AUSTRALIA, 1881-1910.

Period.	Masculinity of Population.	Scarlet Fever.		Measles.		Whooping Cough.		Diphtheria and Croup.		Typhoid.		Diarrhoea, Enteritis, and Dysentery.	
		M.	F.	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.
1881-1885	1177	68	85	68	83	125	201	414	453	544	564	1355	1184
1886-1890	1172	40	53	30	34	127	203	492	535	548	489	950	919
1891-1895	1136	36	51	98	99	140	200	325	375	278	222	631	561
1896-1900	1117	32	45	108	112	107	150	146	158	401	277	557	498
1901-1905	1095	21	27	39	44	90	121	101	105	252	176	372	306
1906-1910	1084	12	16	22	23	102	124	100	106	190	127	838	734

These figures shew in general a very decided decrease in death rates. In the diagram, which gives yearly rates for measles and scarlet fever from 1881 to 1910, one can recognise how sharp were the epidemics of the former disease in 1884 and 1898. Scarlet fever shews less marked fluctuations, which in general synchronise with those of measles. The next two diagrams shew the annual incidence of typhoid, whooping cough, diarrhoea, with enteritis and dysentery, and of diphtheria and croup. Although there are striking fluctuations in the death rate from typhoid it is at once evident, both from the left-hand diagram for "persons" and the right-hand one for each sex, that the incidence of the disease has been enormously diminished. This has been brought about by improvement in water supply and sewerage, and also by a purer milk supply. The death rate for whooping cough gives no decided indications, and its incidence is very irregular, but, as shewn in the diagram on page 237 (right-hand side), its incidence in the case of males and in the case of females, while by no means identical, shews some general correspondence.

COMMONWEALTH OF AUSTRALIA.—DEATH RATES FOR MEASLES AND SCARLET FEVER, 1881 TO 1910.

EXPLANATION OF GRAPH.—The base of each small square represents one calendar year, and the vertical height a death rate of ten persons per 1,000,000 of population. The continuous line relates to scarlet fever, and the broken line to measles. The figures on the left margin represent number of deaths per 1,000,000 of population; those on the lower margin calendar years. The diagram shews very strikingly the intensity of the epidemics of measles for the years 1884, 1898, and 1900.

COMMONWEALTH OF AUSTRALIA.—DEATH RATES FOR TYPHOID FEVER  
AND WHOOPING COUGH, 1881 to 1910.

EXPLANATION OF GRAPHS.—In the diagram to the left, both results are for persons (both sexes combined), the upper or firm line denoting the mortality for typhoid fever; the lower or broken line, the mortality for whooping cough. In the diagram to the right, the results shewn by broken lines indicate the mortality from typhoid for males; and the firm line shews the mortality for typhoid for females.

The base of each small square represents one calendar year, while the height represents a death rate of ten per 1,000,000 of mean population. The left hand marginal marking represents death rates per 1,000,000 of population in each case; while the figures on the lower margin are the calendar years at quinquennial intervals.

The changes in the death rate for diphtheria and croup, as shewn in the diagram on page 237, are very striking. Attaining a high maximum in 1890, it has, on the whole, been steadily dropping ever since. In severity of its incidence there is no synchronism with diarrhoea.

The numbers dying at different ages from diarrhoea, dysentery, and enteritis are shewn in the diagram on page 232, which indicates that death is very frequent in early infancy, reaches a minimum at the age of about thirteen years, then steadily progresses till about sixty, when it sharply increases till about seventy-six, at which age it again falls off in frequency.

COMMONWEALTH OF AUSTRALIA.—DEATH RATES FOR DIARRHŒA, &c., FOR  
DIPHTHERIA AND CROUP, AND FOR WHOOPING COUGH, 1881 TO 1910.

EXPLANATION OF GRAPHS.—The diagram on the left relates to death rates of persons (males and females combined) from diarrhœa, etc., shewn by a broken line, and from diphtheria and croup, shewn by a continuous line; and that on the right relates to the male and female death rates (separately shewn) from whooping cough, the broken line denoting results for males and the continuous line those for females. In both cases the base of each small square represents one calendar year, while the vertical height in the diagram on the left represents a death rate of twenty per 1,000,000 of population, and in that on the right a death rate of five per 1,000,000 of male and female population, respectively. The figures on the left margin of each diagram are death rates per 1,000,000 of population, those on the lower margins are calendar years.

30. **Masculinity of Death from Various Diseases.**—The mean quinquennial results given in the table hereunder furnish information as to the relative frequency of death through particular diseases in the two sexes, the number of deaths of males per 1000 deaths of females being shewn.

**FREQUENCY OF DEATHS OF MALES FROM VARIOUS DISEASES, PER 1000 FEMALES,  
WHEN THE NUMBERS OF EACH SEX ARE EQUAL IN THE GENERAL  
POPULATION—AUSTRALIA, 1881-1910.**

Period.	Scarlet Fever.	Measles.	Whooping Cough.	Diphtheria and Croup.	Typhoid.	Diarrhœa, Enteritis, & Dysentery.
1881-1885	808	863	636	913	966	1,143
1886-1890	761	866	625	921	1,121	1,034
1891-1895	750	992	704	866	1,248	1,126
1896-1900	711	970	711	921	1,446	1,119
1901-1905	778	891	745	964	1,430	1,214
1906-1910	762	982	818	939	1,493	1,142
Mean of quin- quennial values	762	928	706	921	1,284	1,130

It will be seen that, except in the case of whooping cough and typhoid, there is no definite evidence of any change in the relative frequency of death for the several diseases in the two sexes. Hence, with the exception mentioned, the mean of the quinquennial means may be taken as the constant probability of the death of males, the probability of the death of females being taken as 1000.

In the case of whooping cough and typhoid this probability, shewn in the last line, is a mean one for the period 1881 to 1910, but is at the present time too small, and appears to change nearly linearly with the lapse of time.\*

**31. The Monthly Variations in the Frequency of Deaths from Various Causes.**—The seasonal variation in several causes of death dealt with has been deduced from the number of deaths recorded in each month during the period of four years 1907 to 1910. Those recorded were so corrected as to relate to months of equal length and a constant population. These corrected results are expressed as the number of deaths per month per 10,000,000 of population, and are as follows:—

**MONTHLY VARIATION IN DEATHS FROM VARIOUS CAUSES, ADJUSTED FOR EQUALISED MONTHS AND CONSTANT POPULATION.**

DEATHS PER MONTH PER 10,000,000 OF POPULATION.

Month.	Pulmon- ary Tuber- culosis.	Cancer.	Diarrhœa etc.	Whoop- ing Cough.	Typhoid.	Measles.	Scarlet Fever.	Diph- theria and Croup.
January ...	609	612	1,444	85	200	21	7	50
February ...	561	634	1,293	98	217	9	9	57
March ...	584	606	1,137	72	241	8	10	78
April ...	563	607	996	74	216	12	11	108
May ...	626	610	659	99	140	12	17	122
June ...	618	593	376	92	118	10	16	133
July ...	675	568	293	124	56	12	11	123
August ...	699	581	239	139	48	22	12	98
September ...	671	614	262	130	47	36	13	96
October ...	712	584	417	105	36	36	11	63
November ...	594	581	861	99	80	46	8	73
December ...	601	620	1,246	95	133	27	11	72

From these results have been deduced† the curves shewn on the diagram hereunder, from which it will be observed that the time of the deadliest activity of any one disease is by no means generally coincident with that of any other. Thus, the sharpest incidence of particular diseases during the year is as follows:—

Pulmonary tuberculosis	middle October‡	Diarrhœa, etc.	... middle January
Cancer ...	February‡	Diphtheria, etc.	... June
Typhoid ...	March	Measles ...	... November
Whooping cough ...	August	Scarlet fever	... May

\* The masculinity in these cases can be expressed very accurately by a formula. Assuming that a linear change represents the results with sufficient accuracy, we have for whooping cough  $M = 593 + 7.3 (T - 1880)$ ; for typhoid,  $M = 951 + 21.5 (T - 1880)$ , in which  $M$  is the masculinity or number of males dying per 1000 females dying, when the number of the sexes is equal.

† See a paper entitled "Studies in Statistical Representation: Statistical Applications of the Fourier Series," by G. H. Knibbs, C.M.G., etc., Journ. Royal Society N.S.W., Vol. XLV., pp. 76-110.

‡ Doubtful.

## COMMONWEALTH OF AUSTRALIA, 1907 TO 1910.

EXPLANATION OF GRAPHS.—The graphs based on the monthly totals of deaths over the period 1907-10 shew at any moment the relative frequency of the following diseases, viz., pulmonary tuberculosis and cancer; typhoid and whooping cough; diarrhoea, dysentery and enteritis, and diphtheria and croup; and measles and scarlet fever. For each disease a circle is drawn (a continuous or a broken line as the disease is represented by a continuous or broken curve) shewing the position corresponding to a uniform distribution throughout the year, and this indicates whether the value at any particular time is above or below the average for the disease. The numbers on the diagram denote the aggregate per month per quadrennium, and the intervals between each small circle represent the following numbers respectively where A denotes Arabic figures and E Egyptian figures.

Cancer ... ..	A: 1 interval represents 70 deaths.
Pulmonary Tuberculosis ... ..	E: " " 100 "
Whooping Cough ... ..	A: " " 20 "
Typhoid... ..	E: " " 30 "
Measles ... ..	A: " " 5 "
Scarlet Fever ... ..	E: " " 2.5 "
Diphtheria and Croup ... ..	A: " " 20 "
Diarrhoea, etc. ... ..	E: " " 150 "

## APPENDIX.—SUICIDES.

1. **Suicide in Australia.**<sup>1</sup>—The course of suicide in Australia presents certain features which call for special comment, viz.:—(i.) the constancy of the measure of the suicidal tendency; (ii.) its constancy in respect of the relative numbers of each sex; and (iii.) its periodicity according to seasons or months.

Suicide does not prominently figure among the causes of death, being only 1.166 per 10,000 of the population, and 1.13 per cent. of deaths from all causes. The suicide rate from 1858 to the present time was as follows:—

**ANNUAL RATE OF SUICIDES 'PER 10,000,000 PERSONS IN THE COMMONWEALTH,  
1858 to 1910.**

Year.	No. per 10 million.	Year.	No. per 10 million.	Year.	No. per 10 million.	Year.	No. per 10 million.	Year.	No. per 10 million.

Mean	for whole period	...	...	...	...	...	...	...	1117.6

1. The information is obtained from an article with the title "Suicide in Australia: a Statistical Analysis of the Facts." By G. H. Knibbs, C.M.G., etc. Journal Royal Society N.S.W., volume xiv., pp. 225-246, to which reference should be made for details.

NOTES.—1858-9, State of Victoria only; 1860 to 1866, States of New South Wales and Victoria; 1867 to 1872, States of New South Wales, Victoria, and South Australia; 1873 to 1886, Queensland and Tasmania also included; 1887 to 1910, All the States of the Commonwealth. \* The result for 1858 is abnormal.

This change of frequency is indicated in the following diagram:—

SECULAR FREQUENCY OF SUICIDE IN AUSTRALIA.

EXPLANATION OF GRAPH.—Each vertical division represents five suicides per annum per million of the general population, and each horizontal division denotes one year. The rectangular lines shew the actual observed group-rate of suicide for the years 1858 to 1910. The general mean is shown by a firm horizontal line, and the two horizontal broken lines shew the averages for the period 1859 to 1886 and for the period 1887 to 1910. The fine inclined dotted line shews the general trend of the frequency for the period 1889 to 1910, if that trend be regarded as linear in character. The heavy curved line shews the general trend on the assumption that it tends to be periodic, which assumption agrees more closely with the observed frequency than the assumption of a linear trend.

The aggregate number of suicides in the whole period 1859 to 1910 inclusive was 15,242, and since the sum of the annual populations was 133,136 millions, the actual mean rate of suicide for the whole period was 114.48 per million per annum. The average of the annual numbers per million is only 111.76, hence this is the mean tendency to commit suicide about which fluctuations take place from year to year. In respect of differences from the curve shewn in the diagram representing the probable general trend of the phenomena, it may be noted that the relatively large increase which characterised 1887 and 1888 synchronised approximately with a period of excessive speculation, viz., the days of the silver and land booms. The large value for 1893 corresponded to the bank failures and collapse of the land boom. The high value for 1897 to some extent followed the incidence of drought conditions, viz., in 1895 and subsequent years.

The low value for 1900 synchronised with the South African war, when many men were drawn from Australia for military service in South Africa. The high values for 1903, 1904, and 1905, corresponded to the period of the most serious drought in Australia.

Practically the frequency of suicide for the whole of the period 1859 to 1886 was under the general average frequency, and for the whole of the period 1887 to 1910 it was above the average for Australia. The mean frequency per 1,000,000 population for 1859 to 1886 inclusive was 104.04 and from 1887 to 1910 inclusive was 120.78. But a reference to the figure will shew that the assumption of a slow linear progression\* does not really satisfactorily accord with the facts. The general trend is, however, well exhibited by the curve shewn by the heavy firm line. This has a 46-year period, and can be expressed by a formula† showing a fluctuation reaching a maximum of only 15%.

It is perhaps remarkable that the rate for Australia should exceed that for England and Wales, and greatly exceed that for the United Kingdom taken as a whole; and, seeing that the race element is identical, since Australia is almost wholly of British origin, the fact seems worthy of further investigation.

From 1881 to the present time (1910), the countries whose suicide rates most closely approximate to that of Australia, are Sweden and Belgium.

The great range of frequency, viz., from Ireland, with only 34 per million, to Switzerland, with, say, 230—nearly seven times the frequency for Ireland—is worthy of note; also that Australia occupies approximately the mean position between these extremes. Mere geographical position on the earth's surface, or average annual temperature, etc., has apparently no marked influence on the suicidal frequency, and it would seem also that the influence of race is negligible. Probably social and economic conditions are the most potent factors governing the phenomena of suicide.

Respecting the question whether the suicidal tendency is or is not growing, it may be pointed out that it is clear, from the table on the following page, that there is a fairly steady increase in the frequency of suicide in the civilised world. The general result, given in the last line of the table, shews that suicide is decidedly on the increase, but also that the rate of increase is steadily diminishing. The result can be expressed by a formula.‡

\* Such a progression would be represented by the formula  $S = 111.8 + 0.65 (T - 1884)$ , and is shewn in the figure by the dotted straight line.

† Viz.: 
$$S = 111.8 + 16.7 \sin 2\pi \frac{T - 1886}{46}$$

In the formula  $S$  is the number of persons annually committing suicide for an Australian population of 1,000,000, and  $T$  is the year in question.

‡ The number of suicides per million per annum ( $S$ ) for the civilised world generally would appear to be roughly given for any year by the expression

(3)  $S = 112 + 2.2 (T - 1873) - 0.022 (T - 1873)^2$   
in which  $T$  is the year in question. This would imply that the rate per million per annum ( $dS/dT$ ) is increasing, as expressed by the following formula, viz.:

(4)  $dS/dT = 2.2 - 0.044 (T - 1873)$ ;  
which gives for the rate of increase per million per annum for 1873, 2.20, and for 1910 only 0.57—a very considerable reduction of the rate of increase, and one which indicates that there is some likelihood of the increase ceasing altogether.

The average rate of suicide for the period 1859 to 1910 of 111.8 per million does not exceed very greatly the rate for England and Wales. For comparison the results are given for various countries for successive quinquennia from 1871 onwards, and are as follows :—

### SUICIDE RATES PER MILLION INHABITANTS FOR VARIOUS COUNTRIES.<sup>1</sup>

Country.	Period.							
	1871 to 1875	1876 to 1880	1881 to 1885	1886 to 1890	1891 to 1895	1896 to 1900	1901 to 1905	1906 to 1910

General result	112	122	133	139	151	152	160	158 ?

1. See Statistik und Gesellschaftslehre. Prof. G. v. Mayr, Bd. III., p. 279.

<sup>a</sup> This sudden decrease is due to the fact that cases of death by poisons self-administered for purposes of abortion have been excluded.

<sup>b</sup> For 1886-7.    <sup>c</sup> For 1892-5.    <sup>d</sup> For 1878-80.    <sup>e</sup> For 1906-08.    <sup>f</sup> For 1906-09.

It is a remarkable fact that in the western world the frequency of suicide among men ranges from double to quintuple the frequency among women, while in India and Burmah the relation is reversed, that is, suicide is more frequent there among women than men.

For Australia, for the four decennia between 1871 and 1909 inclusive (omitting West Australian suicides, for which figures are not available till 1896), the results are as follows :—

### SUICIDES IN THE COMMONWEALTH, 1871-1909.

Years.	Males.	Females.	Total.	Males. (Per 1000 of Total Suicides.)	Females. (Per 1000 of Total Suicides.)
1871-1909	11,051	2,250	13,301	831	169
1900-1909	3,992	811	4,803	831	169

This constancy of relation of 83.1% males and 16.9% females, approximately true for each decennium, shews that in the Commonwealth of Australia 4.92 males commit suicide for each female who commits that act, a ratio that is exceeded by only one country—Switzerland. The relative number of males and females has, however, varied. If allowance be made for this we have—

Years 1871-1909	...	825 males	175 females per 1000
1900-1909	...	830 „	170 „ „

For comparison, the crude ratios are given in the following table:—

TABLE SHEWING CRUDE RATIO OF MALE TO FEMALE SUICIDES IN VARIOUS COUNTRIES.

Country.	Period	Ratio.	Country.	Period.	Ratio.
Japan ...	1881 - 1905	1.65	Prussia ...	1881 - 1905	3.80
Servia ...	1881 - 1905	2.06	German Empire ...	1881 - 1905	3.85
Scotland ...	1881 - 1905	2.52	Norway ...	1881 - 1905	3.85
Rumania ...	1891 - 1900	2.68	Sweden ...	1881 - 1905	3.91
Bulgaria ...	1896 - 1905	2.96	Netherlands ...	1881 - 1905	4.05
England & Wales	1881 - 1905	2.98	Italy ...	1881 - 1905	4.05
Scotland ...	1896 - 1905	3.00	Spain ...	1881 - 1905	4.22
Ireland ...	1881 - 1905	3.00	Finland ...	1881 - 1905	4.31
Russia ...	1881 - 1890	3.38	Sweden ...	1901 - 1905	4.59
France ...	1881 - 1905	3.55	Belgium ...	1881 - 1905	4.93
Austria ...	1881 - 1905	3.58	Australia ...	1881 - 1905	4.95
Denmark ...	1881 - 1905	3.62	Switzerland ...	1881 - 1905	5.22

#### INDIA, &c., 1907.

Country.	Ratio.	Country.	Ratio.
Burmah ...	1.16	East Bengal and Assam ...	0.67
Central Provinces ...	1.00	Eastern Territory ...	0.59
Bombay ...	0.92	Bengal ...	0.57
Punjab ...	0.79	North West Provinces ...	0.55
Madras ...	0.74	Agra and Oudh ...	0.34

The figures in the lower table above are for India and Burmah, where generally there are more female than male suicides. This fact illustrates the great difference between the social condition in the two civilisations.

Since the relative number of males and females differs in each country, the crude rates are not *quite* satisfactory.\* The comparisons of the suicides within the various age-groups shew the progression of suicidal tendency through the different stages of life.

\* What has been called the corrected frequency relation, does not yield very different results. (See Op. cit. pp. 233, 234.)

**NUMBER OF PERSONS PER MILLION OF EACH AGE-GROUP AND EACH SEX  
COMMITTING SUICIDE—VARIOUS COUNTRIES.\***

\* The results, excepting for Australia, are computed from the data furnished in the work of Prof. G. v. Mayr, of Munich. Op. cit. Bd. III., pp. 313-316.

† Buenos Ayres not included in mean.

The suicidal frequency per million for each five-year group in Australia, based on the records of the last two decades,<sup>1</sup> is as follows:—

**SUICIDES PER MILLION IN EACH AGE GROUP AND SEX—AUSTRALIA,**

1891 TO 1910.

Age-group.	Males.	Females.	Age-group.	Males.	Females.
10-14	5	4	50-54	559	94
15-19	32	40	55-59	569	81
20-24	119	67	60-64	637	102
25-29	190	53	65-69	560	69
30-34	235	71	70-74	573	82
35-39	309	81	75-79	524	109
40-44	361	76	80-84	474	70
45-49	461	102	85	475	32

<sup>1</sup> These are computed on the basis of the age constitution at the 1901 Census, which is sufficiently accurate for the purpose in view.

These numbers disclose the frequency of suicide at different ages, and thus the age at which the tendency is most strongly expressed. Since the total number of persons in any age-group ordinarily diminishes with increase of age, and differs both from period to period as well as from country to country, the absolute numbers of suicides at various ages are of little interest; it is the relative numbers which are significant. The absolute numbers have therefore not been given.

The characteristic difference between the suicidal tendency in males and in females is shewn in the following diagram:—

FREQUENCY OF SUICIDE ACCORDING TO AGE.  
UPPER CURVE, MALES. LOWER CURVE, FEMALES.

EXPLANATION OF GRAPH.—Each horizontal division denotes five years of age, and each vertical division denotes fifty suicides per annum per million of the population of the corresponding sex and age. The upper rectangles denote the observed frequency per annum per million males of each quinquennial age-group, and the lower rectangles denote the observed frequency per annum per million females of each quinquennial group. The two curves denote the probable instantaneous values for any age between the limits 0 to 90, the upper being for the male sex, the lower for the female sex, the ordinates thereto being per million per annum of the corresponding sex.

For males the increase of frequency is almost linear from fifteen to fifty-five years of age. The maximum frequency is about sixty-two, after which the frequency decreases decidedly, but not as quickly as it increases for earlier ages. Italy and Sweden shew a similar decrease of frequency, the maximum being between the ages sixty and seventy, so also do Massachusetts and Buenos Ayres.

It would appear that the measure of the stress of life is special to each country, and that, measured against the capacity to endure this stress, it falls off in Australia at the age of about sixty to sixty-five for men, becoming even at ninety as small as it was at forty-seven for that sex. It also distinctly decreases for the later years of life, for women. It is further worthy of note that the average frequency among Australian women never reaches, at any period of life, the average frequency at the age of twenty-three among men.

There is a well marked seasonal fluctuation of suicide. This fluctuation is perhaps best shewn by computing for a period of years how many persons commit suicide per month, correcting the crude results so as to equalise the months in respect of their duration and total population. The results are:—

## MONTHLY FREQUENCY OF SUICIDE, AUSTRALIA.

Month.	Numbers per 100,000,000 of Population.				Numbers per 10,000 Suicides.

	13,543	19,188	4,236	12,039	10,000	10,000	10,000	10,000

\* For result for 1890 to 1910 see table hereinafter.

There is a distinct seasonal fluctuation; it is, however, apparently not identical from decade to decade, and from the last three columns it is evident that the curve is by no means identical for the sexes. For the purpose of comparison the result for a long series of observations in various European countries, and the corresponding results for Australia for 1890 to 1910, are given. These shew in a general way that the seasonal relationship of the maximum frequency is identical in Australia with that of the Northern Hemisphere, the absolute difference between approximately 6 months.

The Australian figures for the last 21 years are based on two States for the first ten years and on all for the last eleven years. All results are corrected to equalise the months, etc.

## ANNUAL FLUCTUATION IN THE FREQUENCY OF SUICIDE.

EXPLANATION OF GRAPHS.—The horizontal divisions denote not calendar but equalised months and the vertical divisions denote 50 suicides per month out of an assumed total of 10,000 per annum (833½ per month). The rectangular lines denote the group results for the equalised months on the basis assumed. The upper curve denotes the probable instantaneous values for the whole of Europe, the lower the probable instantaneous values for the whole of Australia. The results are so corrected as to correspond to a population constant throughout the year.

In the diagram the rectangular lines shew the rates for the various months for Australia and Europe generally, and the curves give the most probable form of the fluctuation.

If the monthly mean temperatures of the capital cities of Australia be weighted in proportion to the populations, the resultant mean is as follows:—

Month	...	Jan.	Feb.	Mar.	April.	May.	June.	July.	Aug.	Sept.	Oct.	Nov.	Dec.
Temp. Fahr.	...	71.1	70.7	68.4	63.5	57.7	53.6	51.8	54.1	57.7	61.8	65.6	69.0

These results may be regarded as approximately representing the temperature conditions influencing the rate of suicides owing to the fact that the populations of the cities have a preponderating influence. The frequency of suicide can be expressed by a formula depending on this average temperature.\*

The remarkable correlation between temperature and suicide frequency is best seen by combining the results for pairs of months. In this way we obtain the two upper lines in the following table:—

		Dec. Jan.	Feb. Mar.	April. May.	June. July.	Aug. Sept.	Oct. Nov.
Temperature, Fahr.	...	70.0	69.5	60.6	52.7	55.9	63.7
Suicides per 10,000	...	1,832	1,743	1,631	1,478	1,600	1,716
Calculated	...	1,805	1,796	1,645	1,511	1,565	1,698

\* See Journal Royal Society N.S.W., volume xlv., p. 109. The frequency ( $q$ ) of suicide per million per diem in Australia can be put in the form  

$$q = 0.33 + 0.003 t$$
where  $t$  is the temperature above 62° Fahr.

† This correlation is very approximately expressed by  $615 + 17t$  (where  $t$  is the temperature Fahrenheit), a formula which gives results in the last line.

It may be pointed out that Australia differs very remarkably from Europe in this respect, viz., that the range of temperature throughout the year is decidedly smaller in Australia. Thus a mean for the various countries of Europe gives the range between the averaged hottest and coldest months of the year about 33° Fahr., while for Australia the range is only about 19°, i.e., but little more than half. We thus have:—

Ranges ... ..				In Temperature.	In Suicide Frequency.
In Europe ... ..	...	...	...	33° Fahr.	517
In Australia ... ..	...	...	...	19° ..	253

That is to say, the variation in the suicide frequency on the whole corresponds very closely to the range in temperature, being strongly marked where the temperature differences are strongly marked. It is evident from this that large temperature fluctuations tend to bring about large changes in the frequency of suicide.

7. *Mode of Suicide.* In a relatively small population the number of suicides for individual years by any particular mode of self-destruction is naturally variable, nevertheless there is a greater uniformity than might have been anticipated *a priori*. The statistics have been computed for the years 1907 to 1910 inclusive.

These results shew that the mode of suicide is very regular. The relative frequency of any particular mode is best seen by the number represented by each class in a given aggregate, say, 100, 1000, or 10,000.

**RELATIVE NUMBER PER 10,000 SUICIDES OF EACH SEX, AND OF BOTH SEXES,  
DYING BY PARTICULAR MODES IN AUSTRALIA DURING THE PERIOD 1907 TO 1910.**

Mode.	Males.	Females	Persons.	Mode.	Males.	Females	Persons.
Poisoning ... ..	1,806	4,545	2,280	Precipitation from height ... ..	123	89	117
Asphyxia ... ..	31	...	25	Crushing ... ..	135	147	137
Hanging ... ..	1,707	1,349	1,646	Other modes ... ..	369	293	356
Drowning ... ..	823	2,082	1,041	Total ... ..	10,000	10,000	10,000
Firearms ... ..	3,360	645	2,890				
Cutting, etc. ... ..	1,646	850	1,508				

In Australia poison and drowning are resorted to two and a-half times more frequently by women than by men; suicide by cutting is resorted to twice as often, and by shooting five times as often, by men as by women.

The preceding results may be compared with those of a few other countries. For example:—

**RELATIVE NUMBER OF PERSONS IN 1000 OF EACH SEX RESORTING TO  
PARTICULAR MODES OF SUICIDE.**

Country.	Period.	Hanging.		Drowning.		Shooting.		Poisoning.		Cutting.	
		M.	F.	M.	F.	M.	F.	M.	F.	M.	F.
Russia ... ..	1904-1908	573	396	122	312	194	32	52	166	?	?
Japan ... ..	1902-1907	623	444	184	430	24	3	27	25	39	27
Servia ... ..	1902-1906	341	619	98	71	415	239	73	9	49	53
Australia ... ..	1907-1910	171	135	82	208	336	64	181	455	165	85

The comparison discloses for each sex the great diversity of frequency in resorting to particular modes of self-destruction. The results are equally diversified when the total number of suicides is considered (irrespective of sex). These total results may be compared with those of a number of other countries for several forms of suicide, viz., by hanging, drowning, shooting, and cutting. The following table furnishes the relative numbers:—

**RELATIVE NUMBER OUT OF A TOTAL OF 1000 SUICIDES DYING BY HANGING,  
DROWNING, SHOOTING, OR CUTTING.**

VARIOUS COUNTRIES.

Country.	Period.	Mode of Suicide.			
		Hanging.	Drowning.	Shooting.	Cutting.
Australia ... ..	1907-1910	165	104	289	151
Austria ... ..	1887-1891	444	259	173	?
Bavaria ... ..	1887-1890	536	203	208	?
Belgium ... ..	1889-1893	492	249	155	19
Denmark ... ..	1896-1900	749	130	54	13
England ... ..	1889-1893	277	227	93	182
France ... ..	1887-1891	435	260	125	24
Italy ... ..	1889-1893	167	232	254	41
Norway ... ..	1888-1890	656	172	78	47
Prussia ... ..	1891-1900	586	184	129	23
Saxony ... ..	1891-1900	598	196	117	20
Sweden ... ..	1889-1893	495	154	140	56
Württemberg ... ..	1890-1899	589	158	152	27

It is remarkable in cases of suicide that what would *a priori* seem to be negligible factors should really have weight. Thus it is shewn that cold acts as a well-defined deterrent in respect of suicide by drowning.

The following conclusions are indicated by the results:—

- (i.) The relative frequency of suicide in Australia is very constant.
- (ii.) There is apparently a secular oscillation of 46 years period and of relatively small amplitude, viz., 15 per cent. The existence of this cannot be decisively determined till another half century has elapsed.
- (iii.) While economic conditions express themselves in the frequency of suicide, their effects are relatively small, and are comparable in magnitude only with the regular annual fluctuation. In a half century's experience the greatest deviations from the mean are - 15 per cent. to + 21 per cent., and from the oscillation of 46 years-period less than 14 per cent. either way.
- (iv.) Australia occupies a medium place in a list of frequency of suicides for all countries.
- (v.) The annual fluctuation in Australia (fluctuation from month to month) is well marked, but is only about half of that in Europe. It ranges between - 14 per cent. to + 10 per cent.

(vi.) In Europe the mean temperature range, between the hottest and coldest months, is about 33° Fahr. and in Australia it is only 19° Fahr., say 57 per cent. of that of Europe; the range of suicide frequency during the year is similarly only about 50 per cent. of that of Europe.

(vii.) The annual fluctuation stands in the same relation to the seasons, *i.e.*, the maximum and minimum frequencies in Europe are in the months June and December respectively, and in Australia in the months December and June.

(viii.) It would appear from this that the annual temperature fluctuation or some unknown phenomenon associated therewith has a profound influence on the frequency of suicide.

(ix.) Suicide is on the increase for the world generally, but the rate of increase is diminishing.

(x.) It may be stated that there is a fairly well marked increase in the frequency of suicide in Prussia for the ages 15 to 25, *viz.*, the intensive educational period of life.

(xi.) In Australia, frequency of suicide at first increases with age, attaining with men a maximum at about age 62, after which it declines. With women it never attains in the western civilised world or in Australia a comparable magnitude to the frequency in the case of men, but exhibits in a less marked way the tendency to increase with age to a limit and then to decline.

(xii.) The western civilised world stands in startling contrast with the east, and especially with India in this respect, where female suicide preponderates. Even in Japan the frequency of female suicides is large compared with any European country.

(xiii.) The mode of suicide shews considerable constancy, and is apparently influenced by physical conditions.

#### § 4. Graphical Representation of Vital Statistics.

1. **General.**—The progressive fluctuations of the numbers representing the total births and marriages are important indexes of the economic conditions and social ideals of a community. For this reason graphs have been prepared (see pages 253 and 254), shewing these fluctuations from 1860 to 1910, both for the States and the Commonwealth. The facts are very significant from the national point of view and call for serious consideration. To properly appreciate the situation it should be remembered that, normally, the increases of births and also of marriages will be similar to the increase of population. Although the marriage curve shews a falling off in marriages after 1891 (see page 254), it shews a recovery in 1894, and, with the exception of a small fall for 1903, it has continually advanced. The same characteristic is not seen in the curve of births, which discloses a recovering tendency only in 1904.

The table on the following page shews the number of births, marriages and deaths which would have been experienced had the rate for 1890 continued, and reveals the significance of the facts disclosed by the curves. It may be remarked that the death rate has greatly improved, and among other countries, Australia stands in a very favourable position in this respect. At the same time the decline in the marriage rate, overtaken once more in 1907, and the still more serious decline in the birth rate, in a country but sparsely populated, have an obvious and most important bearing on the national future, and on questions concerning the extent to which it is desirable to promote immigration.

## ACTUAL BIRTHS, DEATHS, AND MARRIAGES,

EXPERIENCED IN THE COMMONWEALTH DURING THE YEARS 1890 TO 1910,  
COMPARED WITH THE NUMBER THAT WOULD HAVE OCCURRED IF THE  
RATES OF 1890 HAD REMAINED IN OPERATION.

Year.	BIRTHS.		DEATHS.		MARRIAGES.	
	Actual.	Number of Births that would have been experienced if the 1890 birth rate had been in operation.	Actual.	Number of Deaths that would have been experienced if the 1890 death rate had been in operation.	Actual.	Number of Marriages that would have been experienced if the 1890 marriage rate had been in operation.
1890	108,683		44,449		23,725	
1891	110,187	111,802	47,430	45,737	23,862	24,419

1909	114,071	149,526	44,172	61,170	33,775	32,658
1910	116,801	152,869	45,590	62,537	36,592	33,388

2. *Graphs of Annual Births, Commonwealth and States* (page 253).—A striking feature of the graphs of births is the practically continuous increase in the number of births exhibited in the graph for the Commonwealth from 1860 to 1891, and the marked variations of subsequent years. As the curve clearly shews, a turning point in the number of births occurred in 1891, whilst, as regards the separate States, New South Wales and Tasmania date their decline in number from 1893, Victoria from 1891, and Queensland from 1890. In South Australia the corresponding decline took place as early as 1885, while in Western Australia the increase in number of births has been practically continuous throughout.

It is of special interest to note the decline in births associated with the commercial crisis of 1891-3, and also the decline occurring in 1903, an accompaniment of the severe drought of that period.

In the case of New South Wales the graph crosses that of Victoria in 1879, i.e., the births for that year were sensibly identical in the two States. A fairly continuous increase was experienced in the former State from 1860 to 1893, the only marked fluctuation being a sudden decline in 1889 and an equally rapid recovery in 1890. From 1893 to 1898 a somewhat rapid decline again took place, succeeded by a rise, the continuity of which was broken only by a sharp decline in 1903 and recovery in 1904.

In the case of Victoria the graph shews the increase between 1860 and 1880 to have been comparatively slight, the curve being a gradual rise, with fluctuations more or less marked to 1873, with a subsequent decline. From 1880 to 1891 the increase in the number of births is seen to be very rapid and practically continuous, while from 1891 to 1898 an equally sharp and continuous decline was experienced. A further rise and fall took place between 1898 and 1903, succeeded by a continuous rise from the last-mentioned year to 1907, and a slight fall in 1908, followed by a recovery in 1909.

Starting in 1860 with a lower number of births than any State except Western Australia, the Queensland graph shews that the births increased somewhat rapidly until 1867. The equality in the number of births in Queensland and Tasmania in 1864 is shewn by the Queensland curve crossing the Tasmanian curve at the line for that year. From 1867 to 1882 a continuous though somewhat less rapid increase was experienced, followed by a very rapid rise to 1890, in which year Queensland's maximum number of births was recorded. The South Australian graph is crossed by that of Queensland at the year 1885. From 1890 onwards the number of births has fluctuated somewhat, but has, on the whole, retained a practically stationary position at a height rather less than that of 1890. The most serious variation was a sudden fall in 1903, the drought year, and rapid recovery in 1904, with a further fall in 1905 and a continuous rise since 1906.

The South Australian graph, a slow but practically continuous rise from 1860 to 1885, exhibits the steady increase in the total number of births. This rise is followed by a slow but fluctuating decline to 1903, and a slight recovery to 1910.

The Tasmanian curve may be regarded as made up of five portions, of which the first, from 1860 to 1877, represents a period of very slight variation, with, on the whole, an increase; the second, from 1877 to 1884, a period of continuous and moderately rapid increase; the third, from 1884 to 1893, a period of rapid increase; the fourth, from 1893 to 1898, a period of continuous but slow decrease; and the fifth, from 1898 onwards, a period of steady recovery.

The Western Australian curve indicates that an increase, which was practically continuous but very slow, took place from 1860 to 1884, and that a somewhat quicker rate of increase, experienced from 1884 to 1896, was succeeded by a still more rapid and very satisfactory rate of increase from 1896 onwards.

It will be seen that the years in which the highest points were reached by the several curves are as follows :—

State ...	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
Year ...	1910	1891	1910	1885	1906	1908	1910

**3. Graphs of Annual Marriages, Commonwealth and States** (page 254).—The Commonwealth marriage graph from 1860 to 1885 reveals a moderate but somewhat fluctuating increase in the annual number of marriages between 1860 and 1871, a more rapid increase between 1871 and 1879, a still more rapid increase between 1879 and 1885. From 1885 to 1891 the numbers continued to increase, but with marked fluctuations in rate. The financial crisis associated with the period subsequent to the latter year was accompanied by a strongly-marked decline in the number of marriages, which reached its lowest point in 1894. From that year onwards a fairly rapid recovery was effected, the record for 1891 being exceeded by that of 1897. This progress was maintained until 1902, when the severe drought of that and the succeeding year were collateral with a rapid fall in the number of marriages. An equally rapid recovery, however, has since taken place, and the number of marriages in the Commonwealth during 1910 was greater than in any preceding year.

GRAPHS SHEWING TOTAL ANNUAL BIRTHS IN THE COMMONWEALTH AND  
STATES OF AUSTRALIA, 1860-1910.

(See Table page 168.)

EXPLANATION OF GRAPHS.—The base of each small square represents an interval of one year for both Commonwealth and States, and the vertical height represents 2000 persons for the Commonwealth, and 1000 for the States.

The scale on the left relates to the Commonwealth, and that on the right to the States.

The distances upwards from the common zero lines of the States and Commonwealth, marked 0, denote the total annual number of births in the States and Commonwealth, the scale of the latter being reduced one-half.

The names of the States to which the graphs refer are written thereon, and the characters of the lines used are as follows:—Commonwealth, —————; New South Wales, - - - - -; Victoria, . . . . .; Queensland, — · — · —; South Australia, — — — — —; Western Australia, — · — · — · — · —; Tasmania, — — — — —.

GRAPHS SHEWING TOTAL ANNUAL MARRIAGES IN THE COMMONWEALTH AND  
STATES OF AUSTRALIA, 1860-1910.

(See Table page 180.)

EXPLANATION OF GRAPHS.—The base of each small square represents an interval of one year for both Commonwealth and States, and the vertical height represents 600 marriages for the Commonwealth and 300 for the States.

The scale on the left relates to the Commonwealth, and that on the right relates to the States.

The distances upwards from the zero line, marked 0, denote the total annual number of marriages in the States and Commonwealth, the scale of the latter being reduced one-half.

The names of the States to which the graphs refer are written thereon, and the lines used are similar to those for births on page 253.

GRAPHS SHEWING TOTAL ANNUAL DEATHS IN THE COMMONWEALTH AND  
STATES OF AUSTRALIA, 1860-1910.

(See Table page 189.)

EXPLANATION OF GRAPHS.—The base of each small square represents an interval of one year for both Commonwealth and States, and the vertical height represents 2000 persons for the Commonwealth and 1000 for the States.

The scale on the left relates to the Commonwealth, and that on the right relates to the States.

The distances upwards from the common zero line for States and Commonwealth, marked 0, denote the total annual number of deaths in the States and Commonwealth, the scale of the latter being reduced one-half.

The names of the States to which the curves refer are written thereon, and the lines used are similar to those for births on page 253.

GRAPHS SHEWING GENERAL BIRTH, NATURAL INCREASE, DEATH (MALE, GENERAL AND FEMALE), AND MARRIAGE RATES IN THE COMMONWEALTH OF AUSTRALIA, 1860-1910.

(See pages 168, 181, 189 and 262.)

EXPLANATION OF GRAPHS.—The base of each small square represents one year's interval, and the vertical height, according to the character of the curve, one half per thousand of the population— the basic line being five per thousand of the population.

GRAPHS SHEWING BIRTH RATES IN THE STATES OF NEW SOUTH WALES,  
VICTORIA, AND QUEENSLAND, 1860-1910.

(See Table page 168.)

EXPLANATION OF GRAPHS.—The base of each small square represents one year's interval, and the vertical height one birth per thousand of the population—the basic line for each State being twenty per thousand of the population.

GRAPHS SHEWING BIRTH RATES IN THE STATES OF SOUTH AUSTRALIA,  
WESTERN AUSTRALIA, AND TASMANIA, 1860-1910.

(See Table page 168.)

EXPLANATION OF GRAPHS.—The base of each small square represents one year's interval, and the vertical height one birth per thousand of the population—the basic line for each State being twenty per thousand of the population.

GRAPHS SHEWING DEATH RATES IN THE STATES OF NEW SOUTH WALES,  
VICTORIA, AND QUEENSLAND. 1860-1910.

EXPLANATION OF GRAPHS.—The base of each small square represents one year's interval, and the vertical height one death per thousand of the population. The zero for each State is shewn by a thickened line

GRAPHS SHEWING DEATH RATES IN THE STATES OF SOUTH AUSTRALIA,  
WESTERN AUSTRALIA, AND TASMANIA, 1860-1910.

EXPLANATION OF GRAPHS.—The base of each small square represents one year's interval, and the vertical height one death per thousand of the population. The zero for each State is shewn by a thickened line.

4. **Graphs of Annual Deaths, Commonwealth and States** (page 255).—The curves shewing the progression of the annual number of deaths indicate clearly that the periods for which exceptionally large numbers of deaths occurred were:—(a) 1866-7, (b) 1875-6, (c) 1884-5, (d) 1889-1891, (e) 1893, (f) 1898, and (g) 1902-3. It is remarkable that in each of the periods specified the phenomenon of a relatively high number of deaths was experienced in the majority of the States. Thus, as regards 1866-7, all the States except Western Australia and Tasmania were so affected; in 1875-6 all except Western Australia; in 1884-5 all were affected; in 1889 all except Western Australia and South Australia; in 1891 all except Queensland; whilst in 1893 and 1898, and in 1902-3, all were affected. The fact that the periods of high death rates have been practically identical in the several States furnishes an indication that the excessive mortality has been due to a considerable extent to some common cause operating throughout the Commonwealth.

It may be noted as curious that periods of heavy mortality have occurred at intervals of approximately nine years, viz.:—1866-7, 1875-6, 1884-5, 1893, and 1902-3. There are, however, two marked increases between the third and fourth dates, and one between the fourth and fifth. Thus there is no real indication of the periodicity in the death rate.

Periods in which the number of deaths was exceptionally low are far less clearly defined than those in which the number was high, and the agreement amongst the States is also less complete. The principal periods of low mortality may be said to be 1861, 1869-71, 1879, 1892, 1897, 1900, 1904-5, 1909.

5. **Graphs of Annual Birth, Death, and Marriage Rates and of Rate of Natural Increase—Commonwealth** (page 256).—(i.) *General*. These graphs represent the number of births, deaths, and marriages, and the excess of births over deaths (natural increase) per 1000 of the population of the Commonwealth, for each of the years 1860 to 1910.

(ii.) *Births*. In the case of births, the graph indicates a well marked decline in rate during the period, and represents a fall from 42.56 per 1000 of population in 1860 to 26.73 per 1000 in 1910. This enormous reduction has been subject to small fluctuations during the period under review, but may, on the whole, be said to have been in evidence throughout. There are, however, two periods of arrested decline noticeable, one from 1877 to 1890, and the other from 1898 to the present time. The course of the graph thus indicates a rapid fall from 42.56 in 1860 to 34.99 in 1877, succeeded by a fluctuating but, on the whole, fairly stationary, period to 34.98 in 1890, then a fall even more rapid to 27.15 in 1893, and a further comparatively stationary period to 26.73 in 1910. The lowest point reached, viz., 25.29, was attained in 1903, the year in which the Commonwealth suffered severely from the worst drought it has ever experienced. Since then a small but well defined advance in the birth rate has been in evidence. A declining birth rate is usually due to complex causes, amongst which the variations in the age constitution of the population, and the adoption of preventive measures, are generally considered the most potent.

(iii.) *Deaths*. The three graphs relating to deaths furnish particulars concerning the rates experienced during the period amongst males and females separately, and in the population as a whole, the latter occupying naturally a position between the other two. Throughout the period the rate for males has largely exceeded that for females, but the fluctuations in the two rates have synchronised remarkably, indicating that the conditions which have been responsible for the marked variations which have occurred from time to time have affected males and females alike. On the whole, the graphs furnish clear evidence of a satisfactory decline in the death rate of the Commonwealth, a fall having taken place from 20.86 in 1860 to 10.43 in 1910. The graphical representation of the death rates brings into prominence five years in which the rates were exceptionally high when compared with those of adjacent years. These years are 1860, 1866, 1875, 1884, and 1898. The principal cause of the excessive rate of 1860 was the prevalence in that year of measles, scarlatina, and diphtheria, while the high rates of

1866, 1875, and 1898 were also largely due to epidemics of measles. Prior to 1892, when a rate of 12.91 was experienced, the lowest general death rate for the Commonwealth was that of 1871, viz., 13.24. The highest male death rate for the period was 20.97 in 1860, and the lowest 11.51 in 1909. For females the highest was 20.71 in 1860, and the lowest 9.06 in 1909. The difference between the male and female rates has, since 1869, been fairly constant, and has ranged between 1.97 and 3.44, with a mean value of about 2.7.

(iv.) *Marriages.* In the case of the graph representing marriage rates, the fluctuations are less abrupt than in the case of the birth-rate and death-rate graphs, and the rate for 1910, the final year of the period, viz., 8.37, does not differ very considerably from that of 1860, which was 8.42. The lowest marriage rate for the period was that of 1894, viz., 6.08, marking the culmination of the commercial and financial depression indicated by the declining rates from 1888 onwards. From 1894 to the present time a satisfactory increase has been in evidence, disturbed only by the sharp decline which, in 1903, accompanied the severe drought experienced in the Commonwealth in that year.

(v.) *Natural Increase.* This graph, which represents the excess of births over deaths per 1000 of population, exhibits marked fluctuations arising from the combined fluctuations in birth and death rates. Thus, corresponding to the high death rates of 1860, 1866, 1875, and 1898, there are exceptionally low rates of natural increase, accentuated in the last-mentioned year by a comparatively low birth rate. A combination of low birth rate and comparatively high death rate was also responsible for a very low rate of natural increase in 1903. The highest rate of natural increase for the period was 26.58 in 1864, and the lowest 13.03 in 1898.

**6. Graphs of Annual Birth Rates—States** (pages 257 and 258).—These graphs furnish for the several States information similar to that supplied in the graph on page 256 for the Commonwealth as a whole. It will be seen that in every case the total effect has been an extensive decline in rate, subject to very marked fluctuations. In all the States the period from 1875 to 1885 was one of arrested decline, if not of actual advance, in the birth rate. With the exception of the very low rate accompanying the drought in 1903, the variations in any of the States since 1901 have not been very marked, and in some cases a slight tendency to increase is in evidence.

The highest birth rates during the period were as follows:—New South Wales (1864), 44.00; Victoria (1862), 44.71; Queensland (1860), 47.93; South Australia (1862), 45.44; Western Australia (1860), 38.96; and Tasmania (1884), 36.63. The following were the lowest rates for the period:—New South Wales (1903), 25.44; Victoria (1910), 24.51; Queensland (1903), 24.53; South Australia (1903), 23.65; Western Australia (1896), 23.44; Tasmania (1899), 27.43.

**7. Graphs of Annual Death Rates—States** (pages 259 and 260).—These graphs furnish for the several States similar information to that given for the Commonwealth as a whole in the diagram on page 256, and indicate in each case a satisfactory decline in death rate. It may be noted that an exceptionally high death rate was experienced in all the States in 1875, and that a similar uniformity, though on a smaller scale, is observable for the year 1898, the principal cause in each case having been an epidemic of measles. The highest death rates experienced during the period were as follows:—New South Wales (1867), 19.79; Victoria (1860), 22.77; Queensland (1866), 25.96; South Australia (1875), 19.97; Western Australia (1884), 21.54; and Tasmania (1875), 19.99. The following were the lowest death rates for the period:—New South Wales (1909 and 1910), 9.89; Victoria (1909), 11.45; Queensland (1906), 9.50; South Australia (1909), 9.82; Western Australia (1910), 10.11; and Tasmania (1909), 9.68.

## SECTION VI.

## LAND TENURE AND SETTLEMENT.

## § 1. Introduction and Early History.

1. **Introduction.**—A comprehensive description, in a classified form, of the land tenure systems of the several States has been given in preceding issues of this book; see especially Year Book No. 4. (pp. 235 to 333). The details of that description have been necessarily condensed in the present issue, and for more complete information for past years, reference may therefore be made to Year Book No. 4. The historical matter dealing with the development of land legislation in the individual States may be found in Year Book No. 2 (pp. 263 to 272), and in a more condensed form in Year Books No. 3 (pp. 245 to 254), and No. 4 (pp. 235 to 244).

## § 2. Land Legislation in Individual States.

1. **New South Wales.**—(i.) *Acts now in Force.* The Crown Lands Act of 1884 and the supplementary Act of 1889 were passed chiefly for the purpose of putting an end to speculative selection without *bonâ fide* intention of settlement. Pastoral leases were required to be surrendered to the Crown and divided into two equal parts, one of which was returned to the lessee under a lease with a fixity of tenure for a term of years, the other half the lessee was allowed to hold under an annual occupation license, but this half was always open for selection.

Nevertheless accumulation of land into large estates continued, and settlement proceeded slowly. Entirely new principles of agrarian legislation have been embodied in the Crown Lands Acts 1895 to 1910, the Labour Settlements Act 1902, the Closer Settlement Acts 1904 to 1909, and the Closer Settlement Promotion Act 1910, which, while still giving fixity of tenure to pastoral lessees, retain the principle of free selection before survey, and offer *bonâ fide* settlers special inducements by the introduction of new forms of tenure on easy terms and conditions.

(ii.) *The Western Lands Acts.* All lands in the Western Division of New South Wales are now subject to the special provisions of the Western Lands Acts 1901 to 1909. All leases or occupation licenses could be brought within the provisions of the Western Lands Act by application before the 30th June, 1902. Otherwise the leases or licenses were dealt with by the Board as if the Act had not been passed. All leases issued or

brought under the provisions of the Western Lands Acts expire on the 30th June, 1943, except in cases where part of the land leased is withdrawn for the purpose of sale by auction, or to provide small holdings, in which case an extension of the term of lease of the remainder may be granted, as compensation for the part withdrawn.

2. **Victoria.**—(i.) *Acts now in Force.* The Consolidating Land Act of 1901, amended by the Acts of 1903, 1904, 1905, 1909, and 1910, deals with the whole system of land occupation and alienation in this State. Closer Settlement was provided for by the Land Acts of 1898 and 1901, and amendments until the introduction of the Closer Settlement Act 1904, amended in 1906, 1907, 1909, and 1910. Other special forms of tenure have been provided for by the Settlement on Lands Act 1893, and the Small Improved Holdings Act 1906; these, however, are now embraced in the Land Acts and Closer Settlement Acts respectively.

The Land Act 1910 allows large tracts of land in the counties of Millewa, Croajingolong, and Dargo hitherto reserved for public purposes to be dealt with as unalienated Crown Lands. It is proposed to pass an amending and consolidating Land Act at an early date.

(ii.) *Mallee Lands.* The lands in the Mallee territory comprising an area of about 11,000,000 acres in the north-western district of the State can be cleared at a moderate expenditure. An extension of railway facilities and of successful systems of water supply should bring this territory into greater prominence as a field for agricultural enterprise. More than one-half of this area is unalienated and available for occupation.

Alienation of Mallee lands is now dealt with by a special part of the Land Act of 1901 (see § 6, 3, iii. hereinafter), as amended in 1904, and by the Murray Settlements Act 1907..

3. **Queensland.**—*Acts now in Force.* The Closer Settlement Act 1906 and the Land Act 1910 control the alienation of Crown lands in this State. The latter Act consolidates, amends and simplifies the law relating to the occupation and alienation of Crown lands.

4. **South Australia and Northern Territory.**—(i.) *Acts now in Force.* The Crown Lands Act 1903, amended in 1905 and 1906, repealed and consolidated previous Land Acts, and also repealed the earlier Closer Settlement and Village Settlement Acts. An Act amending the provisions relating to Closer Settlement was passed in 1910. The Pastoral Act 1904 controls the pastoral occupation of lands, and the Irrigation and Reclaimed Lands Acts of 1908, 1909, and 1910 provide for leases of reclaimed lands.

(ii.) *Northern Territory.* During the year 1910 the sale and occupation of Northern Territory lands were regulated by the Northern Territory Crown Lands Act 1890, the Northern Territory Lands Act 1899, and the Northern Territory Tropical Products Act 1904, but since the transfer of the Northern Territory to the Commonwealth on the 1st January, 1911, under the Northern Territory Surrender Act 1907 of South Australia, and the Northern Territory Acceptance Act 1910 of the Commonwealth, the further alienation and occupation of land in the Northern Territory have been suspended, pending a complete reorganisation of the system of land settlement by the Commonwealth Government.

5. **Western Australia.**—*Acts now in Force.* The Land Act 1898 amended, repealed and consolidated previous legislation as to the management of Crown Lands. This Act has in turn been amended in 1899, 1900, 1902, 1904, 1905, 1906, and 1909, and, with its amendments, is now in force. The principle of repurchasing Crown lands for the purposes of closer settlement was introduced by the Agricultural Lands Purchase Acts 1896 to 1904; these Acts were repealed and consolidated by the Agricultural Lands Purchase Act 1909.

6. **Tasmania.**—*Acts now in Force.* The law relating to land tenure and settlement is now consolidated in the Crown Lands Acts 1903, 1905, and 1907; and in the Closer Settlement Acts of 1906, 1907, and 1908.

7. **Administration and Classification of Crown Lands.**—In each of the States of the Commonwealth there is now a Lands Department under the direction of a responsible Cabinet Minister, who is charged generally with the administration of the Acts relating to the alienation, occupation, and management of Crown Lands. The administrative functions of most of the Lands Departments are to some extent decentralised by the division of the States into what are usually termed Land Districts, in each of which there is a Land Office, under the management of a land officer, who deals with applications for selections and other matters generally appertaining to the administration of the Acts within the particular district. In some of the States there is also a Local Land Board or a Commissioner for each district or group of districts.

In most of the States Crown lands are classified according to their situation, the suitability of the soil for particular purposes, and the prevailing climatic and other conditions. The modes of tenure under the Acts, as well as the amount of purchase money or rent and the conditions as to improvements and residence, may vary in each State according to the classification of the land. The administration of certain special Acts relating to Crown lands has in some cases been placed in the hands of a Board under the general supervision of the Minister; for such purposes, for instance, are constituted the Western Lands Board in New South Wales, the Lands Purchase and Management Board in Victoria, and the Closer Settlement Board in Tasmania.

In each of the States there is also a Mines Department, which is empowered under the several Acts relating to mining to grant leases and licenses of Crown lands for mining and auxiliary purposes. Such leases and licenses are more particularly referred to in a later part of this section. (See §.9, hereinafter.)

Full information respecting lands available for settlement or on any matter connected with the selection of holdings may be obtained from the Commonwealth representative in London, from the Lands Departments, or from the Agents-General of the respective States. The administration and classification of Crown lands in each State were more fully dealt with in Year Book No. 2 (pp. 273-6), to which reference may be made.

### § 3. Tenures under which Crown Lands may be Alienated or Occupied.

1. **Introduction.**—The freehold of Crown lands in the several States of the Commonwealth may now ordinarily be alienated either by free grant (in trust for certain specified purposes), by direct sale and purchase (which may be either by agreement or at auction), or by conditional sale and purchase. Crown lands may be occupied in the several States under a variety of forms of leases and licenses, issued both by the Lands and the Mines Departments.

2. **Classification of Tenures.**—The tabular statement given on pages 268-9 shews the several tenures under which Crown lands may be acquired or occupied in each State of the Commonwealth. The several forms of tenure are dealt with individually

in the succeeding parts of this section. In the State of Victoria it is proposed to amend and consolidate the Land Acts at an early date, and to abolish some of the existing forms of tenure. Reference to any amending Acts which are passed up to the latest available date prior to the publication of this book may be found in the Appendix.

(i.) *Free Grants, Reservations, and Dedications.* The modes of alienation given in this category include all free grants either of the fee simple or of leases of Crown lands. "Free" homesteads in Queensland and Western Australia are not included in this class, these tenures being free in the sense that no purchase-money is payable, though the grants are not free from residential and improvement conditions. Reservation and dedication, which are ordinarily conditions precedent to the issue of free grants, are also dealt with herein.

(ii.) *Sales by Auction and Special Sales.* This class of tenure includes all methods by which the freehold of Crown lands may be obtained (exclusive of sales under the Closer Settlement and kindred Acts) for cash or by deferred payments, and in which the only condition for the issue of the grant is the payment of the purchase-money.

(iii.) *Conditional Purchases.* In this class are included all tenures (except tenures under Closer Settlement and kindred Acts) in which the issue of the grant of the fee simple is conditional upon the fulfilment of certain conditions (as to residence or improvements) other than, or in addition to, the condition of the payment of purchase-money.

(iv.) *Leases and Licenses.* This class includes all forms of occupation of Crown lands (other than under Closer Settlement and kindred Acts) for a term of years under leases and licenses issued by the Lands Departments. As the terms indicate, the freehold cannot be obtained under these forms of tenure.

(v.) *Closer Settlement Sales, Leases, and Licenses.* In this division are included all forms of tenure provided for under the various Closer Settlement Acts and also under kindred Acts, such as the Village Settlements and Small Holdings Acts.

(vi.) *Mines Departments' Leases and Licenses.* The tenures here specified include all methods in which Crown lands may be occupied for mining and auxiliary purposes under leases and licenses issued by the Mines Departments in the several States.

**3. Conversion of Tenures.**—It may be seen in later parts of this section that in certain cases provision is made in the Land Acts for the conversion of one form of tenure into another. In this connection an important Act was passed in New South Wales in 1908, viz., the Crown Lands Amendment Act 1908.

(i.) *New South Wales.*—*The Crown Lands Amendment Act 1908.* This Act, which came into force on the 1st February, 1909, contains provisions for the conversion of various forms of tenure.

(a) *Conversion of Homestead Selections or Grants.* Under the amending Act any homestead selection or grant (see page 279) may be converted into (a) a conditional purchase lease, (b) a conditional purchase, or (c) a conditional purchase and conditional lease, but so that the area comprised in such lease does not exceed three times the area

comprised in the conditional purchase. Any application for conversion must be accompanied by a provisional deposit of one shilling per acre of the area of a proposed conditional purchase, as part payment of a deposit of 5 per cent. on the capital value; any balance of the latter deposit must be paid within one month after the applicant has been called upon to do so.

(b) *Conversion of Settlement Leases.* Any settlement lease (see § 7, 2, iii.) may be converted into an original conditional purchase or into an original conditional purchase and a conditional lease if the total area held by an applicant for conversion (exclusive of land under annual tenure) does not exceed an area which, in the opinion of the Board, would be sufficient for the maintenance in average seasons and circumstances of an average family. The area of the lease must not exceed three times the area of the conditional purchase.

If the total area held by an applicant for conversion (exclusive of land under annual tenure) exceeds such area, the conversion must be partly into an original conditional purchase and the balance into a conditional lease. Provision has been made for the conversion of part of the lease into an additional conditional purchase.

(c) *Conversion of Non-residential Conditional Purchases.* A non-residential conditional purchase (see p. 278) may be converted into an original conditional purchase, the term of ten years' residence commencing from the date of application for conversion. The term of compulsory residence is, however, reducible by any period (not exceeding five years) of continuous residence on the land by the holder up to and immediately preceding his application for conversion.

(d) *Conversion of Special Leases and Church and School Lands Leases.* The registered holder of any special lease for the purpose of access to water, agricultural, bee and poultry farming, dairying, dams, drainage, garden, grazing, irrigation, orchard, pig and poultry farm; residence, sugar-cane growing, tanks, tobacco-growing, or water conservation, or of any church or school lands lease, may apply to convert the same or part thereof into (a) a conditional purchase lease, (b) a conditional purchase, (c) a homestead selection, (d) a settlement lease, or (e) a conditional lease. An application for conversion must be accompanied by the prescribed deposit. The application is referred to the Board for inquiry and the Board reports to the Minister as to whether there is any objection to the granting of the application. If the Board recommends the granting of the application, it proceeds to appraise the capital value or price or rent of the land.

(e) *Purchase of Residential Leases.* The holder of any residential lease (see § 7, 2 vi.) may at any time after the first five years of his lease apply to purchase his holding. The application must be accompanied by the prescribed deposit, and is referred to the Secretary for Mines, who, if he concurs therein, reports to the Board, which in turn reports to the Minister. The purchase price is fixed by the Board and must be paid within three months, or within such extended time as the Minister may allow, subject to the payment of interest at 5 per cent.

(f) *Limitation of Transfer.* Conditional purchase leases, conditional purchases, homestead selections, and settlement leases, and subdivisions of the same may not be transferred, except by way of mortgage, to a person who already holds under any tenure (other than annual tenure) an area greater than a "home maintenance area."

(ii.) *Queensland.*—The Land Act 1910 facilitates the conversion of selection tenures from any one mode to any other mode, with the Minister's consent, on terms to be approved by the Land Court.

# **CLASSIFICATION OF TENURES UNDER WHICH CROWN LANDS MAY BE ALIENATED OR OCCUPIED.**

\* See § 2. 4. (ii).

4. **Limitation of Tenures in New South Wales.**—In October, 1910, it was officially stated that it was the policy of the Government to discontinue the granting of the freehold of Crown Lands. Pending the necessary alteration of the law to give effect to that policy, settlement will continue under the provisions of the Crown Lands Acts. In cases where lands are to be classified and where the method of disposal is within the discretion of the Minister for Lands, disposal by way of homestead selection and settlement lease has been adopted for the present.

5. **Tenure of Lands by Aliens.**—In the States of New South Wales, Queensland, South Australia and Tasmania restrictions are imposed upon the tenure of lands by aliens (*i.e.*, persons other than natural-born or naturalised British subjects). In Victoria and Western Australia there are no such restrictions.

(i.) *New South Wales.* Under the Crown Lands Act 1895 (sections 40 and 41), an alien is not qualified to apply for a homestead selection, conditional purchase lease, settlement lease, original homestead lease, or original conditional purchase, unless he has resided in New South Wales for one year, and at the time of making application he lodge a declaration of his intention to become naturalised within five years. If he fail to become naturalised within that period, the land is forfeited.

It is proposed to pass a regulation at an early date giving priority to applicants in ballots for land in the following order :—(a) Members of any of the European races. (b) Persons who are not members of any European race. (c) Coloured people who are aliens.

(ii.) *Victoria.* Under the Aliens Act 1890 (section 3), every alien friend resident in Victoria may acquire, either by grant from the Crown or otherwise, both real and personal property.

(iii.) *Queensland.* Under the Land Act 1891 (section 85.2 and 86B), an alien cannot acquire the freehold of any land in Queensland unless he obtains a certificate that he is able to read and write from dictation words in such language as the Minister for Lands may direct. He must within three years of such acquisition become a naturalised subject. In the Land Bill recently introduced in Parliament these provisions are proposed to be re-enacted, save that the time within which an alien must be naturalised is extended to five years.

(iv.) *South Australia.* In South Australia Asiatics are disqualified from holding perpetual leases of lands in irrigation areas under Section 18 of the Irrigation and Reclaimed Lands Act 1908.

(v.) *Western Australia.* In this State aliens are under no disability as regards the acquisition of the freehold of lands already alienated. Every application to acquire Crown lands, whether by a British subject or an alien, is subject to the approval of the Minister for Lands, with an appeal to the Governor-in-Council.

(vi.) *Tasmania.* Under the Aliens Act 1861 (section 2), aliens cannot hold real estate. An alien, if the subject of a friendly State, may, however, occupy lands for any term not exceeding twenty-one years.

#### 4. Free Grants, Reservations, and Dedications.

1. **Introduction.**—Although free grants of Crown lands were virtually abolished as far back as 1831, the Land Acts of all the States now contain provisions under which the free alienation or occupation of Crown lands for certain specified purposes—comprising generally charitable, educational, and public purposes—is allowed. In all the States, also, Crown lands may be excepted from sale and reserved to the Crown or dedicated for various public and special purposes. Generally reservation and dedication are conditions precedent to the issue of a free grant. In addition to reservations of a permanent nature, temporary reservations are also made, but these are, as a rule, subject to considerable fluctuations in area by reason of withdrawals, renotifications, and fresh reservations.

The following table shews the area for which free grants were issued and the areas permanently reserved or dedicated in each State during each year from 1901 to 1910 inclusive:—

## PARTICULARS OF FREE GRANTS, RESERVATIONS, AND DEDICATIONS, 1901 to 1910.

\* Not available. † Exclusive of South Australia. || Including Northern Territory.

§ Including both permanent and temporary reservations and dedications. ‡ Free leases.

2. **New South Wales.**—Under Sections 104 to 106 of the Crown Lands Act 1884, Crown lands may be reserved or dedicated for certain charitable, educational, and public purposes therein specified. No fresh promises of dedication for religious purposes were made after the 11th May, 1880, on which date a resolution against any further such grants was passed by the Legislative Assembly. During 1909-10, seven free grants of 50 acres each were issued under the Volunteer Force Regulations Act 1867.

(i.) *Reservations.* In addition to the reservations under Sections 104 to 106 of the Act of 1884, referred to above, Crown lands may also be temporarily reserved as sites for cities, towns, or villages under Section 101 of the same Act, and may be reserved for mining purposes under Section 106 of the Mining Act 1906. Crown lands within one mile of any made or projected railway may be temporarily reserved from sale under Section 103 of the Crown Lands Act 1884, and under Sections 112 to 114 of that Act any Crown lands may be reserved from sale for the preservation and growth of timber. Further, under Section 39 of the Crown Lands Act 1889, Crown lands may be reserved by notification in the *Gazette* from being sold or let upon lease or license, in such particular manner as may be specified, or may be reserved from sale or lease generally.

(ii.) *Areas Granted and Reserved, 1910-11.* During the financial year 1910-11, the total area for which free grants were prepared was 2186 acres, including grants of 1579 acres of land resumed under the 12th clause of the Public Roads Act 1902. During the same period 2195 acres were dedicated and permanently reserved, the number of separate dedications being 125.

On the 30th June, 1910, the total area temporarily reserved was 26,636,299 acres, of which 6,278,517 acres were for travelling stock, 6,492,519 acres for forest reserves, 2,973,694 acres for water, 1,269,278 acres for mining, and the remainder for temporary commons, railways, recreation and parks, and miscellaneous purposes.

3. **Victoria.**—Under Section 10 of the Land Act 1901, the Governor is authorised to reserve Crown lands, either temporarily or permanently, from sale, lease or license, for any public purpose whatever.

During the year 1910 eleven free grants, comprising an area of 103 acres, were issued. During the same year reservations of both a permanent and temporary nature, comprising an area of 1575 acres, were made; of this area 828 acres were reserved for recreation grounds.

4. **Queensland.**—Under the Land Act 1910, the Governor in Council may grant in trust, or reserve from sale, or lease, temporarily or permanently, any Crown lands, required for public purposes.

(i.) *Reservations.* Under Section 2 of the State Forests and National Parks Act 1906, the Governor-in-Council may permanently reserve any Crown lands and declare them to be a State Forest or a National Park.

(ii.) *Areas Granted and Reserved, 1910.* During the year 1910 there were forty-two free grants issued for a total area of 186 acres. During the same period reserves covering an area of 112,272 acres were proclaimed, of which 33,610 acres were for timber reserves, 31,286 acres for camping and water, and 10,412 acres for water supply. The total area reserved up to the end of the year 1910 was 13,135,315 acres.

5. **South Australia.**—Under Section 7 (d) of the Crown Lands Act 1903, the Governor is empowered to dedicate by proclamation any Crown lands for various charitable, educational, and public purposes, and may, at any time after dedication, grant the fee simple of such lands to secure the use thereof for the purpose for which they were dedicated.

(i.) *Reservations.* Under Section 7 (f) of the same Act the Governor may by proclamation reserve any Crown lands (a) for the use of aborigines, (b) for the purposes of military defence, (c) for forest or travelling-stock reserves, (d) for public recreation grounds, (e) for railways or tramways, and (f) for park lands.

(ii.) *Artesian Leases.* Under special circumstances free leases of pastoral lands may be granted to discoverers of artesian wells. (See § 8, 5 vi. c.)

(iii.) *Areas Granted and Reserved, 1910.* During the year 1910 there were 18 free grants issued for a total area of 300 acres. During the same year 101 reserves, comprising 6587 acres, were proclaimed.

6. **Western Australia.**—Under Section 39 of the Land Act 1898, as amended by Section 27 of the Act of 1906, the Governor may reserve any Crown lands which may be required for religious, charitable, or public purposes. These reservations may be either temporary or permanent.

During the year 1910, 16 free grants totalling 280 acres were issued, while the area reserved was 1,985,807 acres. Further particulars are not available.

7. **Tasmania.**—Under Section 24 of the Crown Lands Act 1903, the Governor may reserve any Crown lands for the purposes therein specified. The lands are ordinarily leased for a period of ninety-nine years at a peppercorn rental.

During the year 1910 there were 15 free leases, comprising an area of 288 acres issued. During the same period 24,825 acres were reserved, 12,300 acres being reserved for re-forestation purposes, 135 acres for recreation grounds, and 166 acres for other public reserves. The total area permanently reserved to the end of the year 1910 was 1,041,582 acres.

## § 5. Sales by Auction and Special Sales.

1. **Introduction.**—In all the States sales by auction of Crown lands are held from time to time. Notifications of such sales are given in the *Government Gazettes*, together with particulars as to the upset price and conditions of sale. Excepting in the case of South Australia, where land is sold at auction for cash only, the purchase may be either for cash or on credit by deferred payments. In most of the States land may also be purchased by private contract at the upset price, when it has been offered at auction and not sold. In the case of auction sales on credit in the States of Western Australia and Tasmania, certain improvement conditions are imposed, and such sales are therefore classed for the purposes of this article among *Conditional Purchases*. (See § 6 below.) In most of the States comparatively small areas of Crown lands may be sold without competition under special circumstances. Sales by auction and special sales under Closer Settlement Acts are referred to in a later part of this section. (See § 8.)

2. **New South Wales.**—Under the Crown Lands Act 1884 lands not exceeding in the aggregate 200,000 acres for the whole State may be sold by auction during any one year. The sales are notified in the *Gazette* not less than one month before the day of sale. The upset prices may not be less than £8 an acre for town lands; £2 10s. for suburban lands; and other lands fifteen shillings. Town lands may not be sold in areas exceeding half-an-acre; suburban lands in areas exceeding twenty acres; and country lands in areas exceeding 640 acres. A deposit of 25 per cent. on the purchase money must be paid at the sale, and the remainder within three months.

(i.) *Deferred Payment on Auction Sales.* Under the Auction Sales Balances Act 1887 and the Crown Lands Amendment Act 1903 special terms of payment may be made on auction sales of land subdivided into areas not exceeding forty acres. The time for deferred payments may not exceed five years and the instalments carry interest at five per cent. per annum. A cash deposit of 25 per cent. on the purchase money must be paid.

(ii.) *After-auction Sales.* Under the Crown Lands Amendments Acts 1895 and 1903, lands which have been offered for sale at auction and not sold may be granted at the upset price to any person applying. A deposit of 25 per cent. on the upset price must be paid, and the remainder according to the terms on which the land was offered at auction.

(iii.) *Special Sales without Competition.* Under the Crown Lands Act 1884 the Governor is authorised to rescind the reservation of water frontage, or of land adjoining such frontage, contained in any Crown grant, and to sell the land, the subject of such rescission, at a fair price not less than the upset price, to the owner of the land contained in the grant. Crown lands may be sold to the owners of adjacent lands in a similar manner in the following cases:—(a) Where there is no way of access attainable, (b) where the lands comprised are insufficient in area for conditional sale, (c) where the lands are situated between granted land and a road which should form the way of approach to such granted land, (d) where the lands are encroached upon by buildings erected on granted land, and (e) where lands have been reclaimed with the authority of the Governor from below high-water mark.

(iv.) *Improvement Purchases.* Only lands within proclaimed goldfields are available for improvement purchases. The areas which may be acquired in this manner may not exceed one-quarter of an acre within the boundaries of a town or village, or two acres of land outside such boundaries. The price must not be less than £8 per acre for town lands, and £2 10s. for suburban or other lands. The applicant must be in authorised occupation under the Mining Act of the land he applies for, and must be the owner of the improvements thereon; such improvements must be of value equal to the respective minimum rates above-mentioned.

(v.) *Alienation by Auction and Special Sales.* During the year ended the 30th June, 1911, the area of Crown lands sold by auction and special sales for which grants were prepared amounted to 10,911 acres, of which 6311 acres were sold by auction in 1341 lots; 2826 were sold by after-auction sales in 1029 lots: 88 acres were sold as improvement purchases in 171 lots; and 1686 acres were sold as special purchases in 172 lots. The following table gives particulars of Crown lands alienated by auction and special sales during each year from 1901 to 1910:—

**NEW SOUTH WALES.—AUCTION AND SPECIAL SALES, 1901 to 1910.**

Year.	Auction and After-auction Sales.	Improvement Purchases.	Special Sales.	Total.	
				Area.	Price.
	Acres.	Acres.	Acres.	Acres.	£
1901 ...	49,074	43	445	49,562	116,562
1902 ...	50,110	801	1,022	51,933	115,625
1903 ...	40,610	23	576	41,209	117,879

1910 <sup>2</sup> ...	7,980 <sup>4</sup>	86	1,109	9,175	91,374

1. Half-year ended 30th June. 2. Year ended 30th June. 3. Including land sold under the Centennial Park Sale Act. 4. Exclusive of 3,423 feet frontage sold for £15,005 under the Centennial Park Sale Act.

The total areas alienated by auction and other forms of sale up to the 30th June, 1910, are shewn hereinafter. (See § 11.)

3. **Victoria.**—Lands specially classed for sale by auction, and any land in any city, town, or borough, may be sold by auction in fee simple, not exceeding 100,000 acres in any one year, at an upset price of £1 an acre, or at any higher price determined. The purchaser must pay the survey charge at the time of the sale, together with a deposit of 12½ per cent. of the whole price; the residue is payable in equal half-yearly instalments not exceeding forty in number, according to the amount, with interest at the rate of 4 per cent. per annum.

(i.) *Special Sales without Competition.* Detached strips of land not exceeding twenty acres may be sold at a valuation to the owner of the adjoining freehold in cases somewhat similar to those specified above in respect to Crown lands in New South Wales.

(ii.) *Areas Sold at Auction and by Special Sales, 1901 to 1910.* The following table gives particulars of auction sales and special sales for the year 1901 and from 1905 to 1910:—

**VICTORIA.—AUCTION AND SPECIAL SALES, 1901 to 1910.**

Particulars.	1901.	1905.	1906.	1907.	1908.	1909.	1910.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Country lands ...	4,079	3,267	2,060	2,776	2,805	2,729	2,469
Town and suburban lands ...	2,127	2,129	1,946	1,369	1,630	2,062	1,789
Special sales ...	846	3,382	2,636	2,168	2,117	2,602	1,537
Total ...	7,052	8,778	6,642	6,313	6,552	7,393	5,795

Particulars of total areas alienated are given hereafter. (See § 11.)

4. **Queensland.**—The Minister may, with the approval of the Governor-in-Council, cause any Crown lands to be offered for sale by auction. The notification must specify the amount of deposit, and the term for payment of the balance of the money, which term may not exceed ten years. The upset price may not be less than £8 per acre for town lands, £2 per acre for suburban lands, and 10s. per acre for country lands.

(i.) *After-auction Sales.* The proclamation of lands for sale by auction declares that any lands therein mentioned, which have been offered at auction, but not sold or withdrawn, shall be open to purchase at the upset price by the first applicant. The price may be paid in the same instalments and at the same periods as if the land had been bought at the auction.

(ii.) *Special Sales without Competition.* Land may be sold without competition to the holder or holders of adjoining lands at a price to be determined by the Land Court, under circumstances similar to those specified above in the case of New South Wales. When the holder of any land proves that, owing to danger from floods or other reasons, it is unsafe to reside on his holding, he may be granted, on payment of a price determined by the Land Court, an area not exceeding ten acres out of the nearest convenient and available Crown lands.

(iii.) *Areas Sold at Auction, after Auction, and by Special Sales, 1901 to 1910.* The following table shews the areas sold at or after auction, and by special sales, during the year 1901 and from 1905 to 1910:—

**QUEENSLAND.—AUCTION AND SPECIAL SALES, 1901 to 1910.**

Particulars.	1901.	1905.	1906.	1907.	1908.	1909.	1910.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Town ...	334	128	340	285	472	227	464

Country—							
Ordinary sales ...	52,132	157,839	15,481	11,556	7,585	12,844	8,939
Special sales ...	...	1,659	...	3,716	...	...	...
Total ...	53,259	159,989	16,527	15,921	8,678	13,411	10,578

Particulars as to the total areas alienated by all forms of purchase up to the end of each year from 1901 to 1910 are given in a later part of this section. (See § 11 herein.)

(iv.) *Unconditional Selections.* This form of tenure is similar to that of a sale by auction with deferred payment. The minimum price for the land is 13s. 4d. an acre, payable in twenty annual instalments, and the maximum area granted to the applicant is 1,280 acres. A deed of grant may be obtained upon payment of the purchase money.

The following table shews the number and area of unconditional selections for which applications were accepted during the year 1901 and from 1905 to 1910:—

**QUEENSLAND.—UNCONDITIONAL SELECTIONS, 1901 to 1910.**

Particulars.	1901.	1905.	1906.	1907.	1908.	1909.	1910.
Number ...	151	90	130	91	126	131	98
Area ... Acres	24,322	10,586	25,262	25,382	22,770	27,395	15,930
Rent ... £	1,180	481	1,113	1,042	1,073	1,111	685

5. **South Australia.**—The following lands may be sold by auction for cash :—(a) Special blocks. Any single section of Crown lands which may be surrounded by lands sold or contracted to be sold, and any section (not exceeding 100 acres in area) which may be required for the establishment of any industry. (b) Crown lands which have been offered for perpetual lease, and not taken up for two years. (c) Town lands. (d) Suburban lands. The upset price is determined by the Commissioner, and 20 per cent. of the purchase-money must be deposited at the time of sale, and the residue paid within such a time as the Commissioner may allow.

(i.) *After-auction Sales.* All Crown lands, except town or suburban lands, offered at auction and not sold remain open for leasing or sale under agreement or may be sold by private contract for cash at the upset price.

(ii.) *Sales for Special Purposes.* The Governor may, on the application of the purchaser or lessee under any of the Crown Lands Acts, grant 2 acres of the land comprised in such agreement or lease to trustees, to be used for any public or charitable purposes, or he may grant not over one acre of land, comprised in such agreement, as a site for a shop, mill, or post office. The purchase-money for such land must be paid at the time of application.

(iii.) *Areas Sold for Cash, 1901 to 1910.* The following table shews the areas sold for cash during the year 1901 and from 1905 to 1910. The total areas sold under all types of sale at the end of the year 1901 and from 1905 to 1910 are shewn in a later part of this section. (See § 11.)

**SOUTH AUSTRALIA.—AUCTION AND SPECIAL SALES, 1901 to 1910.**

Year ... ..	1901.	1905.	1906.	1907.	1908.	1909.	1910.
Area in acres ...	11,314	77,022	69,060	70,349	78,557	128,529	386,977

6. **Western Australia.**—Surveyed town lots notified in the *Gazette* as open for sale, may be sold by public auction at a prescribed upset price. Any person may apply to the Minister to put up for sale by auction any lot already surveyed on depositing 10 per cent. of the upset price. The balance of the purchase-money, and the value of the improvements, if any, must ordinarily be paid in four equal quarterly instalments. In the case of suburban lands, the purchaser must carry out certain improvements, which are more particularly referred to below. (See § 6, *Conditional Purchases*, 6, vii.)

(i.) *Areas Sold by Auction, 1901 to 1911.* The following table shews the areas of town and suburban lands sold at auction during the year 1901 and from 1906 to 1911 :—

**WESTERN AUSTRALIA.—AUCTION SALES, 1901 to 1911.**

Year ... ..	1901.	1906. <sup>1</sup>	1907. <sup>1</sup>	1908. <sup>1</sup>	1909. <sup>1</sup>	1910. <sup>1</sup>	1911. <sup>1</sup>

1. For the year ended 30th June,

Particulars as to total areas alienated are given in a later part of this section. (See § 11.)

7. **Tasmania.**—Any town lands may be sold at auction or by private contract, either for cash or on credit, provided that no such lands may be sold on credit if the price is less than £15. Rural lands may also be sold at auction or by private contract, but lots of

first-class land may not be sold on credit if less than fifteen acres in area. In the case of sales on credit both of town and rural lands, improvement conditions are imposed, and such sales are therefore classified for the purposes of this article as *Conditional Purchases*. (See § 6.)

(i.) *After-auction Sales*. All rural lands and town lands, not within five miles of any city, which have been offered at auction and not sold, may be purchased by private contract at the upset price, and subject to the conditions on which they were offered at auction.

(ii.) *Sale of Land in Mining Towns*. The holder of a residence or business license, who is in occupation and is the owner of buildings and improvements upon the area licensed of a value equal to the upset price of such area, is entitled to purchase not more than half an acre in area. The areas may be sold on credit.

(iii.) *Areas Sold for Cash, 1901 to 1910*. The following table shews the areas sold for cash during the year 1901 and from 1905 to 1910:—

**TASMANIA.—AUCTION AND SPECIAL SALES, 1901 to 1910.**

Particulars of total areas alienated are given in a later part of this section. (See § 11.)

## § 6. Conditional Purchases.

1. **Introduction.**—In all the States of the Commonwealth the freehold of the land may be acquired under what are known as systems of conditional purchase by deferred payments of half-yearly or yearly instalments. Certain conditions, generally as to residence and improvements, have to be complied with before the freehold is granted, but these conditions are usually of a light nature and are inserted chiefly with the object of guaranteeing that the occupier will become of benefit to the community by making a reasonable effort to render his holding wealth-producing. Though there is a considerable similarity between some of the forms of tenure in the several States, the terms and conditions vary greatly in detail. As a rule a lease or license for a certain period is first issued to the selector, and upon fulfilment of the prescribed conditions and payment of the full amount of purchase-money the freehold is conveyed to him. In Queensland and Western Australia "free" homesteads may be acquired. Although under these tenures no purchase-money is payable, the grant is conditional on the performance of residential and improvement conditions; these tenures are therefore included here with conditional purchases rather than with free grants.

2. **New South Wales.**—The following are the methods by which land may be alienated by conditional purchase:—(i.) Residential conditional purchase; (ii.) non-residential conditional purchase; (iii.) conversion of conditional purchase; and (iv.) homestead selections.

(i.) *Residential Conditional Purchase*. Any vacant Crown lands in the "Eastern Division" and "Central Division," and certain proclaimed areas in the "Western Division" are available for conditional purchase. An applicant must be not less than sixteen years of age, and must pay on application both the prescribed deposit and a survey fee according to a fixed scale. The area which may be selected depends upon the division in which the land is situated, and ranges from 40 to 2,560 acres. The price is ordinarily £1 per acre. After three years the purchaser may pay an instalment equal to 5 per cent.

on the price of the land, and thereafter annually a similar amount. These instalments include  $2\frac{1}{2}$  per cent. interest on the outstanding balance of the purchase money. The holding must be fenced within three years and improved to the value of ten shillings an acre (but not exceeding 50 per cent. of the price of the land) at the end of the first five years. Residential conditions, which for sufficient reason may be suspended, are imposed. A certificate which permits transference of the holding will be issued at the expiration of five years if the required conditions have been fulfilled.

The holder of a conditional purchase may obtain an additional conditional purchase the area of which, together with that of the original holding, must not exceed the prescribed maximum unless in the opinion of the Board such area is insufficient for the maintenance of a home.

(ii.) *Non-residential Conditional Purchase.*—The maximum area granted for a non-residential conditional purchase is 320 acres, and the minimum 40 acres. The price, deposit and annual instalments are double those required under residential conditions, and the improvement conditions are more stringent. A non-residential conditional purchase may be converted into an original conditional purchase (see p. 267 *ante*).

(iii.) *Conversion of Conditional Purchase Leases.* Under the Crown Lands Amendment Act 1905, a conditional purchase lease, for which the term is forty years, carries with it a right of conversion into a conditional purchase at any time during its currency, and ultimately into a freehold. These leases are more particularly referred to below. (See § 7, *Leases and Licenses*).

(iv.) *Applications Made and Confirmed and Deeds Issued, 1901 to 1911.* During the year ended the 30th June, 1911, deeds of grant were prepared on the completion of conditional purchases for 632,737 acres, making the total number of conditional purchases in existence at the end of the financial year 93,408 for a total area of 15,614,036 acres. The following table gives particulars of conditional purchases for each year from 1901 to 1911 :—

#### NEW SOUTH WALES.—CONDITIONAL PURCHASES, 1901 to 1911.

Total ...	284,514	40,315,295	68,934	12,329,408	10,849,155 <sup>3</sup>	15,614,036

1. Half-year ended 30th June. 2. Year ended 30th June. 3. From 1901 to 1911 inclusive.  
4. Exclusive of exchanges under the Crown Lands Act 1895.

Further particulars as to the total areas alienated and in process of alienation are given hereinafter. (See § 11.)

(v.) *Homestead Selection.* Under the Act of 1895 suitable land may be classified for homestead selection. Good agricultural lands are divided into blocks, with maximum area of 1280 acres, and suitable lands for business people within easy access to towns may be provided. Conditions as to area of blocks, capital value, etc., are published in the *Gazette*. After five years' continuous residence a grant will be issued; thereafter a residence for at least seven months in the year will be necessary. The rent for the first six years will be  $1\frac{1}{2}$  per cent. of the capital value of the land, and thereafter  $2\frac{1}{2}$  per cent. of the capital value. Should an area granted under this tenure be found to be insufficient for the maintenance of a home, it may be increased to a home maintenance area by additional homestead selection. Conditional purchases may be converted into homestead selections and vice versa.

During the year ended 30th June 1910, there were 183 original and 85 additional homestead selections applied for, comprising an area of 79,787 acres. During the same period the total number of applications confirmed was 265, comprising 76,003 acres, 1764 homestead selections comprising an area of 622,903 acres were in existence on the 30th June 1910, and up to the same date 4,028 homestead grants of 1,628,176 acres had been issued. Further particulars for previous years are given in a later part of this section. (See § 11.)

3. *Victoria.*—The freehold of agricultural and grazing lands may be acquired by conditional purchase under the following tenures:—(i.) Agricultural allotments and grazing allotments; (ii.) Agricultural and grazing allotments by selection from grazing area or perpetual leases; (iii.) Mallee agricultural licenses; (iv.) Murray settlements leases; and (v.) swamp or reclaimed lands purchase leases. Numbers (i.), (ii.) and (iii.) may be either on residential or on non-residential conditions. It is proposed to make various important alterations at an early date in the land laws of Victoria. Particulars of any Acts which are passed up to the latest available date prior to the publication of this book may be found in the Appendix.

(i.) *Agricultural Allotments and Grazing Allotments.* An agricultural allotment is an area not exceeding 200 acres of first-class lands or 320 acres of second-class lands, and a grazing allotment is an area not exceeding 640 acres of third-class lands, which may for 20s., 15s., and 10s. an acre for the first, second and third-class lands respectively, be paid for in twenty or forty years. The applicant must be over 18 years of age, and must not already be in possession of a selection under the Land Acts.

Agricultural allotments and grazing allotments may be granted under either (a) residential or (b) non-residential licenses.

(a) *Residential Licenses* are granted for six years at a fee, according to the valuation of the land, of not less than sixpence per acre per annum. The licensee may not transfer, assign, or sublet this allotment. The licenses are granted subject to conditions as to residence, improvements, fencing, and destruction of vermin. During the term of license improvements equal in value to the minimum price of the land must be effected. Upon satisfying the Board that all conditions of the license have been fulfilled, the licensee is entitled after six years to obtain a grant upon payment of the balance of the purchase-money; or otherwise he may obtain a lease of the allotment for a term of fourteen years at the same rental as the fee paid under license. During the currency of the lease a grant in fee of the lands leased may be obtained upon payment of the difference between the amount actually paid and the purchasing price of the land.

Residential licenses are also granted, subject to the same covenants and conditions as stated above, but varied with regard to the term and to the amount of the fee and rent reserved, being double the term at half the yearly payment.

(b) *Non-residential Licenses* for both agricultural and grazing allotments may be issued on conditions similar to the above, with the exception that the term of the lease granted after the license period must be on the fourteen years basis only.

(ii.) *Agricultural and Grazing Allotments by Selection from Grazing Areas and Perpetual Leases or Auriferous Lands Licences.* The lessee of a grazing area may select thereout, under residential conditions (see 3 (i.) above), and if the residence and improvement conditions necessary under an agricultural or grazing allotment license have already been complied with, the license may be antedated any period, not exceeding 6 years, upon payment of the difference in the rent for such period, and a grant may, therefore, be obtained immediately. The lessee of a grazing area may, if preferred, select thereout under non-residential conditions (see 3 (i.) (b) above). Grazing area-leases are more particularly referred to below, under the heading of *Leases*. (See § 7, 3 i.) Either residential or non-residential, agricultural or grazing allotments may also be selected under certain circumstances out of areas held under perpetual leases (see § 7, 3, ii.) below or auriferous lands licenses. (See § 7, 3, iv.)

(iii.) *Mallee Agricultural Licences.* These licenses are issued for first, second, and third-class Mallee lands, the maximum areas being 640, 1000 and 1280 acres of first, second and third-class land respectively. The licenses are for six years, and are issued subject to similar conditions (both residential and non-residential) as agricultural allotments. (See above.)

(iv.) *Murray Settlements Leases.* Under the Murray Settlements Act 1907, any Crown lands within the Mallee country or Mallee border may be subdivided into either (a) *Homestead Allotments* near the river Murray, each containing an area of not more than fifty acres, or (b) *Mallee farm allotments*, situated more or less remotely from the homestead allotments, and each containing an area not exceeding 640, 1000, 1280, or 1600 acres of first, second, third, or fourth class land respectively. Payment of the value of a holding, with interest at not less than  $4\frac{1}{2}$  per cent. per annum, must be made in sixty-three half-yearly instalments, and the prescribed improvements must be carried out. Part II. of the Act provides for the construction and maintenance of irrigation works and gives power to constitute irrigation areas. Two settlement areas have been laid out under the Act with due regard to irrigation conditions, viz., those at White Cliffs and Nyah, and at the former place a dry farm area has also been subdivided. At White Cliffs 6273 acres were subdivided as homestead allotments, and 50,345 acres as dry farm allotments, while at Nyah 1960 acres were subdivided as homestead allotments. At the commencement of the year 1911, there were 256 irrigation allotments held under the Act, covering an area of 9527 acres.

(v.) *Swamp or Reclaimed Lands Purchase Leases.* The special conditions attached to conditional purchase leases of swamp or reclaimed lands are referred to below. (See § 7, 3 v.)

(vi.) *Area Selected Conditionally and Area Sold, 1901 to 1910.* The subjoined table gives particulars shewing the areas selected conditionally during the year 1901 and from 1905 to 1910. A large proportion of the areas shewn has reverted to the Crown in consequence of non-fulfilment of conditions.

#### VICTORIA.—AREAS PURCHASED CONDITIONALLY, 1901 to 1910.

Particulars.	1901.	1905.	1906.	1907.	1908.	1909.	1910.

Particulars as to total areas alienated and in process of alienation are given in a later part of this section. (See § 11.)

4. **Queensland.**—The several types of selections under which the freehold may be acquired by conditional purchase are as follows:—(i.) Agricultural farms; (ii.) agricultural homesteads; (iii.) prickly pear selections; and (iv.) free homesteads.

Land is made available for selection by proclamation in the *Gazette*, specifying the modes in which the land may be selected, the area, rent, price and conditions.

The applicant must be over the age of sixteen years. Applications for selections must be made in the prescribed form and be lodged with the land agent for the district in which the land is situated, and must be accompanied by the prescribed deposit. In the case of a prickly pear selection the deposit must be the full amount of the survey fee, and in other cases, except free homesteads, a year's rent and one-fifth of the survey fee. In the case of a free homestead application the deposit consists of an application fee of £1 and one-fifth of the survey fee. If land is open for selection in two or more modes, alternatively, and there are simultaneous applications to select it under different modes, priority among such applications is given to an application for the land as an agricultural homestead, as against an application for it as an agricultural farm, and to an application for it as an agricultural farm as against an application for it as an unconditional selection. In the case of simultaneous applications for the same land as an agricultural farm, priority is secured by an applicant who undertakes to personally reside on the land during the first five years of the lease. Provision is made in the Land Act 1910 for the conversion of one form of selection into another.

(i.) *Agricultural Farms.* The more accessible lands are usually set apart for agricultural selection up to the maximum area of 2560 acres allowed to each selector of an agricultural farm. The term is twenty years, and the price ranges from ten shillings per acre upwards. The annual rent is one-fortieth of the purchasing price, and the payments are credited as part of the price. Conditions relating to residence and improvements must be fulfilled. A selector who obtains a certificate that he has carried out such requirements upon payment of the balance of the purchase money, receives a deed of grant in fee-simple.

During the year 1910, applications were accepted to select agricultural farms to the number of 1733 for 628,222 acres, an average area of 362 acres, at an average price of 22s. 1d. per acre. The number of selections and the total area selected were higher than the corresponding figures for the previous year by 300 and 86,929 acres, respectively. The average area is less by 12 acres, and the average price higher by 4s. per acre.

(ii.) *Agricultural Homesteads.* The maximum area for an agricultural homestead must not exceed 320 acres. Upon fulfilment of the prescribed improvement conditions, a lease may be issued for a period of ten years, during which time the lessee must reside upon the holding. The annual rent will be 3d. per acre, and the purchasing price 2s. 6d. per acre, of which the annual rents are considered to be instalments.

Particulars of agricultural homesteads are given in par. (iv.) hereinafter.

(iii.) *Prickly Pear Selections.* Under the Land Act, 1910, the maximum area held under a prickly pear selection tenure by any one person, may not exceed 2560 acres. The term of the lease is fifteen years. All prickly pear must be destroyed during a prescribed period, and the lease may contain a residential condition. The rent for the first prescribed period is nominal, and the purchasing price is published in the notification of sale. Upon fulfilment of all conditions and payment of the remainder of the purchasing price, the lessee is entitled to a deed of grant in fee-simple.

In the case of prickly pear (bonus) selections, the freehold of the land and a bonus in addition are granted for the complete eradication of the pear.

Particulars of prickly pear selections are given in the following paragraph.

(iv.) *Number and Area of Conditional Purchases, 1901 to 1910.* The following table shews the number and area of conditional purchases for which applications were accepted during each year from 1901 to 1910 :—

**QUEENSLAND.—CONDITIONAL PURCHASES (APPLICATIONS ACCEPTED),**

**1901 to 1910.**

Year.	Agricultural Farms.		Agricultural Homesteads.		Prickly Pear Selections.		Total.	
	Number.	Area.	Number.	Area.	Number.	Area.	Number.	Area.
		Acres.		Acres.		Acres.		Acres.
1901 ...	661	160,804	669	155,512	19	48,450	1,349	364,766
1902 ...	683	168,801	523	118,246	10	51,058	1,216	337,605
1903 ...	499	124,026	424	89,037	6	5,423	929	218,486
1904 ...	516	136,092	355	73,705	1	200	872	209,997
1905 ...	962	254,117	448	97,543	7	31,457	1,417	383,117
1906 ...	1,427	438,605	392	96,561	3	9,562	1,822	544,728
1907 ...	1,948	689,916	267	68,464	439	524,956	2,654	1,283,336
1908 ...	1,608	607,164	229	55,152	714	870,849	2,551	1,533,165
1909 ...	1,433	541,293	162	39,654	496	665,614	2,091	1,246,561
1910 ...	1,733	623,222	67	14,778	920	1,308,170	2,720	1,951,170

The average area of agricultural farms selected during the year 1910 was 362 acres at an average price of 22s. 1d. per acre; the average area of agricultural homesteads was 221 acres. The average price of the land selected as prickly pear infested selections during the year was 3s. 4½d. per acre, and of prickly pear frontage selections was 5s. 11d. per acre.

Particulars as to total areas alienated and in process of alienation may be found hereinafter. (See § 11.)

(v.) *Free Homesteads.* The maximum area which may be selected in this manner is 160 acres. The term is five years, and during that period the selector must occupy the land by personally residing on it, and must enclose it with a fence or make improvements equal in value to that of a fence. During the year 1910 the number of acres of land opened for selection as free homesteads was 320, and 17 applications, totalling 2720 acres, were accepted.

**5. South Australia.**—The types of conditional purchases under which land may be alienated in this State are as follows :—(i.) Agreement to purchase, and (ii.) Agreement under the Pinnaroo Railway Act 1903. A month's notice of lands open for application is given in the *Gazette*. Applicants must not be under 18 years of age. Preference is given to applicants who will reside on the land applied for. Interest at the rate of 5 per cent. is charged on arrears due under leases and agreements; if over two months in arrears the Commissioner may recover the same in court. The unimproved value of any land held under any tenure, except under pastoral lease, must not exceed £5000. Exceptions are made in cases where the land to be included in the lease or agreement is suitable only for pastoral purposes, and the carrying capacity of which, together with all other lands held by the lessee or purchaser under any tenure does not exceed 5000 sheep; if the land is outside Goyder's line<sup>1</sup> the limitation may be increased to a carrying capacity of 10,000 sheep.

1. Goyder's line is not exactly based on rainfall, but on the evidence of vegetation ("salt-bush" and "blue-bush," etc.), and marked the northern limit of what was thought to be fit land for agricultural pursuits. The vegetation which was supposed incapable of flourishing in regions of regular rainfall afforded the indications for locating the line.

(i.) *Agreement to Purchase*.—Applications must be made in writing to the Commissioner, and must be accompanied by a deposit equal to the first half-yearly instalment of the purchase-money of the land and improvements. The purchase-money and interest for the land and improvements must be paid at not less than the rate of 2 per cent. per annum by sixty equal half-yearly instalments payable in advance. If the conditions relating to fencing, vermin destruction, and in some cases to residence, be fulfilled the purchase may be completed after a term of six years on payment of all principal and interest due.

(ii.) *Pinnaroo Railway Lands*. Under the Pinnaroo Railway Act 1903 provision was made for opening up about 1,500,000 acres of good agricultural country in the vicinity of a line from Pinnaroo adjoining the Victorian border to Taillem Bend, a distance of eighty-seven miles. These lands are now offered on agreement with covenant to purchase or on perpetual lease under the Crown Lands Act 1903. The railway has been paid for from the proceeds of the land already selected. The conditions of purchase are similar to those stated in par (i.) above.

The total area held on 30th June, 1911, was 452,310 acres; of this area 17,604 acres are held on perpetual and right of purchase leases, allotted before the Pinnaroo Railway Act was passed.

(iii.) *Particulars of Conditional Purchases, 1901 to 1910*. The subjoined table gives particulars of the areas alienated by conditional purchase, on fulfilment of the conditions, at the end of 1901 and from 1905 to 1910 inclusive:—

**SOUTH AUSTRALIA.—AREAS ALIENATED UNDER AGREEMENTS TO PURCHASE,  
1901 to 1910.**

Year ...	1901.	1905.	1906.	1907.	1908.	1909.	1910.
Area in acres ...	57,460	16,106	6,439	57,890	68,977	128,656	160,668

Particulars as to the total areas alienated and in process of alienation are given in a later part of this section. (See § 11.)

**6. Western Australia.**—The various types of selections under which the freehold can be alienated by conditional purchase in this State are as follows:—(i.) Residential conditional purchase; (ii.) non-residential conditional purchase; (iii.) conditional purchase by direct payment; (iv.) conditional purchase of blocks for vineyards, orchards, or gardens; (v.) conditional purchase of grazing lands; and (vi.) free homestead farms.

All applications must be lodged, with the prescribed deposit and fees, at the agency in which the land is situated. No person may acquire under homestead farm, conditional purchase, and grazing lease, collectively, or any two or more of them, either as lessee or transferee, more than 2000 acres of cultivable land (that is, land acquired as homestead farm and by conditional purchase), or an equivalent area of grazing land, or cultivable and grazing land mixed. Where a man has selected up to the maximum allowed, his wife may hold a further area of 1000 acres of cultivable land or its equivalent area of grazing or of cultivable and grazing land. Five acres of grazing land are deemed to be an equivalent of two acres of cultivable land, and all unclassified land disposed of prior to the 1st February, 1907, is deemed to be cultivable land until otherwise classified by the Lands Department. If the holder require the land to be classified he must pay the prescribed fee.

(i.) *Residential Conditional Purchase.* Under this form of tenure any person over the age of sixteen years may select from a minimum area of 100 acres to a maximum of 1000 acres. The price of the land varies from ten shillings to forty shillings per acre payable in twenty years by half-yearly instalments, or sooner, at the occupier's option, but for the first three years of the lease only sixpence per acre per annum is charged; subsequent payments are increased when the value of the land is over ten shillings per acre. Residence by a member of the family of the holder during 6 months of the year is compulsory. Improvements equal in value to the value of the land, but not exceeding £1 per acre, must be effected. One half of the land must be fenced within five years, and the whole within ten years.

Special conditions governing improvements apply to holders of land in the neighbourhood of railways, but such improvements need not exceed in cost the amount which the Agricultural Bank is prepared to advance to the holder. After 5 years from the date of the lease the holder may obtain a Crown grant, if the prescribed conditions have been fulfilled and the purchase money paid.

(ii.) *Non-residential Conditional Purchase.*—Under this form of tenure the conditions are similar to those described under § 6, 6 (i.), except that residence is not compulsory, and the total value of improvements must be 50 per cent. over and above the value of the land, but need not exceed 30s. per acre.

(iii.) *Conditional Purchase by Direct Payment.* Unalienated Crown lands of an area of 100 to 1000 acres at a price not less than 10s. per acre may be acquired by direct payment of 10 per cent. of the purchase-money with the application; then a license for seven years may be granted, and the balance of the purchase-money is payable within twelve months. Improvements to the value of 10s. per acre and fencing must be carried out. The Crown grant may be obtained when all conditions have been fulfilled, and purchase-money and fees have been paid.

(iv.) *Conditional Purchase of Small Blocks for Vineyards, Orchards or Gardens.* Areas of five to fifty acres at a price of not less than £1 per acre may be selected for these purposes. The purchase-money and survey cost must be paid in instalments within three years. The land must be fenced and one-tenth of the area planted with vines, fruit trees or vegetables.

(v.) *Conditional Purchase of Grazing Lands.* Lands suitable for grazing purposes only, and not within an agricultural area, may be selected at a price not less than 3s. 9d. per acre, which is payable half-yearly at the rate of one-twentieth of the total purchase-money. The maximum area is 5000 acres, and the minimum area 500 acres, unless the land adjoin an applicant's holding, when the minimum area is 300 acres. Conditions pertaining to residence, improvements and fencing must be fulfilled.

(vi.) *Free Homestead Farms.* Any male person of 16 years of age and upwards, not holding more than 100 acres within the State, may select 10 to 60 acres on lands opened for free homestead farms in the South-west, Central, or Eucla division. The holder or approved agent must reside six months of the year for the first five years on the holding, and improvements at the rate of four to six shillings per acre per annum for seven years must be carried out. Part of the improvement money must be expended on fencing, which must be completed in seven years. The Crown grant for a homestead farm within a surveyed block will not be issued separately unless the holder pays the prescribed survey fees and 30s. for the Crown grant.

(vii.) *Conditional Auction Sales.* Sales of town and suburban lands at auction have already been referred to (see § 5, 6, above). For suburban lands set apart for cultivation the payment of the purchase money is extended over five years; the land must be fenced within two years, and cultivation must be carried on.

(viii.) *Areas Alienated Absolutely under Forms of Conditional Purchase, 1901 to 1911.* The following table shews the area of the selections for which grants were issued, the prescribed conditions having been fulfilled, during the year 1901 and from 1906 to 1911.

Particulars as to the total areas alienated absolutely, and in process of alienation, are given in a later part of this section. (See § 11).

\* For year ended 30th June. 1. Provisions repealed by Act of 1906.

2. Closer settlement. (See § 8, 7, hereinafter.)

Particulars as to the total areas in process of alienation are given in a later part of this section. (See § 11.)

**7 Tasmania.**—The various types of conditional purchases in this State are as follows:—(i.) Selection of rural land; (ii.) homestead areas; (iii.) selection in mining areas; and (iv.) sales by auction on credit, either of town or rural lands. Upon all first-class lands purchased or selected under the Acts now in force habitual residence is

necessary for five years, commencing to run two years after the date of purchase, and must be continuous; but on land within a mining area the necessary period of residence is reduced to three years. If purchased at auction on credit all lands (town or rural) must be improved to the value of a sum at least equal to the sale price of the land. No person may hold more than 200 acres of first-class, 250 acres of second-class, and 500 acres of third-class lands on credit at one time. The Lands Department advances four-fifths of the survey fee to the selector of first-class land, but for lands purchased by auction and for second and third-class lands, the survey fee must be paid in full. The amount of this fee ranges according to the class and area of land from £4 10s. to £20.

(i.) *Selection of Rural Lands.* From 15 to 500 acres according to the quality of the land may be selected. The cash price ranges from 5s. an acre upwards, payable with interest over terms of 14 to 18 years. The conditions as to residence on first-class land and as to improvements on all classes are as stated above.

(ii.) *Selection of Homestead Areas.* 50 acres of first-class land at the price of £1 an acre with one-third added for credit, may be selected as a homestead area. Provision is made for easy payments, extending over a term of 19 years. A grant will be issued upon fulfilment of the conditions pertaining to improvements and residence.

(iii.) *Selection in Mining Areas.* From 10 to 100 acres in a proclaimed "Mining Area" may be selected as first-class agricultural land. The terms as to payment of purchase-money are the same as in the case of selection of rural lands, mentioned above.

(iv.) *Conditional Sales on Credit.* Both town and rural lands may be sold on credit, either at auction or by private contract. In the case of sales of town lands on credit, improvements may be required to be effected. Such improvements are obligatory in the case of credit purchase of rural lands. Residence for five years is necessary in the case of a credit purchase of first-class rural land (except lands within a mining area). The purchase-money is payable over a term of fourteen years.

(v.) *Areas Sold Conditionally, 1901 to 1910.* The following table shews the areas alienated absolutely under systems of conditional purchases and sales on credit, the conditions having been fulfilled, and also shews the areas sold conditionally and the applications for conditional purchases received and confirmed, during the year 1901 and from 1905 to 1910, inclusive:—

1. Including selections and sales on credit.

Particulars of total areas alienated and in process of alienation are given hereinafter. (See § 11.)

## § 7. Leases and Licenses.

**1. Introduction.**—Leases and licenses are issued in all the States for various terms and upon various conditions. In Victoria, Queensland, and South Australia perpetual leases are issued for an indefinitely long period upon payment of an annual rent, while in all the States leases or licenses of comparatively large areas may be obtained for pastoral purposes. Provision has also been made in all the States for convenient forms of leases and licenses for various special purposes, and also for special classes of lands. The leases and licenses dealt with below are exclusive of those issued under Closer Settlement and kindred Acts, and also of those issued for mining and auxiliary purposes. (See § 8 and 9 hereinafter.)

**2. New South Wales.**—The following are the various types of leases and licenses issued in this State:—(i.) Conditional leases; (ii.) conditional purchase leases; (iii.) settlement leases; (iv.) improvement leases; (v.) annual leases; (vi.) residential leases; (vii.) special leases; (viii.) snow leases; (ix.) pastoral leases; (x.) scrub leases; (xi.) inferior lands leases; (xii.) occupation licenses; (xiii.) Western lands leases.

(i.) *Conditional Leases.* Before applying for a conditional lease it is necessary to apply for a residential conditional purchase, in virtue of which such a lease may be held. The area of land conditionally leased may not be less than 40 acres, nor more than three times the area of the conditional purchase, nor must the area of the two together exceed, except by permission, 1280 acres in the Eastern, or 2560 acres in the Central division. The lease is for forty years, and the annual rent may, on application, be periodically determined by appraisalment. The whole or part of the lease may be converted into an additional conditional purchase.

The total area held under conditional leases on the 30th June, 1910, was 15,581,163 acres, the total rent therefrom being £189,509, as compared with an area of 15,480,660 acres at a rent of £184,929 on the 30th June, 1909.

(ii.) *Conditional Purchase Leases.* The intending settler can, for a small initial outlay by way of deposit, obtain a lease for forty years at a moderate rent and under easy conditions, together with a right of ultimately converting it into a freehold. No one may apply who already holds land other than town or suburban lands or land leased from a private individual. The conditions specified in Section 40 of the Crown Lands Act of 1895, and Section 14 of the Act of 1905, should be read by intending applicants. The rent equals 2½ per cent of the capital value of the land, which is determined every fifteen years by the Minister and Local Land Board. A condition of ten years' continuous personal residence on or near the holding is attached to holdings of this class.

The following statement gives particulars of conditional purchase leases applied for and confirmed during the year ended 30th June, 1910.

### NEW SOUTH WALES.—CONDITIONAL PURCHASE LEASES.

YEAR ENDED 30TH JUNE, 1910.

Applications Received.		Applications Confirmed.			
Number.	Area.	Number.	Area.	Capital Value.	Annual Rent
	Acres.		Acres.	£	£
288	171,474	267	147,902	174,651	3,755

The total area held under conditional purchase leases on 30th June, 1910, was 667,795 acres, compared with an area of 534,499 acres held on the same date in 1909.

Designs for the subdivision of large areas of country in the Dorrigo and Ellenborough River districts have been prepared. Roads are in course of construction to facilitate settlement.

(iii.) *Settlement Leases.* 1280 acres for agricultural, and up to 10,240 acres for grazing purposes may be selected as settlement leases; these areas may be increased by the Local Land Board by additional settlement leases.

The lease is for a term of forty years. The annual rent for every period of fifteen years may be fixed by the Minister or on appeal by appraisalment. The holding must be the *bond-fide* residence of the lessee. Regulations as to fencing and the destruction of vermin must be complied with. 1,280 acres of the lease may be converted into a homestead grant. Settlement leases may be converted into original conditional purchases. (See 267 *ante*.)

The following statement gives particulars of applications for settlement leases received and confirmed during the year ended 30th June, 1910:—

#### NEW SOUTH WALES.—SETTLEMENT LEASES.

YEAR ENDED 30TH JUNE, 1910.

Applications Received.		Applications Confirmed.		
Number.	Area.	Number.	Area.	Rent.
	Acres.		Acres.	£
207	525,807	193	571,816	6,025

The total area held under settlement leases on the 30th June, 1910, was 7,569,925 acres at an annual rent of £94,843, as against 6,671,742 acres at a rent of £85,602 on the same date in the preceding year.

(iv.) *Improvement Leases.* Scrub or inferior lands can be obtained in the Eastern or Central Divisions by auction or tender at a moderate annual rental for a lease term of twenty-eight years. 640 acres may be converted into a homestead selection. On the 30th June, 1910, an area of 6,884,330 acres was held under improvement leases, the total annual rent amounting to £51,884 or an average of 1½ pence per acre.

(v.) *Annual Leases.* Annual leases are renewable, and any number of leases, each of whose area may be 1920 acres, may be held by the lessee. The annual rent is notified in the *Cazette*. Security of tenure is not guaranteed. On the 30th June, 1910, there were current 10,302 annual leases for 5,405,694 acres, producing a yearly rental of £35,825.

(vi.) *Residential Leases.* Only lands situated within proclaimed gold or mineral fields are available for holdings of this class. An applicant must be a holder of what is termed a "miner's right," or "mineral license," and must pay a deposit of £1, provisional rental of one shilling per acre applied for, and the survey fee. The maximum area that may be leased is twenty acres, and the term may not exceed twenty-eight years. Fences and buildings must be erected. On the 30th June, 1910, there were 910 leases current for 13,387 acres at a rental of £1536.

(vii.) *Special Leases.* These leases are issued chiefly for industrial or business purposes, for the erection of dams, tanks, irrigation works, mills, etc. The area may not exceed 320 acres, except in the case of leases under secs. 89 and 92 of the Act of 1884, for such purposes as wharves, jetties, tramways, and irrigation works, and the term of a special lease may not exceed twenty-eight years. Special leases may be obtained either by application, purchase at auction, or by tender. A special lease may, under the Crown Lands (Amendment) Act 1908, be converted into (a) a conditional purchase lease, (b) a conditional purchase, (c) a homestead selection, (d) a settlement lease, or (e) a conditional lease. On the 30th June, 1910, there were 4692 leases current, comprising an area of 496,759 acres, at a total rent of £27,588, as compared with 419,469 acres at a rent of £25,583 in the preceding year.

(viii.) *Snow Leases.* Lands not held under pastoral or other lease, which may be usually covered with snow for a part of each year, may be leased in areas of not less than 1280 acres, nor more than 10,240 acres. Such leases are sold by auction or let by tender or by after-auction tender for terms not exceeding ten years. On the 30th June, 1910, there were 22 leases current, covering an area of 71,730 acres, at a rental of £389 per annum.

(ix.) *Leases under Section 18, Act of 1903.* The only existing pastoral leases under the Crown Lands Act are situated in the Western district (see para. xiii. hereof). Under the provisions of the amending Act of 1903, Section 18, leases may, on the recommendation of the Local Land Board, be granted to the registered holder of any pastoral lease, occupation license, or preferential occupation license, for an area not exceeding one-third of the total area comprised within the lease, license, or lease and license, at the date of expiration of the pastoral lease. The term of the lease may not exceed twenty-eight years, and the lease is subject to such rent and conditions as may be determined. At the end of the year 1909-10, there were 153 leases current for 1,136,141 acres at a rental of £10,381 per annum.

(x.) *Scrub Leases.* Leases of land declared as "Scrub Land" may be sold by auction or tender for a term of twenty-one to twenty-eight years. The total area held under scrub leases on the 30th June, 1910, was 2,234,314 acres at a total rent of £8347.

(xi.) *Inferior Land Leases.* Isolated or abandoned inferior lands may be leased by auction or tender for a period of from twenty to twenty-eight years. At the close of the financial year 1909-10 there were current thirty leases, covering 106,562 acres, at a rental of £275 per annum.

(xii.) *Occupation Licenses.* There are two forms of occupation licenses, viz., (a) preferential, consisting of the areas within expired pastoral leases, and (b) ordinary, which relate to the parts of holdings formerly known as resumed areas. Occupation licenses are granted annually by the Minister for Lands at rents determined by the Land Boards, and are terminable at notice. On the 30th June, 1910, there were 1391 occupation licenses current, embracing about 9,994,307 acres; seventy-three permissive occupancies over rifle ranges, etc., having an area of 7310 acres, were granted to the Commonwealth Government.

(xiii.) *Western Lands Leases.* Subject to existing rights and to the extension of tenure to the 30th June, 1943, which might be granted to a lessee on bringing his lease within the provisions of the Western Lands Act 1901 (see § 2, 1, ii., above), all forms of alienation, other than by auction and leases, prescribed by the Crown Lands Act, ceased to operate within this division from the 1st January, 1902. Lands are declared open for lease by notice in the *Government Gazette*. The annual rent is determined by the Commissioners for periods not exceeding ten years. No rent or license fee may be less than

2s. 6d. per square mile, but it may not be fixed at a higher rate than sevenpence per sheep on the carrying capacity of the land as determined by the Commissioners. All lands leased must be fenced. Special leases may be granted to discoverers of artesian water.

(xiv.) *Leases and Licenses Current, 1901 to 1910.* On the 30th June, 1910, there were 61,207 leases and licenses current under the Lands Department and the Western Land Board, comprising 127,755,783 acres of Crown Lands. Of these leases there were 40,368, comprising 22,002,710 acres, in the Eastern Division; 17,845, comprising 29,582,587 acres, in the Central; and 2,994, comprising 76,170,486 acres, in the Western Division.

The following table shows the areas held under various descriptions of leases and licenses at the end of the year 1901, and at the end of the financial years 1906-7, 1907-8 and 1908-9, and also the area and rental of leases current on the 30th June, 1910:—

The total annual rent derived from the leases and licenses issued by the Lands Department and the Western Lands Board amounted to £576,881, or an average of 1.084 pence per acre. Particulars regarding leases and licenses issued by the Mines Department are given in a later part of this section. (See § 9. *Occupation of Crown Lands for Mining Purposes.*)

3. **Victoria.**—The various types of leases and licenses (exclusive of Closer Settlement and Mines Department leases and licenses) which may be issued in this State are as follows:—(i.) Grazing area leases; (ii.) perpetual leases; (iii.) Mallee perpetual leases; (iv.) licenses of auriferous lands; (v.) swamp or reclaimed lands leases; (vi.) grazing licenses and pastoral leases; (vii.) leases and licenses for other than pastoral purposes and (viii.) State forests and timber reserves licenses.

(i.) *Grazing Area Leases.* These leases may be granted for any term of years expiring not later than the 29th December, 1920. The area leased must not exceed 200, 640, or 1280 acres of first, second, or third-class land respectively, for which the annual rent must not be less than 3d., 2d., and 1d. an acre for first, second and third class land respectively. Fencing or other improvement conditions are imposed, and the lessee must destroy all vermin and noxious weeds. The Crown reserves to itself the right to resume the land, in which case the lessee receives the value of his interest in the lease and improvements.

The lessee may select an agricultural or grazing allotment out of the land leased in the manner indicated above. (See § 6, 3 ii.)

(ii.) *Perpetual Leases.* The area of any Crown lands which may be granted to any one person under perpetual lease must not exceed three times the area which may be selected. The lessee must enclose the holding with a fence, carry out improvements, and conform with conditions as to residence. The rent payable by the lessee (other than for mallee, swamp, or reclaimed lands, which are specially dealt with under the respective headings), is 4 per cent. on the unimproved value of the land. The lessee may obtain an agricultural or grazing allotment license. (See § 6, 3, i.).

(iii.) *Mallee Perpetual Leases.* The rent payable for a mallee perpetual lease is  $1\frac{1}{4}$  per cent. per annum on the estimated unimproved value of the land and is reviewed every ten years. Residential conditions are not enforced if the prescribed improvements be carried out. The lessee may, at any time, surrender and obtain a mallee agricultural license (see above § 6, 3, iii.), or if the conditions under a license have been fulfilled, a mallee agricultural lease may be issued.

(iv.) *Licenses of Auriferous Lands.* Annual licenses may be issued for areas not exceeding 20 acres. Improvement and residential conditions must be complied with, and an annual fee paid. The land remains subject to mining conditions. The license may be surrendered and in lieu thereof an agricultural or grazing allotment may be acquired. (See above § 6, 3, i. and ii.)

(v.) *Swamp or Reclaimed Lands.* An allotment of 160 acres of swamp or reclaimed lands may be leased either for a term of 21 years, or under a perpetual lease, or under a conditional purchase lease (see § 6, 3, v.), or may be disposed of by public auction (see § 5, 3), on condition that (a) the holder will keep open all drainage works on and adjacent to the land, and (b) that the holder will make permanent improvements on the land to the value of 10s. an acre in each of the first three years, unless the Minister omits or modifies the condition. The rent under a perpetual lease is payable at the rate of 4 per cent. per annum on the value of the land. Under a conditional purchase lease, 3 per cent. half-yearly in 63 instalments pays off the purchase money and interest.

(vi.) *Grazing Licenses and Pastoral Leases.* Pastoral lands are now occupied under annual grazing licenses which are also issued for lands set apart as reserves, and Crown lands, not required for other purposes. There is no limit to the area which may be so held; the rental charged varies according to the grazing value.

(vii.) *Leases and Licenses for other than Pastoral or Agricultural Purposes.* Leases are granted of any Crown lands not exceeding (except in the case of leases for guano or other manure) three acres, for a term of not more than twenty-one years, and at an annual rent of not less than £5. These leases are granted for various purposes, such as—for obtaining guano, stone or earth; for sites of inns, stores, bridges, ferries, factories, quays, or landing places; for the working of mineral springs, and for the manufacture of salt. If the lessee fail to use the land *bona-fide* for the purpose for which he leased it, the lease may be cancelled at any time. Leases are also granted to persons who are willing to construct canals, docks, roads or tramways. Annual licenses are used for any of the purposes for which the leases are granted as above, and also for bee-farms. If the licensee of a site for a butter factory or creamery,

or for a residence, garden, inn, store, smithy, or similar building not within the boundaries of a city, has been in possession for five years and has constructed improvements on the land, provided that there are no objections to the alienation of the land on the ground of being auriferous or other reasons of a public nature, he may purchase the allotment at an appraised price and receive credit for all rent paid. No such licensee can purchase more than one site. Similar holdings under miner's right for areas not exceeding one acre may be purchased under Sec. 36, Mines Act 1890, after two and a half years' possession.

(viii.) *State Forests and Timber Reserves Licenses.* Grazing licenses, residence licenses, and licenses to cut timber are issued for lands situated within State forests and timber reserves, which are now controlled by the Forest Branch of the Department of Mines under the Forests Act 1907.

(ix.) *Areas held under Leases and Licenses, 1901 to 1910.* The following statement shews the areas of Crown lands occupied under leases and licenses at the end of the year 1901, and from 1906 to 1910 inclusive :—

**VICTORIA.—OCCUPATION OF CROWN LANDS UNDER LEASE OR LICENSE,  
1901 to 1910.**

4. **Queensland.**—In this State Crown lands may be occupied under the following types of leases and licenses:—(i.) Grazing farms; (ii.) grazing homesteads; (iii.) occupation licenses; (iv.) special leases; (v.) perpetual lease selections; (vi.) special licenses; and (vii.) pastoral leases. General conditions as to applications for selections have been mentioned above. (See § 6, 4.)

(i.) *Grazing Farms.* Under this form of tenure an applicant may not obtain more than 60,000 acres, and the term of the lease may not exceed twenty-eight years. In order to obtain priority of claim the applicant may tender an annual rent higher than the notified one, for the first seven years. As soon as the land is fenced the selector becomes entitled to a lease, and may thereafter mortgage the same. The lease is subject to the condition of occupation during the whole term. The Crown may resume the whole or part of the lease.

Particulars of grazing farms are given in paragraph (iii.) hereinafter.

(ii) *Grazing Homesteads.* Lands opened for grazing selections are available for fifty-six days as grazing homesteads only, at the same rental, and for the same term of lease as for grazing farms. Personal residence is necessary for the first 5 years; thereafter the lease is subject to the condition of occupation.

Particulars of grazing homesteads are given in paragraph (iii.) hereinafter.

(iii.) *Grazing Farms, Homestead and Scrub Selections, 1901 to 1910.* The following table shews the number of grazing farms, grazing homesteads, and scrub selections, for which applications were accepted during each year from 1901 to 1910:—

**QUEENSLAND.—GRAZING FARMS, HOMESTEAD AND SCRUB SELECTIONS,  
1901 to 1910.**

1909 ...	304	3,114,593	116	1,509,210	2	8,489	422	4,632,292
1910 ...	182	1,406,087	243	2,477,743	1 <sup>1</sup>	5,324	426	3,889,154

1 The Land Act 1910, makes no provision for the further selection of land as scrub selections.

The average rent in 1910 was  $\frac{7}{8}$ d. per acre for grazing farms and  $1\frac{1}{4}$ d. per acre for grazing homesteads.

Particulars of total areas held under leases and licenses are given in a later part of this section. (See § 11.)

(iv.) *Occupation Licenses.* Annual licenses are granted to occupy Crown lands which have been declared open for such occupation by notification in the *Gazette*. The rent is as specified by the notification or as bid by the licensee, but the Minister may by notice before the 1st September in any year increase the rent. The total number of licenses in force at the end of the year 1910 was 1729 comprising an area of 59,117 square miles, the total rent being £27,799. Particulars of the area held under license for previous years are given in a later part of this section. (See § 11.)

(v.) *Special Leases.* Leases of any portion of land may be issued for a term not exceeding thirty years to any person for any manufacturing, industrial, business or recreation purposes. Leases for a similar term may be issued for any country lands reserved for public purposes and which are infested with noxious weeds.

During the year 1910 there were 130 leases for special purposes granted, comprising an area of 6590 acres, the total annual rent being £472, and there were extant at the end of the year 475 such leases, reserving rents amounting to £2785 per annum. In addition, 35 leases of reserves, aggregating 21,918 acres, were granted at rentals amounting to £198 per annum; the total number of these leases of reserves in force at the end of the year being 105, reserving rents amounting to £452. Particulars of special leases for previous years are given in a later part of this section. (See § 11.)

(vi.) *Perpetual Lease Selections.* Land proclaimed to be open for agricultural farm selection (see § 6, 4, above) may also be opened for perpetual lease selection, and the latter mode may be conceded priority of application over the former. The rent for the first period of ten years of the lease is  $1\frac{1}{2}$  per cent. on the proclaimed purchase price of the land for

agricultural farm selection. The rent for each succeeding period of ten years is determined by the Land Court. Similar conditions of occupation and improvement as are prescribed for agricultural farms are attached to perpetual lease selections.

(vii.) *Special Licenses.* Licenses to cut timber or to dig for any stone, gravel, earth, shells, or guano, may be issued.

(viii.) *Pastoral Leases.* Existing pastoral leases are now deemed to be held under the Land Act 1910. Lands open for selection as pastoral leases may be leased for a period not exceeding thirty years. The annual rent, per square mile, for the first ten years must be notified. If the value of the holding become enhanced by the development of public works in the neighbourhood, or by the occurrence of minerals on the holding, the rent may be redetermined.

The following table shews the total areas of pastoral leases (including resumed parts) occupied under the various Acts at the end of the year 1901 and from 1906 to 1910, inclusive:—

**QUEENSLAND.—PASTORAL LEASES OCCUPIED UNDER VARIOUS ACTS, 1901 to 1910.**

Total ... ..	348,015	284,975	302,078	315,426	326,787	340,849

The gross area held at the end of the year 1910 for purely pastoral purposes (under *Occupation Licenses and Pastoral Leases*) was 399,965 square miles, at rentals aggregating £321,686 per annum. The area was 13,706 square miles greater than that for the previous year, and the rental was £10,352 greater. The average rent was 16s. 1d. per square mile, as against 16s. 1½d. for the previous year.

5. *South Australia.*—The following are the various types of leases and licenses which are issued in this State:—(i.) Perpetual leases; (ii.) miscellaneous leases; (iii.) grazing and cultivation leases; (iv.) reclaimed swamp leases; (v.) licenses for special purposes; (vi.) leases under the Pastoral Act 1904; and (vii.) leases with right of purchase. General information regarding applications for leases and agreements has been given above. (See § 6, 5.) Leases of lands in the Northern Territory are dealt with in the next succeeding part of this sub-section.

(i.) *Perpetual Leases.* All surveyed Crown lands are available for perpetual lease. The land is vested in the lessee in perpetuity, and the rent is determined for each period of fourteen years, at least twelve months before the expiration of each such period. The rent of land suitable only for pastoral purposes is fixed at pastoral rates. All minerals are reserved to the Crown, and the Crown may resume any part of the land for the purposes of roads, mining, etc., on making compensation to the lessee.

(ii.) *Miscellaneous Leases.* Leases of Crown lands, not exceeding 640 acres in extent, may be granted on such terms and conditions as the Governor may think fit to any *bona-fide* discoverer of any guano or other valuable substance or deposit (not including minerals).

The possession of wells and land contiguous thereto to the extent of one to five square miles may be resumed and leased by private contract or public auction.

Leases of Crown lands for the purpose of obtaining guano, stone, clay, for sites for stores, inns and factories may be acquired for a term not exceeding twenty-one years, and of forest reserve lands for a term not exceeding forty-two years.

(iii.) *Grazing and Cultivation Leases.* Every miscellaneous lease under any of the Crown Lands Acts for grazing and cultivation purposes, or grazing purposes only, is held to have been lawfully granted, and the power of resumption, if required for any purpose of public utility, is reserved to the Crown.

(iv.) *Reclaimed Swamp Lands.* The rent of these lands may not be less than 4 per cent. per annum on the cost of reclaiming and the unimproved value of the land. For the first three years a part only of this rent need be paid. The maximum area is fifty acres. (See also § 8, 6 iii. hereinafter.)

(v.) *Special Licenses.* Licenses to remove timber, stone, guano, manure, shell or seaweed from Crown lands, and for fishermen's residences and drying grounds, for manufactures, slaughter-houses or saw mills, for depasturing stock, or other approved purposes for any term not exceeding a year, may be granted by the Commissioner or any person authorised by him on payment of a fee as fixed by regulation.

(vi.) *Leases under the Pastoral Act 1904.* This Act deals with Crown lands which do not come within the scope of the Lands Acts.

(a) *General Provisions.* The area, situation, term of rent, price to be paid for improvements, and the cost of valuation of each block are published in the *Gazette*. The first year's rent and the lease fee must be paid within one month after allotment. A lease does not entitle the holder to mine, or to remove timber. The Commissioner may advance part of the cost of vermin-proof fencing. Blocks not exceeding 1000 square miles may be leased to charitable incorporated bodies for aboriginal reserves.

(b) *Terms and Conditions.* Unless already improved up to £3, every lessee is required to spend in improvements on the land a sum fixed by the Board, not exceeding ten shillings per mile per annum, until at least £3 per mile has been so expended. The term of the lease is from twenty-one to forty-two years. The rent is determined by the Board.

(c) *Resumption and Free Leases of Pastoral Lands.* The lessee is entitled to compensation for land resumed from his run, or for loss or depreciation in value of his lease caused by such resumption, and for improvements. If water is discovered by any person on any run, an area from one to five square miles contiguous to the water may be resumed. If the lessee discover an artesian supply on his run ten miles distant from any other artesian supply, he is entitled to 100 square miles of land surrounding the well, rent free for ten years.

Very little pastoral country was applied for or allotted during 1910, although 14,685 square miles at low rentals, once stocked, have been open to application for some years. In addition there are available about 148,000 square miles of unoccupied country. The area of land held under pastoral leases is 130,607 square miles at an annual rent of £24,595 and yearly instalments of purchase-money for improvements £12,806; also 12,260 square miles are held on annual permits at a rental of £1086.

(vii.) *Leases with Right of Purchase.* Under the Crown Lands Act of 1888, now repealed by the Crown Lands Act 1903, and the Pastoral Act 1904, leases were granted with a right of purchase for a term of twenty-one years, containing a right of renewal for a further term of twenty-one years and a right of purchase, exercisable at any time after the first six years at a price of not less than five shillings an acre. The renewed leases are now governed by Part V. Division V. of the Act of 1903.

(viii.) *Area held under Lease, 1901 to 1910.* The following table shews the area held under leases and licenses at the end of the year 1901, and from 1905 to 1910 :—

**SOUTH AUSTRALIA (Proper).—AREA UNDER LEASES AND LICENSES, 1901-1910.**

**6. Northern Territory.**—The system of land settlement in the Northern Territory is being reorganised by the Commonwealth Government. The various types of leases and licenses current are as follows :—(i.) Agricultural leases ; (ii.) pastoral leases ; (iii.) special leases ; (iv.) leases with right of purchase ; (v.) tropical products leases ; (vi.) leases for horsebreeding stations ; and (vii.) licenses. (See § 2, 4, ii.)

(i.) *Area held under Lease, 1901 to 1910.* The following table shews the total area held under lease at the end of the year 1901 and from 1906 to 1910 :—

**NORTHERN TERRITORY.—AREAS HELD UNDER LEASE, 1901 to 1910.**

**7. Western Australia.**—The following are the various types of leases and licenses issued in this State :—(i.) Pastoral leases ; (ii.) permits and licenses to cut timber ; (iii.) special leases ; and (iv.) licenses for quarrying.

(i.) *Pastoral Leases.* Leases are granted for pastoral purposes throughout the State, but the lands leased may be thrown open to selection by the Crown at any time upon giving twelve months' notice to the lessee. All pastoral leases expire on the 31st December, 1928. The smallest areas leased range from 3,000 to 50,000 acres according to the division, and the annual rents range from three shillings to twenty shillings for each 1000 acres. After the first two years the lease must be stocked to the extent of at least 10 head of sheep or one head of large stock for every 1000 acres comprised therein. On fulfilment of this condition, lessees on the Kimberley Division may obtain a reduction of one-half the rent.

(ii.) *Permits and Licenses to Cut Timber.* The alienation of forests and timber lands is now regulated by the Lands Act Amendment Acts of 1904 and 1906. The Governor is authorised to declare any Crown Lands to be a State forest or timber reserve, and to grant to persons desirous of erecting saw-mills permits to cut timber in any State forest or timber reserves, or on any Crown land, upon certain conditions. Licenses may also be granted to hew and fell timber for piles, poles, or baulks, subject to the payment by the licensee of royalties proportional to the measurement of the timber hewn or felled. The amount of all fees or royalties is fixed by the Governor.

(iii.) *Special Leases.* Crown land may be leased for the purpose of obtaining guano or other manure, and for the collection of salt, for a term not exceeding twenty-five years; and for the purpose of procuring stone, earth, mineral water; the production of electricity, gas and water; the erection of inns, stores, bridges, and jetties, for a period not exceeding twenty-one years.

(iv.) *Licenses for Quarrying.* Licenses are granted to any person to quarry and dig for any rock, soil, or other material, on any lands vested in the Crown, not being on a goldfield or in a mining district.

(v.) *Areas Held under Leases and Licenses, 1901 to 1911.* The following table shows the number and area of leases and licenses issued during the year 1901, and from 1906 to 1911:—

**WESTERN AUSTRALIA.—LEASES AND LICENSES ISSUED, 1901 to 1911.**

1. For financial year ended the 30th June. 2. No timber leases granted since 1903.

Particulars as to the total area occupied under leases and licenses are given in a later part of this section. (See § 11.)

8. *Tasmania.*—The several forms of leases and licenses in this State are as follows:—(i.) Grazing leases; (ii.) miscellaneous leases; (iii.) timber licenses; and (iv.) occupation licenses.

(i.) *Grazing Leases.* Grazing leases of unoccupied country may be offered at auction, but such runs are liable at any time to be sold or occupied by virtue of a license for other than pastoral purposes, and to be otherwise alienated and dealt with. The rent is payable in advance. The land may be resumed by the Crown, which compensates the lessee for his improvements.

(ii.) *Miscellaneous Leases.* The Governor in Council may grant leases for a period not exceeding fourteen years of any land bordering upon a navigable river, or on the sea, if required for the purpose of constructing wharves, docks, jetties, or any other works of public utility, also for the purpose of constructing watercourses, or of erecting a manufactory, mill, or such other work, or for constructing railways or tramways.

(iii.) *Timber Licenses.* Temporary licenses for a period not exceeding five years may be granted for the purpose of felling timber, or for removing gravel, clay, or stone, etc., on or from particular localities.

(iv.) *Occupation Licenses.* Occupation licenses may be issued for a period not exceeding twelve months upon payment of a fee of five shillings. The licensee may occupy one quarter of an acre within any mining area.

Residence land licenses for mining areas are granted on similar terms upon payment of a fee of ten shillings, and business licenses upon payment of a fee of twenty shillings.

(v.) *Area held under Leases and Licenses.* The following table shews the areas of Crown lands occupied under leases and licenses at the end of the year 1901 and from 1906 to 1910:—

#### TASMANIA.—LEASES AND LICENSES, 1901 to 1910.

### § 8. Closer Settlement.

1. *Introduction.*—In all the States, Acts have been passed authorising the Governments to repurchase alienated lands for the purpose of cutting them up into blocks of suitable size and throwing them open to settlement on easy terms and conditions. Special Acts have also been passed in several of the States authorising the establishment on particular lines of co-operative communities, village settlements, and labour colonies. Lands may be acquired either compulsorily or voluntarily in New South Wales, Victoria, Queensland, and Tasmania, but only voluntarily in South Australia and Western Australia.

The following table gives particulars up to the latest available date of operations under the Closer Settlement Acts for each State and the whole Commonwealth:—

#### CLOSER SETTLEMENT.—TOTAL AREAS ACQUIRED AND ALLOTTED UP TO

30th JUNE, 1911.

\* Particulars are for calendar years. † Up to the 31st December, 1909. ‡ Up to 31st December, 1910.  
 || To 30th June. § Including 4581 acres of Crown lands.

2. **Government Loans to Settlers.**—For the purpose of promoting pastoral, agricultural, and similar pursuits, and with the object of assisting settlers in erecting buildings and carrying out improvements on their holdings, general systems have been established in all the States, under which financial aid is rendered to settlers by the State Governments. These general systems are more particularly referred to in the section in this book dealing with "Agriculture." In many of the Closer Settlement and similar Acts, however, special provisions have been inserted with the object of lending money to settlers taking up land under these Acts, with which to build homes or effect improvements. The principal features of these provisions are referred to below.

3. **New South Wales.**—Under the Closer Settlement Act of 1901 provision was made for the acquisition of private lands or of Crown lands held under lease, for the purpose of closer settlement. No power of compulsory resumption was conferred by the Act, which was consequently practically inoperative. Under the Closer Settlement Act of 1904, as amended in 1906, 1907, and 1909, and the Closer Settlement Promotion Act 1910, the Government is empowered to resume private lands, either by agreement or by compulsory purchase, and to alienate them on favourable terms to persons who desire to settle and make homes for themselves and their families on the soil. The administration of the Closer Settlement Acts is in the hands of a Board. Land acquired under the Acts is subdivided into blocks or farms, and by notification in the *Government Gazette* is declared to be a settlement purchase area available for application. The *Gazette* notice also gives all necessary information as to the class and character of the land, and the capital value, area, etc., of each block or farm.

(i.) **Closer Settlement Purchase.** Under this tenure a settler may acquire the freehold of the land under a system of deferred payments. A deposit of 5 per cent. of the notified value of the settlement purchase must be lodged with the application, and a similar amount by way of instalment, paid annually until the purchase-money, together with interest at the rate of 4 per cent., is paid off. Under this system the balance due to the Crown will be paid off in thirty-eight years, the holding then becoming a freehold. A condition of residence for ten years attaches to every settlement purchase. Under the amending Act of 1909 postponement of the payment of instalments may be granted by the Minister, subject to the conditions (a) that additional improvements to the value of the amount postponed be made on the land within twelve months, and (b) that interest at 4 per cent. per annum be paid on the amount postponed.

(ii.) *Closer Settlement Annual Leases.* Leases for areas not exceeding 320 acres may be obtained under the Closer Settlement Acts at a rent fixed by the Board. They may be renewed from year to year on payment of the yearly rent in advance. The land held under this form of lease may be applied for by the lessee as a settlement purchase.

(iii.) *Sales by Auction.* Areas within closer settlement districts necessary for township settlement may be set apart by notification in the *Gazette*. Allotments, each of which may not exceed half an acre in extent, within such areas may be sold by auction.

(iv.) *Private Sub-division.* An important feature of the amending Act of 1909 is the power which is given to owners for private sub-division of lands which have been notified by proclamation for resumption. Upon the owner entering into an agreement with the Minister to sub-divide the land and to sell or lease in such areas and subject to such terms as may be agreed upon, the Minister is empowered to suspend the power of resumption for a period not exceeding two years.

(v.) *The Closer Settlement Promotion Act 1910.* Under this Act any three or more persons who are qualified to hold settlement purchases and who desire to purchase from the same owner any private lands may, upon entering into an agreement with the owner and subject to valuation by the Advisory Board and the Savings Bank Commissioners, acquire such lands through the Minister on Closer Settlement conditions. The maximum sum which may be advanced for the purposes of this Act may not exceed £1,000,000 in any financial year.

(vi.) *Areas Acquired and Disposed of, 1901 to 1911.* Up to the 30th June, 1911, ten areas had been opened for settlement under the Closer Settlement Acts.

The following statement gives particulars of the areas opened up to the 30th June, in each year from 1906 to 1911:—

#### NEW SOUTH WALES.—CLOSER SETTLEMENT AREAS, 1906 to 1911.

Year Ended 30th June.	Areas.			Capital Values.		
	Acquired Lands.	Adjoining Crown Lands.	Total.	Acquired Lands.	Adjoining Crown Lands.	Total.
	Acre.	Acre.	Acre.	£	£	£
1906 ...	53,523	13,166	66,689	137,795	24,589	162,384
1907 ...	142,403	25,712	168,115	438,490	37,178	475,668
1908 ...	142,403	25,719	168,122	438,362	37,192	475,554
1909 ...	321,209	28,064	349,273	1,246,508	42,878	1,289,386
1910 ...	461,723	83,045	544,768	1,624,858	147,977	1,772,835
1911 ...	591,830	86,127	677,957	2,297,194	148,749	2,445,943

The total area thus set apart has been divided into 1396 farms comprising 653,144 acres, the remaining 24,802 acres being reserved for recreation areas, roads, stock routes, schools, etc. Up to the 30th June, 1911, 1316 of these farms had been allotted.

The Murrumbidgee Irrigation Act 1910 provides for the acquisition of 1,668,000 acres near Narrandera, in Riverina, for irrigation and other purposes in connection with the Burrinjuck Irrigation Scheme.

The following table gives particulars as to the disposal of the farms by closer settlement purchase for each year ended the 30th June, 1905 to 1911:—

## NEW SOUTH WALES.—CLOSER SETTLEMENT ALLOTMENTS, 1905 to 1911.

Year.	Farms Allotted by Board to Date.			Total Amount received in respect of Settlement Purchases.	Total Number of Applications received.
	Number.	Area.	Value.		
	No.	Acres.	£	£	No.
1904-5 ...	49	18,568	56,235	2,817	50
1905-6 ...	98	48,567	120,445	6,560	120

1908-9 ...	683	312,075	1,192,293	73,193	953
1909-10 ...	941	471,639	1,731,480	147,945	1,209
1910-11 ...	1,316	604,319	2,420,035	220,720	1,328

(vii.) *Labour Settlements.* These settlements were founded by the Labour Settlements Acts 1893 and 1894, which have now been amended and repealed by the Labour Settlements Act 1902. Land may be set apart for lease for a period of 28 years as a labour settlement under the superintendence of a Board of Control. The functions of the Board of Control are to enrol members of the settlement; to make regulations concerning the work to be done; to apportion the work among the members; and to distribute the wages and profits. The Minister is empowered to grant financial assistance to the Board of Control.

(a) *Settlements Established.* Only two settlements had been established under the Act up to the 30th June, 1911. Particulars are given in the following statement:—

## NEW SOUTH WALES.—PARTICULARS OF LABOUR SETTLEMENTS, 30th JUNE, 1911

Settlement.	Date of Establishment.	Area.	Population.				Value of Improvements.	Loans Advanced by the Government.
			Men Enrolled.	Women.	Children.	Total.		
		Acres.					£	£

Total ...	—	1,795	36	39	122	197	4,390	4,900

4. *Victoria.*—(i.) *Closer Settlement Acts, 1904 to 1909.* The Closer Settlement Acts (see § 2, p. 264, hereof) are administered by a Board consisting of three persons appointed by the Governor-in-Council, and intrusted with power to acquire, either compulsorily or by agreement, private lands in any part of the State for the purpose of Closer Settlement. The Board may dispose of all lands acquired, either Crown lands or repurchased lands, on conditional purchase leases either as (a) farm allotments not exceeding £2500 in value, (b) workmen's homes allotments not exceeding £100 in value, and (c) agricultural labourers' allotments not exceeding £200 in value. The price of the land must cover the cost of the original purchase and the cost of all improvements. Land acquired by the Board may also be sold in small areas in fee simple as sites for churches, public halls, butter factories, creameries, or recreation reserves.

The Board may approve of an agreement between an owner and one or more persons to purchase a farm or farms, not exceeding £2500 in value. On the property being acquired by the Board, the applicant obtains a lease under Closer Settlement conditions.

(a) *Closer Settlement Leases.* Every conditional purchase lease is for such a term of years as may be agreed upon by the lessee and the Board, and payment must be made with interest at  $4\frac{1}{2}$  per cent. per annum by sixty-three half-yearly instalments, or such lesser number as may be agreed upon. Under the amending Act of 1906 postponement of payment of instalments may be granted by the Board up to 60 per cent. of the value of improvements. The lessee must personally reside during eight months in each year on his allotment, and for six years he must carry out prescribed improvements. Thereafter he may, with permission, transfer, assign, mortgage or sublet his allotment. After twelve years, if all conditions have been fulfilled, a Crown grant will be issued. In the case of workmen's homes allotments the land must be fenced within one year, and a dwelling-house to the value of at least £50 must be erected within the same time; within two years further improvements must be made to the value of at least £25. As regards agricultural labourers' allotments, a dwelling-house to the value of at least £30 must be erected within one year, and within two years the allotment must be fenced.

(b) *Advances to Settlers.* The Board may make advances for the purpose of fencing and building dwelling-houses, and is empowered to erect dwelling-houses, outbuildings, or improvements on any allotment at a cost not exceeding £250 for any one allotment. Any sum so expended is repayable by instalments extending over a prescribed period, not greater than twenty years. Provision has also been made for deferring payments in cases of hardship, as well as for advances (to the extent of 60 per cent. of the value of the improvements) to enable work to be carried on. Special advances may also be granted to purchase wire netting in rabbit-infested districts.

(c) *Loans to Municipalities.* Under the Amendment Act of 1907 loans may be made out of the Closer Settlements Fund for the purpose of carrying out any road-making or other public works within the boundaries of an estate.

(d) *Areas acquired and made available for Closer Settlement, 1901 to 1911.* The following statement shews the operations which have taken place in Victoria under the provisions of the Closer Settlement Acts, 1898 to 1910, up to the 30th June in each year from 1901 to 1911, inclusive:—

### VICTORIA.—CLOSER SETTLEMENT, 1901 to 1911.

Year ended 30th June.	Total Area Acquired by Government to Date.	Total Cost to Date.	How Made Available for Settlement.						Number of Applications Granted to Date.	Total Receipts to Date.	Repayments of Principal to Date.	Area Available for Settlement.

(ii.) *The Small Improved Holdings Act 1906.* Under this Act, which has been repealed, 2822 acres at a cost of £53,568 allotted to 260 settlers were purchased close to towns where industrial employment could be obtained by the settlers.

These settlements are now under the control of the Closer Settlement Board.

(iii.) *Village Communities.* The settlement of land by Village Communities is now provided for in the Land Act 1901, but is not availed of to any extent. Certain unalienated Crown lands were surveyed into allotments of one to twenty acres. The price is not less than twenty shillings an acre. Additional areas may be acquired by conditional purchase. The rent is a nominal one for 3 years. The total amount of monetary aid advanced up to the 30th June, 1911, was £67,379, of which sum the amount repaid to date was £37,236. After three years a lease may be obtained.

Particulars of areas in process of cultivation under the Act are given hereinafter. (See § 11, 3).

On the 30th June, 1911, there were 1199 settlers actually residing, and 150 not residing, but improving, making a total of 1349 in occupation. Including wives and children the total number in residence was 5500. At the same date the area under cultivation was 16,215 acres; the value of live stock £76,544, and of improvement, £204,730.

5. **Queensland.**—Under the provisions of the Closer Settlement Act of 1906 private lands may be re-purchased by the Crown, either by agreement or compulsorily.

(i.) *Compulsory Acquisition.* The owner of an estate in possession, the whole of which is proposed to be taken compulsorily, has the right to retain in one block, land of the value of £10,000 to £20,000 according to the value of the whole estate. The maximum sum which may be expended on the acquisition of land for the purpose of closer settlement is £500,000 in any one year.

(ii.) *Disposal of Land.* A sufficient part of the land acquired must be set apart for roads, public reserves, and townships, and the remainder is proclaimed open for selection as agricultural farms under the Land Act 1910, which repealed the Land Acts 1897 to 1909; the term of the lease is 25 years. The rent to be paid for the first year is equal to £10 for every £100 of the purchasing price; and (no payment being required during the second, third, or fourth years) an annual payment of £8 2s. 7d. for every £100, continued from the fifth to the twenty-fifth year will, at the end of the term, have paid off the principal sum together with interest.

(iii.) *Areas Acquired and Selected, 1901 to 1910.*—The operations under the Closer Settlement Acts resulted up to the end of the year 1910 in the acquisition by the Government of twenty-seven estates, of a total area of 537,449 acres, at a total cost of £1,490,489. The following table gives particulars of the operations under the above Acts at the end of each year from 1901 to 1910, inclusive:—

QUEENSLAND.—CLOSER SETTLEMENT, 1901 to 1910.

Year.	Number of Estates Acquired.	Total Area Acquired to Date.	Total Amount of Purchase Money.	Total Area Selected to Date.
		Acres.	£	Acres.
1901 ... ..	15	132,760	335,056	124,710
1902 ... ..	19	266,925	699,815	230,149
1903 ... ..	20	286,952	790,445	253,096
1904 ... ..	21	308,605	877,058	277,939
1905 ... ..	21	308,605	877,058	289,878
1906 ... ..	24	381,724	968,844	301,908
1907 ... ..	26	409,563	1,057,463	340,405
1908 ... ..	27	456,742	1,208,013	364,334 <sup>1</sup>
1909 ... ..	27	497,095	1,349,251	409,381 <sup>1</sup>
1910 ... ..	27	537,449	1,490,489	437,496 <sup>1</sup>

1. In addition there were at the end of the year 1910, 10,821 acres sold at auction and 3129 acres retained by the Government for experimental farms and other sales.

The total area opened for selection up to the end of the year 1910 was 512,681 acres, of which 437,496 acres had been selected by 1798 selectors at a total purchasing price of £1,323,827. There remained 75,185 acres unselected or reserved. The total amount of rent paid up to the same date was £678,014, the amount in arrear being £9,045. At the end of the year 1910 there were 1798 selectors holding 1694 agricultural farms, 394 unconditional selections, and two prickly pear infested selections. In addition, land and improvements to the value of £75,084 had been sold at auction.

(iv.) *The Special Agricultural Selections Acts 1901 to 1905.* These Acts were partly repealed by the Amending Act of 1909, which was in its turn repealed by the Land Act 1910. Under the last Act land may be set apart for members of bodies of selectors who desire to settle in the same locality. The terms and conditions are similar to those in force for single selectors. Every group selection shall be subject to the condition of personal residence during the first five years of the term.

The Special Agricultural Selections Act 1905 provides that financial aid may be granted to all or any of the members of a body of selectors of agricultural homesteads. Advances may also be made to each selector for a value not exceeding £80 for the purpose of buying tools, rations, stock and poultry.

The portions opened for "group settlement" in 1910 numbered 924, and comprised a gross area of 748,172 acres. Up to the end of that year 720 portions, comprising 628,423 acres, valued at £343,406 had been applied for by members of the bodies of settlers for whom they were opened. The greater part of the remaining lots have since been selected.

6. *South Australia.*—Under the provisions of the Crown Lands Acts the Commissioner may repurchase land for the purposes of closer settlement at a cost not exceeding £600,000 in any two years.

Reference has already been made to the provisions of the Irrigation and Reclaimed Lands Acts 1908, regarding the settlement of reclaimed lands. (See § 7, 5 iv.)

(i.) *Disposal of Land.* The Crown Lands Act Further Amendment Act 1910, enlarges the value of the blocks into which estates may be subdivided for closer settlement purposes from £2000 to £5000 unimproved value. The purchase money with interest thereon at 4 per cent. per annum is payable in seventy half-yearly instalments, the first ten payments being interest only.

For the first five years, improvements to the value of £3 for every £100 of the purchase money must be yearly effected.

(ii.) *Areas Acquired and Selected.* The following table shews the area of land acquired by the Government in South Australia for the purposes of closer settlement and the manner in which the same has been disposed of under the provisions of the Crown Lands Acts:—

**SOUTH AUSTRALIA.—CLOSER SETTLEMENT, 1902 to 1910.**

Year.	Area of Lands Repurchased to 31st Dec.	Agreements with Covenants to Purchase.	Total Area Leased as Homestead Blocks.		Perpetual Leases.	Miscellaneous Leases.	Sold.	Remainder Un-occupied (including Roads).
			Right of Purchase.	Perpetual Lease.				
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1902	156,481	—	2,717	3,073	90,128	309	403	59,851
1903	156,481	60,331	2,487	2,895	89,378	274	566	550
1904	174,063	81,566	2,268	2,795	86,881	295	626	542
1905	214,752	116,854	2,057	2,907	82,431	295	736	9,472
1906	260,355	168,930	1,930	2,482	78,642	295	1,987	6,089
1907	326,576	235,673	1,758	2,306	77,017	211	4,808	4,803
1908	354,454	261,457	1,590	1,953	74,651	281	9,142	5,380
1909	500,464	296,013	1,381	1,779	75,045	50,056	24,641	51,549
1910	527,501	327,480	1,241	1,510	62,386	40,077	35,266	29,541

During the financial year 1910-11 four estates aggregating 71,686 acres were repurchased. The total area repurchased at the 30th June, 1911, was 597,624 acres, the purchase money being £1,760,635. Of that area 509,893 acres had been allotted to 1587 persons, the average area to each being 321 acres.

(iii.) *Irrigation Areas.* Under the Irrigation and Reclaimed Lands Act 1908, 1909 and 1910, special provisions are made for granting perpetual leases of reclaimed lands. The maximum area of irrigable or reclaimed land one person may hold in any irrigation area is 50 acres. Each block is offered on perpetual lease, at a rent not less than a sum equivalent to 4 per cent. on the unimproved value of the land, plus the cost of reclaiming. For the first year only one-quarter of the fixed rent is payable, for the second year one-half, and for the third year three-quarters.

(a) *Irrigation Boards.* Irrigation Boards, to whom advances of money may be made by the Commissioner for Crown Lands, may be constituted in irrigation areas.

(b) *Government Loans to Settlers.* Under Part V. of the Act a fund is to be constituted, to be called the Lessees of Reclaimed Lands Loan Fund, consisting of moneys provided by Parliament, to be advanced to assist lessees to make improvements on their lands. The total amount owing by any lessee may not exceed £300. In cases of hardship the time may be extended by the Commissioner, the deferred payments carrying interest at 5 per cent.

In January, 1910, the Waikerie village district was proclaimed an irrigation area.

(iv.) *Village Settlements.* Out of the reserved lands the Commissioner is directed to set apart for the purpose of village settlement such land as he shall consider fit (a) for horticultural purposes, to be termed "horticultural land;" (b) for agricultural purposes.

to be termed "commonage land;" and (c) land whereon any irrigation works are situated. Land so set apart is to be divided as follows:—Horticultural lands into blocks of as nearly as practicable equal unimproved value, and of about ten acres in extent; and the commonage lands into one or more blocks of such area as the Commissioner may determine, and the lands so set apart in each case form the district of the association. No person may hold more than two blocks. Commonage lands may only be leased to the association on perpetual lease, and all unleased horticultural blocks are under the control of the association. Every member of each association must provide or contribute towards the maintenance and regulation of irrigation works and the care and cultivation of the commonage lands.

As the Waikerie district has been proclaimed an irrigation area under the Irrigation and Reclaimed Lands Acts 1908 and 1909, and the settlers at both Ramco and Kingston have applied to be dealt with under the same Acts, this would leave only the Lyrrup Village Settlement, which is in a better position, both financially and as regards population, than the others.

(v.) *Homestead Blocks.* Aboriginal reservations, except those at Point McLeay or Point Pearce, and other suitable lands may be offered as homestead blocks on perpetual lease or lease with a right of purchase. Each block must not exceed £100 in value, and residence by a member of the family for at least nine months of every year is compulsory.

There is now hardly any demand for homestead blocks, persons generally preferring small blocks of repurchased or Crown lands on ordinary conditions. The system appears to be of value only in centres of population where work can be obtained, and within a reasonable distance of a school.

(a) *Advances to Blockholders.* Advances up to £50 may be made by the Commissioner to any homestead blockholder who has complied with the conditions of his lease or agreement, to assist in erecting permanent buildings on the blocks, or other improvements. Advances must be repaid, with interest at 4 per cent. per annum, by twenty equal instalments, commencing twelve months from the date of advance. The Commissioner may, in case of hardship, extend the time of repayment, deferred payments bearing interest at 5 per cent. per annum. The total amount advanced up to the 30th June, 1911, was £40,457, of which £37,468 had been repaid.

(b) *Particulars of Homestead Blocks.* The total number of leases and agreements of which purchase had been completed to the 31st December, 1910, was 1669, comprising 25,035 acres, at a purchase price of £56,240 or an average of £2 5s. per acre, the average of each holding of which purchase was completed being 15 acres.

7. *Western Australia.*—Under the Agricultural Lands Purchase Act 1909, which repealed and consolidated the Agricultural Lands Purchase Acts 1896 to 1904, sums not exceeding in the aggregate £400,000 may be expended on the repurchase of Crown lands near the railways, suitable for immediate cultivation.

(i.) *Acquisition of Land by the Government.* For the purpose of carrying out the provisions of the Acts, a Land Purchase Board has been constituted. Advised by the report of the Board, the Minister, with the approval of the Governor, may make a contract for the acquisition of the land by surrender at the price fixed by the Board, or at any lesser price.

(ii.) *Sale of Repurchased Land.* After reservation of part of the repurchased land for public purposes, the remainder is thrown open for selection. The maximum quantity held by one person must not exceed 1000 acres; in special cases 2000 acres.

(iii.) *Conditions of Sale to Selectors.* The maximum selling price of any re-purchased land is equal to 105 per cent. of the actual cost of the land plus the cost of any improvements made upon it. A lease for twenty years is issued at a rent, the half-yearly instalments of which are to be at the rate of £3 17s. 9d. for each £100 of the selling price. Improvements must be made to the value of one-fifth of the purchase-money every two years of the first ten years of the lease. One-half of the land must be fenced within the first five years and the whole within ten years. Loans may be granted to selectors under the provisions of the Agricultural Bank Acts.

(iv.) *Areas Acquired and Selected, 1901 to 1911.* The transactions conducted under the provisions of the Agricultural Lands Purchase Acts are shewn for each year since 1901 in the subjoined table :—

WESTERN AUSTRALIA.—CLOSER SETTLEMENT, 1901 to 1911.\*

Year.	Total Area Acquired.	Total Purchase- money.	Roads, Reserves, etc.	Total Area made available for Selection.	Area Se- lected during the Year.	Total Area oc- cupied to Date.	Balance of Area available for Selection.	Total Re- venue received to Date.

\* Since the year 1904 the figures are given as up to the 30th June instead of the 31st December; 1905 figures are therefore omitted.

On the 30th June, 1911, the total expenditure, exclusive of purchase-money but including interest, was £58,378, which left a balance of £71,008. At the same date the amount invested as sinking fund was £72,300. During the year 1910-11 two properties, namely those at Avondale and Bowes, having a total area of 47,868 acres, were thrown open to settlement.

(v.) *Working Men's Blocks.* Any person not already holding land within the State is entitled to obtain a lease of lands which have been surveyed and thrown open for selection as working men's blocks. The maximum area that may be selected by one person is, if within any town or goldfield, half an acre, or five acres elsewhere. The price is not less than twenty shillings per acre, payable in ten years by half-yearly instalments. Residence and improvement conditions must be fulfilled. At the expiration of the lease, or at any time after five years from the date of the commencement of the lease, upon compliance with all conditions and upon payment of the full purchase-money and fee, a Crown grant will be issued. No person who has once held a working-man's block is allowed to select another, except under very special circumstances.

The following table shews the number and area of accepted applications for working men's blocks during each year, as well as the total number and area in existence at the end of the year 1901 and for each year from 1905 to 1911, inclusive :—

## WESTERN AUSTRALIA.—PARTICULARS OF WORKING MEN'S BLOCKS, 1901 to 1911

Year ...	...	1901.	1905.	1906. <sup>1</sup>	1907. <sup>1</sup>	1908. <sup>1</sup>	1909. <sup>1</sup>	1910. <sup>1</sup>	1911. <sup>1</sup>

## NUMBER AND AREA OF BLOCKS OCCUPIED AT END OF YEAR.

Number	7	211	229	401	387	408 <sup>1</sup>	440	388
Area in Acres	31	333	393	489	537	667	719	722

1. For financial year ended 30th June.

During the years 1907 to 1911 residential blocks on the goldfields were made available as workingmen's blocks, instead of under residential lease, as before.

8. **Tasmania.**—The principles of closer settlement were not introduced into Tasmania until the Closer Settlement Act of 1906 was passed. Under this Act, which was amended in 1908, power is given to the Minister for Lands, on the recommendation of the Closer Settlement Board, to purchase by agreement private land in any part of Tasmania for the purpose of closer settlement, and also to deal with and dispose of any unoccupied Crown land for the same purpose.

(i.) *Disposal of Land.* Lands so bought under the Act are subdivided into farm allotments of a suitable size—not exceeding £1500 in value—and are disposed of by way of lease for ninety-nine years. The rental is determined by the Board at a rate not exceeding 5 per cent. per annum on the capital value of the land. Any lessee who has fulfilled the conditions under the Act may, after the expiration of ten years of the term of the lease, purchase the land leased to him. Under the Amendment Act of 1908 the Minister is authorised to lease any allotment of land exceeding £1500, but not exceeding £4000 in value, exclusive of buildings.

A lessee must improve his holding to a value equal to  $2\frac{1}{2}$  per cent. on the capital value of the land in each of the first ten years of the term of his lease, and he must, within two years of the date of the lease, personally reside on his allotment during at least eight months of each of the following nine years.

(ii.) *Advances to Settlers.* The total advance by the Government in aid of the cost of effecting improvements to any one lessee must not exceed one-fifth of the capital value of such lessee allotment, and must not exceed pound for pound the sum expended by him in fencing and building. Such advances must be repaid, together with interest at 5 per cent., in equal half-yearly instalments.

(iii.) *Special Sales.* The fee-simple of land acquired may be disposed of by sale on the recommendation of the Board as sites for churches, public halls, dairy factories, fruit-preserving factories, mills, or creameries. The area sold may not exceed one acre in the case of a church or public hall, or five acres in other cases.

(iv.) *Areas Acquired and Selected.* Up to the 30th June, 1911, six areas, viz., Cheshunt, Mount Pleasant, Forester, Isandula, Brinktop and Frogmore had been opened up for closer settlement. Particulars are given in the following statement:—

**TASMANIA.—CLOSER SETTLEMENT, 1907 to 1911.**

Year.	Number of Farms made Available.	Number of Farms Allotted.	Area of Farms Allotted.	Rental of Farms Allotted.	Total Area Purchased.
			Acres.	£	Acres.
1907 ...	61	54	10,365	1,923	13,397
1908 ...	28	26	8,191	634	11,780
1909 ...	49	45	9,117	789	7,902
1910 ...	9	15	1,872	539	1,362
1911 ...	...	...	...	...	...
Total ...	147	140	29,545	3,885	34,441

The total purchase-money paid by the Government up to the 30th June, 1911, was £98,142.

## § 9. Occupation of Crown Lands under Leases and Licenses Issued by Mines Departments.

1. *Introduction.*—Leases and licenses for the occupation of Crown lands for mining and other purposes are issued by the Mines Departments in all the States. Such leases and licenses may be issued with respect to all Crown lands, whether otherwise unoccupied or whether occupied also under leases and licenses issued by the Lands Departments. Certain Crown lands, such as reserves, etc., are, however, subject to special conditions.

(i.) *Mining on Private Lands.* Certain of the Crown lands of the several States have been alienated from time to time, subject to various reservations in respect of gold and other minerals which might afterwards be found therein. Other lands have been alienated without such reservation, but as the mineral gold does not pass from the Crown unless by express conveyance, it has remained the property of the State on all alienated lands. All lands alienated or in process of alienation are open to mining for gold; but to mining for other minerals, those lands only are open in respect of which the rights are reserved in the grants. There are, however, generally certain reservations, such as those with reference to town or village lands and lands which have been built on or are used for special purposes. The working of minerals on private lands is regulated in the several States either by special Acts or by special provisions of the Acts relating to mining.

(ii.) *Leases and Licenses Issued and Total Areas of Crown Lands Occupied, 1901 to 1910.* The following tables shew the total areas of Crown lands for which leases and licenses for mining purposes were issued in each State during each year from 1901 to 1910 inclusive, and also the total areas of Crown lands occupied for mining purposes at the end of each year during the same period:—

## CROWN LANDS, LEASES AND LICENSES FOR MINING PURPOSES, 1901 to 1910.

1908 ...	218,931		140,735	100,387	130,970	56,693	647,716
1909 ...	236,265		147,010	84,293	128,129	55,819	651,516
1910 ...	235,235	136,710	164,737	197,714	164,963	57,908	957,267

1. Including private lands, leases, and water right licenses only. 2. Exclusive of lands held under miners' rights only, amounting in 1908 to approximately 27,500 acres. 3. Exclusive of miners' rights. 4. Excluding Victoria, except for 1910.

The increase in the area held during 1903 is due to the unusually large number of search licenses issued in South Australia during the year, no less than 466 being registered with areas varying from 640 to 3200 acres each.

2. **New South Wales.** Under the provisions of the Mining Act 1906 and the regulations made thereunder, Crown lands may be occupied for mining or other purposes by virtue of (i.) miners' rights; (ii.) business licenses; (iii.) authorities to prospect; or (iv.) leases.

(i.) *Miners' Rights.* A miner's right may be issued for any term not less than six months and not exceeding twenty years from the date of issue, at a fee calculated at the rate of two shillings and sixpence for every half-year of the term. The holder is entitled to take possession of and exclusively occupy for mining purposes Crown lands not expressly exempted from such occupation. Areas so occupied are styled *tenements*, which are divided into nine classes, viz.:—(a) prospecting areas; (b) dams or reservoirs; (c) roads; (d) claims; (e) races; (f) machinery areas; (g) tramways; (h) water rights; and (i) tunnel sites. Any holder of a miner's right may occupy one tenement of any or each of the foregoing classes, but for every additional tenement of the same class he must hold and additional miner's right. The holder of a miner's right may, in addition to the above, occupy a residence area not exceeding one-quarter acre within the boundaries of a town or village, or two acres outside such boundaries.

(ii.) *Business Licenses.* A business license may be issued for any term not less than six months and not exceeding twenty years at a fee calculated at the rate of ten shillings for every half-year of the term. It entitles the holder to occupy as a business area not

more than one-quarter acre within the boundaries of a town or village, or one acre outside such boundaries.

(iii.) *Authorities to Prospect.* Under the Mining Act 1906, the Minister for Mines may grant to the holder of a miner's right an authority to prospect upon any area of Crown lands, whether exempted from ordinary occupation under a miner's right or not. These authorities are protective titles during prospecting operations only, and do not authorise mining.

(iv.) *Leases.* The Governor may grant leases of Crown lands for (a) mining, (b) mining purposes, or (c) dredging.

(a) *Mining Leases.* These leases may be either *gold-mining leases*, for which the rental is at the rate of five shillings per acre per annum, the maximum area which may be demised being twenty-five acres; *mineral leases* (other than coal or shale), for which the rental is at the rate of five shilling per acre per annum, the maximum area being eighty acres; *coal or shale leases*, for which the rental is at the rate of one shilling per acre per annum, with a royalty of sixpence per ton on all shale or large coal, and threepence per ton on all small coal raised, the maximum area being 640 acres. *Special leases* may be granted for gold or minerals, other than shale or coal, if by reason of unusual circumstances the Minister is of the opinion that it is necessary that an area in excess of the limit prescribed for ordinary leases should be leased.

(b) *Leases for Mining Purposes* are granted for the surface of the land and to a limited depth below the surface. Such leases do not authorise mining on the land, but are for such purposes as the construction of dams and reservoirs, tramways, buildings, and machinery.

(c) *Dredging Leases* may be granted for the purpose of mining for gold or any other mineral by dredging, pumping, sluicing, etc., on any Crown lands forming the bed of any river or other suitable land. The rent is two shillings and sixpence per acre per annum, and a royalty of 1 per cent. on the value of all gold and other minerals won must be paid to the Crown. Labour and capital expenditure conditions are attached to dredging leases.

(v.) *Particulars of Leases and Licenses Issued, 1910.* The following table gives particulars of leases and licenses of Crown lands issued by the Mines Department during the year 1910:—

#### NEW SOUTH WALES.—LEASES AND LICENSES

ISSUED BY MINES DEPARTMENT DURING YEAR 1910.

Particulars.	Act under which Issued.	Purpose for which Issued.	Area.
<i>Leases—</i>	Mining Act 1874 & amending Acts	To mine for—	Acres.
		Minerals other than coal ...	40
		Coal ...	1,280

		Authorities to prospect ...	8,107
<b>Total ...</b>	—	—	<b>31,674</b>

It may be remarked that the Mining Act 1874, has now been repealed, so that no further authorities will be issued under that Act.

(vi.) *Leases and Licenses Issued and Areas Occupied, 1901 to 1910.*—The following table gives particulars of the areas of Crown lands for which leases and licenses were issued by the Mines Department during each year, and of the total areas of Crown lands occupied under such leases and licenses at the end of the year 1901 and from 1906 to 1910, inclusive :—

3. **Victoria.**—Leases of Crown lands for mining and auxiliary purposes in this State are issued by the department of Mines and Forests under the Mines Act 1890 to 1907. Miners' rights are issued by the Treasury under the authority of the same Acts.

(i.) *Mining Leases.* These are of three kinds—(a) Gold-mining leases; (b) mineral leases; and (c) dredging leases. (a) *Gold-mining Leases* are granted for a term of fifteen years in such areas as the Minister may recommend. The annual rent is two shillings and sixpence an acre. (b) *Mineral Leases* are granted for a term of 15 years, the maximum area being 640 acres. The annual rent varies from one shilling to £1 per acre. (c) *Dredging Leases* are issued upon the recommendation of the Sludge Abatement Board and on the approval of the Minister. The annual rent is five shillings an acre.

(ii.) *Special Licenses.* Special licenses are also granted by the Department of Mines and Forests. (a) *Searching Licenses* are granted to search for minerals over Crown lands for a term of three months at a minimum rent of £1. (b) *Tailings Licenses* are issued over tailings, which have become the property of the Crown, for a term of five years at a rent of one penny per 100 cubic yards, the minimum rent being ten shillings. (c) *Water-right Licenses* are issued, to divert water by cutting races, etc., over Crown lands, for a term of fifteen years, at a rent fixed according to the length of race, the quantity of water diverted, and the size of the reservoir.

(iii.) *Miners' Rights, Business Licenses, and Residence Areas.* Miners' rights are issued by the Treasury Department upon payment of a fee of two shillings and sixpence,

and are available for a period of twelve months. The holder is entitled to take possession for mining purposes of Crown lands, not otherwise exempted, in any mining district. Upon registration and payment of the prescribed fees, the holder of a miner's right may occupy not more than one acre of Crown lands on any goldfield as a business or residence area.

Licenses of auriferous lands not for mining purposes may be issued by the Lands Department. (§ 7, 3 iv.)

(iv.) *Leases and Licenses Issued and Areas Occupied for Mining.* Particulars of leases and licenses for mining purposes of Crown lands alone are not available, the official returns including also private lands. During the year 1910 the number of mining leases, licenses, etc., issued was 450, covering an area of 38,655 acres; the rent, fees, etc., received amounted to £2219. No particulars are available as to the total area of either Crown or private lands occupied for mining purposes.

4. **Queensland.**—The occupation of the Crown lands for mining purposes in this State is regulated by the Mining Acts 1898 to 1902. Under these Acts the Department of Mines is authorised to issue—(i.) Miners' rights; (ii.) mining leases; (iii.) coal-mining leases and licenses; and (iv.) miners' homestead leases.

(i.) *Miners' Rights.* The foundation of title under a miner's right is prior appropriation, and the permanency of any such title depends upon compliance by the occupier with certain prescribed conditions of use and working. The ground occupied under a miner's right is known as a "claim," which term may include an area taken up for purposes auxiliary to the actual operation of mining, such as machine areas. Water rights and residence areas do not come within the definition of "claim," being licenses which may be granted or refused. The forfeiture of a claim on account of non-compliance with the prescribed conditions may be decreed by the Warden on the application of any holder of a miner's right. The forfeiture of water rights or of residence areas may be declared only by the Crown, who alone can challenge the title of the occupier.

(ii.) *Mining Leases.* These leases are divided into two classes—(a) Gold-mining leases, and (b) mineral leases. Both classes contain certain covenants as to rent, the employment of labour and other matters. Special leases may be granted for auxiliary purposes, such as constructing tramways, erecting buildings, cutting water-races, etc. (a) *Gold-mining Leases.* The maximum area is fifty acres, the term twenty-one years, renewable for a further term of like duration, and the annual rent is £1 an acre. (b) *Mineral Leases.* The maximum area is 160 acres (except for coal, as mentioned hereinafter), the term twenty-one years, renewable for a like period, and the annual rent is ten shillings an acre.

(iii.) *Coal-mining Leases and Licenses.* Mineral leases for coal may be granted for a term of twenty-one years at an annual rent of sixpence an acre, together with a royalty of threepence per ton of coal raised during the first ten years of the lease and of sixpence per ton during the remainder of the term. Special concessions may be granted to discoverers of payable seams of coal. Licenses to occupy not more than 640 acres may be granted to any person desiring to prospect Crown lands for coal upon payment of sixpence for every acre comprised in the application.

(iv.) *Miners' Homestead Leases.* These leases are issued to holders of miners' rights who reside on gold or mineral fields, for the purpose of residence or carrying on business, and range in area from one to eighty acres, in accordance with the proximity to a proclaimed township. The rent ranges from sixpence to five shillings an acre. In the case of homesteads situated outside the limits of a township, after thirty years' rent has been paid the rent ceases to be payable, and in lieu thereof the rent shall be one shilling, if demanded.

(v.) *Particulars of Leases and Licenses Issued, 1910.* The subjoined table gives particulars of the leases and licenses of Crown lands issued for mining purposes during the year 1910:—

**QUEENSLAND.—MINING LEASES AND LICENSES, 1910.**

\* Exclusive of lands held under miners' rights only.

5. **South Australia.**—In this State leases and licenses for mining purposes are issued by the Department of Mines under the authority of the Mining Act 1893, as amended in 1900. Under these Acts mining and prospecting are permitted in virtue of (i.) miners' rights; (ii.) mining leases; (iii.) coal or oil leases; and (iv.) miscellaneous leases, and in addition occupation of Crown lands is permitted by virtue of (v.) business claims, and (vi.) occupation licenses.

(i.) *Miners' Rights.* These rights are issued for a period of one year upon payment of five shillings. The holder is authorised to prospect for any mineral or oil, and to peg out a claim in the prescribed manner on any Crown lands. Under the Amendment Act of 1900, special licenses to search, on specific mineral lands not exceeding five square miles in extent, may be granted for (a) precious stones; (b) mineral phosphates; (c) oil; and (d) rare metals, minerals, and earths, the mining for which has not proved payable in any portion of the State.

(ii.) *Mining Leases.* These leases are of two classes—(a) Gold leases and (b) mineral leases. (a) *Gold Leases* may be issued for a term not exceeding forty-two years to holders

of miners' rights at an annual rent of one shilling an acre. The maximum area which may be so leased is twenty acres. (b) *Mineral Leases* may be issued to holders of miners' rights for lands not comprised in a goldfield. The area leased may not exceed forty acres, nor the term forty-two years. The annual rent is one shilling an acre, together with a royalty of sixpence in the pound on the net profits.

(iii.) *Coal or Oil Leases.* These leases are issued to holders of miners' rights for Crown lands not comprised in goldfields. The maximum area is 640 acres, and the maximum term forty-two years. The rent and conditions are as prescribed. In addition to the rent a royalty of sixpence in the pound on the net profits must be paid.

(iv.) *Miscellaneous Leases.* Leases for any term not exceeding forty-two years may be granted to holders of miners' rights on the prescribed terms and conditions (a) for manufacturing or obtaining salt or gypsum; (b) as sites for smelting or mining works. The maximum area, if the land leased is on a water frontage, is twenty-one acres. A royalty of sixpence in the pound on the net profits must be paid.

(v.) *Business Claims.* Business licenses are granted on payment at the rate of ten shillings for six months, entitling the holder to peg out and occupy for business and residential purposes a claim not exceeding a quarter of an acre in extent, if within a township, or one acre on other lands.

(vi.) *Occupation Licenses.* Licenses are granted authorising the holder to occupy, for purposes of residence and cultivation, any Crown lands not exceeding half an acre in extent for a term of fourteen years at an annual rent not exceeding two shillings an acre.

(vii.) *Particulars of Leases and Licenses, 1910.* The following table gives particulars of leases and licenses of Crown lands issued by the Mines Department during the year 1910:—

6. **Western Australia.**—The issue of leases and licences by the Mines Department is regulated by the Mining Act 1904. Under this Act Crown lands may be occupied by virtue of (i.) Miners' rights; (ii.) mining leases; and (iii.) miners' homestead leases.

(i.) *Miners' Rights.* Any holder of a miner's right may take up and occupy ground, subject to the approval of the Warden, for the following purposes:—Prospecting for any minerals; claims, water rights, residence and business areas, and machinery, tailings, washing, or market garden areas. Lands may be occupied by the holder of a miner's right for the purpose of mining for alluvial gold without registration, the only restriction being that the occupier must peg out his holding according to the prescribed regulations.

(ii.) *Mining Leases.* These leases are granted for mining and auxiliary purposes, and are of three descriptions, viz.:—(a) Gold-mining leases; (b) mineral leases; and (c) coal leases. (a) *Gold-mining Leases.* The maximum area is twenty-four acres, except in the case of a mine which has already been worked and abandoned, is excessively wet, or requires costly appliances, when the maximum area is forty-eight acres. (b) *Mineral Leases.* The maximum area is forty-eight acres, except under the special circumstances referred to in the case of gold-mining leases, when the maximum area is ninety-six acres. (c) *Coal Leases.* The maximum area is 320 acres, but special leases of larger areas may be granted to the discoverer of a payable seam.

(iii.) *Miners' Homestead Leases.* These leases are granted for agricultural purposes on land within goldfields. The area is restricted to twenty acres, if within two miles of a township, and if beyond that distance to 500 acres. Improvement conditions are imposed.

(iv.) *Particulars of Leases and Licenses Issued, 1910.* The following table gives particulars of mining leases and licenses of Crown lands issued during 1910 :—

**WESTERN AUSTRALIA.—MINING LEASES AND LICENSES ISSUED, 1910.\***

\* Exclusive of miners' rights.

7. *Tasmania.*—Under the provisions of the Mining Act 1905, Crown lands in this State may be occupied for mining and auxiliary purposes by virtue of (i.) prospectors' licenses; (ii.) miners' rights; (iii.) mining leases; and (iv.) miscellaneous licenses. Business and residence licenses within mining areas may be issued by the Lands Department. (See § 7, 8 iv.)

(i.) *Prospectors' Licenses.* These licenses are granted for the calendar year in which they are applied for, upon payment of the sum of ten shillings if applied for before the 30th June, or five shillings if after that date. They confer the right to prospect upon prescribed Crown lands, and any discoveries made may be protected in the prescribed manner.

(ii.) *Miners' Rights.* These rights are also issued each year upon payment of five shillings if applied for before the 30th June, or of two shillings and sixpence if after that date. They confer the right to occupy specified Crown lands and to mine thereon.

(iii.) *Mining Leases.* Mining leases are of three kinds—(a) gold-mining leases; (b) mineral leases; and (c) miscellaneous leases. (a) *Gold-mining Leases* are granted for a term not exceeding twenty-one years at an annual rent of £1 an acre. The maximum area which may be so leased is forty acres. The lessee has the exclusive right to mine for gold and other minerals on the land demised. (b) *Mineral Leases* are issued for mining for minerals other than gold on areas not exceeding eighty acres for a term of not more than twenty-one years, at an annual rent of five shillings an acre. Leases to mine for coal, shale, slate, freestone, or limestone may be issued for areas not exceeding 320 acres at an annual rent of two shillings and sixpence an acre. (c) *Miscellaneous Leases.* The Minister may grant leases for mining purposes, for a term not exceeding ten years, of the bed or banks of any river flowing through Crown lands, at a rent of five shillings an acre. The area leased may not exceed forty chains in length by five chains on either side from the centre of the river. Special leases may be granted by the Governor upon resolutions assenting thereto passed by both Houses of Parliament.

(iv.) *Miscellaneous Licenses.* Licenses granting easements for various purposes may be issued, for a term not exceeding twenty-one years, to persons holding mining leases or miners' rights, for the more advantageous working of the land occupied.

(v.) *Particulars of Leases and Licenses Issued, 1910.* The following table shews particulars of leases and licenses of Crown lands, exclusive of prospectors' licenses and miners' rights, issued by the Mines Department during the year 1910:—

## § 10. Resumption by Crown of Alienated Lands.

1. **General.**—Under various Acts, alienated lands may be compulsorily resumed by the Crown in the several States for certain purposes, generally connected with works of a public nature. Resumptions for closer settlement purposes have already been referred to (see § 8, above). In most of the States there are Lands Clauses or similar Acts providing the machinery, and indicating the procedure to be adopted in assessing the compensation to be paid by the Crown to private owners in cases where the parties have failed to agree as to the amount to be paid. The provisions of these Acts are generally incorporated in the special Acts specifying the purposes for which alienated lands may be resumed. Lands leased for pastoral purposes may generally be resumed by the Crown on short notice. The lessee is ordinarily entitled to compensation for land resumed, for loss or depreciation in value of the lease caused by such resumption, and for improvements.

(a) *New South Wales.* Alienated lands may be recovered by the Crown for authorised works and certain public purposes under the provisions of the Public Works Act 1900, and in other cases may be acquired by the Crown by purchase, gift, or surrender under Executive authority. Alienated lands required for public roads may be resumed under the Public Roads Act 1902, and if containing gold may be resumed for mining under Section 72 of the Mining Act 1906. Lands dedicated or granted by the Crown for public purposes may be resumed under Section 105 of the Crown Lands Act 1884, Section 41 of the Crown Lands Act 1889, and Section 1 of the Public Trusts Act 1897. Surrender and exchange of lands alienated or in process of alienation may be carried out under Section 47 of the Crown Lands Act 1895.

(b) *Victoria.* In Victoria lands may be resumed in accordance with the provisions of the Lands Compensation Act 1890, the Public Works Act 1890, the Railways Acts, the Land Act 1901, the Local Government Act 1903, the Water Act 1905, the Vacant Unclaimed Lands Act 1906, and the Forests Act 1907.

(c) *Queensland.* In this State alienated lands may be resumed under the provisions of the Public Works Land Resumption Act 1906, for any of the purposes specified in section 4 of that Act.

(d) *South Australia.* In this State the principal Acts under which land is re-purchased for public works are the Railways Commissioners Act 1887, the Water Conservations Acts 1886, 1889, and 1900, the Waterworks Act 1882, and the Sewers Act 1878.

(e) *Western Australia.* In Western Australia private lands may be resumed under the provisions of the Land Act 1898, the Roads Act 1902, and the Public Works Act 1902.

(f) *Tasmania.* In the greatest number of cases private lands have been resumed in this State for the purpose of roads by agreement under the Lands Vesting Act 1894 and the Roads Acts, which were to a large extent repealed and consolidated by the Local Government Act 1906. In case of the owners failing to agree as to price, the land is acquired under the Lands Clauses Act 1857, incorporated in the Public Works and the Crown Land Acts. The Lands Resumption Acts 1891 and 1892 provide for the compulsory acquisition of land without waiting for the usual formalities. Under that Act a notification may be given to the owner that the land is required; after the expiration of thirty days the land may be resumed by notification in the *Gazette*, the amount of purchase-money being afterwards decided by arbitration, as provided by the Lands Clauses Act. A Bill amending and consolidating the Land for Public Purposes Act 1884, and the Lands Resumption Acts 1891 and 1892, was passed by the House of Assembly in August, 1910.

2. **Areas Resumed, 1901 to 1910.**—The subjoined table shews, so far as particulars are available, the areas of private lands resumed, exclusive of resumptions for closer settlement purposes, in each State during each year from 1901 to 1910 inclusive:—

#### AREAS OF PRIVATE LANDS RESUMED BY THE CROWN

(EXCLUSIVE OF RESUMPTIONS FOR CLOSER SETTLEMENT), 1901 TO 1910.

Year.	N.S.W.	Victoria.*	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.†

\* Exclusive of resumptions for railway purposes, which for the years 1901 to 1906, inclusive, amounted to 13,081 acres. † Not available. ‡ Exclusive of South Australia.

### § 11. Alienation and Occupation of Crown Lands in the Several States.

1. **Introduction.**—The tables given in the previous parts of this section shew separately the areas alienated, in process of alienation, and occupied under various tenures in the several States. The tables given below shew collectively the general condition of the public estate in each State, having regard to (a) the area alienated absolutely, which includes free grants, sales, and conditional purchases for which grants have been issued, the conditions having been complied with; (b) the area in process of alienation, comprising holdings for which the fee-simple has not yet been alienated, but which

are in process of sale under systems of deferred payments; (c) the area occupied under all descriptions of leases and licenses; and (d) the area unoccupied, which, ordinarily, includes roads, permanent reserves, forests, etc. In some cases, however, lands which are permanently reserved from alienation are occupied under leases and licenses, so that in such cases the areas reserved are comprised in class (c) and not in class (d). Particulars of leases and licenses of reserved areas, as distinguished from leases and licenses of other lands, are not available. It should be observed that in many cases lands occupied under leases or licenses for pastoral purposes are held on short tenures only, and could thus be made available for settlement practically, whenever required.

**2. New South Wales.**—The total area of the State of New South Wales is 198,638,080 acres, of which on the 30th June, 1911, 38,741,736 acres, or nearly one-fifth were alienated absolutely; 16,210,185 acres, or about one-twelfth, were in process of alienation; 123,223,559 acres, or about three-fifths, were occupied under Lands Department, Western Land Board, or Mines Department leases and licenses; and the remaining 20,462,600 acres, or about one-tenth, were unoccupied. The next table shows the areas alienated, in process of alienation, held under leases and licenses, and unoccupied, in 1901 and from 1908 to 1911.

During the year 1910-11, a total area of 954,627 acres became available for conditional purchase, conditional lease, conditional purchase lease, homestead selection, and settlement lease, special conditional purchase lease, and additional holdings. Of this area, 380,965 acres were made available for additional holdings only, so as to enable selectors with insufficient areas to increase their holdings, and 130,952 acres were made available for closer settlement purchase.

Area of State—198,638,080 acres.

§ The figures for 1901 are up to the 31st December, while for the other years given they are up to the 30th June. \* Includes 495,052 acres acquired for closer settlement. † Inclusive of alienated area within the Commonwealth Territory, and acquisitions under Closer Settlement Acts. ‡ Now included under Homestead grants. ‡ Up to 31st December.

3. **Victoria.**—The total area of the State of Victoria is 56,245,760 acres, of which 23,568,070 acres, or about three-eighths, had been alienated absolutely up to the end of the year 1910; 5,869,185 acres, or about one-eleventh, were in process of alienation under deferred payments; and 15,433,875 acres were occupied under leases and licenses, while the remaining 11,374,630 acres were unoccupied. The following table shews the areas alienated and in process of alienation, together with the areas reserved, leased, and available for occupation at the end of the year 1901 and from 1906 to 1910:—

**VICTORIA.—ALIENATION AND OCCUPATION OF CROWN LANDS, 1901 to 1910.**

Total area of State—56,245,760 acres.

\* Not available.

Crown lands in Victoria include roads, 1,692,314 acres; water reserves, 284,265 acres; agricultural colleges, etc., 155,483 acres; State forests and timber reserves (now under Forests Act 1907), 3,936,746 acres; reserves in the Mallee, 397,881 acres; unsold land in towns, etc., 2,192,243 acres; and other reserves, 295,525 acres. The Crown Lands Reserve Act was passed in 1910; it revokes permanent reserves for public purposes, in order that the areas totalling 1,591,500 acres may be dealt with as unoccupied Crown lands. Of these lands 1,195,000 acres are mallee country situated in the county of Millewa, while the remainder, 396,500 acres, are situated in the counties of Dargo and Croajingolong in the eastern part of the State.

4. **Queensland.**—The total area of this State is 429,120,000 acres, of which, on the 31st December, 1910, 15,460,352 acres, or about one-twenty-eighth, were alienated absolutely; 7,971,842 acres, or about one-fifty-fourth, were in process of alienation; 295,385,129, or about nine-thirteenths, were occupied under leases and licenses, the remaining 110,303,177 acres being unoccupied. From 1901 to 1910 the area alienated absolutely increased by 1,925,884 acres or  $14\frac{1}{2}$  per cent., and the area in process of alienation by 5,179,678 acres or  $185\frac{1}{2}$  per cent.

The following table shews the area alienated absolutely, the area in process of alienation, and the area held under various forms of lease and license at the end of the year 1901 and from 1906 to 1910:—

## QUEENSLAND.—ALIENATION AND OCCUPATION OF CROWN LANDS,

Total area of State—429,120,000 acres.

\* Approximate; the area under timber licenses is constantly fluctuating.

The area open for selection (as distinguished from occupation for purely pastoral or special purposes) under every mode at the beginning of the year 1910 was 4,311,659 acres, and the area opened during the year was 8,600,600 acres, while the area withdrawn was 784,584 acres. The area selected was 5,889,019 acres, and the area remaining open at the end of the year was 6,235,656 acres. The number of grazing selections was 425 as against 420 in the previous year, and their gross area 3,883,830 acres, as against 4,623,803 acres.

**5. South Australia.**—The area of the State of South Australia south of lat. 26° S. is 243,244,800 acres. In South Australia, at the end of the year 1910, there were 9,268,789 acres, or about one one-twenty-sixth, alienated absolutely; 1,463,038 acres, or about one-one-hundred and sixty-sixth were in process of alienation; 111,513,856 acres, or about three-sevenths, were occupied under leases and licenses; while the remaining 120,999,117 acres were unoccupied. The subjoined table shews for South Australia the area of land alienated absolutely, and in process of alienation under deferred payments, and the area held under different forms of leases:—

Total area of State—624,588,800 acres.

\* Figures are now given as up to the 30th June, instead of as up to 31st December. Figures for previous years may be obtained from the Statistical Registers of Western Australia. † On the 31st December, 1906. ‡ On the 31st December.

8. **Tasmania.**—Of the total area of Tasmania, namely, 16,777,600 acres, there were at the end of the year 1910, 4,932,276 acres, or about one-quarter, alienated absolutely; 1,104,379 acres, or about one-fifteenth, were in process of alienation; 1,460,523 acres, or about one-eleventh, were occupied under leases and licenses for either pastoral, agricultural, timber, or mining purposes; the remaining 9,280,422 acres, or about five-eighths, being unoccupied. The following table shews the areas alienated, in process of alienation, and held under lease or license, and the area unoccupied at the end of the year 1901 and from 1906 to 1910:—

## TASMANIA.—ALIENATION AND OCCUPATION OF CROWN LANDS, 1901 to 1910.

Total area of State—16,777,600 acres.						

## § 12. Classification of Holdings according to Size.

1. **General.**—The classification of holdings according to their area is of interest chiefly in relation to the efforts made by the several States in recent years to promote settlement on the land on blocks of suitable size, especially by means of the Closer Settlement Acts. Returns shewing such a classification are not available for Queensland.

The following table gives particulars of the number and aggregate area of holdings of lands alienated and in process of alienation in area series, as returned to the collectors of agricultural statistics, in New South Wales, Victoria, Western Australia, and Tasmania, for the season 1910-11:—

## CLASSIFICATION OF HOLDINGS (ONE ACRE AND OVER) IN AREA SERIES, 1910-11.

Size of Holdings.	N.S.W.	Victoria.	S. Aust.	N.Ter'tory.	W. Aust.	Tasmania.	Total.

2. **New South Wales.**—The total number of holdings of one acre and over in area in this State on the 31st March, 1901, was 69,439. On the 31st March, 1911, the corresponding number was 87,503, shewing an increase of 18,064, or about 26.01 per cent. The following table shews the number of holdings of various sizes alienated absolutely, and in process of alienation, on the 31st March, 1901, and from 1905 to 1911:—

**NEW SOUTH WALES.—CLASSIFICATION OF HOLDINGS ALIENATED AND IN  
PROCESS OF ALIENATION, 1901 to 1911.**

### § 13. The Progress of Land Settlement, 1901 to 1910.

1. **Recent Progress.**—The progress of settlement and the growth of land alienation in the States of the Commonwealth under recent legislation is seen in the subjoined statement, which shews concisely the condition of the public estate in each State and in the Commonwealth at the end of each year from 1901 to 1910, inclusive. The effect of the land laws during that period has been generally to diminish the number of large holdings, at the same time decreasing the area held under lease, while both the area alienated and the area in process of alienation have increased. As leases of large areas fall in or are otherwise terminated they are in many cases not renewed, but the land leased is cut up for the purpose of settlement under systems of deferred payment; the State Governments, also, have in many cases acquired by repurchase considerable areas under the provisions of the various Closer Settlement Acts. Further, greater facilities have been granted to the working classes to acquire possession of the soil, and special inducements have been offered to *bona fide* settlers by the introduction of new forms of tenure on easy terms and conditions.

From 1901 to 1910 the area alienated absolutely in the whole Commonwealth increased by 20,009,094 acres, or 26 per cent.; the area in process of alienation increased by 9,688,939 acres, or 28 per cent.; the area leased by 94,530,953 acres, or 13 per cent.; while the area unoccupied decreased by 125,771,014 acres, or 12 per cent.

**TOTAL AREAS ALIENATED, IN PROCESS OF ALIENATION,  
HELD UNDER LEASE OR LICENSE, AND UNOCCUPIED, IN EACH STATE AND IN  
THE COMMONWEALTH AT THE END OF EACH YEAR FROM 1901 TO 1910  
INCLUSIVE, EXPRESSED ABSOLUTELY AND AS PERCENTAGES OF AREA OF  
ENTIRE STATE.**

2. **Diagram shewing Condition of Public Estate.**—The following diagram shows the condition of the public estate in the Commonwealth at the end of the year 1910. The square itself represents the total area of the Commonwealth, while the relative areas of individual States are shown by the vertical rectangles. The areas alienated absolutely, in process of alienation under systems of deferred payments, and the areas held under leases or licenses, are designated by the differently-shaded areas as described in the reference given below the diagram, while the areas unoccupied are left unshaded:—

Area alienated absolutely

Area held under lease, etc.

Area in process of alienation

Area unoccupied

3. **Federal Territory.** The following particulars relate to the tenures of land within the Federal Capital Territory at the end of the year 1911. The figures are approximate:—

**FEDERAL CAPITAL TERRITORY, TENURES OF LAND, 1911.**

Alienated.	In Process of Alienation.	Leases.	Unoccupied.	Total.
Acres. 173,528	Acres. 149,601	Acres. 213,662	Acres. 25,890	Acres. 562,681

## SECTION VII.

## PASTORAL PRODUCTION.

## § 1. Initiation and Growth of Pastoral Industry.

1. **Early Statistics.**—The live stock which Captain Phillip brought with him when establishing the first settlement in Australia, in January, 1788, is stated to have comprised seven horses, six cattle, twenty-nine sheep, twelve pigs, and a few goats. Later in the same year, in a letter from Captain Phillip to Lord Sydney, then Secretary of State for the Colonies, an enclosure signed by "Andrew Miller, Commissary," sets forth in detail the numbers of each kind of live stock in the colony on 1st May, 1788. A summary of the particulars supplied is as follows:—Horses, 7; cattle, 7; sheep, 29; pigs, 74; rabbits, 5; turkeys, 18; geese, 29; ducks, 35; fowls, 209. In view of the depredation since caused by rabbits their inclusion in this return as part of the live stock of the Commonwealth is of interest.

2. **Subsequent Development.**—During the years immediately succeeding the first settlement the growth of the number of live stock was slow, and notwithstanding importations from India and the Cape of Good Hope the total of the flocks and herds of Australia amounted in 1800 to only 203 horses, 1044 cattle, 6124 sheep, and 4017 pigs. During the next fifty years, however, the pastoral industry made rapid strides, and at the end thereof (1850) the totals reached were 159,951 horses, 1,894,834 cattle, 15,993,954 sheep, and 114,000 pigs.

The statistical records of live stock in Australia prior to the year 1860 are somewhat defective, but from that year onwards fairly complete particulars are available in most of the States. At the present time statistics of live stock are collected annually in all the States, principally through the agency of the police, but in the years 1885 to 1888 inclusive, and 1893 to 1895 inclusive, no such particulars were collected in South Australia, and similar gaps occur in the Victorian records for the periods 1895 to 1899 inclusive, and 1901 to 1903. In order to obtain totals for the Commonwealth for these years the missing numbers have been supplied by interpolation. The results so obtained probably differ but slightly from the actual numbers for the respective years.

3. **Increase in Numbers.**—Particulars concerning the numbers of each of the principal kinds of live stock in the Commonwealth at quinquennial intervals from 1860 to 1905, and thence onwards in single years, are given in the following table, and are shewn continuously in the graphs as given hereinafter.

During the fifty years covered by the table the live stock of the Commonwealth increased considerably, horses by 402 per cent., cattle 197 per cent., sheep 357 per cent., and pigs 192 per cent. The average annual increases which these aggregates represent are as follows:—Horses, 3.29 per cent. per annum; cattle, 2.20 per cent.; sheep, 3.09 per cent.; and pigs, 2.16 per cent.

## COMMONWEALTH LIVE STOCK, 1860 to 1910.

Year.	Horses.	Cattle.	Sheep.	Pigs.
1860 ...	431,525	3,957,915	20,135,286	351,096

1900 ...	1,609,654	8,640,225	70,602,995	950,349
1905 ...	1,674,790	8,528,331	74,540,916	1,014,977
1906 ...	1,765,186	9,349,409	83,687,655	813,569
1907 ...	1,871,714	10,128,486	87,650,263	754,101
1908 ...	1,927,729	10,547,679	87,043,266	695,691
1909 ...	2,022,917	11,040,391	91,676,281	765,137
1910 ...	2,165,866	11,744,714	92,047,015	1,025,850

4. **Fluctuations.**—The increases referred to, however, have not been continuous, marked fluctuations having taken place during the period, mainly on account of the droughts which have from time to time left their impress on the pastoral history of Australia. These were in evidence in 1869, 1877, 1884, 1895 and subsequent years, 1902, and to some extent in 1908. The drought of 1902 was one of the most severe experienced in Australia, the number of sheep in the Commonwealth diminishing under its influence from 72,040,211 on 31st December, 1901, to 53,668,347 at the same date in 1902—a decrease of more than 25 per cent.

The extraordinary recuperative power of Australia is evidenced by the large increases in the numbers of stock which the good seasons, supervening on the various droughts have witnessed. Thus, in the eight years from 1902 to 1910, horses increased by 641,265 cattle by 4,681,972, and sheep by 38,378,668, the corresponding increases per cent. per annum being horses 4.49 per cent., cattle 6.56 per cent., and sheep 6.98 per cent.

The number of horses in the Commonwealth at the end of 1910 was higher than for any previous year. The number of cattle was higher than for any year since 1895, and the number of sheep higher than for any year since 1894. The years in which the numbers of live stock attained their maxima are as follows:—Horses, 1910, 2,165,866; cattle, 1894, 12,311,617; sheep, 1891, 106,421,068; and pigs, 1904, 1,062,703.

5. **Live Stock in Relation to Population.**—The number of each kind of live stock per head of the population of the Commonwealth has varied during the past fifty years in the manner shewn in the succeeding table:—

## NUMBER OF LIVE STOCK PER HEAD OF POPULATION, 1860 to 1910.

Year.	Horses.	Cattle.	Sheep.	Pigs.	Year.	Horses.	Cattle.	Sheep.	Pigs.
1860 ...	0.38	3.45	17.58	0.31	1902 ...	0.39	1.82	13.85	0.20
1865 ...	0.41	2.68	21.25	0.25	1903 ...	0.39	1.85	14.54	0.21
1870 ...	0.43	2.60	25.24	0.33	1904 ...	0.40	1.97	16.56	0.27
1875 ...	0.44	3.37	27.99	0.29	1905 ...	0.42	2.11	18.48	0.25
1880 ...	0.48	3.37	27.87	0.37	1906 ...	0.43	2.29	20.45	0.20
1885 ...	0.42	2.75	25.05	0.28	1907 ...	0.45	2.43	21.06	0.18
1890 ...	0.48	3.27	31.06	0.28	1908 ...	0.46	2.49	20.57	0.16
1895 ...	0.48	3.36	25.93	0.24	1909 ...	0.47	2.55	21.20	0.18
1900 ...	0.43	2.29	18.75	0.25	1910 ...	0.49	2.65	20.80	0.23
1901 ...	0.42	2.22	18.83	0.24					

Considered in relation to population, the live stock attained its maximum in the period 1890-5, and its minimum in the year 1902. During the period of fifty years under review, the number of horses varied but slightly in proportion to population, the range being from 0.33 to 0.49 per head. In the case of cattle, the limits of variation were 1.82 and 3.45; sheep, 13.85 and 31.06; and pigs, 0.16 and 0.37.

6. **Live Stock in Relation to Area.**—The numbers of live stock per square mile in the several States of the Commonwealth on 31st December, 1910, were as follows:—

**NUMBER OF LIVE STOCK PER SQUARE MILE, 31st DECEMBER, 1910.**

States and Territory.	Horses.	Cattle.	Sheep.	Pigs.
New South Wales ... ..	2.10	10.12	146.79	1.04
Victoria ... ..	5.37	17.61	146.59	3.79
Queensland ... ..	0.89	7.65	30.32	0.23
South Australia... ..	0.66	1.01	16.49	0.25
Western Australia ... ..	0.14	0.85	5.29	0.06
Tasmania ... ..	1.53	7.70	68.22	2.43
Northern Territory ... ..	0.05	0.98	0.11	0.002
Commonwealth ... ..	0.73	3.95	30.94	0.34

7. **Minor Classes of Live Stock.**—The numbers of minor classes of live stock returned as at 31st December, 1911, were as follows:—Goats, 313,917; camels, 8426; mules, 1350; donkeys, 3807; and ostriches, 1739. Of these, goats were most numerous in Queensland, camels and donkeys in Western Australia, and mules and ostriches in South Australia. In the raising of goats, considerable attention has in recent years been devoted to the angora goat and its product—mohair, and upwards of 20,000 angora goats are included in the total of 313,917 goats shown above. Of these, upwards of 9000 were in Queensland, while the quantity of mohair produced in that State in 1910 was set down at 7096 lbs., and the number of skins placed on the market was returned as 1753.

8. **Net Exports of Principal Pastoral Products.**—The quantities by which the exports of the principal pastoral products of the Commonwealth exceeded the imports for the years 1906 to 1910 are as follows:—

**QUANTITIES OF NET EXPORTS OF PRINCIPAL PASTORAL PRODUCTS  
OF THE COMMONWEALTH, 1906 to 1910.**

Products.	Unit of Quantity.	1906.	1907.	1908.	1909.	1910.

## § 2. Horses.

**1. Suitability of Australia for Horse-breeding.**—From the earliest times the suitability of the climate and pastures of Australia for the production of serviceable breeds of horses has been fully recognised. By the importation of high-class sires, and the careful selection of breeding mares, these natural advantages were utilised to the fullest extent, all classes of horses being bred. As a consequence of this combination of advantages the Australian horse, whether of the heavy draught, medium weight, or light saddle and carriage variety, compares more than favourably with the product of other lands. The Australian horse has been found suitable for the army in India, and large numbers are obtained annually for remount purposes.

**2. Distribution throughout the Commonwealth.**—As regards numbers, the State of New South Wales, the earliest settled of the group, established a lead, which it has ever since retained. The figures for the several States for a series of years are as follows:—

**NUMBER OF HORSES IN STATES, NORTHERN TERRITORY, AND COMMONWEALTH,  
1860 to 1910.**

Year.	New South Wales.	Victoria.	Queensl'd.	South Australia.	Western Australia.	Tasmania.	Northern Territory.	Common- wealth.

\* Statistics not collected prior to 1880.

**3. Proportion in the Several States.**—The percentages of the numbers of horses in the several States on the totals for the Commonwealth for the past ten years are as follows:—

**PERCENTAGE OF HORSES IN EACH STATE AND NORTHERN TERRITORY ON  
TOTAL FOR COMMONWEALTH, 1900 to 1910.**

Year.	New South Wales.	Victoria.	Queensl'd.	South Australia.	Western Australia.	Tasmania.	Northern Territory.	Common- wealth.
	%	%	%	%	%	%	%	%
1900 ...	29.91	24.37	28.38	10.36	4.24	1.96	0.78	100.00
1901 ...	30.03	23.90	28.52	10.20	4.55	2.00	0.80	100.00
1902 ...	29.52	25.08	26.18	10.80	5.26	2.19	0.97	100.00
1903 ...	29.62	24.41	26.00	11.43	5.35	2.17	1.02	100.00
1904 ...	30.26	23.34	25.90	11.50	5.66	2.29	1.05	100.00
1905 ...	30.27	23.02	25.70	11.77	5.82	2.21	1.21	100.00
1906 ...	30.47	23.05	25.66	11.70	5.94	2.17	1.01	100.00
1907 ...	30.90	22.69	26.10	11.15	6.05	2.16	0.95	100.00
1908 ...	30.66	22.04	26.97	11.07	6.06	2.07	1.13	100.00
1909 ...	29.90	21.89	27.47	11.39	6.19	2.00	1.16	100.00
1910 ...	30.04	21.80	27.42	11.51	6.19	1.91	1.13	100.00

During the period under review, the proportions in South Australia and Western Australia have increased, those in Victoria and Queensland have diminished, while in the case of New South Wales and Tasmania the proportion in 1910 was practically identical with that in 1900.

**4. Oversea Export Trade in Horses.**—Australia's export trade in horses is a fairly considerable, though somewhat fluctuating, one. During the past five years it has varied in number between 12,632 for the year 1907 and 7807 in 1909, and in value between £319,470 and £173,012 respectively for the same two years. The total number of horses exported during the five years amounted to 53,040, an average of 10,608 per annum. The total value of the exports for the period was £1,231,060, or £246,212 per annum.

The average export value per head for the period was £23 4s. 2d. The numbers exported to the principal countries concerned in this trade are as follows:—

**NUMBER AND DESTINATION OF HORSES EXPORTED FROM THE COMMONWEALTH,  
1906 to 1910.**

Country to which Exported.	1906.	1907.	1908.	1909.	1910.	Total for 5 years.

Total ... ..	258,256	319,470	224,218	173,012	256,104	1,231,060

It will be seen from the foregoing tables that the export trade in horses with India, the Straits Settlements, and Java has been fairly uniform throughout the five years under review, but that the particulars for some of the other countries specified exhibit marked fluctuations.

The number of horses imported into the Commonwealth is comparatively small, consisting mainly of valuable animals introduced for breeding purposes, and imported principally from New Zealand and the United Kingdom. The average value per head of the horses imported during the five years was £67 13s. 9d., as compared with £23 4s. 2d. per head for the exports for the same period. The average number imported per annum was, however, only 1692, and the average annual value £114,629. The following table furnishes a comparison of imports and exports of horses during the five years 1906 to 1910:—

#### COMMONWEALTH IMPORTS AND EXPORTS OF HORSES, 1906 to 1910.

Year.	Imports.		Exports.		Net Exports.	
	No.	Value.	No.	Value.	No.	Value.
		£		£		£
1906 ... ..	426	52,250	10,772	258,256	10,346	206,006
1907 ... ..	516	53,145	12,632	319,470	12,116	266,325
1908 ... ..	504	71,546	9,668	224,218	9,164	152,672
1909 ... ..	1,472	88,317	7,807	173,012	6,335	84,695
1910 ... ..	5,542	307,371	12,161	256,104	6,619	—51,267
Total for 5 years	8,460	572,629	53,040	1,231,060	44,580	658,431

Note. — signifies value of net imports.

5. **Comparison with other Countries.**—The numbers of horses in some of the leading horse-breeding countries of the world, according to the latest available returns, are as follows:—

#### NUMBER OF HORSES IN SOME OF THE LEADING HORSE-BREEDING COUNTRIES. IN THE WORLD.

Country.	Date.	Number of Horses.	Country.	Date.	Number of Horses.
Russian Empire <sup>1</sup> ...	1909	29,892,319	Uruguay ...	1908	556,307
Utd. States America	1909	21,040,000	Bulgaria ...	1905	538,271
Argentine Republic	1908	7,531,376	Chile ...	1908	516,764
Germany... ..	1907	4,345,043	Spain ...	1909	494,853
Austria-Hungary <sup>2</sup> ...	1902 & 1909	3,714,580	Denmark ...	1903	486,935
France <sup>3</sup> ... ..	1908	3,133,650	New Zealand ...	1908-9	363,259
Australia... ..	1910	2,165,866	Netherlands ...	1904	295,277
Canada <sup>4</sup> ... ..	1909	2,132,489	Cape Colony ...	1904	255,060

Mexico ... ..	1902	859,217	Orange River Col'ny	1907	127,579
Sweden ... ..	1908	574,872			

1. Preliminary figures. 2. Austria 1902, Hungary 1909. 3. Employed on farms. 4. Exclusive of British Columbia. 5. Agricultural horses, unbroken horses, and breeding mares only. 6. Exclusive of Formosa. 7. Exclusive of Bengal.

6. **Relation to Population.**—In proportion to population, horses are much more numerous in the Northern Territory than in any other of the principal divisions of the Commonwealth. Queensland is next in order, while Tasmania has the smallest number of horses per head. In all cases the number of horses per head of population was somewhat higher in 1910 than in 1900. Particulars for the past ten years are as follows:—

NUMBER OF HORSES PER HEAD OF POPULATION, 1901 to 1910.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Northern Territory.	C'wealth.

### § 3. Cattle.

1. **Purposes for which Raised.**—In all the States of the Commonwealth cattle-raising is carried out on a more or less extensive scale, the main object in certain districts being the production of stock suitable for slaughtering purposes, and in others the raising of profitable dairy herds. The great impetus which the development of the export trade in Australian butter gave to the dairying industry in the Commonwealth led to a considerable increase in the numbers and quality of the dairy herds of the States of Victoria, New South Wales, and Southern Queensland in particular, the sub-tropical portion of Australia being apparently the best adapted to this industry. On the other hand, by far the finest specimens of beef-producing cattle are those raised in the tropical districts of the Commonwealth, *i.e.*, in the northern parts of Queensland, in the Northern Territory, and in the Kimberley districts in the north of Western Australia.

2. **Distribution throughout Commonwealth.**—Until 1880 New South Wales occupied the leading position in the Commonwealth group as a cattle-raising State, but in that year Queensland forged ahead and obtained a lead which it has since maintained. The extent of this lead has, however, varied considerably, owing principally to the effects produced by the tick fever and droughts, from both of which causes the Queensland herds suffered more severely than those of the other States. In fact, during the period from 1894, when the number of cattle in Queensland attained its maximum of rather more than 7,000,000, to 1903, when the number recorded was less than 2,500,000, an uninterrupted decline was experienced. During the past seven years, however, a rapid improvement has taken place, and the total reached on 31st December, 1910, was over 5,100,000.

The numbers of cattle in the several States and the Northern Territory at quinquennial intervals from 1860 to 1900 and thence onwards for each year are as follows :—

**NUMBER OF CATTLE IN STATES, NORTHERN TERRITORY AND COMMONWEALTH,  
1860 to 1910.**

Year.	N.S.W.	Victoria.	Queensland	S. Aust.	W. Aust.	Tasmania	Northern Territory.	C'wealth.

\* Statistics not collected prior to 1880.

**3. Proportion in each State.**—During the period elapsing between 1900 and 1910 the proportion of cattle in the several States and the Northern Territory has varied considerably, as shewn hereunder :—

**PERCENTAGE OF CATTLE IN EACH STATE AND NORTHERN TERRITORY ON  
TOTAL FOR COMMONWEALTH, 1900 to 1910.**

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N. T'ry.	C'wealth.
	%	%	%	%	%	%	%	%
1900	...	22.95	18.55	47.20	2.49	3.92	1.91	2.98
1901	...	24.11	19.12	44.43	2.65	4.69	1.99	3.01
1902	...	24.65	23.28	36.01	3.02	6.19	2.52	4.33
1903	...	25.95	22.97	34.24	3.37	6.87	2.57	4.03
1904	...	27.41	21.50	34.72	3.48	7.16	2.57	3.16
1905	...	27.42	20.37	34.75	3.56	7.41	2.42	4.07
1906	...	27.27	19.30	36.52	3.48	7.38	2.26	3.79
1907	...	27.16	18.20	38.43	3.30	7.08	2.13	3.70
1908	...	28.02	14.92	40.97	3.23	7.04	1.95	3.87
1909	...	27.42	14.04	42.68	3.12	7.18	1.81	3.75
1910	...	26.74	13.18	43.69	3.28	7.02	1.72	4.37

A comparison of the positions of the several States in 1900 and 1910 shews that, while Queensland's proportion of the Commonwealth herds and those of Victoria and Tasmania suffered diminution, fairly large increases were in evidence in New South Wales, South Australia, Western Australia and Northern Territory. The most noticeable increase in proportion is that of Western Australia, from 3.92% in 1900 to 7.02% in 1910.

4. **Imports and Exports of Cattle.**—Although the various products of the cattle-raising industry bulk largely in the export trade of the Commonwealth, the export of live cattle from Australia has never been considerable. The number of cattle imported is also small, consisting, as in the case of horses, mainly of valuable animals for breeding. One effect of this is that although considerably more than three times as many cattle were exported during the past ten years as were imported, the value of exports exceeded the value of imports by only £5335. Details are as follows :—

**COMMONWEALTH IMPORTS AND EXPORTS OF CATTLE, 1901 to 1910.**

Year.	Imports.		Exports.		Net Exports.	
	No.	Value.	No.	Value.	No.	Value.*
		£		£		£
1901 ...	114	3,591	2,413	22,088	2,299	18,497
1902 ...	2,929	49,231	4,489	19,002	1,560	— 30,229
1903 ...	161	9,569	939	9,302	778	— 267
1904 ...	145	7,903	770	7,115	625	— 788
1905 ...	1,022	10,591	1,280	15,451	258	4,860
1906 ...	161	6,762	552	5,373	391	— 1,389
1907 ...	183	10,204	687	8,759	504	— 1,445
1908 ...	112	11,020	953	11,724	841	704
1909 ...	81	5,710	975	9,586	894	3,876
1910 ...	104	8,665	3,745	20,181	3,641	11,516
Total for 10 years.	5,012	123,246	16,803	128,581	11,791	5,335

\* — signifies net imports.

The average value of the cattle imported into the Commonwealth during the ten years was £24 11s. 10d. per head, while the average value of the cattle exported during the same period was £7 13s. 1d.

The comparatively large export figures for 1901 and 1902 were due to exports to Natal and Cape Colony.

5. **Cattle Slaughtered.**—Complete returns of the number of cattle slaughtered annually in the Commonwealth are not obtainable, as these particulars are collected in Tasmania for Hobart and Launceston only, and were collected in South Australia for the first time in 1908 in respect of the year 1907. Estimates for the missing data for these States have, however, been made, as shewn in the following table :—

**CATTLE (INCLUDING CALVES) SLAUGHTERED, COMMONWEALTH AND STATES, 1901 to 1910.**

Year.	N.S.W.	Victoria.	Q'land.	S. Aust. <sup>1</sup>	W. Aust.	Tas.	C'wealth.
1901 ...	335,823	251,477	377,433	72,000	39,424	34,000	1,110,157
1902 ...	288,131	233,206	344,731	72,000	43,882	34,000	1,015,950

1910 ...	483,947	319,665	378,514	<sup>2</sup> 88,225	55,723	37,000	1,363,074

1. Estimated for the years 1901 to 1906. 2. Including Northern Territory.—1908 to 1910, 3759, 3975, and 4061 respectively.

For Hobart and Launceston only, the figures for the years 1901 to 1910 were, respectively, 8815, 10,193, 9842, 10,708, 12,035, 10,503, 12,037, 11,907, 10,059 and 11,569.

6. **Export of Beef Preserved by Cold Process.**—A large export trade in beef preserved by cold process is carried on by the Commonwealth, mainly with the United Kingdom, the Philippine Islands and the South African Union. The quantities so exported during the five years 1906 to 1910 are as follows:—

**QUANTITY OF BEEF PRESERVED BY COLD PROCESS EXPORTED FROM  
THE COMMONWEALTH, 1906 to 1910.**

Country to which Exported.	1906.	1907.	1908.	1909.	1910.	Total for 5 years.

During the five years under review, the largest of Australia's customers for beef preserved by cold process has been the United Kingdom, while the most consistent and the second largest customer has been the Philippine Islands; the South African Union, Russia and Egypt ranked next in order of importance. The exporting States during 1910 were Queensland, 96,593,882 lbs., valued at £1,037,038; New South Wales, 8,745,361 lbs., valued at £97,878; and Victoria, 4,088,285 lbs., valued at £44,230.

7. **Comparison with other Countries.**—In the following comparison of the herds of Australia with those of some of the principal cattle-raising countries of the world, the latest available figures have been inserted in each case :—

#### NUMBER OF CATTLE IN VARIOUS COUNTRIES.

Country.	Date.	No. of Cattle.	Country.	Date.	No. of Cattle.
British India <sup>1</sup> ...	1908	92,038,528 <sup>2</sup>	Bulgaria ...	1905	2,172,405 <sup>2</sup>

1. Exclusive of Bengal.

2. Including buffaloes.

3. Austria 1902, Hungary 1909.

4. Exclusive of British Columbia.

5. Exclusive of Formosa.

8. **Relation to Population.**—The number of cattle per head of population differs considerably in the several States, and is also subject to marked variation from year to year in the same State. Particulars for the past ten years are as follows :—

#### NUMBER OF CATTLE PER HEAD OF POPULATION, 1901 to 1910.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	Northern Territory.	C'wealth.
1901 ...	1.49	1.34	7.44	0.63	2.06	0.96	5.47	2.22
1902 ...	1.24	1.36	4.97	0.60	2.06	0.99	6.84	1.82
1903 ...	1.32	1.38	4.79	0.69	2.21	1.02	6.90	1.85
1904 ...	1.48	1.40	5.19	0.76	2.36	1.09	5.89	1.97
1905 ...	1.57	1.44	5.58	0.84	2.53	1.11	8.57	2.11
1906 ...	1.71	1.48	6.33	0.89	2.70	1.14	9.08	2.29
1907 ...	1.81	1.49	7.13	0.90	2.82	1.14	10.03	2.43
1908 ...	1.89	1.26	7.76	0.88	2.86	1.08	11.42	2.49
1909 ...	1.88	1.21	8.15	0.88	2.99	1.04	11.82	2.55
1910 ...	1.91	1.21	8.57	0.95	2.98	1.04	15.55	2.65

For the Commonwealth as a whole the ratio of cattle to population is 19 per cent. greater for 1910 than for 1901, and has exhibited a continuous increase from 1902 onwards. The excess of the 1910 figures over those for 1901 is in evidence in all the States except Victoria, and is most marked in the case of the Northern Territory. In Queensland the ratio has increased very rapidly during the past seven years, the ratio per head of population for 1910 being 79 per cent. greater than for 1903. In Victoria the ratios for 1909 and 1910 are the lowest for the period under review.

### § 4. Sheep.

1. **The Founding of the Commonwealth Pastoral Industry.**—Fortunately for Australia, the suitability of its climate and general conditions for the production of a high class of wool was, at an early date in the history of its settlement, surmised and tested by Captain Macarthur, one of the pioneer sheep-breeders of New South Wales. To the energy of this enterprising pastoralist is due in large measure the rapid and extremely satisfactory development of Australia as a producer of fine wool, and though it would appear that the introduction of the Merino sheep into Australia was not due to Macarthur, a great deal of the credit for having successfully established the pastoral industry in Australia must certainly be his.

2. **Distribution throughout Commonwealth.**—With the exception of a short period in the early sixties, when the flocks of Victoria outnumbered those of the mother State, New South Wales has maintained amongst the Commonwealth group the lead in sheep production which naturally attached to it as the portion of the Commonwealth in which settlement was first effected. From 1878 onwards, the number of sheep in New South Wales has, in every year except 1902, 1903, and 1910, represented more than half the total for the Commonwealth, and even in these years it fell but little short of half the total.

The number of sheep in the several States at quinquennial intervals from 1860 to 1900, and for each year onwards to 1910, is as follows:—

#### NUMBER OF SHEEP IN STATES, NORTHERN TERRITORY, AND COMMONWEALTH, 1860 to 1910.

Year.	New South Wales.	Victoria.	Queens- land.	South Australia.	Western Australia.	Tasmania.	Northern Territory	Total C'wealth.

\* Statistics not collected prior to 1880.

3. **Proportion in the Several States.**—Particulars concerning the relative positions of the several States and the Northern Territory with respect to the total flocks of Australia, and the variations in such positions which have taken place during the past ten years, are as hereunder.

During the period the proportion of total Commonwealth flocks declined considerably in the case of New South Wales and Tasmania, and in a less marked degree in Victoria, South Australia, and the Northern Territory, while in the case of Queensland and Western Australia a marked advance in proportion was experienced.

**PERCENTAGE OF SHEEP IN EACH STATE AND NORTHERN TERRITORY ON TOTAL  
FOR COMMONWEALTH, 1901 to 1910.**

Year.	N.S.W.	Vic.	Q'nsland.	S. Aust.	W. Aust.	Tas.	Northern Territory.	C'wealth.

**4. Oversea Imports and Exports of Sheep.**—As in the case of cattle, the oversea exports of live sheep from Australia are of comparatively small importance. The principal countries to which such exports have been consigned during recent years are South African Union, Straits Settlements, New Caledonia, and Papua. The following are the particulars of the imports and exports for the past ten years:—

**COMMONWEALTH IMPORTS AND EXPORTS OF SHEEP, 1901 to 1910.**

Year.	Imports.		Exports.		Net Exports.	
	No.	Value.	No.	Value.	No.	Value.
		£		£		£
1901 ...	553	12,134	12,094	12,104	11,541	—30
1902 ...	47,654	66,042	24,296	15,558	—23,358	—50,484

1910	7,470,002	4,245,881	1,751,151	1,316,904 <sup>3</sup>	549,977	346,000	15,679,915

1. Estimated for years 1901 to 1906.

2. Estimated.

3. Including Northern Territory, 1908 to 1910; 300,523, and 516 respectively.

For Hobart and Launceston only the figures for the years 1901 to 1910 were respectively:—101,627, 114,900, 122,233, 109,992, 101,863, 104,081, 107,859, 115,560, 111,445 and 119,456.

6. **Exports of Mutton and Lamb Preserved by Cold Process.**—Australia's export trade in mutton and lamb preserved by cold process is one which has, in recent years, advanced rapidly, and at the present time amounts to more than £2,100,000 per annum. In all the States considerable attention is now being paid to the breeding of a class of sheep that will best meet the requirements of consumers. Crosses between the Merino and the Lincoln, or between the Merino and the Leicester breeds, have proved exceedingly valuable, as they furnish both a good quality of wool and also an excellent carcase for export purposes. The breeding of Shropshire and Southdown sheep with a view to combining meat production with that of wool is also on the increase. Special attention is being paid to the raising of lambs for the home markets, as it is becoming very widely recognised that with suitable breeds, the export trade in lambs is a very profitable one.

Australia's principal customers in this trade are the United Kingdom and South Africa, while in Egypt and Canada a demand for Australian mutton and lamb has developed in recent years. A regular, though not very extensive, trade is also done with the Philippine Islands. The quantities exported to various countries are as follows:—

**QUANTITY OF MUTTON AND LAMB PRESERVED BY COLD PROCESS EXPORTED  
FROM THE COMMONWEALTH, 1906 to 1910.**

**7. Comparison with other Countries.**—As regards the size of its flocks and the quantity and quality of wool produced, Australia occupies the foremost position amongst the sheep-raising countries of the world. The following comparison gives the latest available figures relative to the number of sheep in the principal wool-producing countries:—

**NUMBER OF SHEEP IN VARIOUS COUNTRIES.**

Country.	Date.	No. of Sheep	Country.	Date.	No. of Sheep.
<b>Australia</b> ...	<b>1910</b>	<b>92,047,015</b>	Rumania ...	1900	5,655,444

## § 5. Wool.

1. **Importance of Wool Production.**—The chief contributing factor to the pastoral wealth of Australia is the production of wool, the value of the output for the year 1910 being about £32,000,000. Most of the wool produced in the Commonwealth is exported, but with the increased activity of the local woollen mills there has, in recent years, been an increasing quantity used in Australia, although even now the quantity so used represents less than  $1\frac{1}{2}$  per cent. of the whole clip.

2. **Greasy and Scoured Wool.**—In the returns of imports and exports of wool furnished to the Customs Department the quantities are usually shewn as "greasy," or as "scoured and washed," but for the purpose of comparing the clips of the several States or of the Commonwealth as a whole for a series of years, it is convenient to have the total production expressed in terms of greasy wool.

The total quantity of Australian wool scoured and washed before export is, on the average of the last five years, about  $22\frac{1}{2}$  per cent. of the total clip. The ratio of loss of weight in scouring varies largely with season, locality, breed, and condition. It seems preferable to express "scoured and washed" wool in terms of "greasy" rather than *vice versa*, since the absolute error arising from any uncertainty as to the average loss of weight has thus the less effect.

3. **Total Production.**—In the following tables, relative to the production of wool for the five years 1906 to 1910, wool returned as "scoured and washed" has been converted into the estimated equivalent amount of "greasy" on the assumption that two pounds of "greasy" wool are on the average required to produce one pound of "scoured and washed" wool. An allowance has also been made for the quantity of wool exported on sheepskins. On this basis the estimated total production of wool (in the grease) for the years 1906 to 1910 may be said to be as in the following table:—

## PRODUCTION OF WOOL, ESTIMATED AS "GREASY," COMMONWEALTH AND STATES, 1906 to 1910.

State.	1906.	1907.	1908.	1909.	1910.

\* Details for individual States not available owing to discontinuance by Customs Department of statistics of Interstate trade.

4. **Wool Locally Used.**—Of this production the quantity used in the manufactories of the several States of the Commonwealth was approximately as follows:—

**LOCALLY USED WOOL, ESTIMATED AS "GREASY," COMMONWEALTH AND STATES,  
1906 to 1910.**

State.	1906.	1907.	1908.	1909.	1910.

5. **Bounties on Combed Wool or Tops Exported.**—Under the Bounties Act 1907, bounties are payable on combed wool or tops exported from the Commonwealth, provided they were produced therein. The maximum amount which may be paid in any one year is £10,000. For the three years commencing 1st January, 1909, the rate of bounty granted is 1½d. per lb.; and for the two years commencing 1st January, 1912, 1d. per lb. is payable. During the year 1908-9, an amount of £326 was paid in bounties, in 1909-10 £4933 was paid, while in 1910-11 the amount so distributed was £8522. The quantities of wool on which these amounts were paid were 52,085, 789,216, and 1,363,520 lbs. respectively.

6. **Exports of Wool.**—About forty-five per cent. of the exports of wool from the Commonwealth are despatched to the United Kingdom, the other leading consignees being France, Germany, Belgium, and the United States of America. The following table shews for the years 1906 to 1910 the quantities of "greasy" wool exported from the Commonwealth to the principal countries of destination:—

**COMMONWEALTH EXPORTS OF WOOL IN THE GREASE, 1906 to 1910.**

The figures for "scoured and washed wool" for 1909 include for the first time an export of tops, amounting to 496,492 lbs. and valued at £58,638. In 1910 the corresponding export was 1,123,469 lbs., valued at £134,874.

The total value of the wool exported from the Commonwealth to each of the various countries during the five years under review was:—

**TOTAL VALUE OF WOOL EXPORTED FROM THE COMMONWEALTH, 1906 to 1910.**

**7. Care needed in Comparing Clips.**—The Customs returns, from which statistics of wool production are usually compiled, do not furnish a reliable indication of increase or decrease in successive clips, since in each case they relate to the year ended 31st December. Ordinarily, therefore, they include for any year imports and exports of wool belonging to two distinct clips. A further defect in the comparability of successive clips arises as follows:—Owing to climatic or other conditions, the time of shearing may be so far delayed that one clip may include almost thirteen months' growth of wool, while the succeeding one may include little more than eleven months' growth. An instance of this occurred in some portions of the Commonwealth in connection with the clips of 1906 and 1907. The shearing in the former case was somewhat late, while in the latter it took place at the usual time, the result being that the 1906 clip was above and that of 1907 below the normal.

Similar circumstances operated to make the 1909 clip somewhat higher and the 1910 clip somewhat lower than would have been the case had the interval between successive shearings been exactly a year.

**8. Wool-producing Countries in Southern Hemisphere.**—The next table, compiled by Messrs. Helmuth Schwartz and Co., the well-known firm of English wool

brokers, furnishes interesting evidence of the relative importance of the three great wool-producing countries of the Southern Hemisphere. The figures given represent for the respective years the imports of wool into Europe and North America :—

#### IMPORTS OF WOOL INTO EUROPE AND NORTH AMERICA, 1901 to 1910.

Year.	Commonwealth and New Zealand.	Cape Colony.	River Plate.	Total
	Bales.	Bales.	Bales.	Bales.
1901 ... ..	1,745,000	217,000	532,000	2,494,000
1902 ... ..	1,699,000	234,000	512,000	2,445,000
1903 ... ..	1,451,000	234,000	558,000	2,243,000
1904 ... ..	1,371,000	201,000	476,000	2,048,000
1905 ... ..	1,633,000	209,000	488,000	2,330,000
1906 ... ..	1,833,000	238,000	487,000	2,558,000
1907 ... ..	2,103,000	287,000	478,000	2,868,000
1908 ... ..	2,072,000	276,000	484,000	2,832,000
1909 ... ..	2,296,000	380,000	571,000	3,247,000
1910 ... ..	2,411,000	377,000	461,000	3,249,000

It will be seen that of the total importations shewn in this table, the Commonwealth of Australia and the Dominion of New Zealand account for about 70 per cent.

9. **United Kingdom Importation of Wool.**—The quantity and value of wool imported into the United Kingdom during the year 1910 from the principal wool-producing countries, furnish evidence of the important position which the Commonwealth occupies in the supply of wool to the mother country. This is shewn in the following table :—

#### IMPORTS OF WOOL INTO THE UNITED KINGDOM, 1910.

Country from which Imported.	Quantity.	Value.	Country from which Imported.	Quantity.	Value.
	lbs.	£		lbs.	£
Australia ... ..	314,517,042	14,273,939	Peru ... ..	3,031,752	128,793
New Zealand ... ..	189,680,851	8,526,757	Russia ... ..	3,798,031	125,226
Cape Colony ... ..	79,659,514	3,065,950	Egypt ... ..	3,682,030	99,896
France ... ..	27,587,988	1,679,316	Portugal ... ..	2,712,492	93,638
British India ... ..	53,334,001	1,448,636	China ... ..	2,418,014	83,131
Argentine Republic ... ..	32,382,184	1,261,061	Netherlands ... ..	842,206	30,712
Natal ... ..	24,614,953	864,796	Canada ... ..	804,930	30,124
Chile ... ..	24,863,833	808,833	Italy ... ..	555,081	23,376
Turkey ... ..	9,501,945	267,005	Persia ... ..	419,000	12,349
Belgium ... ..	4,734,796	223,545	Spain ... ..	252,511	8,099
Germany ... ..	3,431,000	170,378	Other Countries ... ..	2,560,096	92,879
U.S. of America ... ..	3,707,459	168,454			
Falkland Islands ... ..	4,839,600	166,725			
Uruguay ... ..	3,487,094	157,919	Total ... ..	797,418,403	33,811,537

It will be seen that of the total importations of wool into the United Kingdom, Australian wool represented about 39 per cent. of quantity and 42 per cent. of value.

10. **The Wool Market.**—About 83 per cent. of the wool grown in Australia is now disposed of at the local sales held in Sydney, Melbourne, Geelong, Brisbane, Adelaide, Fremantle, Hobart and Launceston. These sales are attended by buyers from England and America, as well as by representatives of the principal European manufacturing countries. The market for wool, which had been for some years steadily improving, received a severe set-back in the early portion of the season 1907-8 by the disastrous financial crisis which occurred in America soon after the commencement of that season. The result was that buying was restricted, prices fell, and a considerable quantity of

wool was withdrawn from sale and held over until the succeeding season. The season 1908-9 consequently opened rather inauspiciously, but, although prices did not reach the high level attained in 1906-7, the demand, particularly in the latter part of the season, was much more spirited than in 1907-8, and the sales must be regarded as having been very satisfactory. The season 1909-10 opened favourably and prices exhibited a distinctly upward tendency, with the result that the price averaged over 20 per cent. more than was obtained during the preceding year. The 1910-11 season opened with a fall of 10 per cent. on the closing rates of the previous season; values gradually recovered before the middle of the series, when wool was selling almost as well as at any period of the previous year; prices again declined  $7\frac{1}{2}$  to 10 per cent., but made a good recovery towards the close of the season, the average for the year being 8 per cent. below that of the previous year.

During the sales of 1910-11 the prices realised for greasy merino wool ranged up to 18 $\frac{1}{2}$ d. per lb. for a few lines of extra super. Western District (Victoria) wool, super, to 14 $\frac{1}{2}$ d., good to 12 $\frac{1}{2}$ d., average to 12d., and inferior from 6 $\frac{1}{2}$ d. to 8d. Amongst other classes of wool extra super. comebacks brought as high as 15 $\frac{1}{2}$ d., and super. 14 $\frac{1}{2}$ d. Super. crossbreds sold up to 14 $\frac{1}{2}$ d., fine to 12 $\frac{1}{2}$ d., medium to 10d., and coarse to 9 $\frac{1}{2}$ d. Scoured wool ranged from 16d. to 23 $\frac{1}{2}$ d.

The average values per lb. of Australian greasy wool according to the export returns for the past ten years have been as follows:—

**EXPORT VALUE PER LB. OF AUSTRALIAN GREASY WOOL, 1901 to 1910.**

**§ 6. Hides and Sheepskins.**

1. **Extent of Trade.**—In addition to the hides and sheepskins treated in the tanneries of the several States, a very considerable export trade is carried on, the total value of the hides and sheepskins exported from Australia during the five years 1906 to 1910 being no less a sum than £10,030,115, or an average of £2,006,023 per annum.

2. **Sheepskins with Wool.**—By far the largest item included in the amount mentioned in the preceding paragraph arises from the value of sheepskins with wool exported, which are shipped principally to France and the United Kingdom. Details concerning the number so exported during the five years 1906 to 1910 are as follows:—

**COMMONWEALTH EXPORTS OF SHEEPSKINS WITH WOOL, 1906 to 1910.**

4. **Hides.**—The Commonwealth trade in hides has now assumed considerable proportions, and during 1910 the total value of hides exported amounted to £456,045. The exports took place principally to the United Kingdom, Belgium, Germany, Italy, the United States of America, and France. Large quantities of hides are also imported into the Commonwealth, mainly from New Zealand and the Pacific Islands. The total value of hides imported during 1910 was £169,771.

Particulars concerning the export of hides during the past five years are as follows:—

**COMMONWEALTH EXPORTS OF HIDES, 1906 to 1910.**

## § 7. Graphical Representation of Pastoral Production.

1. **General.**—As comparatively complete statistics relative to the number of horses, cattle, sheep and pigs are available from 1860, the graphical representation of the increase in numbers for the Commonwealth as a whole, shewn on page 357, covers the period from 1860 to 1910.

2. **Horses.**—With relatively unimportant fluctuations the number of horses in the Commonwealth increased at a fairly consistent rate until 1895, when a decline set in, culminating in the losses of the disastrous drought of 1902. At this latter point the number was practically identical with that for 1890. From 1902 onwards a rapid improvement has been experienced, and in 1906 the previous maximum attained in 1895 was passed. Previous periods of decline were experienced in 1866, 1871, 1877 and 1882.

3. **Cattle.**—The graph for cattle furnishes evidence of rapid increase in number, interrupted by three marked periods of decline, of which the first extended from 1862 to 1866, the second from 1881 to 1885, and the third from 1894 to 1902. So extensive was this last-mentioned decline that the number receded to that of 1879. Since 1902 a rapid recovery has been effected, and the total for 1910 closely approximates to that existing at the end of the year 1895, though still short of the maximum attained in 1894.

4. **Sheep.**—In the case of sheep the graph furnishes evidence of four periods in which the upward movement in number has been arrested or reversed. The first of these occurred between 1868 and 1871, the second between 1875 and 1877, the third during 1884, and the fourth, by far the most serious, between 1891 and 1902. From 1902 to 1907 a rapid increase took place, succeeded by a slight decline in 1908, and a rapid advance in 1909 and 1910. The point now reached corresponds approximately with that attained in the latter portion of 1895.

5. **Pigs.**—The graph for pigs exhibits more numerous fluctuations than that for either of the other classes of live stock represented, and from 1904 to 1908 furnished evidence of a persistent decline. In 1909, however, an upward movement took place, the total for that year being higher than that for either of the two preceding years, while that for 1910 is the highest recorded for any year, with the exception of 1904.

GRAPHS SHEWING NUMBER OF HORSES, CATTLE, SHEEP, AND PIGS IN  
THE COMMONWEALTH FROM 1860 TO 1910.

(See pages 338, 341, 345, and 444.)

**EXPLANATION OF GRAPH.**—The base of each small square represents an interval of one year. The totals of the sheep, cattle, horses, and pigs for the Commonwealth are indicated by the several curves or graphs, the vertical side of a small square representing 2,000,000 in the case of sheep; 200,000 for cattle; 30,000 for horses; 40,000 for pigs.

GRAPHS SHEWING THE PRODUCTION OF BUTTER AND CHEESE, AND BACON AND HAM, IN THE COMMONWEALTH, FROM 1896 TO 1910.

(See page 446.)

EXPLANATION OF GRAPH.—The base of each small rectangle represents an interval of one year, and the vertical height of each rectangle denotes in the case of butter 10,000,000 lbs.; in the case of bacon and ham, 4,000,000 lbs.; and in the case of cheese, 3,000,000 lbs.

GRAPHS SHEWING THE QUANTITY AND VALUE OF NET EXPORTS OF BUTTER FROM THE COMMONWEALTH, FROM 1901 TO 1910.

(See page 450.)

EXPLANATION OF GRAPH.—The base of each small rectangle represents an interval of one year, and the vertical height of each small rectangle represents 5,000,000 lbs. in weight, or £1,000,000 in value.

## SECTION VIII.

### AGRICULTURAL PRODUCTION.

#### § 1. Introductory.

**1. Early Attempts at Agriculture.**—The instructions issued to Captain Phillip on the 25th April, 1787, directed him, amongst other things, to proceed as soon as possible to the cultivation of the soil "under such regulations as may appear to be necessary and best calculated for securing supplies of grain and provisions." When the settlers landed at Botany Bay, however, it was found that the glowing accounts published in England by members of Captain Cook's expedition of the fertility of the soil in that locality were considerably overdrawn. Even when Phillip and his company moved round to Port Jackson on the 26th January, 1788, matters were for a time in no better case. The ground in the immediate neighbourhood of the settlement was not suitable for the cultivation of cereal crops, and when the time came to cultivate the soil it was found that there were very few who possessed the slightest acquaintance with the art of husbandry.

**2. The First Sowing.**—In his despatch of the 15th May, 1788, Captain Phillip states that it was proposed to sow eight acres with wheat and barley, although, owing to the depredations of field mice and ants, he was doubtful of the success of the crops.

**3. Discovery of Suitable Agricultural Land.**—A branch settlement was formed at Rosehill, on the Parramatta River, towards the close of 1788, and here corn crops were successfully raised. In his despatch of 12th February, 1790, Phillip refers to the harvest at Rosehill at the end of December, 1789, as consisting of 200 bushels of wheat and sixty of barley, in addition to small quantities of oats, Indian corn, and flax. By the year 1791 there were 213 acres under crop in this locality. In 1792 a new settlement was formed at Toongabbie, about three miles westward of Parramatta, where Phillip states "there are several thousand acres of exceeding good ground." The Hawkesbury Valley, which probably contains some of the richest land in the world, was first settled in 1794. For a long time agricultural operations in Australia were restricted to the narrow belt of country between the tableland and the east coast of New South Wales, as it was not until the year 1813 that a passage was discovered across the Blue Mountains to the fertile plains of the west.

#### § 2. Progress of Agriculture.

**1. Early Records.**—In an "Account of Live Stock and Ground under Crop in New South Wales, 19th August, 1797," Governor Hunter gives the acreage under crop as follows:—Wheat, 3361 acres; maize, 1527 acres; barley, 26 acres; potatoes, 11 acres; and vines, 8 acres.

At a muster taken in 1808 the following was the return of crops:—Wheat, 6877 acres; maize, 3389 acres; barley, 544 acres; oats, 92 acres; peas and beans, 100 acres; potatoes, 301 acres; turnips, 13 acres; orchards, 546 acres; and flax and hemp, 34 acres.

By the year 1850 the area under crop had increased to 491,000 acres, of which 198,000 acres were cultivated in what is now the State of New South Wales, and 169,000 acres in Tasmania. At the end of 1850 the area under cultivation in Victoria, which was then the Port Phillip District of New South Wales, was 52,190 acres.

The gold discoveries of 1851 and subsequent years had at first a very disturbing effect on agricultural progress, the area under crop declining from 491,000 acres in 1850 to 458,000 acres in 1854; the area under cultivation in New South Wales decreased by nearly 66,000 acres, while in Tasmania a falling-off of over 41,000 acres was experienced. The demand for agricultural products occasioned by the large influx of population was, however, soon reflected in the increased area cultivated, for at the end of 1858 the land under crop in Australia totalled over a million acres. The largest increase took place in Victoria, which returned an area of 299,000 acres. For the same year South Australia had 264,000 acres in cultivation, Tasmania 229,000 acres, and New South Wales 223,000 acres.

**2. Progress of Cultivation since 1860.**—The following table shews the area under crop in each of the Commonwealth States at quinquennial intervals since 1860 and during each year of the period 1901-11. The area under permanent artificially-sown grasses is excluded in all the States, except for the years 1860-79 in the case of New South Wales, where the acreage cannot be separated. During those years, however, the area laid down under permanent grasses could not have been very large:—

#### AREA UNDER CROP IN AUSTRALIA, 1860-1 to 1910-11.

1910-11 ...	3,386,017	3,952,070	667,113	*2,746,694	855,024	286,920	11,893,838

\* Including Northern Territory, 360 acres.

The increase in the area under crop during the past ten years has been most marked in the case of New South Wales, the total advancing from 2,445,564 acres in the season 1900-1 to 3,386,017 in 1910-11, an increase of 940,453 acres. During the same period an increase of 837,938 acres was experienced in Victoria, 653,686 acres in Western Australia, 376,654 acres in South Australia, 209,716 in Queensland, and 62,568 acres in Tasmania. The total area under crop in the Commonwealth increased during the period by 3,081,375 acres, and the total for 1910-11 was the highest ever attained by the Commonwealth. The 1910-11 figures were also the highest ever attained by any of the States.

3. **Relation to Population.**—From the following table it will be seen that for the Commonwealth as a whole the area under crop has, during the past ten seasons, increased at a rate which is somewhat greater than that at which the population of the Commonwealth has increased. This relatively greater increase is in evidence in all the States, being most marked in the case of Western Australia, which has now a larger area under crop per head of population than any State except South Australia. Details for the ten seasons are as follows:—

#### TOTAL AREA UNDER CROP PER 1000 OF POPULATION.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1901-2 ...	1,656	2,451	954	6,224	1,123	1,327	2,200
1902-3 ...	1,604	2,687	538	6,231	1,085	1,376	2,186
1903-4 ...	1,786	2,813	1,094	6,321	1,263	1,419	2,375
1904-5 ...	1,838	2,755	1,027	6,332	1,368	1,222	2,356

1909-10 ...	1,971	2,865	1,050	6,440	2,718	1,419	2,538
1910-11 ...	2,060	3,037	1,114	6,750	3,089	1,480	2,688

4. **Relation to Total Area.**—The next table furnishes a comparison of the area under crop in the Commonwealth and the several States with the respective total areas. For the Commonwealth as a whole the area under crop represented for 1910-11 only about one acre in every 160. In Victoria the area under crop was about one acre in every 14, in Tasmania one in 58, in New South Wales one in 59, in South Australia one in 89, in Queensland one in 643, and in Western Australia one in 730.

#### PERCENTAGE OF AREA UNDER CROP TO TOTAL AREA OF EACH STATE AND OF COMMONWEALTH FOR SEASONS 1901-2 to 1910-11.

1910-11 ...	1.705	7.026	0.155	1.129	0.137	1.710	0.625

\* Exclusive of Northern Territory.

5. **Artificially-Sown Grasses.**—In all the States considerable areas are devoted to artificially-sown grasses, frequently sown on uncultivated land after burning off. Complete statistics regarding the area under such grasses are available for the whole of the States only since the year 1896, and are as shewn hereunder:—

## AREA UNDER SOWN GRASSES, 1896-7 to 1910-11.

Season.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Commonwealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1896-7	384,016	172,582	11,960	20,027	4,044	253,306	845,935
1901-2	467,839	162,954	34,679	23,510	3,711	314,422	1,007,115
1902-3	477,629	565,635	24,286	23,636	3,228	319,090	1,413,504
1903-4	552,501	962,665	15,639	24,118	2,952	343,284	1,901,159
1904-5	607,997	953,543	35,589	24,912	3,964	378,346	2,004,351
1905-6	627,530	1,040,335	40,802	26,082	5,456	404,653	2,144,858
1906-7	697,631	1,095,642	45,990	23,679	6,787	432,128	2,301,857
1907-8	736,080	1,095,471	76,943	34,635	7,990	465,673	2,416,792
1908-9	807,924	1,029,711	82,784	23,297	10,265	491,422	2,445,403
1909-10	888,937	988,671	108,438	23,343	9,017	439,450	2,457,856
1910-11	1,055,303	991,195	140,196	26,416	8,348	493,233	2,714,691

The considerable increase in the area of the grass lands of the Commonwealth is due in large measure to the great development of the dairying industry which has taken place during the last ten years, and which is referred to in the succeeding section. The areas contained in the above table relate in most cases to grasses sown for grazing purposes on uncultivated land, generally after burning off, and are consequently not included with "area under crop."

## § 3. Relative Importance of Crops.

1. **Various Crops.**—In the following table are furnished details concerning the areas in the several States under each of the principal crops for the season 1910-11 :—

## DISTRIBUTION OF CROPS IN AUSTRALIA, 1910-11.

Crop.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N. Ter.	Total for C'wealth.

2. **Relative Areas of Crops in States.**—Taking the principal crops, *i.e.*, those in the case of which the cultivation amounts to more than 50,000 acres in the Commonwealth, the proportion of each in the various States to the total area under crop for the season 1910-11 is shewn in the next table. In four of the States, *viz.*, New South Wales, Victoria, South Australia, and Western Australia, wheat-growing for grain is by far the most extensive form of cultivation, while in each of these States the hay crop is second in importance. In New South Wales maize ranks third, but in Victoria, South Australia, and Western Australia, and also in the Commonwealth as a whole, the oat crop occupies third position. In Queensland, on the other hand, the three principal crops in the order of importance are maize, sugar cane, and wheat, while in Tasmania hay, oats, and wheat occupy the leading positions. For the Commonwealth as a whole, the wheat, hay, and oat crops represent nearly 87 per cent. of the total area under crop.

**PROPORTION OF AREA UNDER CHIEF CROPS, 1910-11.**

Crop.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N. Ter.	C'wealth.

Green Forage	236,484	439,725	413,511	306,082	374,862
Orchards and Fruit Gardens	162,274	169,299	173,388	178,798	185,156
Sugar Cane	153,864	144,763	140,883	142,261	155,542
Potatoes ...	146,681	143,511	125,685	137,070	151,515
Barley ...	106,436	131,099	140,243	143,013	108,424
Vineyards ...	62,546	61,232	59,450	58,151	59,114
All other Crops ...	144,898	126,390	122,897	129,626	136,762
Total	9,552,800	9,353,902	9,891,243	10,972,299	11,893,83

During the period under review the area devoted to the several crops has varied considerably, that under wheat attaining a maximum for the period in the season 1910-11, and a minimum in 1908-9, while hay reached its maximum area in 1908-9 and its minimum in 1906-7. Of the other crops maize, orchards and fruit gardens, sugar-cane and potatoes attained their maximum areas in 1910-11, oats and barley in 1909-10, green forage in 1907-8, and vineyards in 1906-7.

#### § 4. Wheat.

1. **Progress of Wheat-Growing.**—(i.) *Acres.* The area under wheat for grain is given below for each State at various periods since 1860, and is shewn diagrammatically in the graph hereinafter :—

AREA UNDER WHEAT, 1860-1 to 1910-11.

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	West Aust.	Tasmania.	C'wealth.

1910-11	2,128,826	2,398,089	106,718	*2,104,719	581,862	52,242	7,372,456

\* Including Northern Territory, 2 acres.

The area devoted in the Commonwealth to the production of wheat for grain was higher for the season 1910-11 than for any previous season, exceeding the area for 1909-10, the previous record season, by 786,220 acres, and that for 1908-9 by no less than 2,109,983 acres. The maximum area under wheat for grain was attained by the several States in the following seasons :—New South Wales, Victoria, South Australia and Western Australia 1910-11 ; Queensland 1904-5 ; and Tasmania, 1897-8. The average area under wheat in the Commonwealth in the past ten seasons was 5,881,814 acres. The seasons 1904-5, 1905-6, 1906-7, 1909-10 and 1910-11 exceeded this average, while the remaining five seasons fell short of it. According to the preliminary reports available it appears that the area of wheat reaped for grain in 1911-12 will fall short of that for 1910-11, and will probably not exceed 7,200,000 acres.

(ii.) *Yield.* The production during the same period for each State and for the Commonwealth as a whole is given below :—

## PRODUCTION OF WHEAT, 1860-1 to 1910-11.

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tasmania.	C'wealth.

\* Including Northern Territory, 20 bushels.

The wheat harvest of 1910-11 was the largest ever reaped in the Commonwealth, and exceeded by no less than 4,698,386 bushels that of 1909-10, the next largest harvest, these being the only two occasions on which a yield exceeding 75,000,000 bushels has been obtained. The only other occasions on which a yield exceeding 60,000,000 bushels has been reaped were the seasons 1903-4, 1905-6, 1906-7 and 1908-9. The prospects for the forthcoming harvest of 1911-12, although not so good as for the two preceding seasons, are still fair, and it appears probable that the aggregate yield for the season will exceed 75,000,000 bushels. For latest particulars to date of going to press, see Appendix.

(iii.) *Average Yields.* In the next table will be found the average yield of wheat per acre in each of the last ten seasons and for the decennium :—

## YIELD OF WHEAT PER ACRE, 1901-2 to 1910-11.

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tasmania.	C'wealth
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
1901-2	10.64	6.91	19.40	4.60	10.10	21.86	7.54
1902-3	1.24	1.29	3.28	3.64	10.67	21.44	2.40
1903-4	17.51	14.49	17.65	7.72	13.60	15.53	13.32
1904-5	9.27	9.26	14.24	6.53	11.06	18.40	8.70
1905-6	10.69	11.31	9.53	11.46	11.83	18.79	11.19
1906-7	11.69	11.13	9.68	10.36	11.02	19.86	11.10
1907-8	6.59	6.55	8.41	10.91	10.46	20.92	8.29
1908-9	11.11	13.12	14.87	11.45	8.63	24.08	11.89
1909-10	14.34	13.72	13.41	13.26	12.48	21.41	13.73
1910-11	13.11	14.52	9.58	11.57	10.14	21.45	12.90
Average for 10 seasons	11.00	10.36	13.03	9.21	10.91	20.18	10.33

As the above figures shew, there were remarkable variations in the average yields, chiefly due of course to the vagaries of the season. The season 1902-3 was an especially lean one in all the States except Western Australia and Tasmania. A large proportion of the area sown with wheat had to be ploughed in or else fed off by stock, but the comparatively heavy yields in the succeeding year shew that this additional cultivation

was very beneficial. For the Commonwealth as a whole the average yield per acre for 1910-11 was below that for 1909-10 which was the best since 1866-7, when, however, the area under wheat was only about one-eighth of the area so cropped in 1910-11. Victoria was the only State with an increase in the average yield per acre, Tasmania was approximately the same as in the previous year, the falling-off being in the other four States.

(iv.) *Relation to Population.* During the past ten seasons the Commonwealth's production of wheat per head of population has varied between  $3\frac{1}{2}$  bushels in 1902-3 and  $21\frac{1}{2}$  bushels in 1910-11. The State in which wheat-growing occupies the most important position relatively to population is South Australia, which in 1910-11 had a yield which averaged close upon 60 bushels per head. Queensland is the State in which the average production of wheat per head is least. Particulars for the past ten seasons are as follows:—

#### AUSTRALIAN WHEAT PRODUCTION PER 1000 OF POPULATION.

Season.	N.S.W.	Victoria.	Queensland.	South Aust.	West. Aust.	Tasmania.	C'wealth.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
1901-2	10,766	10,023	3,340	22,299	4,943	5,499	10,082
1902-3	1,131	2,127	12	17,801	4,649	4,887	3,194

\* Exclusive of Northern Territory.

2. *Australian and Foreign Wheat Yields.*—In the next table will be found a statement of the average return per acre in the principal wheat-growing countries of the world ranging from Belgium with a maximum of  $39\frac{1}{2}$  bushels per acre to Algeria with a minimum of  $8\frac{1}{2}$  bushels per acre. Australia with approximately 13 occupies an intermediate position:—

#### AVERAGE YIELD OF WHEAT IN VARIOUS COUNTRIES.

\*Exclusive of British Columbia.

Various estimates of the total quantity of wheat produced in the world have been made. That furnished by the United States Department of Agriculture gives the following figures for the five years 1905 to 1909 :—

## WORLD'S PRODUCTION OF WHEAT.

Year	1905.	1906.	1907.	1908.	1909.
Production	1,000,000 bushels. 3,225	1,000,000 bushels. 3,324	1,000,000 bushels. 3,031	1,000,000 bushels. 3,079	1,000,000 bushels. 3,513

In this estimate the figures given for Australia and New Zealand relate to the agricultural year ending on 31st March in the year specified.

For the five years referred to the Australian production of wheat aggregated 332,600,000 bushels, thus representing about 2 per cent. of the world's production. The total quantity of wheat produced in the British Empire during the same period of five years was approximately 2,800,000,000 bushels, so that the Australian production of wheat represented nearly 12 per cent. of that of the British Empire, while the British Empire production represented about 17 per cent. of the world's total.

4. **Prices of Wheat.**—(i.) *British Wheat.* Since the United Kingdom is the largest importer of Australian wheat, the price of wheat in the British markets is a matter of considerable interest to the local producer. The table below gives the average prices per Imperial quarter realised for British-grown wheat :—

## PRICES OF BRITISH WHEAT PER QUARTER, 1861 to 1910.

Year.	Average for Year.	Highest Weekly Average.	Lowest Weekly Average.	Year.	Average for Year.	Highest Weekly Average.	Lowest Weekly Average.
	s. d.	s. d.	s. d.		s. d.	s. d.	s. d.
1861	55 4	61 6	50 0	1904	28 4	30 6	26 3
1871	56 8	60 0	52 6	1905	29 8	32 3	26 8
1881	45 4	55 2	40 9	1906	28 3	30 9	25 9
1891	37 0	41 8	32 3	1907	30 7	36 3	26 0
1901	26 9	27 8	25 8	1908	32 0	35 6	30 5
1902	28 1	31 8	24 10	1909	36 11	44 9	31 4
1903	26 9	30 3	24 11	1910	31 8	33 9	29 0

(ii.) *Australian and other Wheat.* Generally speaking, Australian wheat shews a grain of bright clear texture, rich in gluten, and of fine milling quality. Its excellence is attested by the high price which it realises in the Home markets. The statement below shews, for the last five years, the average value per Imperial quarter of the wheat imported into the United Kingdom from the chief producing countries:—

**AVERAGE PRICE OF FOREIGN WHEAT IMPORTED INTO THE UNITED KINGDOM,  
1906 to 1910.**

Country.	Average Price per Imperial Quarter.					Country.	Average Price per Imperial Quarter.

In the next table will be found a statement of the export values of Australian wheat during each of the last ten years:—

**EXPORT VALUES OF AUSTRALIAN WHEAT, 1901 to 1910.**

Year ...	1901.	1902.	1903.	1904.	1905.	1906.	1907.	1908.	1909.	1910.
Price per bushel	2s. 9d.	3s. 1d.	3s. 1d.	3s. 2d.	3s. 5d.	3s. 3d.	3s. 4d.	4s. 1d.	4s. 2d.	4s. 2d.

The export values here shown are the average declared values for the successive years at the several ports of shipment in the Commonwealth.

**5. Imports and Exports of Wheat and Flour.**—(i.) *Quantities.* The table hereunder shews the imports, exports, and net exports of wheat and flour during each year of the period 1901-10. For the sake of convenience flour has been expressed at its equivalent in wheat, one ton of flour being taken as equal to 50 bushels of grain. As shewn in this table, the Commonwealth imports of wheat and flour during 1903 were equivalent to 12,607,940 bushels of wheat. This importation was necessitated by the failure of the crop in the preceding season. The principal sources of supply were the United States, which contributed 5,000,000 bushels of wheat and 56,000 tons of flour, the Argentine, which sent 3,000,000 bushels of wheat and 2000 tons of flour, and Canada, which sent 57,000 bushels of wheat in addition to 11,000 tons of flour. Wheat to the extent of 134,000 bushels was obtained from India, while Brazil furnished 122,000 bushels. In ordinary seasons the import of wheat and flour is negligible. During the past five years the export has ranged between 20,900,000 bushels in 1908 and 54,760,000 bushels in 1910, the net exports for that period averaging 37,830,000 bushels.

# IMPORTS AND EXPORTS OF WHEAT AND FLOUR, COMMONWEALTH, 1901 to 1910.

Year.	Imports.			Exports.			Net Exports.

1. Equivalent in bushels of wheat. 2. — denotes net imports.

(ii.) *Destination of Exported Breadstuffs.* In the next two tables will be found the principal countries to which the Commonwealth exported wheat and flour during each year of the period 1906-10. The countries are as shown in the Australian Customs returns, but owing to the fact that wheat ships are frequently instructed to call for orders at various ports, the countries in which these ports are, cannot be properly considered as the ultimate destination of the whole of the wheat said to be exported to them.

## EXPORTS OF WHEAT FROM THE COMMONWEALTH, 1906 to 1910.

Other Countries	6,089	3,663	7,418	5,845	6,619	29,634
Total	166,881	163,438	116,803	129,969	139,946	717,037

During the five years under review the export of wheat to the United Kingdom totalled 116,193,813 bushels or about 76 per cent. of the total export for the period. On the other hand, the export of flour to the United Kingdom aggregated only 103,873 tons or about 14½ per cent. of the total export. During the five years the heaviest exports of flour have been to South Africa, the United Kingdom, Portuguese East Africa, Java, the Straits Settlements, the Philippine Islands and Hong Kong.

(iii.) *Exports of Wheat and Flour.* From the foregoing returns it will be seen that the quantity of Australian wheat exported in the form of flour during the past five years represents, on the average, about 23 per cent. of the total wheat export of the Commonwealth. One cause of this, and probably the chief one, is the fact that Australian wheats are in considerable demand with the English millers for mixing purposes, while the Australian flour has not, up to the present, received that consideration from the English bakers which its admitted qualities undoubtedly merit. Steps which have recently been taken for bringing these qualities before the British public may possibly have the effect of increasing the proportion of wheat exported in the form of flour.

A point of some interest in connection with the export of wheat, and one which bears also on the proportions of wheat and flour exports just referred to, is that concerning the quantity of phosphoric acid which this export has the effect of removing from the Commonwealth, and the necessity which exists for the return to the soil of this substance in some form.

According to an estimate furnished by the chemist to the New South Wales Department of Agriculture (F. B. Guthrie, Esq., F.C.S., etc.), the proportions of milled product from a bushel (60 lbs.) of wheat are, approximately, 42 lbs. of flour, 9 lbs. of bran, and 9 lbs. of pollard, while the percentage of phosphoric acid contained in these products is as follows:—

Flour	...	...	0.32 per cent., or 0.13 lbs. per bushel.
Bran	...	...	3.00        "        0.27        "
Pollard	...	...	0.90        "        0.08        "

The total amount of phosphoric acid contained in a bushel of wheat is, therefore, 0.48 lbs., of which 0.13 lbs. is in the flour and 0.35 lbs. in the offal.

During the past ten years the net exports from the Commonwealth of wheat and its milled products have amounted to 232,851,144 bushels of wheat, 1,023,401 tons of flour, and 4,421,818 bushels of bran, pollard, and sharps. On the basis of the figures quoted above this export would contain no less than 120,000,000 lbs. of phosphoric acid, the value of which as a fertiliser would be about £750,000.

6. **Value of the Wheat Crop.**—The estimated value of the wheat crop in each State and in the Commonwealth during the season 1910-11 is shewn below :—

#### VALUE OF THE WHEAT CROP,\* 1910-11.

### § 5. Oats.

1. **Progress of Cultivation.**—Oats comes next in importance to wheat amongst the grain crops cultivated last season, but while wheat grown for grain accounted for 62 per cent., oats represented less than 6 per cent. of the area under crop in the Commonwealth. The progress of cultivation of oats since 1860 is shewn in the table hereunder, and more fully in the graphs hereinafter:—

#### CULTIVATION OF OATS, 1860-1 to 1910-11.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.

1909-10 ...	1,966,586	7,913,423	50,018	1,209,131	1,248,162	2,347,548	14,734,868
1910-11 ...	1,702,706	9,699,127	50,469	1,136,618	776,233	2,063,303	15,428,456

The principal oat-growing State of the Commonwealth is Victoria. During the past ten seasons it has produced about 65½ per cent. of the total quantity of oats grown in the Commonwealth; Tasmania, New South Wales, and South Australia come next in order of importance. In New South Wales, Western Australia and Tasmania, the highest production of oats for any season was that of 1909-10, while Victoria and Queensland experienced a maximum yield in 1903-4, and South Australia in 1908-9. For the Commonwealth as a whole the record yield was that of 17,541,210 bushels in the season 1903-4, while the yield of 15,428,456 bushels for 1910-11 ranks third.

**3. Average Yield.**—The average yield per acre of the oat crop of the Commonwealth varies considerably in the different States, being highest in Tasmania and lowest in South Australia. Particulars as to average yield for the past ten seasons are given in the succeeding table:—

## AVERAGE YIELD OF OATS PER ACRE.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
1901-2 ...	21.31	20.43	27.50	13.54	16.78	31.48	21.22
1902-3 ...	8.18	10.16	6.67	12.34	16.25	31.83	12.32
1903-4 ...	24.26	30.98	25.18	15.69	17.74	26.74	28.25
1904-5 ...	16.13	18.03	23.54	10.98	16.32	26.98	17.90
1905-6 ...	22.91	23.18	10.99	15.26	18.07	28.05	22.45
1906-7 ...	24.89	23.25	23.37	15.72	16.12	33.94	23.39
1907-8 ...	11.24	13.04	13.85	13.19	15.47	27.94	14.29
1908-9 ...	18.70	26.50	21.60	16.31	12.43	34.35	24.03
1909-10 ...	24.14	20.60	17.93	14.17	17.02	32.93	21.10
1910-11 ...	21.83	24.70	19.89	14.63	12.54	32.30	22.80
Average for 10 Seasons ...	19.51	21.10	21.30	14.33	15.10	30.87	20.84

It will be seen that as in the case of the wheat crop, the smallest average yield per acre for the Commonwealth for the period was that experienced in the season 1902-3, while the largest was that of the succeeding season.

4. **Relation to Population.**—The State in which oat production occupies the most important position in relation to population is Tasmania, the yield for that State representing for 1910-11 about 10½ bushels per head, as compared with 3½ bushels per head for the Commonwealth as a whole. Particulars for the past ten seasons are furnished in the succeeding table :—

**OAT PRODUCTION PER 1000 OF POPULATION.**

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.*	W. Aust.	Tas.	C'wealth.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
1901-2	500	5,558	83	1,306	845	9,734	2,559
1902-3	251	3,644	1	1,739	792	9,767	1,883
1903-4	879	11,152	137	2,529	1,150	8,867	4,479
1904-5	448	5,145	29	1,546	945	6,366	2,222
1905-6	594	5,975	11	2,397	1,135	6,438	2,597
1906-7	944	7,252	54	2,445	1,792	10,673	3,327
1907-8	560	4,219	18	2,340	2,836	8,049	2,207
1908-9	717	8,897	70	3,318	2,847	10,150	3,839
1909-10	1,219	6,197	87	3,077	4,698	12,156	3,408
1910-11	1,036	7,453	84	2,794	2,804	10,646	3,487

\* Exclusive of Northern Territory.

5. **Value of Oat Crop.**—The estimated value of the oat crop of the several States of the Commonwealth for the season 1910-11 is as follows :—

**VALUE OF OAT CROP,\* 1910-11.**

State.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aus.	Tas.	C'wealth.
Aggregate value	£225,250	£1,000,223	£8,832	£113,662	£103,498	£257,913	£1,709,378
Value per acre ...	£2/17/9	£2/10/11	£3/9/8	£1/9/3	£1/13/5	£4/0/9	£2/10/6

\* Exclusive of the value of Straw.

6. **Imports and Exports.**—The production of oats in the Commonwealth has not yet reached such a stage as to admit of a regular export trade in this cereal; in fact in certain years the imports have exceeded the exports, notably in 1903, 1906, and 1908. The quantities and values of oats imported into and exported from the Commonwealth during the ten years 1901 to 1910 are given hereunder :—

**COMMONWEALTH IMPORT AND EXPORT OF OATS, 1901 to 1910.**

Year.	Imports.		Exports.		Net Exports.*	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Bushels.	£	Bushels.	£	Bushels.	£
1901	1,526,599	153,674	2,874,334	285,347	1,347,735	131,673
1902	1,037,596	157,981	1,427,620	181,450	390,024	23,469
1903	2,066,365	229,395	184,823	23,305	—1,881,542	—206,090
1904	185,652	15,921	1,713,578	115,659	1,527,926	99,738
1905	392,400	45,460	882,740	83,479	490,340	38,019
1906	215,330	27,445	154,063	18,559	—61,267	—8,886
1907	21,945	2,850	533,485	60,204	511,540	57,354
1908	1,401,870	206,283	67,058	10,594	—1,334,812	—195,689
1909	320,543	32,607	339,258	35,375	18,715	2,768
1910	19,510	2,232	129,490	14,893	109,980	12,661

\* — signifies net imports.

The principal countries from which the Commonwealth imports of oats have been obtained are the Dominion of New Zealand and the South African colonies, while the principal countries to which oats were exported during the period under review were the South African colonies in the earlier, and the United Kingdom, the Philippine Islands, and India in the later years.

7. **Oatmeal, etc.**—Importations of oatmeal, etc., into the Commonwealth take place principally from the United Kingdom, the United States, and Canada. The total importations of oatmeal, wheatmeal, and rolled oats during 1910 amounted to 797,735 lbs., and represented a value of £9,342.

8. **Comparison with other Countries.**—A comparison of the Australian production of oats with that of the leading oat-producing countries of the world, is furnished in the following table:—

#### PRODUCTION OF OATS IN VARIOUS COUNTRIES, 1909.

Country.	Quantity of Oats produced	Country.	Quantity of Oats produced	Country.	Quantity of Oats produced.
	Bushels.		Bushels.		Bushels
United States ...	976,729,464	U'd. Kingdom	178,736,968	Argentina ...	26,236,192
Russian Empire	936,869,360	Austria ...	144,225,912	Rumania ...	25,143,352
Germany ...	515,725,600	Hungary ...	80,907,120	Netherlands	18,762,392
Canada* ...	353,466,000	Sweden ...	67,329,624	<b>Australia ...</b>	<b>14,734,868</b>
France ...	320,947,272	Denmark ...	40,590,522	New Zealand	13,804,000

\* Exclusive of British Columbia.

9. **Comparison of Yields.**—The average yield per acre of oats in Australia is a somewhat low one compared with the results obtained in other countries, where the cultivation of this cereal is more extensively carried on. Arranging the countries contained in the foregoing table, with the exception of Denmark, for which particulars are not available, according to the magnitude of the average yield of oats for the year 1909, the results are as follows:—

#### YIELD OF OATS PER ACRE, 1909.

## § 6. Maize.

1. **States Growing Maize.**—The only States in which maize is at all extensively grown for grain are those of New South Wales and Queensland, the area so cropped in these two States during the season 1910-11 being 394,079 acres, or nearly 95 per cent. of the total for the Commonwealth. Of the balance, Victoria contributed 20,151 acres, South Australia 619 acres, Western Australia 46 acres, and the Northern Territory 19 acres. The climate of Tasmania prevents the growing of maize for grain in that State. In South Australia prior to 1908 particulars concerning maize had not been specially asked for on the form used in the collection of agricultural statistics. In all the States maize is grown to a greater or less extent as green forage, particularly in connection with the dairying industry.

2. **Area under Maize.**—The area devoted to the growing of maize for grain in each State, from 1875 onwards, is given in the following table, and the actual fluctuations from year to year are shown more fully on the graph hereinafter.

The total area under maize in the Commonwealth exceeded 300,000 acres for the first time in the season 1890-1, and although it fluctuated somewhat during the succeeding seventeen years, it may be considered to have remained at about that figure. The greatest divergence during the period occurred in 1903-4, when a record total of 371,906 acres was harvested. From 1908-9 onwards, however, a continuous increase in the area devoted to maize has been in evidence, and the total of 414,914 acres for 1910-11 is the highest ever attained. The area cropped with maize in New South Wales, which had declined rapidly from a maximum of 226,834 acres in 1903-4 to 160,980 acres in 1907-8, shewed a marked improvement in 1908-9, when a total area of 180,812 acres was cropped, and a further improvement to 212,797 acres in 1909-10, which was well maintained in the succeeding season 1910-11. In Queensland the area appears to be on the increase, and that for 1910-11 was the highest ever attained in that State, while the area cropped in 1909-10 had only twice been previously exceeded, viz., in 1906-7 and 1903-4. The area under maize in New South Wales in 1910-11 represents only 6½ per cent. of that State's total area under crop, while in the case of Queensland the maize crop represents over 27 per cent. of the total.

## AREA UNDER MAIZE, STATES AND COMMONWEALTH, 1875-6 to 1910-11.

Season.	N.S.W.	Victoria.	Queensland.	South Aust.	West Aust.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1875-6	117,582	2,346	38,711	...	60	158,699

1910-11	213,217	20,151	180,862	†638	40	414,914

\* Particulars for previous years not available. † Including 19 acres, Northern Territory.

3. **Total Yield.**—In the matter of maize yield the season 1910-11 was a record one, the total production of that cereal for the Commonwealth exceeding 13,000,000 bushels. On only three previous occasions has a total of more than 10,000,000 bushels been reached, viz., in 1897-8, 10,036,083 bushels; in 1906-7, 10,172,254 bushels; and in 1909-10, 10,770,648 bushels. Particulars concerning the yield from 1875 onwards are as hereunder:—

**MAIZE CROP, STATES AND COMMONWEALTH, 1875-6 to 1910-11.**

Season.	N.S.W.	Victoria.	Queensland.	S. Aust.	W. Aust.	C'wealth.

1905-6 ...	29.26	54.41	19.04	...	9.95	26.50
1906-7 ...	33.10	60.99	26.51	...	9.10	31.24
1907-8 ...	28.13	46.92	24.34	*11.41	12.41	27.16
1908-9 ...	28.85	46.45	21.68	15.57	11.80	26.72
1909-10 ...	33.36	60.59	18.96	16.00	14.64	29.54
1910-11 ...	35.62	48.74	24.66	10.70	15.61	31.44
Average for 10 Seasons	28.32	57.30	20.90	†13.55	12.29	26.60

\* Particulars for previous years not available. † Average for 4 Seasons.

The extraordinarily high average yield obtained in Victoria is due, in large measure, to the fact that the area under maize in that State is comparatively small and is situated in districts that are peculiarly suited to the production of this grain. The yield in New South Wales is appreciably higher than that obtained in Queensland.

5. **Value of Maize Crop.**—The value of the Commonwealth maize crop for the season 1910-11 has been estimated at £1,805,548, made up as follows:—

**VALUE OF MAIZE CROP, 1910-11.**

State.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	N. Ter'ty.	C'wealth.
Aggregate value	£1,012,550	£122,763	£669,046	£956	£153	£80	£1,805,548
Value per acre	£4/15/0	£6/1/10	£3/14/0	£1/10/11	£3/6/6	£4/4/3	£4/7/0

6. **Relation to Population.**—During the past ten seasons the Commonwealth production of maize has ranged between  $1\frac{1}{4}$  bushels per head of population in 1902-3 and 3 bushels per head in 1910-11. The production in Queensland, the State in which the maize yield per head of population is highest, ranged during the same period between 2 bushels per head in 1902-3 and  $7\frac{1}{2}$  bushels per head in 1910-11. Details for the several States for the ten seasons are as follows:—

**MAIZE PRODUCTION PER 1000 OF POPULATION, 1901-2 to 1910-11.**

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.*	W. Aust.	C'wealth.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.

1910-11 ... ..	4,620	755	7,446	16	3	2,948

\* Exclusive of Northern Territory.

† Particulars for previous years not available.

7. **Oversea Imports and Exports.**—Except in the years 1902 and 1903, when, owing to the severe drought experienced in Australia, many of the maize crops failed, the Commonwealth oversea trade in maize has been practically insignificant. In the former of the years mentioned nearly two million, and in the latter considerably more than a million bushels were imported. In 1908 and 1909 also, owing to the small harvests of seasons 1907-8 and 1908-9, the imports of maize were largely in excess of the exports. Details of imports and exports for the past ten years are as follows:—

**COMMONWEALTH IMPORTS AND EXPORTS OF MAIZE, 1901 to 1910.**

Year.	Imports.		Exports.		Net Exports.*	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.

1910 ... ..	183,730	19,554	12,557	1,904	121,173	17,650

\* — signifies net imports.

The principal countries to which maize has been exported from the Commonwealth are South Africa, New Zealand, and China, while the principal countries from which importations have taken place are the Argentine Republic, New Zealand, the United States, the Pacific Islands, South Africa, and Java.

8. **Prepared Maize.**—A fairly large quantity of corn-flour is imported annually into the Commonwealth, the principal countries of supply being the United Kingdom and the United States. During the year 1910 these importations amounted to 466,010 lbs., and represented a value of £6997.

9. **Maize-growing in other Countries.**—The world's production of maize for the year 1909 has been estimated by the United States Department of Agriculture at 3,672,600,000 bushels, and of this quantity the United States of America was responsible for 2,687,500,000 bushels, or about 75 per cent. The other leading maize-producing countries of the world are Austria-Hungary, Argentine Republic, Italy, Rumania, Mexico, and Russia, in the order mentioned.

10. **Price of Maize.**—The average wholesale price of maize in the Sydney market is given in the following table for each of the years 1901 to 1910:—

**AVERAGE PRICE OF MAIZE PER BUSHEL, 1901 to 1910.**

Year	...	1901.	1902.	1903.	1904.	1905.	1906.	1907.	1908.	1909.	1910.

## § 7. Barley.

1. **Area under Barley.**—The area devoted to barley in the Commonwealth is one which has fluctuated very considerably, but the net result of these fluctuations has left it in practically the same position as that which it occupied thirty years ago. The principal barley-growing State is Victoria, which, for the season 1910-11, accounted for 48½ per cent. of the Commonwealth area devoted to this crop. The figures here given relate to the areas harvested for grain; only small areas are cropped for hay, while more considerable quantities are cut for green forage. These, however, are not included in this sub-section. The area under barley for grain in the several States from 1875 onwards is shewn in the following table:—

**COMMONWEALTH AREA UNDER BARLEY, 1875-6 to 1910-1911.**

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tasmania.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres
1875-6	4,817	31,568	613	13,969	5,014	5,939	61,920
1880-1	8,056	68,630	1,499	13,074	6,363	8,297	105,919
1885-6	5,293	74,112	406	16,493	6,178	6,833	109,320
1890-1	4,937	87,751	584	14,472	5,322	4,376	117,442
1895-6	7,590	78,438	721	14,184	1,932	6,178	109,043
1900-1	9,435	58,853	7,533	15,352	2,536	4,502	98,211
1901-2	6,023	32,423	11,775	15,517	2,669	6,104	74,511
1902-3	4,557	37,716	480	21,493	3,783	8,281	76,260
1903-4	10,057	47,760	22,881	28,697	3,609	8,084	121,088
1904-5	14,930	46,089	17,387	23,904	3,251	7,646	113,207
1905-6	9,519	40,938	5,201	26,250	3,665	5,372	90,945
1906-7	7,979	52,816	8,601	28,122	3,590	5,328	106,436
1907-8	11,890	63,074	6,943	37,321	6,019	5,852	131,099
1908-9	9,517	64,648	7,385	44,911	7,308	6,474	140,243
1909-10	15,091	58,603	13,109	41,895	8,022	6,293	143,013
1910-11	7,082	52,687	5,578	34,473	3,369	5,235	108,424

2. **Malting and other Barley.**—In recent years the statistics of all the States have distinguished between "malting" and "other" barley. Particulars for the Commonwealth are as follows:—

**AREA UNDER MALTING AND OTHER BARLEY, 1910-11.**

State.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	Acres.	Acres	Acres.	Acres.	Acres.	Acres.	Acres
Malting barley	4,981	30,609	3,222	23,245	1,449	3,902	67,408
Other barley ...	2,101	22,078	2,356	11,228	1,920	1,333	41,016
Total ...	7,082	52,687	5,578	34,473	3,369	5,235	108,424

It will be seen that, taking the Commonwealth as a whole, about 62 per cent. of the area devoted to this grain in 1910-11 was cropped with malting barley. The proportion varies considerably in the several States.

3. **Total Yield.**—The total production of barley in the Commonwealth for the season 1910-11 amounted to 2,226,368 bushels, falling short of the record yield of 1908-9, by 647,836 bushels. Particulars concerning the yields of the several States from 1875 onwards are as follows:—

**COMMONWEALTH BARLEY CROP, 1875-6 to 1910-11.**

4. **Value of Barley Crop.**—The estimated value of the total barley crop of the Commonwealth for the season 1910-11 was £400,054. The extent to which the several States have contributed to this total is shewn in the following table:—

**VALUE OF BARLEY CROP.\***

State.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tas.	C'wealth.
Total value ...	£15,190	£252,521	£18,580	£86,942	£5,473	£21,348	£400,054
Value per acre	£2/2/11	£4/15/10	£3/6/8	£2/10/5	£1/12/6	£4/1/7	£3/13/10

\* Exclusive of the value of Straw.

5. **Relation to Population.**—During the ten seasons 1901-2 to 1910-11, the quantity of barley produced in the Commonwealth has averaged about half a bushel per head of population. For the season 1910-11 the production ranged from about  $1\frac{1}{2}$  bushels per head in South Australia to one-twentieth of a bushel in New South Wales. Details for the period are as follows:—

**BARLEY PRODUCTION PER 1000 OF POPULATION, 1901-2 to 1910-11.**

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.*	W. Aust.	Tas.	C'wealth.

\* Exclusive of Northern Territory.

6. **Commonwealth Imports and Exports.**—The Commonwealth oversea trade in barley is not extensive, and in most years the imports exceed the exports. In 1902 and 1903 somewhat extensive importations of barley from the United States and New Zealand took place, owing to the shortage in local supply resulting from the severe drought of that period. In 1904, the excellent crop of the season 1903-4 furnished the material for a heavy exportation to Japan, the total exported thither during that year being 551,825 bushels. In 1909 also a fairly heavy export took place, mainly to the United Kingdom. Particulars of the Commonwealth oversea imports and exports of barley for the ten years 1901 to 1910 are contained in the following table:—

**COMMONWEALTH IMPORTS AND EXPORTS OF BARLEY, 1901 to 1910.**

Year.	Imports.		Exports.		Net Exports.*	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Bushels.	£	Bushels.	£	Bushels.	£
1901 ... ..	55,508	7,208	17,474	1,942	— 38,034	— 5,266
1902 ... ..	686,478	123,194	8,267	1,465	—678,211	—121,729
1903 ... ..	731,494	136,997	14,286	5,561	—717,208	—131,436
1904 ... ..	246,908	39,012	568,640	65,950	321,732	26,938
1905 ... ..	124,850	19,672	244,456	28,618	119,606	8,946
1906 ... ..	210,586	34,468	3,150	562	—207,436	— 33,906

1908 ... ..	452,462	107,126	1,148	290	—451,314	—106,836
1909 ... ..	51,332	12,356	188,946	23,774	137,614	16,418
1910 ... ..	34,684	8,498	39,146	5,155	4,462	— 3,343

\* — signifies net imports.

It will be seen that in only three years out of the ten dealt with have the Commonwealth exports of barley exceeded the imports, viz., in 1904, 1905, and 1909. During the ten years the total importations amounted to 2,826,456 bushels, valued at £542,333,

and the total exports to 1,123,863 bushels, valued at £143,850, giving a net importation of 1,702,593 bushels in quantity and £398,483 in value.

In addition to the above, which relates to the unprepared grain, there is a small importation into the Commonwealth of pearl and Scotch barley, mainly from the United Kingdom, Germany, China and Japan. The total imported during 1910 amounted to only 5465 lbs. in weight, with a value of £60.

A more considerable export trade in Australian pearl and Scotch barley is carried on, mainly with the United Kingdom and New Zealand, the total exports for 1909 reaching 1,155,346 lbs. valued at £3573, and for 1910, 119,837 lbs. valued at £510.

**7. Commonwealth Imports and Exports of Malt.**—The importations of malt into the Commonwealth are fairly extensive, the bulk of the supply being obtained from the United Kingdom, Austria-Hungary, and Germany, but principally from the United Kingdom. Details of imports and exports for the past ten years are given hereunder:—

#### COMMONWEALTH IMPORTS AND EXPORTS OF MALT, 1901 to 1910.

Year.	Imports.		Exports.		Net Imports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Bushels.	£	Bushels.	£	Bushels.	£
1901 ...	516,135	140,615	...	...	516,135	140,615

**8. Comparison with other Countries.**—In comparison with the barley production of other countries of the world, that of Australia appears very small indeed. Particulars for some of the leading countries for the year 1909 are as follows, the Australian figures being added for the sake of comparison:—

#### PRODUCTION OF BARLEY IN VARIOUS COUNTRIES, 1909.

Country.	Production of Barley.	Country.	Production of Barley.
	Bushels.		Bushels.
Russian Empire ...	456,143,976	Canada* ...	55,398,000

United Kingdom ...	68,944,752	New Zealand ...	1,304,000

\* Exclusive of British Columbia.

**9. Average Yield.**—The average yield per acre of barley varies considerably in the different States, being as a rule highest in Tasmania and Victoria, and lowest in Western

Australia and New South Wales. Details for each State for the ten seasons 1901-2 to 1910-11 are given in the following table :—

**AVERAGE YIELD PER ACRE OF BARLEY, 1901-2 to 1910-11.**

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	West Aust.	Tas.	C'wealth.

Cape barley ...	3 1	1 9	2 7	2 4	2 8	3 8	2 7	2 5

**§ 8. Other Grain and Pulse Crops.**

In addition to the grain crops already specified, the only grain and pulse crops at all extensively grown in the Commonwealth are beans, peas and rye. The total area under the two former for the season 1910-11 was 42,239 acres, giving a total yield of 931,867 bushels, or an average of 22.06 bushels per acre, being 2.39 over the average yield for the decennium ended 1910-11, which was 19.67 bushels per acre. The States in which the greatest area is devoted to beans and peas are Tasmania, Victoria and South Australia. The total area under rye in the Commonwealth during the season 1910-11 was 10,004 acres, yielding 128,091 bushels, and giving an average of 12.80, this being almost identical with the average for the past ten seasons, which is 12.75 bushels per acre. Nearly 45 per cent. of the rye grown during the season was produced in New South Wales, 25 per cent. in Victoria, and 18 per cent. in Tasmania. In addition to these grain crops a small area of rice was for some years cultivated in Queensland. The results obtained, however, have not offered sufficient inducement to growers to continue this crop, and the total area devoted to it declined from 1113 acres in 1892-3 to 7 acres in 1908-9 and disappeared from the records for 1909-10. Twelve acres were, however, under cultivation during 1910-11 in the Northern Territory, producing 784 bushels of rice. Should rice-growing ever be seriously taken up in Australia, it is probable that large tracts of country in the northern parts of Western Australia and in the Northern Territory will be found well suited to its cultivation.

### § 9. Potatoes.

1. **Area.**—The principal potato-growing State of the Commonwealth as regards area is Victoria, Tasmania usually ranking second and New South Wales third. For the season 1909-10, however, owing mainly to the prevalence of the Irish potato blight the Tasmanian area fell to 21,375 acres, a lower figure than has been recorded for any season since 1898-9. In consequence of this, the second place for 1909-10 was occupied by New South Wales, Tasmania being third. New South Wales maintained this position in 1910-11, having 44,452 acres under potatoes, and Tasmania 26,230. The area devoted to this crop in the Commonwealth, which has fluctuated somewhat, reached its highest point in the season 1910-11, with a total of 151,515 acres.

The area under potatoes in each State from 1890 onwards is given hereunder :—

#### COMMONWEALTH AREA UNDER POTATOES, 1890-1 to 1910-11.

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tasmania.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.

1902-3	19,444	49,706	2,899	7,763	2,084	34,625	116,521
1903-4	20,851	48,930	6,732	8,616	1,823	29,160	116,112
1904-5	23,855	46,912	9,771	8,315	1,906	25,948	116,707
1905-6	26,374	44,670	7,170	9,540	2,145	28,634	118,533
1906-7	36,815	55,372	8,031	9,894	2,264	34,305	146,681
1907-8	31,917	54,149	7,889	9,062	1,854	38,640	143,511
1908-9	26,301	47,903	6,227	8,069	2,026	35,159	125,685
1909-10	35,725	62,390	7,708	8,131	1,741	21,375	137,070
1910-11	44,452	62,904	8,326	7,812	1,791	26,230	151,515

2. **Total Yield.**—For the season 1910-11, Victoria's production represented about 41 per cent. of the total for the Commonwealth, New South Wales and Tasmania coming next in order with 30½ and 17½ per cent. respectively. The total Commonwealth production for the season 1906-7, viz., 507,153 tons, was the highest ever attained, the yield which most nearly approached it being 449,333 tons in 1903-4. Details as to production in the several States during the period from 1890 onwards are as follows :—

#### COMMONWEALTH PRODUCTION OF POTATOES, 1890-1 to 1910-11.

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tasmania.	C'wealth.

1910-11	121,033	163,312	15,632	23,920	5,864	70,090	399,851

3. **Average Yield per Acre.**—The suitability of the soil, climate, and general conditions of Tasmania for potato growing is evidenced by the high yields per acre which are almost invariably obtained in the island State, the average yield during the past ten seasons being over 4 tons per acre. The lowest average yield is that obtained in Queensland

with an average of just under two tons for the same period. Particulars for each State for the ten seasons 1901-2 to 1910-11 are given hereunder:—

**AVERAGE YIELD OF POTATOES, COMMONWEALTH AND STATES, 1901-2 to 1910-11.**

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.

1910-11	2.72	2.60	1.88	3.06	3.27	2.67	2.64
Average for 10 Seasons	2.36	2.85	1.92	2.65	2.97	4.07	2.96

4. **Value of Potato Crop.**—The estimated value of the potato crop of each State for the season 1910-11 is furnished in the following table, together with the value per acre:—

**VALUE OF POTATO CROP, 1910-11.**

State.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
Total value	£673,330	£596,089	£132,872	£114,816	£73,300	£350,450	£1,940,857
Value per acre	£15/2/11	£9/9/6	£15/19/2	£14/13/11	£40/18/6	£13/7/3	£12/16/2

5. **Relation to Population.**—The average production of potatoes per annum per head of the population of the Commonwealth for the past ten seasons has been approximately 210 lbs. In Tasmania, where this crop is of far greater importance in relation to population than is the case in any other State, the production per head in 1906-7 was nearly a ton, and in 1910-11 about 7½ cwt. Details for the past ten seasons are as follows:—

**POTATO PRODUCTION PER 1000 OF POPULATION.**

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tas.	C'wealth.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.

\* Exclusive of Northern Territory.

6. **Commonwealth Imports and Exports.**—Under normal conditions there is usually a fairly large export trade in potatoes carried on by the Commonwealth, principally with New Zealand, the Pacific Islands, and the Philippine Islands. Thus, during 1907, out of a total export of 17,842 tons, 13,346 tons went to New Zealand, 2102 tons to the Pacific

Islands, and 2112 tons to the Philippine Islands. On the other hand, when in 1902 and 1903 the drought of that period had brought about a shortage in the Australian supplies, importations from New Zealand took place to the extent of 11,471 tons in the former and 2279 tons in the latter year. The quantities and values of the Commonwealth overseas imports and exports of potatoes for the ten years 1901 to 1910 are contained in the following table:—

**COMMONWEALTH IMPORTS AND EXPORTS OF POTATOES, 1901 to 1910.**

Year.	Imports.		Exports.		Net Exports.*	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Tons.	£	Tons.	£	Tons.	£

## § 10. Other Root and Tuber Crops.

**1. Nature and Extent.**—Root crops, other than potatoes, are not extensively grown in Australia, the total area devoted to them for the season 1910-11 being only 20,829 acres. The principal of these crops are onions, mangolds, turnips, and "sweet potatoes" (*Batatas edulis*). Of these, onions are most largely grown in Victoria, mangolds in Tasmania and Victoria, turnips in Tasmania, and sweet potatoes in Queensland. The total area under onions in the Commonwealth during the season 1910-11 was 6864 acres giving a total yield of 41,276 tons, and averaging 6.01 tons per acre. The area devoted in 1910-11 to root crops other than potatoes and onions, viz., 13,965 acres, yielded 153,667 tons, and gave an average of 11 tons per acre. The areas and yields here given are exclusive of the production of "market gardens," a reference to which will be made later.

**2. Commonwealth Imports and Exports.**—The only root crop, other than potatoes, in which any considerable overseas trade is carried on by the Commonwealth is that of onions. During the year 1910 overseas imports of onions amounted to 97 tons, obtained principally from the Straits Settlements. For the same year the exports of onions totalled 3927 tons, the principal countries to which they were exported being New Zealand, Canada, the Philippine Islands, and the Pacific Islands.

## § 11. Hay.

**1. Nature and Extent.**—As already stated, the most important crop of the Commonwealth is that of wheat grown for grain. Next to this in importance is the hay crop, which for the season 1910-11 represented about 19 per cent. of the area under crop in the Commonwealth. In most European countries the hay crop consists almost entirely of meadow and other grasses, whilst in Australia a very large proportion of the area under hay comprises cereal crops, mainly wheat and oats. A considerable quantity of lucerne hay is also made, particularly in New South Wales and Queensland. The area under hay of all kinds in the several States from 1860 onwards is given hereunder:—

AREA UNDER HAY, 1860-1 to 1910-11.

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tas.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.

1906-7	458,172	621,139	64,498	298,396	149,830	64,965	1,657,000
1907-8	542,761	682,194	54,037	328,672	131,056	73,859	1,812,579
1908-9	715,896	956,371	65,004	424,924	201,874	88,613	2,452,682
1909-10	630,491	864,359	72,298	424,448	158,629	77,804	2,228,029
1910-11	638,577	832,669	98,558	440,177	175,432	72,992	2,258,405

It will be seen from this table that in all the States marked fluctuations occur in the area devoted to the hay crop from year to year. These fluctuations are due to various causes, the principal being the variations in the relative prices of grain and hay, and the favourableness or otherwise of the season for a grain crop. Thus crops originally sown for grain are frequently cut for hay owing to the improved price of that commodity, or owing to the fact that the outlook for the due development of the grain is not a satisfactory one. On the other hand, improved grain prices or the prospect of a heavy yield will frequently cause crops originally intended for hay to be left for grain. The area under hay in the Commonwealth for the season 1910-11 was, with the exception of that for 1908-9, the highest on record.

**2. Kinds of Hay.**—Particulars concerning the kind of crop cut for hay are furnished for a series of years in the returns prepared by four of the States. Totals only were

shown in the cases of South Australia and Tasmania until the season 1907-8, when a specification of details was obtained in South Australia also. Details for the past five seasons are given in the following table:—

### KINDS OF HAY GROWN, 1906-7 to 1910-11.

\* Details not available.

It will be seen that wheat is the principal hay crop in New South Wales, South Australia, and Western Australia, oats in Victoria, and lucerne in Queensland. Details for Tasmania are not available.

3. **Total Yield.**—The Commonwealth hay crop for the season 1910-11 amounted to 3,175,851 tons, or 22,655 tons more than were produced in 1909-10. This represents the largest hay crop ever harvested in the Commonwealth, the highest previous records being that of 3,137,374 tons for the season 1908-9, and 3,153,196 for 1909-10. For many years past the State of Victoria has been the largest hay producer in the Commonwealth, and in the season 1910-11 accounted for more than 40 per cent. of the total production. The total yields of the several States from 1860 onwards are given hereunder:—

#### COMMONWEALTH HAY CROP, 1860-1 to 1910-11.

4. **Value of Hay Crop.**—The following table furnishes particulars concerning the total value and the value per acre of the hay crop of the several States of the Commonwealth for the season 1910-11:—

#### VALUE OF HAY CROP, 1910-11.

Particulars.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Commonwealth.
Total value...	£2,514,020	£2,649,440	£431,856	£1,517,413	£987,038	£403,165	£8,502,932
Value per acre	£3/18/9	£3/3/8	£4/7/8	£3/8/11	£5/12/6	£5/10/6	£3/15/4

5. **Average Yield per Acre.**—The States of the Commonwealth in which the highest average yields per acre have been obtained are those of Queensland and Tasmania, these being also the States in which the smallest areas are devoted to this crop. For the past ten seasons the lowest yield for the Commonwealth as a whole was that of 17 cwt. per acre in 1902-3, and the highest that of 31 cwt. in 1903-4. The average per decennium was 25 cwt. Particulars for the several States for the seasons 1901-2 to 1910-11 are given hereunder:—

## AVERAGE YIELD OF HAY PER ACRE, 1901-2 to 1910-11.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.

Average for 10 seasons ...	1.12	1.37	1.55	1.23	1.03	1.52	1.26

6. **Relation to Population.**—During the past ten seasons the Commonwealth hay production per head of population has varied between 7 cwt. in 1902-3 and  $14\frac{1}{2}$  cwt. in 1903-4 and 1908-9; averaging about  $11\frac{1}{2}$  cwt. per head for the period. The State in which the hay production per head of population is highest is South Australia. Details for the past ten seasons are given hereunder:—

## HAY PRODUCTION PER 1000 OF POPULATION.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
1901-2 ...	339	731	241	964	463	624	529

1910-11 ...	513	993	253	1,463	648	594	718

\* Exclusive of Northern Territory.

7. **Oversea Imports and Exports.**—Under normal conditions hay, whether whole or in the form of chaff, is somewhat bulky for oversea trade, and consequently does not in such circumstances figure largely amongst the imports and exports of the Commonwealth. In 1901 and 1902, however, the exceptional demand which was created by the South African war brought about a fairly large export of hay and chaff to Natal and Cape Colony. These colonies also took a considerable quantity of Australian compressed fodder. During the year 1904, when the war between Japan and Russia was being carried on, the exports of compressed fodder to Hong Kong were valued at £42,759 and those to Japan at £23,608. The total value of the hay and chaff exported during 1901 was £406,455, as compared with £17,804 only in 1910, while the exports of fodder which amounted in value to £142,472 in 1904, had shrunk to £37,057 in 1910.

During 1910 the principal consignees of the hay and chaff exported from the Commonwealth were India, the Straits Settlements, New Zealand and Ceylon, while the principal countries to which compressed fodder was exported were the Philippine Islands and New Zealand.

Imports of hay and chaff into the Commonwealth are usually unimportant, and for the year 1910 totalled 111 tons, valued at £444, obtained principally from New Zealand.

**8. Hay Production in Other Countries.**—As already noted, the hay crops of most European countries consist of grasses of various kinds, amongst which clover, lucerne, sainfoin and rye grass occupy a prominent place. The statistics of hay production in these countries are not prepared on a uniform basis, and consequently any attempt to furnish an extensive comparison of the production of hay in the various countries would probably be misleading. It may be noted, however, that in the United Kingdom the production of hay from clover, sainfoin, etc., was for the year 1910 represented by 5,152,518 tons from 2,955,420 acres, while from permanent grasses a yield of 10,142,356 tons of hay was obtained from 6,545,190 acres, giving a total of 15,294,874 tons from 9,500,610 acres, or about 32 cwt. per acre.

## § 12. Green Forage.

**1. Nature and Extent.**—In all the States of the Commonwealth a considerable area is devoted to the production of green forage, mainly in connection with the dairying industry. The total area so cropped during the season 1910-11 was 374,862 acres, which was 68,780 acres more than the corresponding area for 1909-10. Of this total the New South Wales area represented about 48 per cent., that in Queensland 24 per cent., while that in Victoria amounted to 19 per cent. of the total. The principal crops cut for green forage are maize, sorghum, oats, barley, rye, rape, and lucerne, while small quantities of sugar-cane also are so used. Particulars concerning the area under green forage in the several States from 1890 onwards are furnished in the following table:—

AREA UNDER GREEN FORAGE, 1890-1 to 1910-11.

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.

\* Including 19 acres Northern Territory.

**2. Value of Green Forage Crops.**—The value of these crops is variously estimated in the several States, and the Commonwealth total for the season 1910-11 may be taken approximately as £1,709,000, or about £2 17s. 7d. per acre.

**3. Relation to Population.**—Particulars concerning the area under green forage per 1000 of the population of the Commonwealth and the several States for the past ten seasons are given hereunder:—

## AREA UNDER GREEN FORAGE PER 1000. OF POPULATION.

## § 13. Sugar-Cane.

1. **Area.**—Sugar-cane is grown for sugar-making purposes in only two of the States of the Commonwealth, viz., Queensland and New South Wales, and much more extensively in the former than the latter. Thus of the total area of 155,542 acres under sugar-cane in the Commonwealth for the season 1910-11 there were 141,779 acres, or about 91 per cent., in Queensland. Sugar-cane growing appears to have been started in the Commonwealth in or about 1862, as the earliest statistical record of sugar-cane as a crop is that which credits Queensland with an area of twenty acres for the season 1862-3. In the following season the New South Wales records shew that an area of two acres was devoted to the crop in the mother State. The area under cane in New South Wales reached its maximum in 1895-6 with a total of 32,927 acres. It then fell continuously to 1902-3, when it was lower than for any previous season since 1889-90. From 1902-3 to 1906-7 it remained practically stationary, but since then it has fallen every year and in 1910-11 had dropped to 13,763 acres, the lowest area under sugar-cane since 1882-3. In Queensland, on the other hand, although fluctuations in area are in evidence throughout, the general trend has been one of satisfactory increase, the area under cane for the season 1910-11 being the highest on record, that for 1905-6 being the next highest and that for 1906-7 only a little short of it. In 1907-8 the area in Queensland declined to 126,810 acres, and in 1908-9 still further to 123,902 acres, but there was a marked increase in 1909-10, while in 1910-11 there was a further increase when it rose to 141,779 acres. The area under sugar-cane in the Commonwealth from 1865 onwards is given in the following table :—

## AREA UNDER SUGAR-CANE, 1865-6 to 1910-11.

Season.	N.S.W.	Queensland.	C'wealth.	Season.	N.S.W.	Queensland.	C'wealth.
	Acres.	Acres.	Acres.		Acres.	Acres.	Acres.
1865-6	141	450	591	1902-3	20,160	85,338	105,498
1870-1	4,082	6,342	10,424	1903-4	20,182	111,516	131,698
1875-6	6,454	13,459	19,913	1904-5	21,525	120,317	141,842
1880-1	10,971	20,224	31,195	1905-6	21,805	134,107	155,912
1885-6	16,419	59,186	75,605	1906-7	20,580	133,284	153,864
1890-1	20,446	50,922	71,368	1907-8	17,953	126,810	144,763
1895-6	32,927	77,247	110,174	1908-9	16,981	123,902	140,883
1900-1	22,114	108,535	130,649	1909-10	14,083	128,178	142,261
1901-2	20,809	112,031	132,840	1910-11	13,763	141,779	155,542

**2. Productive and Unproductive Cane.**—The areas given in the preceding table represent the total area on which sugar-cane was grown during the seasons specified for purposes other than green forage. The whole area, however, was not in any case cut for crushing during that season, there being always a considerable amount of "stand over" cane, as well as a small quantity required for plants. In the season 1910-11 the New South Wales total comprised 5596 acres of productive and 8167 acres of unproductive cane, while in the case of Queensland the productive cane amounted to 94,641 acres and the unproductive to 47,138 acres.

**3. Yield of Cane.**—Queensland statistics of the production of sugar-cane are not available for dates prior to the season 1897-8. In that season the total for the Commonwealth was 1,073,883 tons, as against 1,294,650 tons for 1909-10. The average yield per acre of productive cane is much higher in New South Wales than in Queensland, the average during the last decade being 22.18 for the former and 15.81 for the latter State. During the six seasons 1901-2 to 1906-7 in the case of New South Wales the yield remained practically constant at about 21 tons per acre. In 1907-8 the yield in New South Wales was so excellent that, notwithstanding the comparative smallness of the area cultivated, the aggregate amount of cane produced was the largest in that State since 1898-9. In 1909-10, on the other hand, owing mainly to the decline in area of productive cane, the total yield amounted to only 131,081 tons, the lowest for the State since 1888. In 1910-11 there was a further decline in the acreage of productive cane; the yield of over 28½ tons per acre, however, was so excellent that the production exceeded that of the previous season by 29,230 tons of cane. In Queensland the average yield per acre for 1910-11 was by far the highest recorded for that State, viz., 19.45 tons. Particulars relative to the total and average yields of the Commonwealth sugar crops for the seasons 1901-2 to 1910-11 are as follows:—

YIELD OF SUGAR-CANE, 1901-2 to 1910-11.

Season.	Total Yield of Cane.			Average Yield per Acre of Productive Cane.		
	N.S.W.	Queensland.	C'wealth.	N.S.W.	Queensland.	C'wealth.
	Tons.	Tons.	Tons	Tons.	Tons.	Tons.
1901-2 ...	187,711	1,180,091	1,367,802	21.36	15.10	15.73
1902-3 ...	183,105	641,927	825,032	20.90	10.86	12.16
1903-4 ...	227,511	823,875	1,051,886	21.94	13.65	14.86
1904-5 ...	199,640	1,326,989	1,526,629	20.43	16.04	16.50
1905-6 ...	201,998	1,415,745	1,617,743	19.59	14.73	15.20
1906-7 ...	221,560	1,728,780	1,950,340	21.35	17.61	17.96
1907-8 ...	277,390	1,665,028	1,942,418	27.97	17.64	18.62
1908-9 ...	144,760	1,433,315	1,578,075	20.83	15.54	15.91
1909-10 ...	131,081	1,163,569	1,294,650	20.23	14.53	14.95
1910-11 ...	160,311	1,840,447	2,000,758	28.65	19.45	19.96

A preliminary estimate for Queensland for the season 1911-12 states that the prospects are extremely favorable, but that the total yield of cane in that State will probably be somewhat below that of the previous season in the absence of the unusually large "stand over" which obtained in 1910-11, unless the average tonnage per acre for 1911-12 season is very much in excess of the record average yield of its predecessor.

**4. Relation to Population.**—The sugar-cane production of the Commonwealth during the past five seasons has averaged about 8½ cwt. per head of population. In Queensland, the principal sugar-producing State, the production of cane per head has ranged between 2 tons in 1909-10 and 3½ tons in 1906-7. Details for the period 1906-7 to 1910-11 are as follows:—

## SUGAR-CANE PRODUCTION PER 1000 OF POPULATION.

State.	1906-7.	1907-8.	1908-9.	1909-10.	1910-11.
	Tons.	Tons.	Tons.	Tons.	Tons.
New South Wales ... ..	149	182	93	81	98
Queensland ... ..	3,208	3,051	2,573	2,014	3,072
Commonwealth ... ..	477	467	373	299	452

5. **Quality of Cane.**—The quantity of cane required to produce a ton of sugar varies considerably not only with the district in which the cane is grown but also with the season. In Queensland, for instance, during the seasons 1902-3 to 1906-7 the sugar content of the cane crushed continuously diminished, so that while in 1902-3 the quantity of cane used in producing a ton of sugar was 8.38 tons, in the season 1906-7 the quantity required was 9.38 tons, the production in the former case being approximately 12 per cent. and in the latter 10½ per cent. of the weight of cane crushed. For the season 1907-8, the cane was of much better quality, and the quantity required to produce a ton of sugar was only 8.84 tons, the sugar content representing in this case somewhat more than 11½ per cent. of the weight of cane crushed. In 1908-9, owing in large measure to the effect of frosts, the quantity of cane required to produce one ton of sugar was increased to 9.49 tons, the sugar thus representing only about 10½ per cent. of the weight of cane crushed, while in 1909-10 only 8.65 tons of cane were required to each ton of sugar, the sugar representing about 11½ per cent. of the weight of cane crushed. The especially favourable weather existing throughout 1910 resulted in a very high average quantity of cane per acre being obtained, while the moisture which caused this led to a slight diminution in the saccharine density as compared with the previous year. In 1910-11 the quantity of cane required to produce one ton of sugar was 8.73 tons, the sugar produced representing about 11½ per cent. of the weight of cane crushed. It should be noted also that in 1901-2 no less than 9.76 tons of cane were needed to produce a ton of sugar. It may be remarked in this connection that the systematic study of the beet in Germany shewed that by suitable culture its sugar content might be greatly increased, and this is by no means impossible in the case of sugar-cane.

6. **Sugar Bounties.**—The provision of bounties or similar aids to the sugar-growers of the Commonwealth early occupied the attention of the Commonwealth Parliament, the object in view being that of assisting the industry, whilst at the same time diminishing the employment of coloured labour in connection therewith. The earliest legislative provision made with this object in view was that contained in the Excise Tariff 1902, under which an excise duty of three shillings per cwt. of manufactured sugar was charged, and a rebate of four shillings per ton allowed on all sugar-cane delivered for manufacture, in the production of which white labour only had been employed after 28th February, 1902. This rebate was calculated on the basis of cane giving 10 per cent. of sugar, and was increased or reduced proportionately according to any variation from this standard, that is to say, the rebate amounted to two shillings per cwt. of the sugar content of the cane treated. In actual practice it was found that this system of rebates was producing effects that had not been anticipated at the time the legislation was passed, and that the greater part of the cost of substituting white for coloured labour in the sugar-growing industry was thereby being imposed upon the States engaged in the industry, viz., Queensland and New South Wales, instead of being a charge upon the whole Commonwealth. To remedy this state of affairs, the Sugar Rebate Abolition Act of 1903 was passed on 30th July, 1903, and the Sugar Bounty Act 1903 received assent on the same day. The rate of bounty provided by this latter Act was, as in the case of the rebate mentioned above, four shillings per ton of cane grown by white labour giving 10 per cent. of sugar, the bounty to be increased or reduced proportionately according to any

variation from this standard. This Act remained in force until 31st December, 1906, when it was superseded by the provisions of the Sugar Bounty Act 1905, which extended the principle of bounties to the end of the year 1912, but stipulated that during the years 1911 and 1912 the rates payable on cane delivered should be respectively two-thirds and one-third of the rates prevailing during the earlier years of the period. During the 1910 Session of the Commonwealth Parliament an Amending Act (the Sugar Bounty Act 1910) was passed repealing the provision for successive decrements in the amount of bounty payable, and thus leaving the bounty at full rate applicable for an indefinite time. The rate of bonus allowed under this Act is six shillings per ton of cane of 10 per cent. quality grown by white labour, provided that the rates of wages and conditions of employment of such labour are fair and reasonable, in accordance with the provisions of the Act. Under the Excise Tariff 1905, assented to on 21st December, 1905, the excise duty on sugar was, from 1st January, 1907, increased to four shillings per cwt. of manufactured sugar in place of three shillings formerly imposed. This rate of duty was, under the original Act, to continue in force until 31st December, 1910, reducing to 2s. 8d. per cwt. for 1911, 1s. 4d. per cwt. for 1912, and being abolished after 31st December, 1912. The Excise (Sugar) Act 1910, however, repealed these provisions for reduction and abolition, leaving the duty in force at the full rate for an indefinite time.

**7. Cost of Bounties.**—The amounts paid by the Commonwealth Government in sugar bounties and the expenses in connection therewith during the period 1902-3 to 1910-11 are shewn in the following table:—

**SUGAR BOUNTIES AND EXPENSES. 1902-3 to 1910-11.**

Year.	1902-3.	1903-4.	1904-5.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.	1910-11.

**9. Production by White and Coloured Labour.**—The following table contains particulars furnished by the Commonwealth Treasury concerning the production of sugar in New South Wales and Queensland during the past nine seasons, and furnishes

an indication of the decline in the employment of coloured labour in the sugar industry during that period :—

### SUGAR PRODUCTION, 1902-3 to 1910-11.

Season.	New South Wales.			Queensland.			Commonwealth.		
	Sugar Produced by—			Sugar Produced by—			Sugar Produced by—		
	White Labour.	Coloured Labour.	Total.	White Labour.	Coloured Labour.	Total.	White Labour.	Coloured Labour.	Total.
1902-3 ...	Tons. 19,434	Tons. 1,526	Tons. 20,960	Tons. 12,254	Tons. 65,581	Tons. 77,835	Tons. 31,688	Tons. 67,107	Tons. 98,795
1903-4 ...	19,236	2,561	21,797	24,406	65,456	89,862	43,642	68,017	111,659
1904-5 ...	17,812	1,838	19,650	39,404	105,616	145,020	57,216	107,454	164,670
1905-6 ...	18,019	1,964	19,983	50,897	101,362	152,259	68,916	103,326	172,242
1906-7 ...	21,805	1,613	23,418	127,539	54,619	182,158	149,344	56,232	205,576
1907-8 ...	23,247	934	29,181	162,480	22,583	185,063	190,727	23,517	214,244
1908-9 ...	14,351	964	15,315	132,049	18,358	150,407	146,400	19,322	165,722
1909-10 ...	13,839	815	14,654	118,298	14,451	132,749	132,137	15,266	147,403
1910-11 ...	17,986	892	18,828	191,486	15,778	207,264	209,422	16,670	226,092

During the period under review the proportion of sugar produced by coloured labour declined from 68 per cent. of the total for 1902-3 to less than 7½ per cent. of the total for 1910-11.

10. **Imports and Exports of Sugar.**—Notwithstanding the increase in the production of sugar in evidence in the Commonwealth during recent years, Australia's over-sea import trade in cane sugar remained fairly extensive until 1906, the principal countries engaged in supplying this commodity being Java, Mauritius, and Fiji. In 1907 the exports of sugar exceeded the imports for the first time, the value of the net exports being £166,121. In 1908 the imports exceeded the exports by 96,218 cwt. in quantity and £37,080 in value; while in the following year the excess of imports over exports was 1,832,943 cwt., value £1,004,308. In 1910 the net imports fell in quantity to 548,479 cwt. and in value to £297,958. The principal countries to which Australian sugar is exported are South African Union, New Zealand and New Caledonia, but the bulk of the sugar exported from the Commonwealth is not of Australian origin, but merely a re-export of sugar produced elsewhere. Thus of 161,024 cwt. exported during 1909, only 4099 cwt. were of Australian origin. The sugar so re-exported comes mainly from Fiji, Java, and Mauritius. Particulars concerning the imports and exports of cane sugar for the years 1901 to 1910 are as follows:—

### IMPORTS AND EXPORTS OF CANE SUGAR, 1901 to 1910.

Year.	Oversea Imports.		Oversea Exports.		Net Imports.*

## § 14. Vineyards.

1. **Nature and Extent.**—The introduction of the vine into Australia has been set down by different investigators as at various dates, the years 1815 and 1828 being principally favoured. It would seem, however, that the vine was really brought out with the First Fleet, which initiated the colonisation of Australia, in 1788, and that consequently the Australian vine is as old as Australian settlement. As already mentioned a report of Governor Hunter's gives the area under vines in 1797 as 8 acres. From New South Wales the vine spread to Victoria and South Australia, and these States have now far outstripped the mother State in the area which they have devoted to its cultivation. In Queensland and Western Australia also, vine-growing has been carried on for many years, but in neither State has the industry progressed with the rapidity attained in Victoria and South Australia. In Tasmania the climate is not favourable to the growth of grapes. The purposes for which grapes are grown in Australia are three in number, viz.—(i.) for wine-making, (ii.) for table use, (iii.) for drying. The total area under vines in the several States from 1860 onwards is given in the following table:—

COMMONWEALTH VINEYARDS, 1860-1 to 1910-11.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.		Acres.
1860-1	1,584	1,138	—	3,180	335	There are no vineyards in Tasmania.	6,237
1865-6	2,126	4,078	110	6,629	634		13,577
1870-1	4,504	5,466	416	6,131	710		17,227
1875-6	4,459	5,081	376	4,972	675		15,563

1885-6	5,247	9,775	1,483	5,142	624		22,271
1890-1	8,044	20,686	1,981	9,535	1,024		41,270
1895-6	7,519	30,275	2,021	17,604	2,217		59,636
1900-1	8,441	30,634	2,019	20,158	3,325		64,577
1901-2	8,606	28,592	1,990	20,860	3,629		63,677
1902-3	8,790	28,374	1,559	21,692	3,528		63,943
1903-4	8,940	28,513	2,069	22,617	3,324		65,463
1904-5	8,840	28,016	2,194	23,210	3,413		65,673
1905-6	8,754	26,402	2,044	23,603	3,541		64,344
1906-7	8,521	25,855	2,070	22,586	3,525		62,557
1907-8	8,483	26,465	1,973	21,080	3,231		61,232
1908-9	8,251	24,430	1,616	22,031	3,122		59,450
1909-10	8,330	22,768	1,695	22,441	2,917		58,151
1910-11	8,321	23,412	1,634	22,952	2,795		59,114

The area devoted to vines in the Commonwealth attained its highest point in the season 1904-5, when a total of 65,673 acres was reached. In the course of the six following seasons this area diminished by 6559 acres, the decline being in evidence in all the States.

The wine-growing industry in Australia, more particularly in Victoria and New South Wales, received a severe check on account of various outbreaks of phylloxera which took place in different parts of these States. With a view to its eradication extensive uprooting of vineyards in the infested areas was undertaken, while further planting within such areas, except with phylloxera-resisting vines, was prohibited.

In the States of Victoria and South Australia increases in the area under vines were in evidence in 1910-11, while in Western Australia, Queensland and New South Wales, small decreases were shewn.

**2. Wine Production.**—The production of wine in Australia has not increased as rapidly as the suitability of soil and general favourableness of conditions would appear to warrant. The cause of this is probably twofold, being in the first place due to the fact that the Australians are not a wine-drinking people and consequently do not provide a local market for this product, and in the second to the fact that the new and comparatively unknown wines of Australia find it difficult to establish a footing in the markets of the old world, owing to the competition of well-known brands. Active steps are being taken in various ways to bring the Australian wines under notice, and it may be confidently expected that when their qualities are duly recognised the wine production of Australia will exhibit a rapid development. Particulars concerning the quantity of wine produced in the several States during the past ten seasons are contained in the table given hereunder:—

#### AUSTRALIAN WINE PRODUCTION, 1901-2 to 1910-11.

Season.	New South Wales.	Victoria.	Queens-land.	South Australia.	Western Australia.	Tasmania.	Commonwealth.
	Gallons.	Gallons.	Gallons.	Gallons.	Gallons.	No production of wine in Tasmania.	Gallons.

**3. Relation to Population.**—In relation to population the area of the vineyards of the several States exhibits a well-marked decline during the past ten seasons, the Commonwealth total having fallen during the period from 17 to 13 acres per 1000 of the population. Details for the period are furnished in the succeeding table:—

#### AREA OF VINEYARDS PER 1000 OF POPULATION.

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tas.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.

1910-11 ...	5	18	3	56	10	...	13

\* Exclusive of Northern Territory.

**4. Imports and Exports.**—During the past ten years the importations of wine into the Commonwealth have exhibited a marked fluctuation, declining continuously in value from £161,945 in 1901 to £96,870 in 1904, then increasing continuously to

£133,114 in 1908 and decreasing again in 1909 to £116,021, and again increasing in 1910 to £126,402. The principal countries of origin of wine imported into Australia are France, Spain, Portugal, and Germany, the greater portion of the sparkling wines coming from France and of still wines from Spain and Portugal. Particulars relative to the importations of wine into the Commonwealth during the past ten years are given hereunder:—

#### COMMONWEALTH IMPORTS OF WINE, 1901 to 1910.

Year.	Quantity.			Value.		
	Sparkling.	Other.	Total.	Sparkling.	Other.	Total.
	Gallons.	Gallons.	Gallons.	£	£	£
1901	55,341	165,472	220,813	104,700	57,245	161,945
1902	46,824	134,513	181,337	80,941	46,828	127,769
1903	41,211	81,222	122,433	78,869	29,014	107,883
1904	38,738	70,982	109,720	69,643	27,227	96,870
1905	38,933	74,358	113,291	71,753	28,231	99,984
1906	43,324	71,980	115,304	81,448	24,685	106,133
1907	50,393	67,906	118,299	94,549	26,397	120,946
1908	56,806	68,252	125,058	106,108	27,006	133,114
1909	47,669	60,946	108,615	91,046	24,975	116,021
1910	50,982	70,903	121,885	97,296	29,106	126,402

The principal countries to which wine is exported from Australia are the United Kingdom and New Zealand, a small but fairly regular export trade being also carried on with India, Ceylon, Fiji, and the South Sea Islands. Details concerning the exports of wine from Australia during the ten years 1901 to 1910 are given in the following table:—

#### COMMONWEALTH EXPORTS OF WINE, 1901 to 1910.

Year.	Quantity.			Value.		
	Sparkling.	Other.	Total.	Sparkling.	Other.	Total.
	Gallons.	Gallons.	Gallons.	£	£	£
1901	2,936	863,147	866,083	6,972	122,751	129,723
1902	3,201	1,075,713	1,078,914	5,989	142,994	148,983
1903	2,194	718,284	720,478	4,161	101,016	105,177
1904	2,525	789,032	791,557	4,440	103,272	107,712
1905	2,749	937,932	940,681	4,990	107,988	112,978
1906	2,439	717,821	720,260	4,637	93,046	97,683
1907	2,771	979,527	982,298	5,233	121,811	127,044
1908	2,824	728,421	731,245	4,541	98,333	102,874
1909	2,649	974,413	977,062	4,455	121,116	125,571
1910	2,880	949,033	951,913	5,340	123,593	128,933

The sparkling wine included in the foregoing table consists mainly of foreign wine re-exported.

**5. Other Viticultural Products.**—In addition to grapes for wine-making purposes, large quantities are grown in all the States for table use, whilst, particularly in Victoria and South Australia, the drying of raisins and currants is also carried on. The quantities of table grapes grown in the several States during the past ten seasons are as follows:—

TABLE GRAPES, 1901-2 to 1910-11.

Season.	N.S.W.	Victoria.	Q'land.*	S. Aust.*	W. Aust.*	Tasmania.	C'wealth.

1908-9 ...	7,788,032	3,136,784	1,336,048	2,738,288
1909-10 ...	9,076,928	3,114,496	3,069,696	4,037,824
1910-11 ...	8,883,616	3,891,440	2,956,128	4,509,232

In New South Wales, Queensland, and Western Australia also small quantities of raisins and currants are dried, but until recently no statistics were collected. The quantity so produced in New South Wales amounted to 100,912 lbs. in 1907-8, 160,720 lbs. in 1908-9, 165,984 lbs. in 1909-10, and 297,472 lbs. in 1910-11. For Queensland and Western Australia there are no particulars available.

## § 15. Orchards and Fruit Gardens.

1. *Nature and Extent.*—Fruit-growing has made rapid progress in the Commonwealth during recent years, the area devoted thereto having increased in the past ten years by no less than 38,381 acres. The States in which the increase was most marked were:—Tasmania, 14,449 acres; Western Australia, 10,662 acres; Victoria, 7320 acres; and South Australia, 6095 acres. During the same period the Queensland fruit-growing area increased slightly, while that in New South Wales exhibited a decline of 915 acres. The increased areas in Tasmania and Western Australia are mainly due to extensive plantings of apple trees with a view to the possibilities of the London market for fresh fruit. The total area devoted to orchards and fruit gardens in the several States is given hereunder:—

## COMMONWEALTH ORCHARDS AND FRUIT GARDENS, 1901-2 to 1910-11.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1901-2 ...	48,448	50,055	14,396	16,315	6,076	11,485	146,775

1910-11 ...	47,533	57,375	15,153	*22,423	16,738	25,934	196,156

\* Including 13 acres Northern Territory.

The varieties of fruit grown differ materially in various parts of the several States, and range between such fruits as the pineapple, paw-paw, mango, and guava of the tropics, and the strawberry, the raspberry, and the currant of the colder parts of the temperate zone. The principal varieties grown in Victoria are the apple, plum, peach, apricot, cherry, and pear. In New South Wales citrus fruits (orange, lemon, etc.) occupy the leading position, although apples, pears, peaches, plums, and apricots are also extensively grown. In Queensland the banana, the orange, the pineapple, the apple, the peach, the mango, and the plum are the varieties most largely grown. In South Australia, in addition to the apple, pear, peach, apricot, plum, orange, and lemon, the almond and the olive are also largely grown. In Western Australia the apple, orange, peach, pear, plum, fig, and apricot are the sorts chiefly grown, while in Tasmania, although the apple represents more than two-thirds of the area in that State devoted to fruit-growing, small fruits, such as the currant, raspberry, and gooseberry, are very extensively grown, and the balance of the area is mainly occupied with the pear, plum, apricot, peach, and cherry.

**2. Relation to Population.**—In relation to population the orchards and fruit gardens of the Commonwealth have exhibited an increase during the past nine seasons equal to the decline which was experienced in the case of vineyards. Taking the two in conjunction the relative area under vineyards and orchards has, during the period, remained practically stationary at about 55 acres per 1000 of population. Details for the ten seasons 1901-2 to 1910-11 are as follows :—

## AREA OF ORCHARDS AND FRUIT GARDENS PER 1000 OF POPULATION.

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tas.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.

\* Excluding Northern Territory.

**3. Commonwealth Imports and Exports.**—A very considerable fruit trade, both import and export, is carried on by the Commonwealth with overseas countries, the major portion of the importations consisting of dried fruits, while the bulk of the exports is made up of fresh fruits. Amongst the imports the principal dried fruits are currants, dates, sultanas, and raisins, and the principal fresh fruits bananas, oranges, lemons, and apples. The currants imported are mainly of Greek origin, the dates of Arabian, Persian, and Turkish, the raisins mainly of French and Turkish, and the sultanas of Turkish origin. Of the fresh fruits imported during 1910 the bananas were chiefly from Fiji, the oranges and lemons from Italy, and the apples from Canada. The dried fruits imported during the year were valued at £89,076, and the fresh at £90,100. In 1907 a very marked development in the trade in Australian dried fruits took place, the total export for the year being valued at £76,872, of which £71,506 represented Australian fruits and £5366 re-exports of foreign fruits. In 1908 the total export of dried fruits from Australia was valued at £35,359, of which £33,111 represented Australian fruits, and £2248 re-exports of foreign fruits. There was a further decline in 1909, when the total value of exports was only £13,013, made up of £11,826 of Australian produce, and £1187 of re-exports. There was a small increase in the total exports in 1910, which amounted to £14,765; this, however, was accounted for by re-exports of the value of £2720, the exports of dried fruits of Australian origin shewing a decline amounting to £977. The principal consignees of Australian dried fruits exported were United Kingdom, Canada, and New Zealand. The fresh fruits exported during the year were valued at £322,694, and consisted mainly of apples. These were all of Australian origin with the exception of re-exports valued at £1987. The principal countries to which these were sent were the United Kingdom, Germany, New Zealand, Brazil, Java, and India. The value of the net imports of dried fruits for the year 1910 was £74,311, whilst in the case of fresh fruits, the value of the net exports was £232,594, the largest net export value since 1904.

Particulars concerning the overseas imports and exports of dried fruits for the ten years 1901 to 1910 are as follows:—

### COMMONWEALTH OVERSEA IMPORTS AND EXPORTS OF DRIED FRUITS,

\* Not available.

4. **Jams and Jellies.**—A small oversea trade in jams and jellies is carried on by the Commonwealth, the value of the imports for the year 1910 amounting to £8859, and of the exports to £28,372. The country of origin of the bulk of the importations is the United Kingdom, while the destinations of the exports are principally South Africa, Portuguese East Africa, Ceylon, and Fiji. Particulars relative to imports and exports for the ten years 1901 to 1910 are as follows:—

**COMMONWEALTH OVERSEA TRADE IN JAMS AND JELLIES, 1901 to 1910.**

Year.	Oversea Imports.		Oversea Exports.		Net Exports.

5. **Preserved Fruit.**—Details concerning the quantities and values of preserved fruit imported into and exported from the Commonwealth cannot readily be obtained, owing to the fact that in the Customs returns particulars concerning fruit and vegetables are in certain cases combined. The total value of fruit and vegetables, other than fresh fruits, dried fruits, potatoes, and onions, imported into Australia during 1910 was £55,155, and the corresponding value of exports was £21,598.

## § 16. Minor Crops.

1. **Nature and Extent.**—In addition to the leading crops which in the foregoing pages have been dealt with in some detail, there are many others which, owing either to their nature or to the fact that their cultivation has advanced but little beyond the experimental stage, do not occupy so prominent a position. Some of the more important of these are those which may be classed under the heads of Market Gardens, Nurseries, Grass Seed, Tobacco, Hops, and Millet, while the possibilities of Cotton-growing in the tropical portions of the Commonwealth have in recent years received considerable attention, although the industry cannot yet be said to have assumed definite shape. The total area in the Commonwealth during the season 1910-11 devoted to minor crops was 72,530 acres, of which market gardens accounted for 31,101 acres.

2. **Market Gardens.**—Under this head are included all areas on which are grown mixed vegetables for sale. Where considerable areas are devoted to the production of one vegetable, such for instance as the potato, the onion, the melon, the tomato, etc., these crops are usually not included with market gardens, but are shewn either under some specific head, or under some such general head as "Other Root Crops," or "All other Crops." The area under market gardens in the several States of the Commonwealth during each of the ten seasons 1901-2 to 1910-11 is given in the table hereunder:—

COMMONWEALTH MARKET GARDENS, 1901-2 to 1910-11.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1901-2 ...	7,834	8,752	2,328	9,005	2,142	1,746	31,807

1908-9 ...	10,331	9,279	2,875	2,818	3,471	1,603	30,377
1909-10 ...	10,254	10,214	2,677	2,734	3,481	1,720	31,130
1910-11 ...	9,813	10,778	2,317	*2,876	3,576	1,741	31,101

\* Including 58 acres Northern Territory.

The decline in the Commonwealth total for the season 1907-8 is due to the marked decrease in the area devoted to market gardens in South Australia, and to the smaller falling-off in the cases of Western Australia and Tasmania. In all the other States the area for 1907-8 was in excess of that for 1906-7. In the case of South Australia the falling-off is more apparent than real, being in large part due to a change in the classification of such crops introduced in connection with the new system of collection which came into force for 1907-8. It is believed that the figures given for the earlier years are considerably in excess of the truth.

3. **Grass Seed.**—Particulars concerning the growth of grass seed are available for 1910-11 for all the States except Western Australia. The total area under this crop during that season was 4261 acres, of which 1775 acres were in Tasmania, 1295 acres in Victoria, 1169 acres in Queensland, 17 acres in South Australia, and 5 acres in New South Wales. The total yield for 1910-11 was 79,236 bushels, or 18.6 bushels per acre.

4. **Tobacco.**—The tobacco-growing industry is one which has experienced marked fluctuations in Australia and which once promised to occupy an important place amongst the agricultural industries of the Commonwealth. Thus, as early as the season 1888-9 the area under this crop amounted to as much as 6641 acres, of which

4833 were in New South Wales, 1685 in Victoria, and 123 in Queensland. This promise of prosperity was, however, not fulfilled, and after numerous fluctuations, in the course of which the Victorian area rose in 1895 to over 2000 acres, and that in Queensland to over 1000 acres, the total area under tobacco for the season 1910-11 was only 2080 acres, distributed as follows:—New South Wales, 1096 acres; Victoria, 329 acres; and Queensland, 655 acres. This decline in production appears to have been due to the comparatively small demand which existed in Australia for the locally-produced leaf, and to the fact that the cost of production and preparation in the Commonwealth prevented the Australian leaf from obtaining a footing in the outside markets. Probably under more favourable circumstances, and with greater attention given to the production of leaf of the best quality only, the industry is one which will eventually assume considerable proportions. In all the States in which its cultivation has been tried the soil and climate appear to be very suitable for the growth of the plant, and the enormous importations of tobacco in its various forms into the Commonwealth furnish an indication of the extensive local market which exists for an article grown and prepared in such a manner as to meet with the requirements of consumers. The value of the net importations of tobacco into the Commonwealth during the year 1910 amounted to £645,111, comprising unmanufactured tobacco (£440,350), cigars (£118,788), cigarettes (£37,726), manufactured tobacco (£47,155), and snuff (£1092).

5. **Pumpkins and Melons.**—The total area under this crop in the Commonwealth during 1910-11 was 11,989 acres, of which 5070 acres were in New South Wales, 2477 acres in Victoria, 4160 acres in Queensland, and 282 acres in Western Australia; the production for the first three named was 19,753, 23,851 and 15,402 tons respectively; the quantity produced in Western Australia is not available.

6. **Hops.**—Hop-growing in the Commonwealth is practically confined to Tasmania and some of the cooler districts of Victoria, the total area for the season 1910-11 being 1163 acres, of which 1039 acres were in Tasmania, and 121 acres in Victoria. The Tasmanian area, though still small, has increased rapidly during the past nine years, the total for the season 1901-2 being only 599 acres. On the other hand, the Victorian area, which in 1901-2 was 307 acres, has diminished to 121 acres in 1910-11. The cultivation of hops was much more extensive in Victoria twenty-five years ago than at present, the area devoted to this crop in 1883-4 being no less than 1758 acres. During the year 1910 the net importations of hops into the Commonwealth represented a weight of 1,117,243 lbs. and a value of £59,288. The total value of the net importations of hops into Australia during the past ten years amounted to £500,109, thus indicating the existence of a regular and extensive local demand.

7. **Millet.**—Millet appears in the statistical records of three of the Commonwealth States, viz., New South Wales, Victoria, and Queensland. The total area devoted thereto in 1910-11 was 5569 acres, by far the greater portion, viz., 4467 acres, being in New South Wales. The particulars here given relate to millet grown for grain and fibre. That grown for green forage is dealt with in the section relating thereto.

8. **Nurseries.**—In all the States somewhat extensive areas are devoted to nurseries for raising plants, trees, etc., but statistics concerning the area so occupied for flowers, fruit trees, etc., are not available, and so far as they relate to forestry are given elsewhere.

9. **Cotton.**—Cotton-growing on a small scale has been tried in Queensland, but so far without very marked success. The area under cotton has fluctuated very considerably during the past five years, ranging during that period between 138 acres in 1906-7 and 540 acres in 1908-9. During 1910-11, 460 acres were devoted to this crop in Queensland, giving a yield of 151,438 lbs. of seed cotton, valued at £3786. Hopes are entertained that with the invention of a mechanical device for the picking of the cotton the industry will become firmly established, since the soil and conditions appear eminently suitable for the growth of this crop. Small areas in the Northern Territory have also been planted with cotton, and 15 acres were under cultivation in 1910-11. The crops, however, proved

a failure, owing to a tidal wave. The tropical portions of Western Australia have also long been regarded as suitable for its cultivation.

10. **Coffee.**—Queensland is the only State of the Commonwealth in which coffee-growing has been at all extensively tried, and here the results have up to the present time been far from satisfactory. The total area devoted to this crop reached its highest point in the season 1901-2, when an area of 547 acres was recorded. Since then the area continuously declined to 1906-7, when it was as low as 256 acres. During the season 1907-8 an improvement occurred and the total reached was 304 acres, succeeded by a fall to 285 acres in 1908-9 and 200 acres in 1910-11. In the last-mentioned season the yield amounted to 151,050 lbs., valued at £5664.

11. **Other Crops.**—Miscellaneous small crops are grown in the several States; amongst which may be mentioned tomatoes, rhubarb, artichokes, arrowroot, chicory, and flowers.

### § 17. Bounties on Agricultural Products.

1. **General.**—The Bounties Act of 1907 passed by the Federal Parliament in order to encourage the manufacture and production of certain articles in the Commonwealth, includes among the number of items on which bonuses are payable, several agricultural products. The most important of these, viz., sugar, has been referred to on page 393 of this publication. Minor products of the soil on which these bounties are payable are as set out in the following table :—

#### AGRICULTURAL PRODUCTS (OTHER THAN SUGAR) ON WHICH BOUNTIES ARE PAYABLE.

Article.	Period dating from 1st July, 1907, during or in respect of which Bounty may be paid.	Rates of Bounty.	Maximum amounts which may be paid in any one year.
Cotton, ginned ... ..	8 years	10 % on market value	£ 6,000
Fibres—			
New Zealand flax ... ..	10 "	10 " "	3,000
Flax and hemp ... ..	5 "	10 " "	8,000
Jute ... ..	5 "	20 " "	9,000
Sisal hemp ... ..	10 "	10 " "	3,000
Oil materials supplied to an oil factory for the manufacture of oil			
Cottonseed ... ..	8 "	10 " "	1,000
Linseed (flax seed) ... ..	5 "	10 " "	5,000
Rice, uncleaned ... ..	5 "	20s. per ton	1,000
Coffee, raw, as prescribed	8 "	1d. per lb.	1,500
Tobacco leaf for the manufacture of cigars, high grade, of a quality to be prescribed ... ..	5 "	2d. "	4,000
Fruits—			
Dates (dried) ... ..	15 "	1d. "	1,000
Dried (except currants and raisins) or candied, and exported ... ..	5 "	10 % on market value	6,000

Although the rate of bonus on the several articles, is, as shewn above, fairly liberal, the bounties have not been availed of to any great extent, as will be seen from the following table, which gives particulars as to the quantity of the articles raised and the amounts paid as bounties in respect thereof for the four financial years which have elapsed since the operation of the Act :—

**PARTICULARS OF BOUNTIES PAID ON AGRICULTURAL PRODUCTS (OTHER THAN SUGAR), 1907-8 to 1910-11.**

Article.	Quantity produced on which Bounties were paid.				Amount paid as Bounties.			
	1907-8.	1908-9.	1909-10.	1910-11.	1907-8.	1908-9.	1909-10.	1910-11.
Cotton, ginned ... .. lbs.	662	21,865	24,994	53,173	£ 10	£ 32	£ 34	£ 91

Fruits—								
Dried (except currants and raisins) or candied, and exported ... .. lbs.	54,992	12,096	23,332	454,075	1,061	28	104	940

During the year 1910-11 the total amount paid in respect of cotton, sisal hemp, cottonseed, and coffee was claimed by the State of Queensland. South Australia collected £483, Tasmania £378, and Victoria £79 of the fruit bonus, while £83 of the bounty paid for tobacco leaf was paid to Queensland, the remaining £7 being earned in Victoria. The lastmentioned State also claimed the total amount paid for flax and hemp.

No bounties have yet been paid on New Zealand flax, jute, uncleaned rice or dates.

### § 18. Fertilisers.

1. **General.**—In the early days of settlement and cultivation in the Commonwealth, scientific cultivation was in a much less developed state than it is to-day. The early farmers were neither under the necessity, nor were they as a rule aware of the need, of supplying the constituents to the soil demanded by each class of crop. The widely-divergent character of the soils in the Commonwealth, their degeneration by repeated cropping, the limitations of climatic conditions, the difficulties of following any desired order of rotation of crops, all rendered it necessary to give attention to artificial manuring. The introduction of the modern seed-drill, acting also as a fertiliser distributor, has greatly facilitated the use of artificial manures, and much land formerly regarded as useless for cultivation has now been made available. There is reason to believe that this feature will be even more strikingly characteristic of the future.

2. **Fertilisers Acts.**—In order to protect the interests of users of artificial manures legislation has been passed in each of the States, regulating the sale and preventing the adulteration of fertilisers. The following is a list of such Acts in force:—

New South Wales ...	The Fertilisers Act of 1904.
Victoria ... ..	The Artificial Manures Acts of 1904 and 1910.
Queensland ... ..	The Fertilisers Act of 1905.
South Australia ...	The Fertilisers Act of 1900; amended 1903.
Western Australia ...	The Fertilisers and Feeding Stuffs Act of 1904; amended 1905.
Tasmania ... ..	The Manures Adulteration Acts of 1893 and 1898.

As regards their main features these measures are practically identical. The words "fertiliser" and "manure," as used in these Acts, mean any substance containing nitrogen, phosphoric acid, or potash, manufactured, produced, or prepared in any manner for the purpose of fertilising the soil or supplying nutriment to plants, but do not include farm-yard or stable manure or similar articles in their natural or unmanufactured state. The Acts provide that every vendor of fertilisers must, within a stated period, forward to the Secretary of Agriculture, or corresponding officer, samples of the fertilisers on sale by him, together with the distinctive name or brands by which they are known, and the price at which he intends to sell during the year. On every bag, package, or bundle of fertiliser sold, or exposed for sale, he must attach a printed label shewing thereon:—

- (i.) The number of net pounds of fertiliser in such bag or parcel;
- (ii.) The figure or trade mark attached to the fertiliser and intended to identify it;
- (iii.) The proportion per centum of nitrogen, phosphoric acid, and potash contained therein.

In addition to the above the vendor must furnish every purchaser with an invoice certificate, signed by himself or his agent, stating his full name and place of business and the quality of the fertiliser sold.

Any officer or analyst appointed under the Acts may enter any manufactory, warehouse, store, vessel, wharf, railway station, conveyance, or other place where fertiliser is manufactured, stored, exposed for sale, or in course of delivery or transit, and demand and take samples of such fertiliser. Every sample so taken must be divided by such officer into three parts, and each marked, sealed, and fastened by him in the presence of the person in charge, and disposed of as follows:—

- (i.) One part to be taken by person in charge.
- (ii.) One part to be used for analysis.
- (iii.) One part to be retained by the officer for future comparison.

Every buyer of fertiliser is entitled to submit a sample to the analyst appointed under the Act, and receive a certificate of its analysis. If the analysis prove it to be under what it is represented to be, the vendor must pay the cost of analysis.

**3. Imports.**—The local production of artificial manures falls short of the existing demand, and large quantities are consequently imported.

The importation of fertilisers has increased over 250 per cent. during the ten years of Federation. The chief items, both as regards quantity and value, are those relating to phosphates, a fertiliser apparently very suitable for the growing of cereals in Australian soils. The greater quantity of the manufactured superphosphates is obtained from the United Kingdom, whence came over 70 per cent. of the total imported during 1910, while Japan contributed about 17½ per cent., and Germany nearly 6 per cent., the balance, representing 6½ per cent., being imported from Sweden, Belgium, and the Netherlands. Ocean Island, with about 78 per cent., is the principal contributor of rock phosphates, the balance being obtained from Christmas Island. Guano is imported chiefly from Ocean Island, one of the South Sea group, and in lesser quantities from Malden Island, while India has practically a monopoly of the bone-dust trade with the Commonwealth.

The increasing demand for artificial manures is shewn in the following table. It will be noticed that the quantity of rock phosphates imported during the last three years has shewn a marked increase over previous years. This was particularly large during 1910, when an increase of over 100 per cent. is shown over the quantity imported in the previous year. The figures for the manufactured superphosphates shew an increase of about 50 per cent. during that year.

## COMMONWEALTH IMPORTS OF FERTILISERS, 1906 to 1910.

Fertiliser.		1906.	1907.	1908.	1909.	1910.
Bonedust ... ..	Cwt.	80,625	93,798	74,657	71,959	12,740

4. **Exports.**—The subjoined table shews the exports of artificial manures for the years 1906 to 1910. Practically the whole of the fertiliser is manufactured locally, and is shipped mainly to New Zealand and the Pacific Islands:—

## COMMONWEALTH EXPORTS OF FERTILISERS, 1906 to 1910.

5. **Statistics of Use of Fertilisers.**—The statistics available in connection with the use of manures in the Commonwealth are those of New South Wales, Victoria, South Australia, and Western Australia. Particulars concerning the first-mentioned State are given hereunder:—

## FERTILISERS USED IN NEW SOUTH WALES, 1907-8 to 1910-11.

Season.	Total Area of Crops.	Area Manured.		Manure Used.	
		Aggregate.	Percentage to Total Area of Crop.	Natural (Stable-yard, etc.).	Artificial.
	Acres.	Acres.	%	Loads.	Tons.
1907-8 ... ..	2,572,873	423,678	16.47	144,021	13,356
1908-9 ... ..	2,717,085	509,262	18.74	216,078	15,545
1909-10 ... ..	3,180,561	826,197	25.98	189,008	21,659
1910-11 ... ..	3,386,017	1,030,554	30.43	186,204	25,017

Particulars for Victoria for the past ten seasons are as follows:—

### FERTILISERS USED IN VICTORIA, 1901-2 to 1910-11.

Season.	Total Area of Crops.	Farmers Using Manure.	Area Manured.		Manure Used.	
			Aggregate.	Percentage to Total Area of Crop.	Natural (Stable-yard, etc.).	Artificial.
	Acres.	No.	Acres.	%	Tons.	Tons.
1901-2 ...	2,965,681	11,439	556,777	18.77	153,611	23,535
1902-3 ...	3,246,568	18,537	1,099,686	33.87	206,676	36,630
1903-4 ...	3,389,069	19,921	1,205,443	35.57	207,817	41,639
1904-5 ...	3,321,785	20,167	1,521,946	45.82	190,903	45,940
1905-6 ...	3,219,962	21,586	1,791,537	55.64	210,507	54,674
1906-7 ...	3,303,586	23,072	1,985,148	60.09	205,906	60,871
1907-8 ...	3,232,523	23,733	2,018,079	62.43	232,394	62,337
1908-9 ...	3,461,761	24,437	2,053,987	59.33	235,492	64,715
1909-10 ...	3,658,535	26,690	2,407,331	65.80	197,446	77,579
1910-11 ...	3,952,070	27,845	2,714,854	68.69	203,884	86,316

The figures relating to the use of fertilisers in South Australia, for the only years for which they are available, are shewn in the table below:—

### FERTILISERS USED IN SOUTH AUSTRALIA, 1907-8 to 1910-11.

Season.	Total Area of Crops.	Area Manured.		Manure Used.	
		Aggregate.	Percentage to Total Area of Crop.	Natural (Stable-yard, etc.).	Artificial.
	Acres.	Acres.	%	Loads.	Tons.
1907-8 ...	2,265,017	1,573,861	69.49	124,092	60,008
1908-9 ...	2,321,812	1,712,394	73.75	120,648	64,842
1909-10 ...	2,530,301	2,031,832	80.30	133,935	76,413
1910-11 ...	2,746,334	2,235,378	81.40	129,918	81,899

Corresponding particulars relative to Western Australia for the seasons 1904-5 to 1910-11 are given in the following table, and furnish interesting evidence of the rapid extension of the use of manures in that State:—

### FERTILISERS USED IN WESTERN AUSTRALIA, 1904-5 to 1910-11.

Season.	Total Area of Crops.	Area Manured.		Manure Used.	
		Aggregate.	Percentage to Total Area of Crops.	Natural (Stable-yard, etc.).	Artificial.
	Acres.	Acres.	%	Loads.	Tons.
1904-5 ...	327,391	205,923	63.90	72,523	10,787
1905-6 ...	364,704	257,469	70.60	83,033	12,676
1906-7 ...	460,825	340,401	73.87	81,653	16,127
1907-8 ...	493,837	391,146	79.21	73,809	17,273
1908-9 ...	585,339	493,545	84.32	61,834	21,358
1909-10 ...	722,086	608,870	84.32	67,263	24,654
1910-11 ...	855,024	773,561	90.47	62,229	33,194

A marked increase in the proportion of cropped land treated with manure is in evidence in all of the States for which returns are available. Thus in New South Wales the area of manured land represented in 1907-8 only  $16\frac{1}{2}$  per cent. of the area under crop, as against  $30\frac{1}{2}$  per cent. in 1910-11. Similarly in Victoria the percentage increased from  $18\frac{3}{4}$  per cent. in 1901-2 to over  $68\frac{1}{2}$  per cent. in 1910-11, in South Australia from  $69\frac{1}{2}$  per cent. in 1907-8 to  $81\frac{1}{2}$  per cent. in 1910-11, and in Western Australia from 64 per cent. in 1904-5 to  $90\frac{1}{2}$  per cent. in 1910-11.

**6. Local Production of Fertilisers.**—Statistics relative to the local production of fertilisers are necessarily very incomplete, and detailed returns for fertiliser factories other than bone mills are not available. The number of firms engaged in the manufacture of artificial manures in the Commonwealth during the year 1910 was 78, made up as follows:—New South Wales, 20; Victoria, 24; Queensland, 13; South Australia, 12; Western Australia, 6; and Tasmania, 3. If, however, approximately complete returns of the quantities of fertilisers used in the various States could be given, a comparison with the importations would give valuable information, but, as already mentioned, such particulars are only available for four of the States, and even then do not furnish the whole of the information necessary.

**7. Benefits Derived from the Use of Fertilisers.**—There is little doubt that the increased and increasing use throughout the Commonwealth of fertilisers, natural and artificial, combined with the greater attention being devoted to fallowing and to the combination of sheep-farming with agriculture, is having the effect of improving the prospects of those dependent for a livelihood on the products of the soil. Reference has previously been made to the loss to the soil of phosphoric acid which the Commonwealth export of wheat and its milled products involves, and the necessity which thus arises for returning this ingredient in some form. Similarly, other staple products exported impose their respective tolls upon the soil of the Commonwealth, and the increased use of fertilisers furnishes evidence that producers are alive to the necessity for making good the deficiency so arising.

## § 19. Ensilage.

**1. Value to Stockowners.**—The use of ensilage as a substitute for green fodder during periods of drought or spells of dry weather, or for winter use, is less extensive in Australia than the circumstances would appear to warrant. There is, however, a growing disposition on the part of dairy farmers to make silos on their holdings, as they find that dairy cattle eat ensilage greedily, and that by its means the output of milk, both in regard to quantity and quality, may be kept up long after the supply of ordinary green food is exhausted. Sheepbreeders are also recognising the fact that during protracted periods of dry weather the silo enables them to keep their stock in good condition, and that lambing can take place satisfactorily. Ensilage thus obviates the expense of travelling or trucking sheep for hundreds of miles to get beyond the drought area, or the equally costly and even ruinous alternative of providing chaff for food at high prices and costly freight. In the rearing of lambs for the London market, ensilage appears to be destined to play an important part, as the lambs thrive upon it much better than upon dry food. By the judicious economising of the surplus growth of green food with the use of the silo, farmers and squatters can carry more stock on their holdings than they otherwise would be justified in doing. Not only is the great waste of superabundant food thus avoided, but it becomes possible to change into a succulent and nutritious

food much growth that in any other state would not be eaten by stock. Thus such vegetation as marsh mallows, thistles, weeds of all sorts, and even the swamp reed *Arundo phragmites*, which grows in great quantities in lagoons, billabongs, and swamps, are all eaten with avidity when offered to stock in the form of ensilage. The pit and stack silos are rapidly being superseded by those built of red gum and hardwood or concrete. This is found to a great extent to obviate the loss sustained by mould, at the same time reducing the risk of fire. The silos vary in capacity from forty to 130 tons. A portable silo made of iron which has been devised, is made in sections of such size and weight as to admit of ready handling. These silos can be increased in diameter or height by the addition of further sections.

**2. Government Assistance in the Production of Ensilage.**—The Government of Victoria, recognising the fact that defective methods of making ensilage have often been adopted, leading to partial or total failure, is making special efforts to educate the farming community in this respect, so that mistakes may be avoided and the conditions essential for the production of good ensilage may be better appreciated. These conditions vary with the climate and with the locality.

**3. Quantity Made.**—Particulars concerning the number of silos and the quantity of ensilage made in the several States of the Commonwealth in the seasons 1906-7 to 1910-11 are furnished in the table given hereunder:—

COMMONWEALTH ENSILAGE-MAKING, 1906-7 to 1910-11.

State.	1906-7.		1907-8.		1908-9.		1909-10.		1910-11.	
	*Holdings.	Ensilage Made.	*Holdings.	Ensilage Made.	*Holdings.	Ensilage Made.	*Holdings.	Ensilage Made.	*Holdings.	Ensilage Made.
	No.	Tons.	No.	Tons.	No.	Tons.	No.	Tons.	No.	Tons.

\* No. of holdings on which ensilage was made.

† Figures not available.

‡ Exclusive of Tasmania.

Since the drought of 1902-3 greater attention has been paid to ensilage than was previously the case, and during the four seasons ended 1909-10 a continuous and fairly rapid increase was in evidence in all the States, both in the number of holdings on which ensilage was made, and in the quantity produced. The season for 1910-11 shews a falling-off in all the States, with the exception of Queensland and Tasmania; in these two States there was an increase both as regards the number of holdings and quantity made. The reduction in the States indicated cannot be accepted as an indication of a lessening of appreciation of the benefits of ensilage, but rather of the fact that stocks had not been drawn upon to any great extent during the previous two seasons.

## § 20. Agricultural Colleges and Experimental Farms.

1. **Introduction.**—It has been thought preferable to refer to what may be called the effort in the direction of agricultural education in this section rather than under the heading of education.

The virgin soil of a new country rendered attention to scientific methods of farming less necessary in the earlier days of Australian colonisation than at the present time, and it may also be said that the knowledge of scientific farming was then but little developed. In many parts of Australia, moreover, the regular rotation of crops, of vast importance to all agricultural countries, would appear hardly possible, owing to the peculiar climatic conditions. These conditions may, however, be utilised or made less adverse, by a more skilful tillage of the soil, and the restoring to it or adding to it such chemical constituents as may be necessary for particular crops. The fostering of industries, other than those pertaining merely to the production of cereals, is also becoming a matter of consequence, and considerable extensions of knowledge have been made in the past few years in respect to the co-ordination of other industries with agricultural industry. In most of the States agricultural colleges and experimental farms have been established with a view to promoting agriculture and to establishing improved and more scientific systems of stock-breeding and dairying. In these colleges and in some of the farms provision is made for the accommodation of pupils, to whom both practical and theoretical instruction is given by experts in various branches of agriculture. Analyses of soils and fertilisers are made, manures are tested, and elementary veterinary science, etc., is taught, while general experimental work is carried on with cereal and other crops, not merely for the purpose of shewing that it is practicable to produce certain crops in a given place, but also to shew how it is possible to make farming pay best in that locality. Opportunities are afforded for practice in general agricultural work, and instruction is given in the conservation of fodder, in cheese and butter making, in the management, breeding, and preparation for the market of live stock, in the eradication of pests and weeds, and in carpenters', blacksmiths' and other trades.

Travelling expert lecturers are sent to the various agricultural and dairying centres, and there is a wide distribution of periodical agricultural gazettes and bulletins on matters of importance at special seasons. Lectures are given on agricultural, pastoral, horticultural, and viticultural subjects, according as they have bearing on the industries of the district in which they are given, and practical demonstrations are frequently held with a view of obtaining the best results. Seeds of cereals, potatoes, and fodder plants are distributed throughout the several States for experimental purposes, on the understanding that result reports will be furnished to the department from which the seed was sent. The object of this is to ascertain the varieties of seed best adapted to the soil in the different localities. Attention is also paid to the proper supervision of exports of produce in order to ensure their being placed on the home markets in the best possible condition. In some of the States agricultural instruction is given at technical schools, while experimental elementary agriculture—practically a form of nature study—is taught at many of the primary schools. Courses for the instruction of school-teachers during the holiday recesses have been established at some of the agricultural colleges.

(i.) *Australian Bureau of Agriculture.* In July, 1909, a Bill to establish a Bureau of Agriculture was introduced into the House of Representatives. Under this Bill it was proposed that the Bureau be charged with any of the following functions:—(a) the acquisition and diffusion among the people of the Commonwealth of information connected with agriculture, dairying, horticulture, viticulture, live stock and forestry; (b) the collection, propagation and distribution of new and valuable seeds and plants; (c) the carrying out of experiments and investigations; (d) the investigation of pests or

diseases affecting plants or live stock, and the means for preventing their spread or effecting their eradication; (e) the publication of reports of the experiments of experimental farms; (f) the publication of reports and bulletins dealing with any matter of importance in regard to production in Australia, and (g) such other functions as may be prescribed. It was also proposed that arrangements be made with the Government of any State in respect to the carrying out of experiments and investigations, the supply and distribution of information, the exchange and distribution of seeds and plants; and any matters conducing to the development in Australia of agricultural, pastoral, dairying, horticultural and viticultural industries and forestry. Each year a report was to be furnished to Parliament shewing the condition of the various industries and forestry in Australia and the nature of the work done by the Bureau during the preceding year. This Bill, however, lapsed, and further legislative action has not since been taken.

(ii.) *Particulars of Agricultural Colleges and Experimental Farms.* In the table given below particulars of agricultural colleges and experimental farms in the several States of the Commonwealth in 1910-11 are shewn. Tasmania is the only State in which such colleges or farms are not established.

**PARTICULARS OF AGRICULTURAL COLLEGES AND EXPERIMENTAL FARMS IN THE  
COMMONWEALTH, 1910-11.**

Particulars.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	C'wealth
Number of colleges ...	1	2	1	1	...	5
Number of experimental farms ...	13	7	7	6	4	37

Value of produce for year ... £	20,005	11,330	5,428	6,609	3,882	47,254

2. **New South Wales.**—In order to meet the demand for agricultural training, and or the purpose of conducting experiments in various branches of agriculture and of disseminating agricultural knowledge, an agricultural college and farm and thirteen experimental farms are now established by the New South Wales Government. Theoretical instruction in agriculture, with practical illustrations, forms part of the curriculum of the Sydney Technical College. At the Hurlstone Continuation College there is a special course in both theoretical and practical agriculture for teachers. Instruction in "nature knowledge" is given in the State primary schools, many of which have their own experimental plots. As a means of further encouraging the study of agriculture the Department of Public Instruction has a travelling inspector in agriculture, whose duty it is to visit the country and metropolitan schools, giving lectures on the value, necessity, and advantages of agricultural knowledge, and giving practical demonstrations wherever practicable.

(i.) *The Hawkesbury Agricultural College*, situated near the town of Richmond, on the Hawkesbury River, about thirty-eight miles from Sydney, is under the control of the Agricultural Department and provides accommodation for about 250 students. Attached to the college is a farm of 3551 acres, of which 778 acres were under crop in the season 1910-11.

(a) *The course of instruction* comprises the principles of agriculture; the breeding, rearing, feeding, and management of live stock; agricultural chemistry, botany, vegetable pathology, and entomology; veterinary science and practice; bacteriology; meteorology; agricultural mechanics; elements of surveying and farm book-keeping; all kinds of practical farm work, including the use of farm implements and machinery; dairying, carpentry, saddlery, blacksmithing, and elementary agricultural engineering; the management of poultry and bees and all branches of orchard and garden work. The course extends over two years, and is divided into four sessions. At the end of the course students may undergo examination for the purpose of obtaining the college diploma.

(b) *Experimental Work*. In addition to the education of the students, extensive experimental operations are carried on at the farm for the general benefit of agriculturists. Large numbers of farmers visit the institution in quest of information. During the winter vacation arrangements are made for a winter school for farmers. This school has been in operation for five years. The course extends over one month.

(ii.) *Experimental Farms, Orchards, and Vineyards*. Experimental farms have been established at Wagga, Bathurst, Grafton, Glen Innes, Cowra, Wollongbar, Dural, and Nyngan. There are irrigation farms at Pera, and Yanco, and a dairy stud farm at Berry, while viticultural stations have been established at Howlong and Raymond Terrace. At the farms at Wagga, Bathurst, Wollongbar, and Berry, accommodation is provided for students. The educational work undertaken at the four farms where students are received is more practical than academic. Scientific lectures are given as far as possible, and the students, at the end of the full course, undergo an examination for the purpose of obtaining the farm certificate. The fees payable are not large, amounting, as a rule, to about £25 per annum for residential students. With regard to the farm operations, the objects of each farm are to demonstrate the most economic and effective systems of producing and harvesting crops; to carry out experiments to determine the suitability or otherwise of crops, not only for the district where the farm is situated but for other districts having similar climate and soils; and to carry out scientific agricultural experiments generally.

(iii.) *Particulars of Agricultural College and Experimental Farms*. The following table shows the number of students at the Hawkesbury College and at the four experimental farms at which students are received for each year from 1906 to 1910 inclusive:—

**NEW SOUTH WALES.—NUMBER OF STUDENTS AT GOVERNMENT AGRICULTURAL COLLEGE AND EXPERIMENTAL FARMS, 1906 to 1910.**

Name.	1906.	1907.	1908	1909.	1910.
Hawkesbury Agricultural College ...	201	230	190	188	154
Wagga Farm ...	40	63	52	49	42
Bathurst Farm ...	25	23	25	32	33
Wollongbar Farm...	9	18	7	11	12
Berry Dairy Stud Farm ...	7	11	2	...	...
Total ...	282	345	276	280	241

At the Wagga farm a specialty is made of growing seed wheats and fruits for drying, and of breeding dairy stock and swine. The Bathurst farm is devoted to the cross-breeding of sheep, fruit-growing, cereal culture, and general mixed farming. At Coolabah experiments in the dry districts have been carried on, while at Wollongbar experiments have been made on a large scale with grasses for the grazing of dairy cattle, and steps have been taken to assist the dairying industry in the surrounding districts.

The following table gives particulars of the Hawkesbury College and of thirteen experimental farms for the year ended the 31st March, 1911.

Coolabah and Moree farms were closed in May, 1910, the operations of the former being transferred to Nyngan; a farm was opened at Coonamble in March, 1911.

1. Dairy stud farm.

2. Viticultural station.

3. Irrigation farm.

(iv.) *Other Forms of Agricultural Instruction.* Agricultural education at the Technical College at Sydney includes the following studies:—The character and prospects of Australian agriculture; climate and rainfall; selection of land, clearing, fencing, building and draining; irrigation and water storage; the cultivation of crops; manures; live stock; dairying; sheep and wool; farm and dairy chemistry; the treatment of fungus and insect pests; fruit-growing and preserving; vine-growing and wine-making; pigs, poultry and bee-keeping; and horticulture and home-gardening. Elementary agriculture forms the first year's course, and advanced agriculture is dealt with during the second year. With the object of giving lectures and demonstrations on various subjects, the scientific and expert staff of the agricultural laboratories in Sydney as well as those attached to the college and farm staffs are from time to time placed at the disposal of the farming community, and are constantly in demand by agricultural societies, farmers' and settlers' associations, and other similar bodies. The publication of the *Agricultural Gazette* is a valuable means of imparting knowledge on agricultural matters. Seeds grown at the experimental farms are distributed from a central dépôt in Sydney for trial purposes among the farmers, and are also available to State school teachers for use in connection with the experimental plots which are now attached to many of the primary schools throughout the State. The only condition in the granting of such samples is that the recipients shall in due course forward a report of their experiments to the Agricultural Department.

3. **Victoria.**—In 1884, the Agricultural Colleges Act, passed to make provision for the establishment of agricultural colleges and experimental farms in Victoria, provided for the permanent reservation from sale of 150,000 acres of Crown lands by way of endowment of agricultural colleges and experimental farms, which, together with other lands reserved as sites for such institutions prior to the passing of the Act, are vested in three trustees appointed by the Governor. Provision was made for the appointment of a Council of Agricultural Education, consisting of eleven members, five of whom are elected by the members of the Agricultural Societies of the State, five are nominated by the Governor, whilst the Secretary for Agriculture is also a member of the Council and its Treasurer. Two agricultural colleges and seven experimental farms, orchards and vineyards are now in existence in different parts of the State. There are five Agricultural High Schools under the control of the Education Department, while elementary experimental agriculture is taught at many of the State primary schools. Instruction in agriculture is also given at the technical schools at Melbourne and Bairnsdale.

(i.) *Agricultural Colleges.* The two colleges are situated respectively (a) at Dookie, in the Goulburn Valley district, and (b) at Longerenong, in the Wimmera district.

(a) *The Dookie Agricultural College*, with its farm of 5118 acres, is situated in a rich agricultural country, eminently suited for farming, grazing, viticulture, and horticulture. The college buildings were erected during 1886, and since then numerous additions have been made, so that at the present time accommodation is provided for over 100 students, and provision will shortly be made to accommodate more. The farm is equipped with modern dairy and cowbyres, piggeries, poultry plant, cellars, etc., also large stables and stallion boxes, shearing shed, slaughterhouse, mechanics' and carpenters' shops, silos, barn, sheds, cattle and sheep yards, steam and oil engines, and numerous modern implements of agriculture. Half the students' time is devoted to practical work on the farm, and half to scientific, theoretical, and other work. On the farm the student is taught to manage live stock, handle implements and machinery, work the separator, drive engines, prune vines and trees, break-in horses, shoe horses, mend a break, and erect buildings. At the college instruction is given in determining the fertility of soils, the effects of manuring, the importance of drainage, the improvement of stock and crops, irrigation, and the treatment and eradication of diseases in plants and animals. Considerable attention is paid to experimental work in connection with cereals. The rearing of new varieties of wheat, suitable for the different parts of the State of Victoria, has special attention paid to it. Manurial tests are carried out each year and the results published for the benefit of the farmers. The stock comprises nearly ninety horses, as well as good herds and flocks of pedigree cattle, sheep, pigs, and poultry. The annual charge made to residential students is £32 5s. per head. The number of students during 1910 was 107.

(b) *The Longerenong Agricultural College*, reopened in 1905, can accommodate forty students, and thirty-nine were on the rolls during last year. The farm has an area of 2386 acres, and is particularly adapted for demonstrating what can be done in farming with irrigation, water being supplied by one of the channels of the Western Wimmera Irrigation Trust. Including fallow land, about 800 acres are under cultivation each season; the orchard and vineyard cover an area of about thirty acres. In addition to a number of well-bred horses and cattle, there is a small flock of pedigree sheep. Lamb-raising is one of the principal industries. The course may be taken by either resident or non-resident students, the former doing both class and farm work, while the latter attend for class work only on alternate

days. The syllabus of instruction includes the principles and practice of agriculture, agricultural chemistry, agricultural physics and mechanics, botany, entomology, geology, surveying, bookkeeping, mathematics, and English. The fees for resident students amount to £18 5s. per annum, and for non-resident students to £5 per annum.

(ii.) *Agricultural High Schools and Technical Colleges.* At the end of the year 1911 there were in operation, seven agricultural high schools controlled by the Education Department, viz., Warrnambool, Sale, Shepparton, Wangaratta, Ballarat, Warragul, and Mansfield. Similar institutions are to be established in the near future at Mildura and Leongatha, the sites having already been acquired. The direct aims are to give to boys such an education as will direct their attention specially towards the land as a means of gaining a livelihood; to promote agriculture as an occupation and a profession; to provide a central institution for the dissemination of agricultural information by evening lectures, conferences, and literature; to superintend the Government experimental plots; to record and interpret their results; and to provide a summer school in agriculture for primary school teachers. The course of instruction comprises agricultural science, climatology, physics, chemistry, geography, drawing, English, mathematics, and farm practice. At the Working Men's College at Melbourne lectures are given on agricultural chemistry, wool-classing, poultry-breeding, etc., and at the School of Mines at Bairnsdale a complete course in theoretical and practical agriculture is given, extending over a period of two years. Agricultural courses are also held at the Ballarat School of Mines and at the Gordon College, Geelong.

(iii.) *Experimental Farms.* Experimental farms are now in existence at Rutherglen, Whitfield, Wyuna, Burnley, Rosedale, and Marlo (Gippsland), demonstrating different methods of cultivation, manuring, stock-breeding, the cultivation of economic plants, the improvement of varieties of cereals by selection and cross fertilisation, and the testing of fodder plants. Six demonstration orchards have been established to shew the effect of proper cultivation and pruning of fruit trees in various districts and the suitability of the trees for the district. At Burnley Horticultural Gardens students are trained in horticulture. Areas have been planted at Rutherglen and Wahgunyah with phylloxera-resistant vines for distribution to vignerons to enable them to reconstitute their vineyards. In several districts experimental plots are conducted by the local agricultural society.

(iv.) *Other Forms of Agricultural Instruction.* The *Journal of the Department of Agriculture*, published monthly, deals with various matters relating to agriculture, and is a valuable means of disseminating information. Since the establishment of butter factories throughout Victoria, a travelling dairy formerly utilised has been discontinued. Demonstrations in cheese-making are, however, still given by an expert, while other experts also visit the factories and supply information and instruction. Practical lessons are also given by experts in fruit-preserving, drying, and candying, also in flax manufacture, cider-making, poultry-dressing, and the preparation of poultry for export. In addition to these lectures a system of short-course classes in agriculture has been established. These classes are held at various centres, and lectures are given on the principles of agriculture, the care of farm stock, sheep-breeding and management, dairy-farming, agricultural engineering, and orchard and garden work. In many of the State Schools of Victoria elementary agriculture is taught. In connection with these schools there are experimental plots varying in area from half an acre to rather less than a quarter of an acre. Experiments are conducted to shew the benefits of cultivation, drainage, and rotation of crops, to ascertain fodder and other crops suitable for the locality, and to test manures. In some of the schools milk-testing is taught, and the economic native woods, common weeds, and insects are dealt with. Agricultural societies have been

formed in many country towns. They arrange lectures, competitions, and form experimental plots, etc., and receive subsidies from the State for such purposes. A Chair of Agriculture was established in 1911 and there is now a course of agriculture at the Melbourne University by which students can attain the degrees of the Diploma of Agriculture, and Bachelor of Agricultural Science.

The Bachelor of Agricultural Science course extends over a period of four years, during which time candidates have to attend lectures, laboratory and field work as prescribed by the Faculty of Agriculture in the following subjects, and pass examinations therein:—Chemistry (including agricultural), agricultural zoology (including entomology and botany), natural philosophy, comparative anatomy and physiology of domestic animals, physical geology, economic bacteriology and pathology of the infective diseases. During the fourth year, candidates have to perform at Dookie Agricultural College, or some other institution recognised for the purpose by the Council of the University, such work as may be prescribed by the Faculty in the theory and practice of agriculture and agricultural engineering, and to satisfy the Faculty that they have passed a satisfactory examination therein. After completion of the four years' course, candidates have to spend not less than four months in field work in places devoted to special branches of agricultural work. When candidates have fulfilled these conditions and have also passed an examination in book-keeping, they may then be admitted to the Degree of Bachelor of Agricultural Science. During the first year there are exhibitions open in chemistry, biology and natural philosophy. An exhibition of twenty pounds may be awarded to the candidate who at the second year honour examination stands highest in the subjects of the year, and at the honour examination in the third year the Wrixon exhibition is open under similar conditions.

Candidates for the Diploma of Agriculture have to pass three examinations and complete three years. During the first and second year they have to attend lectures, laboratory and field work as prescribed, and pass examinations therein. The subjects for the first year are chemistry (including agricultural), and biology with laboratory work, agricultural zoology and entomology, botany and physical geology. The second year's subjects are economic bacteriology and pathology of the infective diseases, comparative anatomy and physiology of domestic animals, agricultural bio-chemistry and agricultural botany (including micology). Prior to entering on the third year, candidates must, at some examination approved by the Faculty, have passed in elementary mathematics, including the use of logarithms and elementary plane trigonometry; they are then required to perform at the Dookie Agricultural college or other recognised institution such work as may be prescribed by the Faculty in the theory and practice of agriculture, and satisfy the Faculty that they have passed a satisfactory examination therein. Having complied with the foregoing conditions, and also passed an examination in book-keeping and land surveying, they may be admitted to the Diploma of Agriculture.

Candidates having obtained the Diploma of Agriculture may, at any time, proceed to the Degree of Bachelor of Agricultural Science by matriculating in the University and by passing in the order prescribed in such subjects as together with those that have already been passed will complete the degree, provided that the conditions relating to attendance at lectures, and the performance of the required laboratory, field and practical work be complied with.

(v.) *Particulars of Agricultural Colleges and Experimental Farms.* The table given hereunder furnishes particulars relating to the agricultural colleges of Dookie and Longerenong, and the seven experimental farms:—

**VICTORIA.—PARTICULARS OF GOVERNMENT AGRICULTURAL COLLEGES AND  
EXPERIMENTAL FARMS FOR THE YEAR 1910-11.**

Name of College or Farm.	Total Area of Farm.	Total Area under Crop.	Area under Cereals and Hay.	Area under Fruit Trees & Vines.	Area under all other Crops.	Number of Hands Em- ployed.	Value of Plant and Ma- chinery.	Value of Produce for the Year.

\* Figures for 1909-10; those for 1910-11 not available. † Closed during 1911.

4. **Queensland.**—Organised experimental agriculture in Queensland dates from the establishment of the Department of Agriculture and Stock, but such work as has been done in connection with stock-breeding, other than that carried on by private individuals, has been of later birth, and has been confined to dairy stock and draught horses. Agriculture in Queensland in the early nineties was upon the well-defined lines of the other States, so that the knowledge to be gained as to what could be profitably adapted to Queensland, with its varied climate and rainfall, covered a wide field. Instructors were appointed conversant with the different lines of agriculture, of which grain cultivation, dairying, fruit-growing, tobacco cultivation, and tropical agriculture, such as sugar, rubber, and spices, are the most important. This has been followed by the establishment of an agricultural college, of farms in the temperate parts of the State, and of nurseries in the tropical parts. With wheaten grain a system of experiments has been carried out for some years with the distinctive object of evolving a type of wheat adapted for Queensland, and as far as possible resistant to the attacks of rust. In dairying, a commencement was made by despatching to the different farming centres properly equipped travelling dairies with the latest appliances. The export of Queensland dairy produce has arisen through this effort. No travelling dairies are, however, now employed. A fruit farm has been established, at which fruits suitable for or likely to adapt themselves to the Queensland climate and conditions have been experimented with during a series of years. To cope with the insect and fungus pests to which such fruits are peculiarly susceptible, careful inspection is made of fruits in the markets and for export, and every effort is put forth to prevent the introduction of fresh diseases and to exterminate those which are already within the State.

(i.) *Gatton Agricultural College.* In 1897 the Queensland Government established an agricultural college at Gatton, about fifty-eight miles west of Brisbane, with an associated farm of 1692 acres. Accommodation is provided for sixty residential students. Instruction is afforded in various branches of practical farming and theoretical agriculture, the practical feature being regarded as the more important. Elementary science and physics, dairying, gardening, elementary chemistry, veterinary science, horticulture, stock-breeding, elementary bacteriology, and agricultural chemistry are also taught. A dairy herd of the best known and favoured breeds has been established at the college, whence the young stock of pure breed have been distributed throughout the State. A course for the instruction of school teachers during the summer recess has been established at the college by the Education Department, and the knowledge thus acquired is imparted by the teachers, not only to the school children, but also to the farmers and dairymen. On the 31st December, 1910, there were forty-six students on the books of the college.

(ii.) *Experimental Farms and Technical Colleges.*

(a) *Experimental Farms* are carried on by the Government at Westbrook (near Toowoomba), Gindie, Biggenden, Hermitage (near Warwick), Warren, and Roma. At the Hermitage farm arrangements were made during the year 1906, whereby instruction in general farm work is given to a number of boys who, from circumstances, are unable to receive the advantages of the college course, and this system has now been applied to the farm at Biggenden. The pupils are apprenticed for a term of three years and are instructed in experimental and acclimatisation work, stock-breeding, hybridising, orchard work, etc. These youths are paid nothing for the first twelve months, £12 for the second, and £24 for the third. A state nursery has been established at Kamerunga, near Cairns, and a sugar experimental station at Mackay, but the State tobacco farm at Texas was relinquished during 1906.

(b) *Technical Colleges.* At the technical colleges established in various parts of the State instruction is given in certain agricultural subjects. Thus, at Brisbane, Ipswich, and Maryborough, botany, milk and cream testing, fruit preserving and pickling are dealt with, and at Brisbane wool-classing also. At Bundaberg, Gympie, Rockhampton, South Brisbane, and Toowoomba milk and cream testing is taught, whilst instruction is given in dairy-farming at Warwick.

(iii.) *Other Forms of Agricultural Instruction.* Free lectures are from time to time given at different centres by the Agricultural Department's technical instructors on all agricultural, horticultural, and pastoral subjects. A monthly *Agricultural Journal* is issued, in addition to pamphlets on special subjects. Seeds which are new to the country are distributed free. In the primary schools instruction is given in nature study and in economic gardening, prizes being awarded both for practical and theoretical work.

(iv.) *Particulars of Agricultural College and Experimental Farms.* The table given below contains particulars of the Gatton Agricultural College and the seven experimental farms. Figures relating to the technical colleges are not available:—

**QUEENSLAND.—PARTICULARS OF GOVERNMENT AGRICULTURAL COLLEGE AND  
EXPERIMENTAL FARMS FOR THE YEAR 1910.**

Name of College or Farm.	Total Area of Farm.	Total Area under Crop.	Area under Cereals and Hay.	Area under Fruit Trees and Vines.	Area under all other Crops.	Number of Hands Employ'd	Value of Plant and Ma- chinery.	Value of Produce for the Year.

Hermitage ...	433	266	206	...	60	4	630	700

5. *South Australia.*—To this State belongs the honour of starting the first experimental farm in the Commonwealth. As far back as the year 1879 a resolution was passed by the local Parliament in favour of the establishment of a School of Agriculture, with an experimental farm, under the charge of a professor of agriculture. Active operations in this connection were commenced in 1882, when the first series of plots of wheat were sown at Roseworthy. Experimental work, chiefly directed towards improving

the wheat yield, has been developed along three main lines, viz.: (a) The improvement of varieties of wheat, (b) the improvement of methods of cultivation, and (c) the use of manures. The Central Agricultural Bureau, established at Adelaide under the control of an Advisory Board, has an extensive membership distributed throughout the agricultural districts of the State. It assists farmers by the dissemination of knowledge; by helping to introduce new economic plants; by improving the breed of stock; and it acts as a means of keeping the Agricultural Department in touch with the producers. The branches of the bureau hold meetings at regular intervals in their several districts, ideas and methods as regards practical subjects are interchanged, and discussions are held on matters of general interest to agriculturists.

(i.) *The Roseworthy Agricultural College.* The Roseworthy College, situated seven miles from Gawler, and affording accommodation for about fifty resident pupils—who must be at least sixteen years of age on admission—has two main objects, viz.: (a) To train young men for the practice of agriculture, horticulture, and viticulture, and (b) to conduct experiments with a view to the advancement of the rural industries in South Australia. The attached farm is 1890 acres in extent. The course extends over a period of three years, the fees for residential students being £30 per annum. The curriculum includes both scientific and technical subjects, viz., chemistry, physics, anatomy, physiology, botany and entomology; agriculture, viticulture, œnology, fruit culture, veterinary science, dairying, book-keeping, surveying, wool-classing, and general rural economy. Fifty students were on the roll during 1910.

(ii.) *Experimental Farms.* During the year 1905-6 three experimental farms were handed over to the Agricultural Department, namely, the homestead block at Kybybolite of 1040 (now 2256) acres, 59 acres of reclaimed swamp at Murray Bridge, and 110 acres at Parafield. A similar farm subsequently established at Loxton is carried on in conjunction with one at Veitch's Well. During 1910 farms were established at Shannon and Minburra. On these, experiments are carried on with regard to the growing of different varieties of wheat, oats, and barley, both for grain and for hay crops, and also with regard to the growing of root and fodder crops. Investigations cover the manuring of crops, different methods of cultivation, rotation of crops, irrigation, the hybridisation and selection of cereals, feeding of animals, fruit-growing, and wine-making.

(iii.) *Government Dairy Farm.* Towards the close of 1908 the Government acquired a property of 1600 acres of good agricultural land at Turretfield, nine miles from Gawler, with the object of converting it into a model dairy farm. About 500 acres were cultivated during 1909, the produce of which is to be set aside mainly for ensilage purposes. Special provision has been made for the conservation of fodder, and large silos have been erected for the storage of the green feed. Owing to the large demand for seed wheat, an extension of the Parafield scheme of experimental work was necessary, and 350 acres of the Turretfield Dairy Farm were reserved by the Agricultural Department for seed plots; 100 acres were sown for 1910 season with the most approved types of wheat. There were about sixty cows in milk during the latter part of 1910, particular care being taken to obtain the best strains for milking purposes. A feature of the farm is its piggery, and baconers are sent to the Adelaide market with advantageous results. Cheese and pasteurised cream are also marketed profitably.

(iv.) *Other Forms of Agricultural Instruction.* Lectures are given by experts of the Agricultural Department under arrangement with the School of Mines at Adelaide and at country branches of that institution, while practical demonstrations are also given by the horticultural instructor. No instruction is given by travelling dairies, but the dairy instructor visits districts as arranged and gives instruction and advice on all matters pertaining to dairying. Lectures and practical demonstrations are given by experts all over the State, principally under the auspices of the Agricultural Bureau or local committees. Though no systematic scheme for agricultural teaching in the primary schools

exists, numbers of individual teachers have taken up experimental elementary agriculture—practically a form of nature study—with satisfactory results. Seed of special varieties of wheat is from time to time distributed gratis to applicants; also seed of barley and oats, and of fodder plants of a special character, likely to suit prevailing conditions. The *Journal of the Department of Agriculture* is issued monthly and special bulletins and pamphlets regarding cultivation, manuring, diseases of stock, etc., are published from time to time. It is proposed to establish a training school of agriculture in the near future.

(v.) *Particulars of Agricultural College and Experimental Farms.* The subjoined table gives details of the several farms in the State during 1910-11 :—

**SOUTH AUSTRALIA.—PARTICULARS OF AGRICULTURAL COLLEGE AND  
EXPERIMENTAL FARMS FOR THE YEAR 1910-11.**

Name of College or Farm.	Total Area of Farm.	Total Area under Crop.	Area under Cereals and Hay.	Area under Fruit Trees and Vines.	Area under all other Crops.	No. of Hands Employ'd	Value of Plant and Machinery.	Value of Produce for the Year.

6. *Western Australia.*—A considerable amount of developmental work has been done of late years towards the promulgation of agricultural knowledge on the three State farms at Chapman, Narrogin, and Hamel, and, more recently still, on the experimental farms at Brunswick and Nangeenan.

(i.) *The Chapman Farm* stands in the centre of a vast stretch of country lying twenty-five miles north of Geraldton and fifteen miles east of Northampton. Until a few years ago the expanse of land referred to was almost exclusively devoted to grazing, and it was mainly to prove its capabilities, and thus promote settlement, that the farm was established. The whole of the available land has since been selected, and settlement has outrun the extent of the area in question. Collaterally the object of the farm has been extended; it has become the medium whereby practical instruction in farming is provided for intending settlers in quest of a training which will fit them for their work. The farm, which has an area of 1280 acres, is well watered by the Chapman River and by wells served by windmills; it is securely fenced and subdivided. Stud stock are kept and bred, the young stock being sold annually. The stock consists of a stud of Suffolk Punch horses, a herd of Dexter Keries, a flock of pure-bred Shropshire ewes and rams, Angora goats, and various kinds of poultry.

(ii.) *The Narrogin Farm.* The initial object of this farm was to practically demonstrate the larger return consequent upon improved cultivation of the land; to raise stud stock for the benefit of the farmers, to raise clean seeds for sowing their land, and to offer a field for training farmers' sons and others wishing to settle on the land. Students are admitted at an annual fee of £10; they are taught the practical farm work, such as handling live stock, and the use of various farm implements. Lectures are given at

intervals by the scientific staff attached to the Agricultural Department. Experimental work is a merely subsidiary feature. The total area is 2826 acres. During the year 1910 there were eight students on the rolls.

(iii.) *The Hamel State Farm.* This farm, which formerly carried out experimental work consisting chiefly of testing new varieties of grasses and fodder plants, cereals, fruits and tubers, was closed in September, 1909.

(iv.) *Other Forms of Agricultural Instruction.* The Government dairy expert is continually travelling and lecturing on dairying, and lectures are also given by the field-officer, the horticultural and viticultural experts, and others. Demonstrations are also given in the cultivation of vines and fruit trees, including budding, grafting, and pruning. A regular monthly journal and bulletins at frequent intervals on matters of importance are issued by the Agricultural Department. The distribution of seeds and plants is now practically confined to seeds of fodder plants. While there are no specific regulations, recipients are asked, with a view to collating information as to the most suitable varieties in different localities, to report results. Experimental plots are conducted at some of the State schools under the direction of the teachers. A special feature of the entomological work carried out by the Department of Agriculture is the collection, breeding and distribution of parasites on insect pests. This work has been carried out with excellent results, several pests which were formerly a great source of trouble and expense being now practically non-existent.

(v.) *Particulars of State and Experimental Farms.* Particulars of the farms at Narrogin, Chapman, Brunswick, and Nangeenan for the year 1910 are given hereunder:—

**WESTERN AUSTRALIA.—PARTICULARS OF STATE AND EXPERIMENTAL FARMS  
FOR THE YEAR 1910.**

Name of Farm.	Total Area of Farm.	Total Area under Crop.	Area under Cereals and Hay.	Area under Fruit Trees and Vines.	Area under all other Crops.	Number of Hands Employed	Value of Plant and Machinery.	Value of Produce for Year.

7. *Tasmania.*—In Tasmania there is a Council of Agriculture consisting of eleven members, whose duties are to collect and publish information of every kind calculated to prove beneficial to agriculturists, such as suitableness of various districts for growth or production of animal and vegetable products, information respecting plants, methods of cultivation, breeding and feeding animals, and how best to improve the same: to prevent as far as possible the introduction and spread of diseases and pests, and to publish bulletins, abstracts, and reports containing all such information as may be desirable. Other matters embrace the employment of experts in any branch of agricultural science, distribution of plants and seeds for experiment, and the establishment of local boards of agriculture in different parts of the State. Lectures are given by the experts from time to time, and useful information and knowledge is diffused by means of the monthly gazette published by the Council, and also by means of special bulletins. There are no agricultural colleges or experimental farms, and practically no agricultural teaching is given in the elementary schools.

## § 21. Government Loans to Farmers.

1. **Introduction.**—All the Australian States have established systems under which financial aid is rendered to agriculturists by the Government. The principle upon which such aid is founded was probably first practically applied in Germany, viz., in the year 1770, when the *Landschaften Bank* was created. The establishment of the *Crédit Foncier* nearly a century later in France was a creation of a similar character. This latter institution was designed to enable house and land owners to raise money on mortgage at a low rate of interest, with facility for repayment by an annuity including redemption of the capital. It dates from 1852, but the mortgage bank known as the *Caisse Hypothécaire*, which, after a struggling existence, was finally liquidated in 1846, was based essentially on the same principle. Over the operations of the *Crédit Foncier*, created under governmental patronage and invested with such special privileges as to virtually constitute it a monopoly, the Government exercised a direct control, viz., by appointing its governor and its two deputy-governors. The *Crédit Foncier* was empowered to lend money only on a first mortgage, and to the amount of one-half of the estimated value of houses and farms, and one-third that of vineyards, woods, and other plantations, and the commission charged could not exceed six-tenths per cent. The system developed and adopted in the Commonwealth, with the object of assisting farmers to make improvements or to develop or utilise the agricultural or pastoral resources of the land, is analogous. Particulars of advances made under the *Closer Settlement* and similar Acts are dealt with in the section on *Closer Settlement*. (See page 298.)

2. **Particulars of Transactions in each State, 1908 to 1911.**—The subjoined table gives particulars of transactions in each State in which advances to farmers are made, for the years 1908 to 1911 inclusive. Tasmanian figures are not available for 1908.

\* Compiled from figures furnished by the Government Savings Bank of Victoria. † For years ended 31st December prior. ‡ Returns not available. § Balance after deduction of special principal payments in advances. ¶ Includes loans to farmers and other producers and to local bodies on the security of their own rates. || Including profits in connection with House and Shop loans.

3. *New South Wales.*—(i.) *Initial Legislation.* New South Wales adopted the principle of advances to settlers on 4th April, 1899, when the Advances to Settlers Act received assent. The objects of this Act were to authorise the raising of a loan for making temporary advances to settlers; to provide for the making and repayment of such advances; and for purposes incidental to, or consequent on, those objects. In order to provide the funds necessary for the carrying out of this Act, the Colonial Treasurer was authorised to sell inscribed stock, secured upon the Consolidated Revenue, to an amount not exceeding £500,000, to be sold in amounts of £10 or some multiple of £10, and bearing interest at the rate of  $3\frac{1}{2}$  per cent. per annum, payable half-yearly. A board, consisting of not more than three members appointed by the Governor, called the Advances to Settlers Board, was appointed to deal with applications for loans and to decide whether they should be granted. The maximum amount that was authorised to be advanced to any one person was £200, and was to be repaid in full, together with interest at the rate of 4 per cent., within ten years of the making of the loan, but on no account was a loan to be granted except on the recommendation of the Board and when the security given was deemed satisfactory. An Amendment Act, was passed in 1902, by which the advance limit of £200 was increased to £500, and the period within which repayments were to be made was extended to thirty-one years. In the latter part of the same year a further Amendment Act came into force. Under the provisions of this Act the amount of inscribed stock was increased to £1,000,000, and the maximum amount of advance to any person was raised to £1500, interest on the latter being payable at the rate of not less than 4 per cent. per annum.

(ii.) *Legislation now in Force.* The above Acts were all repealed by the Government Savings Bank Act of 1906, which received assent on 21st December of that year. All property held by the Advances to Settlers Board was to be vested in three Commissioners appointed under this Act, who were styled "The Commissioners of the Government Savings Bank of New South Wales." An Advances Department of the Savings Bank was constituted, and debentures to the amount of £305,000 (that being the amount of stock issued under the Advances to Settlers Acts and held at the beginning of this Act) were issued, an equivalent amount of Government stock transferred to the Savings Bank Department being, at the same time, cancelled. All moneys, securities, documents, property, etc., held by or on behalf of the Advances to Settlers Board were transferred to, and became vested in, the Commissioners, and were carried to the accounts of the Advances Department of the Savings Bank.

(iii.) *Security on which, and Objects for which, Advances are made.* The Commissioners are authorised to issue debentures to the amount of £2,000,000, bearing interest at a rate not exceeding 4 per cent. per annum. They may lend moneys from the Advances Department (a) upon mortgage of an estate of inheritance in fee simple in any land in the State; (b) upon mortgage of conditional purchases with or without associated conditional leases, homestead grants or selections, settlement leases or purchases, or conditional purchase leases; and (c) on deposit at call or short notice in the Treasury on any bank of issue in the State, or on deposit in the Savings Bank Department. Loans may be made for any of the following purposes:—(a) To pay off existing encumbrances or to purchase the land; (b) to pay off money to the Crown in respect of the land; (c) to make improvements or to develop the agricultural or horticultural resources of the land; and (d) to build homes on the land.

(iv.) *Amount and Repayment of Advances.* No loan to any one person may amount to less than £50 or more than £2000, and applications for loans not exceeding £500 have priority over those of a larger amount. In no case does the amount of the advance exceed 80 per cent. of the Commissioners' valuation of the security. Advances may be made up to two-thirds of the value of the interest of the borrower in the land, buildings and improvements, except where the land is held as a conditional lease, homestead grant, settlement lease, homestead selection, settlement purchase, or conditional purchase as to which the first five years' certificate has not issued, in which cases the amount advanced

may not exceed one-half of the holder's interest in the improvements. Loans are made only in respect of first mortgages, and except in the case of loans on the security of freeholds or certificated conditional purchases, are repayable by equal half-yearly instalments within such period, not exceeding thirty-one years, as the Commissioners think fit. Loans granted on the security of freeholds and certificated conditional purchases are repayable either in the same manner as loans on other securities just mentioned, or at the expiration of a fixed term not exceeding five years, during which period interest only is payable.

(v.) *Advances on Purchases of Farms.* To facilitate close settlement on private estates suitable for the purpose, the Commissioners are authorised to make advances in order to assist persons in purchasing land. In the case of such advances the title to the land must be either freehold or a certificated conditional purchase, and the amount advanced may not exceed 80 per cent. of the Commissioners' valuation.

(vi.) *Closer Settlement Promotion Act 1910.* In 1910 an Act was passed whereby intending settlers might acquire by direct purchase from the owner, areas of private land suitable for closer settlement, under the same conditions, regarding residence, the payment of purchase money etc. as apply to settlement purchases under the Closer Settlement Acts. The purchasers are financed to the extent of 95 per cent. of the purchase money, not exceeding the bank's valuation of the properties. At the close of 1910, twelve estates were under consideration, the purchase prices aggregating £108,234. It is anticipated that a considerable amount of business will be done under this Act which will materially expand the operations of advances to farmers in this State.

(vii.) *Particulars of Advances to Farmers, 1906 to 1910.* The following table shews particulars of the advances made up to the 30th June in the year 1906, and to the 31st December in 1907, 1908, 1909 and 1910:—

\* Year ended 30th June. † Year ended 31st December.

4. **Victoria.**—(i.) *Legislation.* The Advances Department of the Government Savings Bank of Victoria was established by the Savings Bank Act of 1896, amended in 1901 and again in 1903. The funds for the purpose of making advances are raised by the issue of mortgage bonds, the total amount of which is limited to £3,000,000.

(ii.) *Security on which Advances Granted.* In order to assist farmers, graziers, market gardeners, or other persons employed in agricultural, horticultural, viticultural, or pastoral pursuits, the Savings Bank Commissioners are empowered to make advances, either by instalments or otherwise, upon the security of any lands held by such person either (a) in fee simple, or (b) under a Crown lease in which the rent received is taken by the Crown in part payment of the lands demised. Security must be, in every case, a first mortgage. A loan may be either in cash or in mortgage bonds at par face value at the option of the Commissioners.

(iii.) *Amount of Advances.* The limits of the advances are £50 and £2000, as in New South Wales, applications for advances under £500 having also similar priority. In the case of land held in fee simple or under lease as specified in (b) above, the amount of the advance which may be made must not exceed two-thirds of the actual value of such land at the time of advance, which is reduced by the amount of all rent payable in respect of the land, previous to the issue of a Crown grant for such. If the person appointed by the Commissioners as valuator of any land certify that the improvements effected thereon increase the productive power of the land and exceed £2 per acre, the Commissioners may make, notwithstanding anything contained above, an advance of fifteen shillings for every acre so improved.

(iv.) *Special Provision for Vineyards, Orchards, etc.* In the case of land which has acquired a special value by reason of being cultivated as vineyards, hop-grounds, orchards, fruit-growing plantations, etc., advances may be made on the following terms:—(a) The total amount which may be at any time advanced upon any such land may not be more than £100,000 in the whole. (b) The amount of two-thirds of the actual value referred to above may be increased by one-quarter of any special increase in value, but such increase is in no case to be considered as greater than £30 an acre. (c) No advance may be for a longer period than fifteen years.

(v.) *Purposes for which Advances Granted.* Advances are made for the following purposes only:—(a) To pay off existing liabilities; (b) to pay off money owing to the Crown in respect of the land; (c) to make improvements or to improve and develop the agricultural, horticultural, viticultural, or pastoral resources of the land.

(vi.) *Repayment of Advances.* The rate of interest charged on loans, originally fixed at 4½ per cent. per annum, may, by the Amendment Act of 1903, be altered by the Commissioners with the approval of the Governor-in-Council, up to but not beyond 5 per cent. per annum. All advances, together with interest, must be repaid by sixty-three half-yearly instalments, or such smaller number as may be agreed upon between the borrower and the Commissioners.

(vii.) *Particulars of Advances to Farmers, 1906 to 1911.* The following table gives particulars as to the loans raised and repaid by the Advances Department, the number and amount of applications received and granted, and the amounts advanced and repaid for each financial year from 1906-7 to 1910-11 inclusive:—

**LOANS TO FARMERS.—TRANSACTIONS OF ADVANCES DEPARTMENT OF GOVERNMENT SAVINGS BANK, VICTORIA, DURING EACH FINANCIAL YEAR, 1906 to 1911.**

Particulars.	1906-7.	1907-8.	1908-9.	1909-10.	1910-11.	Total to the 30th June, 1911.
Bonds & debentures issued £	100,000	100,000	100,000	200,000	700,000	3,483,600
„ „ redeemed £	104,675	79,500	30,000	125,025	100,000	1,228,775
Applications received No.	550	704	825	669	684	13,187
„ „ Amount, £	217,572	344,703	468,085	319,060	356,410	6,379,445
Applications granted No.	295	390	502	416	339	7,109
„ „ Amount, £	98,840	162,615	250,895	177,765	149,610	*3,056,125
Amounts advanced ... £	89,975	143,180	238,210	165,015	139,610	2,797,323
„ repaid ... £	189,547	168,800	151,437	153,355	156,817	1,490,666

\* Of this amount £2,797,323 has been actually paid over to borrowers, a further sum of £28,935 being in course of settlement; the balance represents applications withdrawn or lapsed, or amounts offered but not accepted.

The number of loans at the 30th June, 1911, was 3096, and the average balance of each loan was £422 Os. 11d. The falling-off in the number of applications and amount of advances during the year 1906-7 was due, no doubt, partly to the fact that farmers had been favoured with good seasons during several years past, and partly also to the gradual fall in the rates charged for loans by other lenders. The number of repayments by farmers which became due during the year 1910-11 was 7105, representing amounts of £59,664 for interest and £29,740 for principal. These instalments have been well met, and on 30th June, 1911, there were only six farmers in arrear, the principal in arrear amounting to £26, and interest to £42.

(viii.) *Seed Advances Acts.* In 1896 and 1903, Acts were passed to enable seed and fodder to be advanced on certain terms to cultivators of land. These measures applied only to the season in which they were passed. Under the first-mentioned Act the Treasurer was authorised to pay out of the Consolidated Revenue a sum not exceeding £15,000, but no cultivator was to receive such quantity of seed as would sow more than 100 acres, and he had to give a preferable lien over the produce of all crop harvested within twelve months. By the Act of 1903 the amount authorised to be lent was £100,000, in sums not exceeding the value of £65 where granted on the security of a mortgage or license lien, or £40 where granted on the security of a preferable lien on crops. The borrower was required to give, as security, a mortgage over his farm or a license lien over the improvements thereon, and also, if required, a preferable lien on crops somewhat similar to that laid down in the previous Act. In 1904 an Act was passed to enable seed and manure to be advanced on certain terms to cultivators of land within the area controlled by the Carrum Irrigation and Water Supply Trust.

5. *Queensland.*—(i.) *Legislation.* The Queensland Government was authorised, under the Agricultural Bank Act of 1901, to establish a bank for the purpose of promoting the occupation, cultivation, and improvement of the agricultural lands of the State, and a body of three trustees was appointed to administer the Act. The Government was empowered to raise a sum not exceeding £250,000 by the issue of debentures, bearing interest at a rate of not more than 4 per cent. The original Act was amended in 1904 and again in 1905, the latter amendment specifying that no advance be made to any alien.

(ii.) *Security on which and Purposes for which Advances are made.* Advances may be made to owners of agricultural lands or to occupiers of Crown lands held either as agricultural farms or homesteads, grazing farms or homesteads, unconditional selections, or miners' homestead leases, and may be for any of the following purposes:—(a) The payment of existing liabilities; (b) agricultural, dairying, horticultural, or viticultural pursuits on the holding; (c) making improvements or adding to improvements already made; (d) the purchase of stock, machinery, or implements. Advances are only made on the security of first mortgages.

(iii.) *Amount and Repayment of Advances.* No advance may exceed ten shillings in the pound of the fair estimated value of the holding in the cases of (a) and (b) above, while in the other cases the limit of the amount of the advance is twelve shillings in the pound of such value, and the advance at any time must not exceed £800. Applications for amounts not larger than £200 have priority over those for a larger amount. During the first five years following the date of the loan the borrower must pay interest at the rate of 5 per cent, per annum. After the expiration of that period the loan, together with the interest, must be repaid by half-yearly instalments within twenty years, the amount of such half-yearly instalment being £4 Os. 3d. for each £100 advanced. In the case of advances for the purposes of paying off existing liabilities or of buying stock,

machinery, or implements, the loan must be repaid by equal half-yearly instalments of the amount of £3 11s. for every £100 advanced within twenty-five years from the date of its granting.

(iv.) *Transactions of Agricultural Bank, 1907 to 1911.* The subjoined table shews particulars of the transactions of the Agricultural Bank for each year ended 30th June, from 1907 to 1911 inclusive:—

**6. South Australia.**—(i.) *Legislation.* Under the State Advances Act of 1895, amended in 1896 and 1901, a State Bank has been established in South Australia for the purpose of making advances (i.) to farmers and other producers, (ii.) in aid of industries on the security of lands held in fee simple or under Crown leases, and (iii.) to local authorities upon the security of their rates. The bank, managed by a board consisting of five trustees appointed by the Governor, has funds raised by the issue of mortgage bonds, carrying interest at a rate not exceeding 4 per cent., to an amount not greater than the total amount due to the bank for State advances, and in any case not greater than £3,000,000. On 23rd December, 1908, the Advances to Settlers on Crown Lands Act was passed. This measure is referred to in (iv.) below. Several Acts have, from time to time, been passed dealing with seed wheat advances. These were, in the main, similar to those enacted in Victoria, referred to in 4 (viii.) above.

(ii.) *Amount and Repayment of Advances.* No advance to farmers or to other producers, or in aid of any industry, may exceed three-fifths of the unimproved value of the fee simple of the land and permanent improvements thereon, and if the land has acquired a special additional value by reason of cultivation as a vineyard or orchard, *plus* one-third of such special additional value. If the advance be on the security of a Crown lease, the amount of the loan may not exceed one-half the selling value of the lease, including the interest of the holder in any improvements on the land. The amount lent to any one person at any time may not exceed £5000. Advances are repayable by half-yearly instalments, the rate of interest, up to the limit of 5 per cent. per annum, being a matter of arrangement between the bank and the borrower.

(iii.) *Transactions of the State Bank, 1907 to 1911.* In addition to assisting farmers and other producers, the State Bank makes, as mentioned above, advances in aid of industries and also to local authorities. The following table shews particulars of the transactions with farmers of the State Bank for each year from 1907 to 1911 inclusive:—

**SOUTH AUSTRALIA.—PARTICULARS OF TRANSACTIONS OF THE STATE BANK.**

(iv.) *The Advances to Settlers on Crown Lands Acts 1908 and 1909.* Under the 1908 Act a Board, called the Advances to Settlers Board, was created. The Treasurer is authorised to set apart a sum not exceeding £200,000 in any one financial year for the purpose of loans to settlers. The maximum amount which may be advanced to any one settler is £600, and for a period of five years following the date on which the advance is made the settler is required to pay interest at the rate of 5 per cent. per annum, payable half-yearly. At the expiration of that period it is provided that he must repay the amount advanced by fifty equal half-yearly instalments, together with interest at 5 per cent. on the balance outstanding. A rebate of 1 per cent. interest is allowed if the half-yearly payment is made within fourteen days of the date on which it falls due. Advances may be made on prescribed security for the purpose of making improvements on a holding, such as ring-barking, clearing, boring for water, etc.; or for discharging a mortgage existing on a holding; or for stocking a holding, provided that the necessary improvements have been made on the land. The amount of the advance may not exceed a sum equal to fifteen shillings in the pound on the value of improvements already made, and may not exceed twelve shillings in the pound on improvements made if the land be mortgaged.

During the year ended 30th June, 1909, thirty-four applications, amounting to £6095 were received for advances under this Act. Of these, eleven, representing a value of £1775, were granted, the amount actually advanced being £276. For the year 1909-10, the number of applications for advances was 102, aggregating £19,577, and fifty-five, totalling £9418, were approved of. As, however, some of these were granted by instalments, the actual amount advanced was £8087. During 1910-11, there were 109 applications received, aggregating £21,996; of these, 82, amounting to £15,131, were granted, of which amount £12,747 was advanced by the close of the year. On the 30th June, 1911, the sum of £19,022 represented the amount of advances outstanding on that date.

**7. Western Australia.—(i.) Legislation.** By the Agricultural Bank Act of 1894 the Governor of Western Australia was empowered to establish a bank for the purpose of promoting the occupation, cultivation, and improvement of the agricultural lands of the State. This Act was amended from time to time until a consolidating Act was passed in the year 1906 repealing all previous enactments on the subject. Under this last Act the bank was placed under the control of three trustees, appointed by the Governor, in whom is vested the whole of the bank property. The necessary funds are provided for by the issue of mortgage bonds bearing interest at a rate not exceeding 4 per cent. per annum. The amount authorised to be raised was £1,000,000, but by an Amendment Act in 1907 this sum was increased to £1,500,000, and by a further amendment in 1909 it was increased to £2,000,000. In the latter half of the year 1910, a Bill was introduced into Parliament by which it was proposed to make the amount authorised to be raised £2,500,000.

GRAPHS SHEWING THE AREA UNDER THE PRINCIPAL CROPS IN THE COMMON-WEALTH FROM 1860-1 TO 1909-10.

**EXPLANATION OF GRAPHS.**—The base of each small square represents an interval of one year, while the vertical height represents a number of acres, varying with the nature of the crop in accordance with the scale given on the left-hand of the diagram. The height of each graph above the base line denotes, for the crop to which it relates, the total area under cultivation in the Commonwealth during the successive seasons.

GRAPHS SHEWING THE PRODUCTION OF THE PRINCIPAL CROPS IN THE COMMON-  
WEALTH FROM 1860-1 TO 1909-10.

(See pages—for wheat, 365; oats, 372; barley, 379; maize, 376; and hay, 388.)

EXPLANATION OF GRAPHS.—In this diagram a separate base line is provided for each of the crops dealt with. In each instance the base of a small square represents an interval of one year, the vertical height of such square representing in the case of the wheat graph, 10,000,000 bushels; oats, 2,000,000 bushels; barley, 500,000 bushels; maize, 2,000,000 bushels; and hay, 500,000 tons. The height of each graph above its base line denotes the aggregate yield in the Commonwealth of that particular crop during the successive seasons.

(ii.) *Purposes for which Advances may be made.* The bank is authorised to make advances for (a) ring-barking, clearing, fencing, draining, or water conservation; (b) for discharging any existing mortgage; (c) for the purchase of stock for breeding purposes; or (d) for the purchase of agricultural machinery manufactured in Western Australia subject to the employees engaged in the manufacture of such machinery being paid the ruling rate of wages.

(iii.) *Amount of Advances.* Advances may be made to an amount not exceeding £400 up to the full value of the improvements proposed to be made. Further advances may be made to an amount not exceeding £250 up to half the value of additional improvements proposed to be made. No advance, however, for the purpose of discharging existing mortgages may be made to an amount exceeding three-quarters of the value of improvements already made, and the total advances to any one person may not at any time exceed £750. Not more than £100 may be advanced to any person for the purpose of purchasing stock or agricultural machinery. Advances are made only on a first mortgage, but a second mortgage may be taken as a collateral security. When any land is held by two or more persons as joint proprietors, the amount to be advanced may be multiplied by the number of such joint proprietors.

(iv.) *Repayment of Advances.* During the five years following the date of the loan the borrower pays interest only, at the rate of 5 per cent. per annum. After the expiration of that period the amount advanced, with interest at 5 per cent., must be repaid within twenty-five years by equal half-yearly instalments. In the case of advances for the purpose of buying stock the bank fixes the time and manner of repayment.

(v.) *Particulars of Transactions of Agricultural Bank, 1904 to 1911.* The following table gives particulars of transactions of the Agricultural Bank for each year from 1904 to 1911 inclusive :—

#### PARTICULARS OF TRANSACTIONS OF AGRICULTURAL BANK, 1904 to 1911.

AMOUNTS ADVANCED FOR WHICH IMPROVEMENTS HAVE BEEN EFFECTED—

Year ended the 30th June.	Amounts Advanced.	Improvements Effectuated.							Total.
		Clearing.	Cultivating.	Ring-barking.	Fencing.	Draining.	Wells and Reservoirs.	Buildings.	
	£	£	£	£	£	£	£	£	£
1904	215,000	243,870	60,454	10,787	17,265	1,675	9,861	33,168	377,080

8. *Tasmania.*—(i.) *Legislation.* Under the State Advances Act 1907, assented to 22nd November of that year, authority is given to make advances to persons holding land on credit purchase. Three persons called "the Trustees of the Agricultural Bank of Tasmania" have power to administer the provisions of the Act. Funds were raised by the issue of debentures or inscribed stock for a sum not exceeding £50,000, interest at 4 per cent. per annum being payable on same.

(ii.) *Purposes for which Advances may be made.* Loans may be granted for any of the following purposes:—(a) payment of liabilities already existing on the holding; (b) carrying on agricultural, dairying, grazing, or horticultural pursuits; (c) making or adding to improvements.

(iii.) *Amount of Loans.* The minimum amount of any loan is £25, and the maximum £500. No advance may exceed one-half of the amount actually paid to the Crown in respect of the land held by the borrower under purchase upon the credit system, *plus* one-half of the present value of any improvements upon such land.

(iv.) *Repayment of Loans.* Interest at the rate of 6 per cent. per annum is payable on all advances made. After five years the borrower must begin to pay off the principal in fifty half-yearly instalments, but the advance may, at the option of the borrower, be repaid at any time sooner than is provided, and in larger instalments.

(v.) *Particulars of the operations of the Agricultural Bank.* During the eighteen months ended 30th June, 1909, seventy-seven applications for advances were made, which, with forty-nine carried over from the previous year, made a total of 126 applications, representing £11,110. Of these, ninety-four, of a value of £6571, were granted, the amount advanced being £5687. The amount repaid during the period was £30, leaving a balance of £5657 outstanding. For the year 1909-10, the number of applications for loans was eighty-two, totalling £5845. The trustees of the bank approved of sixty-one of these, amounting to £3593, and refused eleven, representing a value of £850, owing to the applicants not being entitled to loans in accordance with the Act. During the year one borrower failed to comply with the requirements of his mortgage deed and his selection was sold.

During 1910-11, ninety applications for loans totalling £7393 were received. Of these, 71, amounting to £5448, were approved and five were not entertained; the remainder were awaiting consideration of the trustees at the end of the year. The sum of £5423 was actually paid to borrowers during the year, making the total amount advanced under the Act to 30th June, 1911, £14,610, of which £1049 had been repaid.

## § 22. Graphical Representation of Crops.

1. **Areas of Principal Crops.**—A graphical representation of the areas in the Commonwealth devoted to each of the leading crops from 1860 to the present time is furnished on page 430.

(i.) *Wheat.* In the case of wheat, the Commonwealth's principal crop, the graph indicates that the fifty-one seasons under review divide themselves naturally into five distinct periods, three of moderate and fluctuating increases and two of extremely rapid increases. Thus, between the seasons 1860-1 and 1875-6, a moderate rate of increase was in evidence, the area increasing from 640,000 to 1,420,000 acres. During the five succeeding seasons a very rapid increase took place, the total in 1880-1 amounting to over 3,000,000 acres. For fifteen years thereafter the increase in area was not large, and in two seasons, viz., 1885-6 and 1890-1, marked decreases were experienced. The total increase for the fifteen years was about 700,000 acres, the total for 1895-6 being rather more than 3,750,000 acres. The succeeding five years witnessed a rapid increase in area to a total of more than 5,600,000 acres, followed by a further period of marked fluctuations; this latter period, however, contained the two seasons of maximum wheat-cropping, viz., that of 1909-10, when an area of 6,586,000 acres was so cropped, and that of 1910-11, when the area amounted to 7,372,456 acres.

(ii.) *Hay.* Hay-growing, which, next to the growing of wheat for grain, is the most important branch of agriculture in the Commonwealth, will be seen from the graph to have fluctuated very considerably from year to year during the period under review, these fluctuations being due in the main to seasonal variations and to variations in the relative prices of grain and hay crops. It will be seen that the features of the graphs are a moderate increase from 1860-1 to 1875-6, a fairly rapid increase from 1875-6 to 1882-3, moderate increase thence to 1896-7, succeeded by marked fluctuations from this point onwards with, on the whole, a moderate rate of increase until 1908-9 when the maximum of 2,453,000 acres was attained, succeeded by a decline in 1909-10 to 2,228,000 acres, and a slight increase in 1910-11 to 2,258,405 acres.

(iii.) *Oats.* The graph relating to oats exhibits extremely marked fluctuations from year to year in the area devoted to this crop, the general tendency, however, being one of increase, especially during the period 1892-3 to 1896-7. During the past four seasons following 1905-6 the area under oats has increased rapidly to a maximum of 698,000 acres in 1909-10, the succeeding year experiencing a slight falling off, when an area of 677,000 acres was so cropped.

(iv.) *Maize.* The graph relating to maize indicates that the area devoted thereto in Australia, although somewhat fluctuating, increased with fair rapidity until the season 1896-7, since when it has varied above and below the point then reached, on the whole remaining practically stationary up to 1909-10. The maximum area under maize prior to 1910-11, viz., 372,000 acres, was attained in the season 1903-4; in 1910-11 this record was exceeded by 43,000 acres.

(v.) *Sugar-Cane.* In the case of sugar-cane the graph shows a fairly rapid rate of increase to 1874-5, followed by a period of five years during which the area increased but slowly. From 1879-80, however, the sugar-cane area rose rapidly until in 1884-5 a total of more than 75,000 acres was reached. Then followed a period of diminished cultivation, and it was not until 1892-3 that so high a total was again attained. After this the

area rose rapidly to 136,000 acres in 1898-9, but during the next five years a decline took place, the area for 1903-4 being 132,000 acres. The season of maximum area, viz., 156,000 acres, was 1905-6. A marked decline in area was in evidence during the four following seasons; in the year 1910-11, however, the former maximum was again attained.

(vi.) *Barley.* The Commonwealth barley crop has exhibited from time to time very marked fluctuations in area. The graph representing this crop shews consequently a very irregular line. The total has, on the whole, increased but slightly since 1880, rapid increases in certain years being succeeded by equally rapid decreases in subsequent years. The maximum area under barley, viz., 143,000 acres, was attained in the season 1909-10.

(vii.) *Vines.* The graph relating to area under vines, from 1872-3 onwards, indicates that there were two periods of very slow increase, one from 1872-3 to 1881-2, the other from 1893-4 to 1904-5. Between these, viz., from 1881-2 to 1893-4, a moderate rate of increase of area was experienced, the total for the Commonwealth advancing during that time from 14,600 acres to 57,400 acres, while since 1904-5 the area has fallen consistently. The season of maximum area under vineyards was 1904-5, with a total of about 65,700 acres.

2. **Production.**—The diagram on page 431 furnishes a graphical representation of the aggregate yields from 1860-1 to 1910-11 of five of the principal crops of the Commonwealth.

(i.) *Wheat.* This graph brings out clearly the fact that while on the whole the production of wheat in the Commonwealth is increasing with fair rapidity, the fluctuations in the total quantity produced have been more marked in recent than in earlier years. Thus since the year 1890 there have been three seasons of extremely low output, viz., in 1891-2, 1895-6, and 1902-3, with aggregate yields respectively of 25,700,000 bushels, 18,300,000 bushels, and 12,400,000 bushels. On the other hand there have been five seasons in which the total production was exceptionally high. These will be seen from the graph to have been the seasons 1893-4, 1900-1, 1903-4, 1909-10, and 1910-11, the total yields for which were 37,100,000 bushels, 48,400,000 bushels, 74,100,000 bushels, 90,400,000 bushels, and 95,100,000 bushels respectively. Each of these yields represented at the date of its attainment the maximum Australian wheat crop, the last-mentioned being the highest yet reached.

(ii.) *Oats.* From 1860-1 to 1880-1 the oat crop of the Commonwealth, although exhibiting from year to year fluctuations more or less marked, gave no indications of a tendency to increase with the advance in population. This is well shewn in the diagram, by the persistence with which the graph for this period adheres to the line denoting 4,000,000 bushels, the yield for 1880-1 being actually lower than that for 1860-1. From this latter season to 1894-5 the variation was on a somewhat higher level, and is shewn in the diagram to have been in the vicinity of the line representing 6,000,000 bushels. From this point onwards a tendency to more rapid increase in production is in evidence, obscured somewhat by extensive fluctuations corresponding to those referred to above in the case of wheat. Thus in 1895-6 and 1902-3 the total yields were only 4,400,000 and 7,300,000 bushels respectively, while in 1900-1 and 1903-4 aggregates respectively of 12,000,000 and 17,500,000 bushels were reached, this latter being the maximum oat crop of the Commonwealth.

(iii.) *Barley.* The Australian barley crop will from the graph be seen to have fluctuated very considerably throughout, these variations being due rather to fluctuations.

in the area sown than to adverse seasons. From 1879-80 to 1902-3 the curve rises above and falls below the line representing 1,500,000 bushels. For more recent years the graph bears the evidence of an increasing, though still fluctuating, output. The maximum barley crop of the Commonwealth was that of 2,870,000 bushels in 1908-9.

(iv.) *Maize*. The maize graph indicates a rapid increase in output from 1860-1 to 1869-70, followed by a moderate increase from the latter season to 1886-7, and a further rapid increase to 1891-2. From the last-mentioned season onwards the production has fluctuated considerably, but little increase has, on the whole, been experienced, the total for 1891-2 being 9,300,000 bushels, as compared with 10,770,000 bushels for 1909-10, the maximum Australian maize crop up to that date; this was exceeded in the following season, when the production of maize amounted to 13,044,081 bushels. As in the case of all other crops, the maize yield for 1903-4 was much higher than those for the years immediately preceding and succeeding.

(v.) *Hay*. The graph relating to the Commonwealth output of hay indicated a fairly continuous increase in production from the season 1860-1, when the total stood at 340,000 tons, to that of 1887-8, when it reached 1,330,000 tons. In subsequent years marked fluctuations have been in evidence, but the tendency has, on the whole, been one of increase. The maximum hay crop of the Commonwealth was that of the season 1910-11, when the total production reached 3,176,000 tons.

## SECTION IX.

## FARMYARD AND DAIRY PRODUCTION.

## § 1. Introductory.

1. **General.**—Amongst the live stock brought out by Captain Phillip in 1788 were included one bull, four cows, one calf, and twelve pigs, these being established at Farm Cove when Port Jackson was settled. Of the early importations of cattle the greater part was slaughtered to relieve the necessity of the colonists in the famines which several times threatened the existence of the young community. It may be noted that the existing herds have sprung not only from the original stock, but have been improved by the introduction of stud cattle and pigs, especially during late years. Stock-raising, with regard to the special requirements of dairying, etc., has in fact been scientifically considered only in comparatively recent times. The technical advances made in the manufacture of butter and cheese in Europe and elsewhere, and the necessity for keeping pace with them in connection with the export trade, of Australia, demanded in Australian stock-raising a judicious crossing of strains with a view to improving the quantity and quality of the milk supply. Further, the pasturage was improved by the eradication of grasses and herbage of little or no use, and the planting of suitable grasses and other fodder plants. Much of the indigenous herbage forms, however, excellent food for stock. Although some of the State Governments have made considerable importations for stud purposes, the importation of British and other cattle for breeding is ordinarily under private enterprise, but is safeguarded by Government supervision in order to prevent the introduction of diseases and pests, with the result that Australia is comparatively free from stock diseases. Permanent structures for the shelter of dairy herds are required only to a very small extent in the Commonwealth, the mildness of the climate rendering it possible for stock to thrive in the open throughout the year. Practical experience has, however, demonstrated the wisdom of rugging or otherwise protecting dairy cattle during the colder months, while the provision of shelters in the form of plantations of trees is attended by beneficial results. Where winter fodder must be grown it is given to the cattle in the fields, and consists of lucerne, oats, maize, barley, rye, and mangolds. Ensilage is highly recommended by dairy experts, and increasing use is being made thereof. Continued expansion of the dairying industry, and particularly its extension into non-coastal districts, will involve a more general use of the silo.

Some of the indigenous Australian grasses are particularly suitable for dairy cattle, since they possess milk-producing as well as fattening properties, but many of the holdings are sown with English and other imported grasses, varieties being chosen to suit particular localities. The area of land devoted to green food and permanent artificially-sown grasses is constantly increasing, its produce being, for the most part, devoted to the depasturing of dairy herds. The opinion, long held, that only heavily-grassed country with good rainfall was profitable for dairying has been controverted by experience, it having been shown that with proper care more lightly clad regions can be made to yield good milk results.

2. **State Supervision of Industry.**—Each of the State Agricultural Departments exercises considerable supervision in regard to the industry. Dairy experts are employed to give instruction in approved methods of production, to examine animals, to inspect

the buildings used for milking, separating and butter-making, and to examine the marketable produce. A high standard of dairy hygiene, cleanliness of *personnel* and *matériel*, and purity of produce have also been insisted upon under State laws. Financial assistance has been given to facilitate the economic handling of dairy products, and much benefit has resulted, the advances having generally been promptly repaid.

For the maintenance of the purity and quality of Australian butter, the Commonwealth regulations under the Commerce Act 1905 enact that butter intended for shipment overseas must be covered with a true trade description, and that at least the following matter should appear in the brand:—The word "Australia," the name of the State in which it was produced, net weight, manufacturer's or exporter's name or registered brand, and the words, "pure creamery butter," "pastry butter," "milled butter" (that is, butter which is a mixture or blend of two or more butters ordinarily packed alone and under separate names or brands), or "re-packed butter," as the case may require. Other matter may be added, but it must be true, and not liable to mislead. *Margarine* must be so stamped or marked. All butter, etc., intended for export must be sent for inspection to appointed places. The inspecting officer issues a certificate on the authorised form.

The regulations now in force contain important provisions in regard to the standard for export dairy products. By means of these provisions purity and quality are guaranteed. Trade is also facilitated, since quantities of butter, etc., are purchased solely on the certificate issued, without inspection. The standards are as follow:—

*Butter*.—Butter which contains only—No fat other than butter fat; not more than 15 per cent. of water, 3 per cent. of casein, 0.5 per cent. of boric acid, 4 per cent. of salt; not less than 82 per cent. of butter fat; any colouring matter deemed by the Minister to be harmless.

*Cheese*.—Cheese which does not contain any foreign matter, other than rennet, salt, or colouring matter deemed by the Minister to be harmless.

*Concentrated Milk*.—Pasteurised milk which is concentrated by any process whatever, and not subsequently sterilised, and which contains not less than 9 per cent. of butter fat and 24 per cent. of milk solids not fat, and no foreign substance other than 0.5 per cent. of boric acid.

*Condensed Milk*.—Milk which is condensed or concentrated by any process whatever, with or without the addition of cane sugar, and which, when containing such sugar, also contains not less than 9 per cent. of butter fat, and 22 per cent. of milk solids not fat, or which, when not containing such sugar, contains not less than 8 per cent. of butter fat and 20 per cent. of milk solids not fat.

*Dried Milk*.—Milk from which the water has been removed by a process of heating, without the addition of any extraneous matter, and which, when dissolved in or treated with water, according to any directions supplied by the maker or vendor thereof, produces milk as defined in this Schedule.

*Honey*.—The ripened, unfermented honey of bees, which does not contain any foreign matter.

*Milk*.—The milk of cows, whether mixed or not, and containing not less than 3 per cent. of butter fat, nor less than 8.5 per cent. solids not butter fat.

The trade description prescribed must be permanently affixed on the goods or on the containing packages. In the case of butter the trade description must, with additional particulars, be indelibly impressed on the outer covering.

Butter and cheese are to be graded by the examining officer as follows:—

**BUTTER.—**

- Superfine—Pure creamery butter, graded at 95 to 100 points.
- First grade—Pure creamery butter, graded at 90 to 94 points.
- Second grade—Pure butter, graded at 83 to 89 points.
- Third grade—Pure butter, graded at 75 to 82 points.
- Pastry butter—Pure butter, graded at less than 75 points.

**CHEESE.—**

- Superfine—Pure cheese, graded at 95 to 100 points.
- First grade—Pure cheese, graded at 90 to 94 points.
- Second grade—Pure cheese, graded at 83 to 89 points.
- Third grade—Pure cheese, graded at 75 to 82 points.

In grading butter and cheese, the maximum points to be awarded are: Flavour and aroma, 50 points; texture, including body, grain, and moisture, 30 points; condition, including colour, salting, packing, and covering, 20 points. An official grade mark is to be applied to all export butter and cheese graded at over 89 or under 75 points, as follows:—

- Butter and cheese graded at 95 to 100 points—Superfine.
- Butter and cheese graded at 90 to 94 points—First grade.
- Butter graded at under 75 points—Pastry.
- Cheese graded at under 75 points—Below standard.

Impure butter and cheese are not graded at all. The exportation of unsound, inferior, or abnormal dairy products is prohibited, unless the trade description applied to the goods includes the words, "Below Standard."

**3. Mixed Farming.**—Dairying is not now, as formerly, wholly confined to farmers, since many graziers in a large way of business have lately given it their attention. In non-coastal regions it is generally carried on in conjunction with agriculture and sheep-raising, sufficient fodder being grown to carry the cattle through the winter months. Local wants are thus met, and in many places remote from the metropolis well-equipped factories have been established.

**4. Factory System.**—Cream separation and butter-making are often carried on together under the co-operative system. The creation of large central butter factories, supplied by numerous separating establishments or "creameries," has resulted in a considerable reduction in the cost of manufacture, since improved appliances, such as refrigerators, may be profitably worked at the larger establishments. The product is also of a more uniform quality. The number of farmers who adhere to hand processes is rapidly diminishing. Formerly the average quantity of milk used per pound of hand-made butter was about 3 gallons, but separator butter requires only about 2.6 gallons.

**5. Butter and Cheese Factories.**—The establishments in the Commonwealth where the manufacture of butter, cheese, and condensed milk was carried on, numbered 548 in 1910. These were distributed as regards the various States as follows:—New South Wales, 181; Victoria, 203; Queensland, 82; South Australia, 53; Western Australia 3; Tasmania, 26.

## § 2. Milk, Butter, and Cheese.

1. **Dairy Herds.**—Since the drought year 1902 there has been in each State a general yearly increase in the number of dairy cows. In New South Wales, Victoria, South Australia proper, and Tasmania—as will be seen from the table of cattle and dairy cattle given below—the proportion of dairy cattle to all cattle is high. In Queensland, the Northern Territory, and Western Australia there is a greatly preponderating number of other cattle, dairying not being firmly established in the tropical regions of the Continent. In the tables which follow in this section the return for Northern Territory is, unless shewn separately, included in South Australia, the dairy products from the newly-acquired Commonwealth territory being very small:—

## CATTLE AND DAIRY CATTLE, COMMONWEALTH, 1906 to 1910.

State.			1906.	1907.	1908.	1909.	1910.

† Statistics not collected: figures estimated.

2. **Milk.**—The annual quantity of milk produced per dairy cow varies greatly with locality and season, probably reaching as high as 500 gallons, but averaging for the whole of Australia, for all dairy cows and for all seasons, something under 300 gallons per annum. The best yields over a series of years appear to be in South Australia, New South Wales, Victoria, and Tasmania, while Western Australia is below Queensland. In the following table the average yields per cow for 1908, 1909 and 1910 are taken from the number of dairy cows which were, during any part of the year, milking. The average given is considerably below that for cows which were yielding during the greater part of the year.

## PRODUCTION OF MILK, COMMONWEALTH, 1908, 1909 and 1910.

\* Estimated.

**3. Butter and Cheese.**—The butter output shews, in general, a tolerably steady increase since the drought year 1902, the most marked development being in Queensland. The production of butter reached its highest figures in 1910, the highest previous yield being in 1906. The same year marks the highest cheese production, the return being somewhat better than that for 1909. In both butter and cheese a falling-off is shewn in some of the States in 1907 and 1908, due to the dryness of the season. There was a recovery in 1909. For the five years from 1906 to 1910 the figures are:—

**PRODUCTION OF BUTTER AND CHEESE, COMMONWEALTH, 1906 to 1910.**

State.	1906.	1907.	1908.	1909.	1910.
<b>BUTTER.</b>

\* Prior to 1908 Tasmanian statistics relate only to the quantities made in factories. † The totals for the Commonwealth here given prior to 1908 are exclusive of Tasmanian butter and cheese made elsewhere than in factories.

**4. Concentrated Milk.**—"Condensed" or "concentrated" milk denotes milk the bulk of which is reduced by evaporation, no sweetening agent being added. When a sweetening agent is added it is called "preserved" milk. Small quantities of such milk have been made, but the industry is at present by no means a large one. No condensed or concentrated milk is made in South Australia, Western Australia, or Tasmania. In New South Wales, Victoria, and Queensland the following quantities are returned for 1908, 1909 and 1910:—

**CONDENSED AND CONCENTRATED MILK MADE, 1908, 1909 and 1910.**

Year.	N.S.W.	Victoria.	Queensland.	Commonwealth.
	lbs.	lbs.	lbs.	lbs.
1908 ...	2,399,673	3,308,854	3,935,024	9,643,551
1909 ...	2,400,687	3,487,312	7,038,202	12,926,201
1910 ...	1,940,481	2,707,110	7,843,670	12,491,261

**5. Oversea Trade in Milk, Butter, and Cheese.**—The tables following give the imports, exports, and net exports or imports of butter, cheese, and milk. In each of the five years exports of butter exceeded imports; in three the cheese import was heavier than the export, and this was the case each year with milk.

# **IMPORTS, EXPORTS, AND NET IMPORTS OF BUTTER, CHEESE AND MILK, COMMONWEALTH, 1906 to 1910.**

## **IMPORTS.**

" " " " £	182,941	164,173	173,181	137,884	125,008

1. See definition on page 442.

2. — signifies net imports.

The large quantities of concentrated and preserved milk imported for local use indicate room for development in this industry.

**6. Local Consumption of Butter and Cheese.**—The total production of butter and cheese, with the net export or import subtracted or added, gives approximately the consumption in the Commonwealth. In the period considered hereunder, 1907 and 1910 were the only years in which the local supply of cheese was adequate:—

## **BUTTER AND CHEESE LOCALLY CONSUMED, 1906 to 1910.**

Product.	1906.	1907.	1908.	1909.	1910.
	lbs.	lbs.	lbs.	lbs.	lbs.
Butter ... Total ... ..	84,201,904	90,324,640	94,151,872	98,652,376	105,569,150
" ... Per head of mean population ...	20.7	21.9	22.4	23.1	24.2
Cheese ... Total ... ..	14,900,794	13,579,382	15,173,007	15,938,864	15,918,583
" ... Per head of mean population ...	3.7	3.3	3.6	3.8	3.7

The consumption in 1910 averaged 24.2 lbs. of butter and 3.7 lbs. of cheese per head of mean population, an amount probably unsurpassed anywhere. The consumption of butter and cheese in the United Kingdom is given as 19 lbs. per head, and is therefore only equal to about three-fourths of that of the Commonwealth.

### § 3. Pigs, Bacon, etc.

1. **Pigs.**—The pigs in Australasia numbered 43 in 1792; 4017 in 1800; 8992 in 1810; 33,906 in 1821; 66,086 in 1842; and 121,035 in 1851. The figures for each State in subsequent census years, and in the last five years, were as follows:—

NUMBER OF PIGS, COMMONWEALTH. 1861 to 1910.

State.	1861.	1871.	1881.	1891.	1901.	1906.	1907.	1908.	1909.	1910.
New South Wales ...	146,091	213,193	213,916	253,189	265,730	243,370	216,145	215,822	237,849	321,632

South Australia ...	69,286	95,542	120,718	83,797	88,886	111,240	90,741	78,454	80,410	96,386
Western Australia ...	11,984	14,265	22,530	25,930	61,052	56,293	53,399	46,652	47,062	57,628
Tasmania ...	40,841	52,863	49,660	73,520	58,716	42,985	46,704	47,945	55,705	63,715
Northern Territory	*	*	*	*	989	1,037	2,864	2,711	1,337	996
Commonwealth	319,147	586,017	703,188	845,888	931,309	813,569	754,101	695,691	765,137	1,025,850

\* Included in South Australia.

The number of pigs was highest in 1904, when for the first time it was over a million; prior to 1899 it had never reached 900,000. That year, the two immediately following, and 1904, 1905 and 1910 mark the highest totals. An examination of the returns shews remarkable fluctuations. In none of the States was the number as high in 1906 as in the preceding year, and in Tasmania alone was the figure for 1907 higher than that for 1906. A similar experience was met in 1908. In several States the falling-off over the three years is very marked. In 1909 a considerable recovery in the figures is shewn, increases over 1908 being large in New South Wales, Victoria, and Tasmania. The increase in 1910 in all the States is still more remarkable, being thirty-four per cent. in the whole Commonwealth. The number of pigs per head of population, and the number per square mile, will be found in the tables of live stock, pages 334 and 335.

2. **Bacon and Ham.**—From 1905 to 1908 the production of bacon and ham in the Commonwealth shewed little annual variation. In 1909 there was a considerable falling-off, and a large increase in 1910. It will be noticed from the table above that the number of pigs in Australia in 1908 was much below the average.

PRODUCTION OF BACON AND HAM, COMMONWEALTH, 1906 to 1910.

State.	1906.	1907.	1908.	1909.	1910.

1. — signifies net imports.

From 1901 to 1903 there was a considerable net import of bacon and ham, but for the following years there was a large net export. The local production of frozen pork and lard was for each of the years shewn more than sufficient for the local demand. The net export of pig products was considerably greater in 1910 than in previous years.

4. **Local Consumption of Bacon and Ham.**—From 1904 to 1910 the production of bacon and ham was sufficient to meet the local demand, and there was a surplus for export, but in 1901, 1902, and 1903 this was otherwise, and considerable quantities were imported.

**BACON AND HAM LOCALLY CONSUMED, 1906 to 1910.**

## § 4. Poultry Farming.

1. **Development of the Industry.**—Until recently, poultry farming as a well organised industry could scarcely be said to exist, although both in metropolitan and country districts poultry has of course long been kept for the table and egg supplies. The aggregate output, though considerable, represented relatively little value beyond the cost of production, owing to imperfect management. Many farmers however, both wheat-growers and dairymen, have maintained a large poultry stock, erecting poultry yards constructed on modern principles, and feeding from the stubble fields and waste grain with a minimum expenditure in tending. This brought about a considerable addition to the net agricultural or dairying return. The poultry industry during recent years has assumed an independent position among rural industries, notwithstanding that large numbers of poultry runs on wheat and dairy farms are still maintained; poultry farming is also carried on in conjunction with pig farming. In special poultry farms, breeding on scientific principles and a proper arrangement of the runs is secured, feeding and reproduction are technically attended to, and proper shelter is provided either by means of trees or sheds. Poultry experts are engaged by the State Governments to instruct in matters that will amplify the returns. Poultry for consumption is extensively reared, and the egg-producing qualities of the birds have also been greatly improved by careful breeding. Egg collecting circles have been formed in some country districts, to develop, under Government supervision and with Government aid until the organisation is self-supporting, the industry on co-operative lines. A member of the circle is elected to act as secretary, and he receives all the eggs from the members, tests, packs, and forwards them

to the metropolitan depôt for shipment. Only clean and fresh eggs are to be delivered to the secretary under penalty of fine and expulsion from the circle. Another method of collecting and marketing the eggs is through the local butter factories, where eggs are delivered by the suppliers of milk and cream a number of times each week.

2. **Production of Poultry.**—Figures for the yield of poultry products are difficult to obtain. The following values are returned :—

**ESTIMATED VALUE OF POULTRY AND EGGS, COMMONWEALTH,  
1908-9, 1909-10 and 1910-11.**

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust	Tasmania.	C'wealth.

\* Not available. † Excluding Queensland and Tasmania. ‡ Excluding Tasmania.

3. **Oversea Trade in Poultry Products.**—The imports and exports of eggs shew a considerable balance on the side of imports in each of the years 1901 to 1906 and in 1909 and 1910. In 1907 the export greatly exceeded the import, and in 1908 the imports were greater in quantity, but less in value, than the exports. In 1909 and 1910, the balance, both in number and value, was on the side of imports. The figures for frozen poultry indicate that a considerable oversea trade is carried on.

1. — signifies net imports.

2. Quantity not available.

### § 5. Bee Farming.

1. **The Bee-farming Industry.**—Bee farming, like poultry farming, has ordinarily been an adjunct to agricultural or dairying industries, and can hardly yet be said to have been organised as a distinct industry. The returns collected shew that, while production

varies greatly, there is on the whole a fair improvement, to which the large increase in the Western Australian product since 1902 has considerably contributed. The annual average returns of honey from the hives range between 20 lbs. and 600 lbs. per hive.

The value of the export of honey from Australia was only £1541 in 1907, £3361 in 1908, £2675 in 1909, and £2435 in 1910. It is believed that this export could be considerably increased. Australian honey exhibited in the Franco-British Exhibition in London in 1908, obtained the highest award. It has been proved that there is no eucalyptus flavour in Australian honey, and the prejudice against it on that account is ill-founded.

2. **Production of Honey and Beeswax.**—The particulars of honey production are as given below :—

**NUMBER OF HIVES AND PRODUCTION OF HONEY AND BEESWAX, 1908 to 1911.**

## § 8. British Imports of Dairy Products.

1. Value of Britain's Imports of Dairy Products.—Great Britain has paid annually since 1901 considerably more than £20,000,000 for imported butter, the value of the import in 1908, 1909, and 1910 being £24,081,000, £22,425,000, and £24,493,000 respectively; for imported cheese the amounts in the years named were respectively

£7,183,000, £7,234,000, and £7,296,000; for bacon and ham, £17,565,000, £16,914,000, and £15,918,000 respectively; and for pork, £1,660,000, £1,336,000, and £1,500,000 respectively.

2. **Butter.**—Australia in 1910 stood second in the value of butter imported into the United Kingdom, but the import of other Australian dairy products was inconsiderable.

#### IMPORTS OF BUTTER INTO THE UNITED KINGDOM, 1910.

Country from which Imported.	Quantity.	Value.	Country from which Imported.	Quantity.	Value.
	Cwt.	£		Cwt.	£
Denmark ...	1,726,091	10,208,192	Argentine Republic	65,944	374,285
Australia ...	667,966	3,566,952	Norway... ..	22,081	127,003
Russia ...	584,040	3,045,722	Canada ...	16,805	90,797
New Zealand ...	362,674	2,001,393	Other Countries ...	18,468	97,318
France ...	361,249	2,116,072			
Sweden ...	345,684	2,022,398			
Netherlands ...	154,537	843,318	Total ...	4,325,539	24,493,450

In October, 1907, a falling-off of imports of Australian butter into Great Britain was noticed, with the result that, three months later, there was a heavy shortage, and a "butter boom" ensued in London, prices rising rapidly, until a limit was reached with 156s. per cwt., the highest recorded for Australasian butter. After a short period of high values in February, 1908, prices steadied at 116s., and then gradually fell to 104s. in the middle of May, when European grass-fed butter was ready for the British market. Prices in London in 1909 and 1910 were of higher average than in any previous year since the Australian export trade was instituted twenty years ago.

3. **Cheese.**—The value of the British cheese import in 1910 was £6,800,000, of which four and a half million pounds' worth was received from Canada. The import from Australia was practically *nil*. Small experimental shipments were, however, made in 1908, 1909 and 1910, and a fair price was realised.

4. **Bacon and Ham.**—Of a total import of bacon and ham valued in 1910 at £15,918,000, Great Britain received goods to the value of £6,783,000 from the United States; £6,360,000 from Denmark; and £1,588,000 from Canada. The British import from Australia was small, but experimental shipments have been made during recent years.

5. **Pork.**—The total value of British imports of pork (including refrigerated, frozen and salted) was £1,500,000 in 1910. Of this the value of Australian produce was *nil*, whilst from the Netherlands pork valued at £900,000 was imported.

6. **Other Products.**—There is practically no British import from Australia of honey, beeswax, poultry, game, lard, or eggs, but rabbits to the value of £568,000 were received from the Commonwealth in 1910.

### § 8. Graphical Representation of Dairy Production.

Two graphs shewing respectively the increase in dairy production and in the exports of butter will be found on page 358.

## SECTION X.

## FORESTS, FORESTRY, AND FORESTAL PRODUCTS.

## § 1. The Forests of Australia.

1. **Extent of Forests.**—Although no definite survey of forest lands has been made on a uniform basis for the different States of Australia, the following table gives the results of careful estimates made for each State:—

## FOREST RESERVES AND FOREST AREAS, STATES AND COMMONWEALTH, 1910.

State.	Specially Reserved for Timber.	Total Forest Area.	Percentage of State Area.		Percentage of Commonwealth Area.	
			Specially Reserved	Total Forest.	Specially Reserved	Total Forest.

\* Approximate.

The actual area of wooded land is probably in all cases much greater than shewn above. For example, that of Western Australia is estimated at 97,900,000 acres; Queensland has probably 143,000,000 acres; and Victoria has a considerable extent of "Mallee" country not included in the above estimate. The basis of estimation for each State in any case cannot be regarded as quite identical. Considerable areas not included as forest lands possess timber of local value.

The absolute and relative forest areas of Australia and other countries are shewn in the table on the next page.

In each of the States areas have been set apart as State forests and "timber reserves," in some cases the reservation being made in perpetuity, in others for a definite period, in others again the reservation may be cancelled at any time. The characteristics of the forest areas of the different States are referred to seriatim.

2. **Characteristics of State Forest Areas.**—(i.) *New South Wales.* Great diversity exists in the more dense distribution of timber trees in the coastal region, between the Great Dividing Range and the Pacific Ocean. The areas of natural forest, however, are found in nearly every part of the State except the wide plains of the Murrumbidgee, Lachlan, and Darling districts, the level surface of which is chiefly covered with salt bush, scrub, and indigenous grasses, while the tree-growth is, as a rule, confined to belts of red gum, box, sheoak, and myall along the courses of the rivers and their tributaries, and to groves of cypress pine at intervals. The tree-clad regions of the State may be divided into open, brush, and scrub forests. The first class has the widest distribution, being found in every geological formation, and including some of the finest timbers, such as many species of eucalyptus, angophora, and other genera of the natural order of myrtles. Among the hardwoods, red gum usually marks the courses of streams, while on the rough and stony mountain and hill ridges, with their sheltered gorges, are found several varieties of ironbark, blackbutt, tallowwood, spotted gum, grey box, red mahogany, forest red gum, Sydney blue gum, and turpentine. The brush or jungle forests occupy a considerable tract of country between the Dividing Range and the coast. In this region, interspersed occasionally with large Moreton Bay, and other figs, fern trees, cabbage trees, and palms, grow some of the most beautiful timbers known for cabinet work and veneers, such as the red cedar, rosewood, silky oak, beech, red bean, beefwood, tulipwood, and coachwood. In addition to these, there are considerable supplies of the colonial or hoop pine, and the brown or berry pine. The scrub forests are represented by the red or black and white varieties of the cypress pine, and many species of acacia and eucalyptus. These are chiefly situated in the western portion of the State, and although the pines and some of the eucalypts are useful for local building and fencing, the bulk of the timber is of little commercial value.

(ii.) *Victoria.* The mountain ranges, principal of which are the Dividing Range and the Australian Alps, constitute the true forest regions of the country, the trees attaining considerable height and girth, and the brush or scrub growth great luxuriance. The lower elevations of the ranges, remote from settlement, are densely wooded to their summits, but the peaks above the winter snow-line are either bare or covered only with dwarfed vegetation. Dense and luxuriant forests characterise the Otway Ranges and Gippsland, south of the Main Divide. The tree-growth in the Grampians consists chiefly of stringy-bark, white gum, grey and yellow box, and white ironbark, with some red gum and wattle. In the Pyrenees there are more valuable hardwoods, chiefly blue gum and messmate, with stringy-bark, grey and yellow box, red and white ironbark on the lower levels. In Wombat Forest, extending along both sides of the Dividing Range

from Creswick to Mount Macedon, the timber is almost wholly young messmate of good quality, with peppermint and swamp gum. Further eastward along the range messmate and stringy-bark prevail, with grey and yellow box and ironbark on the low country. In Delatite, and in the lower ranges of the Australian Alps generally, the timber increases in height and girth, and includes blue gum, messmate, and peppermint of fine quality, with ribbon gum, woollybutt, and silvertop on the higher levels, and grey and yellow box with stringy-bark along the lower slopes and valleys. The northern plains, extending westward from Wodonga to the Grampians, are thinly covered with open forests, the limits of the prevailing trees being defined in clearly-marked belts. Thus the main belt of red gum follows the course of the Murray and extends along the valleys of its tributaries, but is interspersed at intervals near the river with sand ridges bearing grey box and cypress pine. Southward of this belt, and between the streams, the prevailing trees are grey or yellow box, with red and white gum and stringy-bark on the low ridges. From Chiltern a line drawn westward through Rushworth, Heathcote, Bendigo, Dunolly, and St. Arnaud marks a long belt of ironbark, of both red and white varieties, interspersed with stringy-bark and grey or yellow box. In the north-west, between the Wimmera Plains and the Murray, the dwarf eucalypt known as the mallee scrub covers the plains, with belts of cypress pine at intervals, and red gum and box along the courses of streams and lakes. The south-west is poorly timbered, the prevailing tree being stringy-bark, with red gum along the streams, and white gum, box, lightwood, and honeysuckle on the plains and undulating country. In the Otway district are valuable timber forests; over 280 square miles are covered with blue gum, spotted gum, messmate, and mountain ash or blackbutt of fine quality, with some stringy-bark and white gum, while the valleys between the ridges bear valuable timber of fine grain such as blackwood, beech, satin box, olive, sycamore, and pencil cedar. Eastward of Melbourne, on the watershed of the Yarra, there is another fine forest region, the trees consisting of spotted gum, mountain ash, messmate, and white gum, with blackwood, beech, sassafras, and silver wattle in the valleys. The ranges of Southern Gippsland bear blue gum, spotted gum, mountain ash, and yellow stringy-bark, while in the western and northern portions of the same district grow the mountain stringy-bark, spotted gum, blackbutt, and the Gippsland mountain ash or silvertop, with woollybutt and ribbon gum on the higher elevations of the Main Divide. In the eastern part of the district, stretching from the Lakes towards the Genoa River, are found the Bairnsdale grey box, the Gippsland mountain ash or silvertop, white and yellow stringy-bark, red ironbark and bloodwood. The prevailing timber in this part of Gippsland is the white stringy-bark, which forms large forests from the foothills of the Divide to the sea-coast.

(iii.) *Queensland.* The extensive forests of Queensland yield a great variety of woods, esteemed for their strength, durability, and beauty. The principal merchantable timbers lie between the eastern seaboard and the Great Dividing Range, which runs roughly parallel to, and about 200 miles from, the coast. At about the 21st parallel of south latitude, a spur runs westward nearly to the South Australian border, and bears on its crests and slopes much valuable timber. Forests are also found on the Denham, Johnstone, and Gilbert Ranges. The principal eucalypts are ironbark, grey, spotted, and red gum, blackbutt, and turpentine; Moreton Bay, brown, and Bunya Bunya pines represent the conifers; and red cedar, beech, tulipwood, rosewood, red bean, and black bean are among the brush timbers of fine grain. On the extensive plateaux west of the Divide there is but little timber; and towards the vast basin of the interior, the low ridges and banks of the short water-courses bear a growth of stunted eucalypts such as the gimlet gum, the desert sheoak, acacias, and mallee.

The chief supply of mill timber (eucalypts, Moreton Bay pine, etc.) is in the southern coastal region, from the New South Wales border as far north as Gladstone. In the regions between Rockhampton and Ingham the supply is not so plentiful; but northward of the latter town, the red cedar, kauri pine, and black bean are luxuriant. Large

supplies of these valuable trees are found on the Barron Valley reserves, and in other localities between Ingham and Port Douglas. Inland from this zone of heavy forest is another, less densely timbered, bearing cypress and other pines, ironbarks and acacias. In the south-western regions of the State the cypress pine flourishes.

(iv.) *South Australia.* The principal forest districts of South Australia proper are restricted largely to the hill ranges in the neighbourhood of Adelaide and Spencer Gulf. The trees, however, have not the fulness and lofty growth of those of the eastern and south-western borders of Australia. Red gum is widely distributed, though never far from water; and there are belts of timber where, from the general appearance of the surrounding country, they would hardly be expected. The stringy bark has its habitat principally in the hills, and is but rarely seen on the plains; other useful hardwoods are the white and blue gum and peppermint. Blackwood (in demand for cabinet work) is common in the south-east and along the eastern border, but is rare near Adelaide. Wattle also is cultivated for its gum and bark. Sheoak appears in districts less thickly forest-clad, and ti-trees inhabit low, damp situations. The sandalwood trees grow luxuriantly in Yorke Peninsula. On the great plains of the interior there is little vegetation, patches of forest country being occasionally found, while here and there fertile spots of grass land, but generally not of large extent, are met with. Groups of stunted shrubs, and small scattered trees—sheoak, eucalyptus, and wattle—mostly of limited extent, rise from the plains like islands.

(v.) *Northern Territory.* In Central and Northern Australia there is little forest, until the hills where the waters of the northern river system take their rise are encountered. On the plains to the north of the McDonnell Ranges there is a thin clothing of mulga scrub, with gum trees marking the water-courses. Occasionally patches of heavier gum forests are met with. Stirling Creek is lined with the bean tree. The mulga scrub thickens, and with stunted and mallee gums furnishes a uniform vegetation as far north as Powell's Creek. Here, with red gums still lining the water-courses and flooded gums on the flats, the vegetation becomes more varied. On the ranges pines, fig trees, and orange trees (*Capparis*) occur. Heavy timber clothes the uplands about the Roper River, and the tableland which stretches across the territory at a distance from the coast of from 30 to 100 miles bears large paperbark trees, Leichhardt pines, and palms. On the higher steppes there is also abundance of bloodwood and other varieties of eucalyptus, besides other kinds of trees. Many prominent fibre plants are native to the territory.

(vi.) *Western Australia.* The coastal timber belt runs along the western shore from the Murchison River to the Leeuwin, and along the southern shore from that point to beyond Albany, clothing with trees the Victoria, Herschel, Darling, and Stirling Ranges. Pre-eminent among the trees of this State for strength and durability are the jarrah and karri. A great belt of the former stretches eastward of the Darling Range to upwards of 100 miles in breadth, with a length of 350 miles. Between this region and the coast are two well-marked belts of tuart and red gum. In the extreme south-west of the State the main karri belt stretches from Augusta to Albany. Eastward of the jarrah belt a strip of white gum encloses a narrow belt of York gum, its southern extremity almost reaching the coast, while its northern limit extends even beyond that of the jarrah tract. Still further east the forest thins, a poorer growth of white gum giving place to brushes, scrub, and dwarf trees. Along the shores of the Great Australian Bight there are stunted eucalypts, with casuarinas and wattle. In the north-west, on the King Leopold and St. George's Ranges, there are forest areas, but from Dampier Land to below Shark Bay there is no coastal forest, and in many cases the stunted bush and scrub lands infringe on the sea-coast.

(vii.) *Tasmania*. The Tasmanian forest consists chiefly of eucalypts, widely distributed over the island; and of conifers, such as the Huon, the King William, and the celery-top pines, flourishing in the western and southern parts. The principal hardwoods of the eucalypt family are the blue gum, stringy bark, peppermint, and silvertop iron-bark, while among woods of fine grain are the blackwood, beech or myrtle, sassafras, native cherry, and sheoak. Black and silver wattles also flourish in various parts of Tasmania.

**3. Distribution of Timber in the Commonwealth Generally.**—The more conspicuous timber regions of Australia as a whole are the eastern and southern portions, including Tasmania, and, again, the south-western portion northwards and eastwards from Cape Leeuwin. In regard to distribution, on the eastern side of the continent the largest timber is found on the crests and coastal slopes of the mountain ranges, but in the south-west, in addition to the vegetation between mountains and sea, a large area of forest stretches inland from the coastal ranges. The hills encircling Adelaide and Yorke and Eyre Peninsulas also bear good forest. The Kimberley district is timbered, and in the Northern Territory and round the shores of the Gulf of Carpentaria there are considerable forest areas. But the coastal regions of West and North-west Australia, except in the case of the districts named, and the shores of the Great Australian Bight and Encounter Bay, are devoid alike of mountains and forests. The interior of the continent is thinly timbered, or almost destitute of vegetation, an occasional limited area of forest, generally in connection with mountain systems (though these themselves are scarce), acting as a relief in the landscape, which but for these presents to the eye all the features of a dreary and arid waste.

## § 2. Forestry.

**1. Objects.**—Economic forestry, aiming at the conservation of forestal wealth by safeguarding forests against inconsiderate destruction, and by the suitable re-afforestation of denuded areas, is essential to the preservation of industries dependent upon an adequate supply of timber, and to the perpetuation of a necessary form of national wealth. Though in Australia large areas of virgin forests still remain, the inroads made by timber-getters, by agriculturists, and by pastoralists—who have destroyed large areas by “ringbarking”—are considerable; and it is not unlikely that climatological changes are caused thereby. It is asserted that variations in climate, and alternating periods of drought and flood, desiccation and erosion of soil, with loss or diminution of fertility, have resulted from forest denudation in countries bordering the Mediterranean. In many of the States of America diminished rainfall is said to have followed the destruction of large forest areas, and in Mauritius, clearing the hills of timber destroyed the even distribution of rainfall, causing floods, and soil denudation. On the other hand beneficial consequences appear to have followed on the planting of trees on denuded lands, or along eroding coasts, and it is obvious that a forest covering tends to beneficially regulate the effects of rainfall.

Successful planting of exotics in various parts of the Commonwealth has demonstrated that the Australian climate is suitable for the cultivation of a large number of the most valuable and beautiful of the world's timber trees.

**2. Forestry Departments.**—Each State of the Commonwealth, excepting Tasmania, has organised a separate forestry department or branch of service specially charged with forestal matters. Forest improvement work is carried on, areas of young forest being cleaned up by the felling and removal of stunted, diseased and suppressed growth, the

burning of debris and the making of fire breaks. Provision is made for effective patrols in forest districts, to check the ravages caused by fires, often, it is believed, caused through carelessness. The following table gives a comparative indication of the attention paid to the subject, the particulars being those for 1910:—

### STATE FORESTRY DEPARTMENTS, 1910.

Particulars.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	West. Aus.	Tas.
Designation of officer in charge	Director of Forests	Conservator of Forests	Director of Forests	Conservator of Forests	Insp.-Gen. of Forests.	*
Salaries of persons engaged in administration and control	£ 2,602	£ 2,785†	7,038†	746	782	260
Salaries of technical experts, forest rangers, etc.	£ 12,682†	£ 14,540†		1,203	2,800	\$

3. **Sylvicultural Nurseries and Plantations.**—The growing recognition of the necessity for systematic sylviculture has led to the creation in most of the States of a number of sylvicultural nurseries and plantations.

(i.) *New South Wales.* In this State a small forest nursery is maintained at Gosford, between Sydney and Newcastle, from which young trees are widely distributed throughout the State, the bulk being issued to municipal councils and farmers, and for planting in parks, town reserves, hospital grounds, and cemeteries. Large sums have been distributed by the State in improvement fellings and the thinning out of young timber, principally in the Bogan, Narrandera, and Murray River districts. Over a quarter of a million acres of pine forest and red gum have been so treated.

(ii.) *Victoria.* In Victoria there are three forest nurseries, situated at Macedon, Creswick, and Frankston. At Macedon the arboretum contains many fine specimens of the conifers and deciduous trees of Europe, America and Asia. While the bulk of the yields are retained for the State plantations, there are considerable distributions for public parks and recreation reserves, "arbor-day" planting of streets and roads, municipal councils and water trusts, mechanics' institutes and libraries, cemeteries, State schools and other institutions, and farmers and private persons, the applications of those in dry districts receiving first consideration.

Among the principal native hardwoods raised and distributed are blue gum, sugar gum, and tallowwood, with some jarrah for the plantations; among conifers, the Monterey, Corsican, Black Austrian, Canary Island, Maritime, and Aleppo pines, the blue pine of India, the American white and yellow pines, with several spruces; and among other exotics, peppers, Indian cedars, oaks, elms, planes, silver poplars, sycamores, and chestnuts. Great success has attended the establishment of a new nursery for conifers at Creswick.

The principal forest plantation is along the lower slopes of the You Yangs, near Geelong, where about 1000 acres have been enclosed and planted with eucalyptus and conifers. Good results have attended the cultivation of the broad leaf and feather leaf wattles.

At another plantation, viz., at Sawpit Gully, among the foothills of the Dividing Range, near Creswick, conifers are chiefly grown. Minor plantations of blue gum and sugar gum are established at Havelock and Majorca, near Maryborough; and at Mount Macedon, the principal species of oak, elm, ash, plane, sycamore, pine, spruce, eucalyptus, and willows are planted. During 1909 additional planting of conifers was carried out at Creswick, Frankston, and Warrnambool, and a large area was sown with tan-yielding wattles at You Yangs.

The principal work in forest reserves and plantations is improvement thinning and felling, planting, fencing, and construction of dams. The planted area of some of the older plantations has been enlarged.

Officers of the Lands and Forest Departments have made joint inspections of portions of reserved forests, to discover what areas, suitable for settlement, can be excised from the forest and made available. As a result, the forests will suffer a further loss of 20,000 acres. The officers have also recommended the addition of large areas to the State reserves.

Recent legislation makes provision for the stricter control of grazing in forests, and for more efficient protection from fire.

(iii.) *Queensland.* In Queensland there is a forest plantation of 500 acres. The questions of replanting and further reservation have lately been attracting attention, and the prominence given to them will probably greatly influence forest policy.

(iv.) *South Australia.* In this State there are several plantations, the most important being at Bundaleer (7337 acres) and Wirrabarra (3633 acres), situated some 150 and 190 miles respectively to the north of Adelaide in the direction of Spencer Gulf. The total area of the enclosures for planting and natural regeneration of the indigenous timber was, on 30th June, 1910, 14,898 acres. Of the reserved area, about one-fifth only, it is said, ever bore timber of commercial value, the remainder having been covered for the most part with stunted vegetation. Owing to the absence of high mountain ranges and dryness of the climate, the forests are not dense. Special attention has been given in South Australia to silviculture, and great success has been achieved in clothing areas of treeless plain and hillslope with belts of young trees, such as blue, sugar and red gum, and white ironbark. In some parts the Tasmanian blue gum (*E. globulus*) flourishes, but great success has also been attained with the sugar gum (*E. corynocalyx*), a tree indigenous to the State itself. It is found chiefly in the Flinders Range, and used for railway sleepers, telegraph poles, coachbuilding, and in wharf and jetty construction. Two other eucalypts found in South Australia, the white ironbark (*E. leucoxylon*), known locally as "blue gum," and the grey box (*E. hemiphloia*) furnish strong, tough, and durable timber, inlocked in grain and suitable for the same purposes as sugar gum. The common flooded variety of red gum, which has a fairly wide distribution, being found on clay flats and along streams and water-courses, has also been grown in the plantations, but not with the same success as sugar gum. Among conifers which have been grown with fair success are the Monterey, the Maritime, Aleppo, and Stone pines. The Monterey pine (*P. insignis*) outstrips all other trees in growth, and its timber, though softer than other first-class pines, has been utilised for deal tables, packing cases, picket fencing, shelving, and generally for purposes where common deal is useful. The Maritime, Aleppo, and Stone pines are naturally of slower growth. In Europe they furnish useful timber, but in these plantations have not yet reached an age suitable for utilisation. The upright poplar (*P. fastigiata*) growing well over a large area, serves for packing cases, flooring boards, etc. The locally-grown American ash (*Fraxinus americana*) has been used in coachbuilding work, and compares well in quality with the imported American ash. The area suitable for its cultivation in South Australia is, however, very limited, as it requires favourable conditions of soil and climate.

During the last twenty-eight years the Forest Department has issued very large numbers of young plants to the public free of charge, for wind breaks, avenues, and for the shelter of homesteads and buildings generally, over seven million trees having been so distributed. Formerly, bounties were paid under the Forest Act for the encouragement of private planting of timber trees.

A substantial increase in the amounts voted for recent years has enabled great progress to be made in planting forest reserves, and a much larger area is now planted than has been the case for many years past. It is anticipated that on completion of the planting season nearly a thousand acres will have been planted. Plans have been prepared for re-forestation by natural regeneration of a large area in the Penola State forest, under a thorough system of fire protection.

(v.) *Western Australia.* A State silvicultural nursery is established at Drake's Brook, on the south-western railway, the site chosen being a ti-tree swamp, exotic trees of temperate climates being raised. The planting of the Monterey, Maritime, Aleppo, and Canary Island pines, the blue pine of the Himalayas (*P. excelsa*), the Indian cedar, Lawson's cypress, several kinds of poplar, the Virginian catalpa, white cedar, and American ash has been successful. A large number of pepper trees and sugar gums were raised, chiefly for shade purposes. The trees are sold or given away to settlers, being distributed chiefly in the goldfields region and other districts with little natural forest.

There are also two forest plantations where conifers, acacias, and sandalwood are cultivated, the trees making very healthy growth.

(vi.) *Tasmania*. There are at present only two small experimental plantations. In the State nursery a considerable area is being planted with softwoods.

Particulars regarding nurseries and plantations in 1910 are given hereunder:—

#### SYLVICULTURAL NURSERIES AND PLANTATIONS, 1910.

Particulars.	New South Wales.	Victoria.	Q'land.	South Australia.	Western Australia.	Tasmania.
Expenditure on plantations and upkeep of silvicultural nurseries	£964	£14,367	nil	£18,621	£2900	£200

\* There are no forest nurseries issuing trees in Queensland, but a small number of economic and ornamental trees are issued by the Department of Agriculture.

4. **A Forestry School.**—A suitable building, with adequate grounds, has been established at Creswick, in Victoria, as a School of Forestry. The site is near the State plantation and nursery. General class-teaching is given at the school, but the principal aim of the Forest Department is to keep practical work in the foreground. The principal class subjects, in addition to theoretical forestry, are botany, geology, physics, and land surveying, while in outside work trainees will have regular teaching and experience in the preparation of seed-beds, seed-sowing, propagation, planting out, pruning, the general care and improvement of plantations and natural forests, and the employment of timber to the best advantage. The desire is to catch the prospective forester young and give him a thorough training in all branches of the work. Facilities are also afforded to members of the present forests staff to qualify in special subjects by attending winter classes. The school was opened early in 1911.

In September, 1910, an Instructor of Forestry was appointed by the South Australian Government, to assist the Conservator in forest inspection, and particularly to conduct a course in forestry at the Adelaide School of Mines.

### § 3. Commercial Uses of Principal Australian Timbers.

The uses of the more important of Australian timbers are many and various. Four varieties of ironbark, viz., white or grey (*E. paniculata*), narrow-leaved (*E. crebra*), broad-leaved (*E. siderophloia*), and red (*E. sideroxylon*) are largely used for public works, preference being given to the white and narrow-leaved varieties. These timbers are used extensively in the building of bridges and culverts, for railway sleepers and fencing posts, and for framing, naves, spokes, poles and shafts in carriage and waggon building. Ironbark beams are of great strength, hence it is largely employed for girders and joists of upper floors, especially in stores for heavy goods.<sup>1</sup> Another red ironbark (*E. leucoxyton*), heavy, dense, and strong, is greatly valued for bridge beams and piles. Tallowwood (*E. microcorys*) is strong, heavy, very durable, not easily split, and turns and planes well. It

1. Ironbark girders do not burn rapidly and often stand a fire when iron girders yield through the effect of the heat.

is used for bridge-decking, house-flooring (being peculiarly suitable for ballrooms), girders, piles, and fencing posts, and especially for paving blocks, giving even and regular wear under heavy traffic. Even better in this latter regard is blackbutt (*E. pilularis*), a fine hardwood for house and ship building, as well as street paving. Grey gum (*E. propinqua*), makes excellent railway sleepers, and is used for felloes and spokes in coach building. It makes very durable fencing posts, and is also sometimes split for shingles. Murray red gum (*E. rostrata*), the common river gum of all the eastern States, is one of the best hardwoods for use in contact with the ground, being largely used for poles, house foundations, wood paving, and railway sleepers. It is also extensively cut for mining shafts and public and municipal works. The forest variety of red gum (*E. terebinthifolia*) serves the same purpose as the river red gum. White mahogany (*E. acmenoides*) is used for posts, poles, girders, and similar classes of work, being an exceedingly durable timber. Red mahogany (*E. resinifera*) is largely employed for general building work, street paving, fencing, and weatherboards. It is very durable and hardens greatly with age. Grey box (*E. hemiphloia*) is very durable in contact with the ground, and is hence used for railway sleepers (lasting from thirty to thirty-five years in the track), telegraph poles, mine props, fence posts, piles, girders, and for heavy framing and naves, wheel cogs, shafts, dray poles, spokes, etc. Bairnsdale grey box (*E. bosistoana*) serves similar purposes. Brush box (*Tristania conferta*), another hard and durable wood, is used for tram rails, bullock yokes, tool handles, planes, etc. Sydney blue gum (*E. saligna*) is greatly valued by shipwrights and wheelwrights, and furnishes ships' planks, felloes of wheels, etc. It is also used for buildings, and makes very durable paving blocks. Woollybutt (*E. longifolia*) is used for house building, fencing, felloes, spokes, and wheelwrights' work generally. Being durable in contact with the ground, and resistant to heavy traffic, it is also used for street paving. Spotted gum (*E. maculata*) is one of the best hardwoods for bending, even when cold, and is therefore specially valuable in wheelwrights' and coachbuilders' work for poles, shafts, crosspieces, naves, and spokes; also for framing and house building, tram rails, ship planking, decking of bridges, and wood paving. Turpentine (*Syncarpia laurifolia*) is of great durability in the ground or under water, being used for piles or jetties, wharves, bridges, pillars and girders of buildings, wood paving, and hewn posts and rails. Yellow stringy-bark (*E. muelleriana*) is chiefly used for jetty and pier work, and for fencing posts. Blue gum (*E. globulus*) is a valuable timber with straight, symmetrical bole, used for upper timbers and decking in jetty and bridge work, bridge piles, shafts, felloes, spokes and frame work of vehicles, and in general building and construction. Spotted gum (*E. goniocalyx*) furnishes a hard, heavy, and durable timber, similar in appearance to blue gum, and serving the same purposes. Yellow box (*E. melliodora*) bears a large quantity of blossom, and hence is a favourite tree with beekeepers. Its timber is used for piles and posts, squared beams, and stringers for bridges. Messmate (*E. obliqua*) is largely sawn by mills for weatherboards, studs, rafters, joists, etc., and is also used for railway sleepers and fencing posts. Stringy-barks (*E. macrorrhyncha*, *E. capitellata*, *E. piperita*) are sawn by mills into ordinary building timber, and split by settlers into posts and rails and rough building material. Mountain ash (*E. amygdalina regnans*) is sawn into building material, and is also split into palings, shingles, rails, and mining laths. Silvertop (*E. sieberiana seu virgata*)—called also Gippsland mountain ash, green top, and white ironbark—is used for ordinary building purposes, and for fencing rails and rough construction. Sugar gum (*E. corymocalyx*) is held in high repute on account of its toughness and durability, and is chiefly used for railway sleepers, telegraph poles, coach building, and in wharf and jetty construction. White or manna gum (*E. viminalis*) is not a good weather timber, but is suitable for interior construction, such as house frames and floors.

The pre-eminent timber trees of the West are jarrah (*E. marginata*) and karri (*E. diversicolor*). Jarrah is in great request for piles in jetty and bridge construction, and for railway sleepers and street paving. It also furnishes a favourite material for boat-building, fencing, and rough furniture, and makes excellent charcoal. Karri is heavy, dense, elastic, and tough, not so easily wrought as jarrah, and is used for bridge-

decking, flooring, planking, spokes, felloes, shafts, and street paving. Tuart (*E. gomphocephala*) is exceedingly strong and tough, suitable for the framework of railway waggons, bridge supports, buffers, keelsons, shafts, wheelwrights' work, and generally for all purposes where great strength and hardness are necessary. The red gum (*E. calophylla*) is a fine shade tree, and is valued for the shelter it affords to cattle and sheep. Its timber, however, is not held in much esteem; but in short lengths it is employed for wheelwrights' work and agricultural implements. Its gum or kino has medicinal properties, and is also used locally for tanning hides. Wandoo (*E. redunca*) is used for fencing, wheelwrights' work, and railway buffers and sleepers. The blackbutt (*E. patens*), York gum (*E. loxophleba*), and yate (*E. cornuta*) of the West are largely used for fencing, building, and rough construction.

The Moreton Bay or hoop pine (*Araucaria cunninghami*) is used for interior work (flooring, ceiling, and lining boards) and for packing cases and butter boxes. Brown pine (*Podocarpus elata*) is also used for interior work, and for bridge, jetty, and pier piles. Cypress pine (*Callitris*), including red or black pine (*C. calcarata*); Murray pine (*C. verrucosa*), Port Macquarie pine (*C. macleayana*), and the Richmond River cypress pine (*C. columellaris*) are used for buildings liable to attacks of white ants, being strongly resistant to these pests. Cypress pine is also suitable for bridge decking and makes good fuel. Red cedar (*Cedrela australis*) furnishes timber of great beauty; it is easily worked and very durable, and is used for furniture and cabinet-making, doors, panelling, and interior fittings generally. Rosewood (*Dysoxylon fraserianum*) is easily wrought, and is used for furniture, turnery, carving, cabinet work, mouldings, planes, window joints, house fittings, and wine casks. Red bean (*Dysoxylon muelleri*) has a finely-figured grain and is an excellent furniture wood. White beech (*Glehnina leichhardtii*) is durable and easily worked, and is in great request for decks of vessels, furniture, picture frames, carving, flooring, house-fittings, vats, casks, and general coopers' work. Silky oak (*Grevillea robusta* and *Orites excelsa*) is also in request for coopers' work, and makes handsome furniture and wainscoting. The silky oak has also been used for butter kegs, buckets, churns, etc., and makes good butter boxes for the local markets. Black bean (*Castanospermum australe*), or Moreton Bay chestnut, is used for furniture, cabinet-making, and gun stocks. Tulip-wood (*Harpullia pendula*) is highly esteemed for cabinet-work, being used for door panels, dadoes, and billiard tables. Coachwood (*Ceratopetalum apetalum*) is suitable for boat-building, cabinet work, and coach-building. Kauri pine (*Agathis palmerstoni*) gives a light, strong, and durable timber, and is used for general building and construction, wainscoting, furniture and joinery, railway carriages, and ship-decking. Blackwood (*Acacia melanoxylon*) is very strong and durable, diminishing, however, greatly in weight in seasoning, though shrinking very little in volume. Figured blackwood is a beautiful timber: it is used for furniture, such as billiard tables, chairs, secretaires, casings of pianofortes and organs, and general cabinet work; dadoes, panelling of railway carriages, boat-building, picture frames, wheel naves, gun stocks, walking sticks, and a great variety of useful and ornamental purposes; it is also split into staves for wine and tallow casks. Evergreen beech (*Fagus cunninghami*) yields also a handsome timber, used for furniture, sashes and doors, light joinery, wood-carving, picture frames, and cog-wheels. Huon pine furnishes a fine, strong, and light timber; it is almost indestructible in water, and hence is largely used for boat planking; its beautiful grain brings it into request for furniture, panelling, and wainscoting. The King William variety is very tough, being used for racing sculls; it is also a favourite timber in joiners' work. Celery-top pine is strong and heavy, suitable for furniture, flooring, house frames, coopers' work, and masts. Other Australian brush timbers of minor importance are sassafras (*Atherosperma moschata*), used for saddle-trees and boot lasts; and satin box, sycamore, olive, and pencil-wood, giving woods of beautiful grain for parquetry, veneers, carving, and picture frames. The sandalwood of Western Australia (*Santalum cygnorum*) is a very valuable forest product, and has been exported in varying amounts during the last fifty years.

As aids in the development of Commonwealth industries, the Government is experimenting with Australian woods for rifle stocks, telephone switch boards, etc.

It has also made available a sum of money for the seasoning and storing of Australian timber. It is intended to establish seasoning depôts at the Federal Capital, and also at the principal centres in the various States, whence contractors will be able to obtain timber at scheduled rates. Other timber seasoning works have been established by private enterprise.

#### § 4. Forestal Industries and Production.

1. **Timber.**—The returns for quantity and value of timber cut and sawn, as given by the States Forestry Departments, are at present very incomplete. Owing to this fact the figures given hereunder are, in some cases, necessarily merely estimates.

##### QUANTITY OF LOCAL TIMBER SAWN OR HEWN IN EACH STATE OF THE COMMONWEALTH DURING THE YEARS 1906 to 1910.

State.	1906.	1907.	1908.	1909.	1910.
	Sup. feet.	Sup. feet.	Sup. feet.	Sup. feet.	Sup. feet.
New South Wales	119,337,000	122,998,000	123,152,000	134,070,000	138,845,000
Victoria	51,103,000	55,873,000	54,602,000	50,000,000	51,000,000
Queensland	82,801,846	91,752,000	100,760,000	108,331,000	116,438,000
South Australia	130,763	143,000	436,000	240,500	210,000
Western Australia	136,294,697	110,395,000	165,766,000	171,825,000	133,631,000
Tasmania	39,498,697	35,228,000	44,335,000	45,035,000	54,933,000
Commonwealth	429,166,003	416,389,000	489,051,000	509,561,500	495,057,000

The only States for which annual returns are furnished of the value of locally sawn or hewn timber are South Australia and Tasmania. The values returned for South Australia for the years 1906 to 1910 are respectively, £230; £815; £1084; £411; and £330.\* For Tasmania the values for the years 1906 to 1910 are respectively, £75,817; £110,689; £93,762; £138,492; and £194,106. The estimate for New South Wales, 1901 to 1906, is £4,050,000; for 1907, £1,440,000; for 1908, £763,241; for 1909, £801,456; and for 1910, £891,111. For Victoria, the output of timber, from forest sawmills only, was £153,309 in 1906; £181,590 in 1907; £177,460 in 1908; £189,130 in 1909; and £248,315 in 1910. The output of Western Australian sawmills was valued at £5,268,235 for the years 1901 to 1907; £763,241 in 1908; £1,105,108 in 1909; and £681,213 in 1910. For Queensland the value for 1908 was £665,350; for 1909, £736,578; and for 1910, £858,741.

2. **Forest Produce.**—Estimates have been made of the total value of forest production, but these must be regarded as mere approximations. Many of the items are very difficult, and some impossible, to obtain. Large returns are credited to firewood, but these have been omitted altogether, since estimates are subject to a wide range of uncertainty.

The Forestry Department of New South Wales estimates that the production in the seven years 1901-7 averaged at least £685,000 per annum. For Victoria the Government Statist gives the following figures:—1906, £217,569; 1907, £244,170; 1908, £234,154; 1909, £255,650; 1910, £226,080. This is exclusive of hewn timber. No figures on a similar basis are available for Queensland. The estimates for South Australia for 1906 to 1910 are £610; £440; £1086; £1628; and £1450. Western Australia averaged for the seven years 1901-7, £984,264. Tasmania supplies the following estimates for the years 1901 to 1906, viz., £152,102, £83,943, £114,227, £119,477, £94,987, and £126,514.

\* It is, of course, evident that the value of production was much greater than this.

### § 5. Oversea Trade.

1. **Imports.**—The timber imports are shewn according to countries of origin in the table below. Previously these figures were tabulated according to countries whence imported, and were so published in earlier issues of the Year Book. They are now presented in the improved form.

#### IMPORTS OF DRESSED TIMBER, COMMONWEALTH, 1907 to 1910.

\* Quantities are not included in classes not measured in super. feet.

2. **Exports.**—The quantity and value of undressed (sawn) timber exported from 1906 to 1910 is given below, the countries of destination being also shewn.

The year 1907 shewed considerable decrease in comparison with previous years, both in quantity and value, but the export was again heavy in subsequent years.

**EXPORTS OF UNDRESSED TIMBER (SAWN), COMMONWEALTH**

## SECTION XI.

## FISHERIES. AND PISCICULTURE.

## § 1. Commercial Fisheries.

1. **Early Fishing Excursions of Malays.**—Economic fisheries in Australia date back to a period long before the exploration of the northern and north-western shores of the continent by Tasman and Dampier. The Malays of Macassar, in their proas, made fishing excursions amongst the reefs and shoals skirting the coast, collecting and curing trepang or *bêche-de-mer*, a practice continued up to the present time. They arrive ordinarily at the beginning of the north-west monsoon, and return to Macassar after a few weeks, as the south-east monsoon sets in. In addition to collecting trepang, the Malays barter rice, tobacco, bright coloured handkerchiefs, etc., for tortoise shell, pearlshell, and seed pearls collected by the aborigines.

2. **Fish Stocks.**—Australasia, extending from 10° to 45° south latitude, possesses an abundant and varied fish fauna, which embraces both tropical and temperate varieties and includes destructive as well as edible species. In rivers and lakes both indigenous and imported varieties thrive. The latter have been introduced and acclimatised for industrial and sporting purposes by Governments and angling societies. Exploitation of the fishing areas—for some classes of fish for the whole year, for others during the breeding season only, or until a certain size is attained—is, where necessary, expressly forbidden; proclaimed localities are closed against net-fishing, and a minimum size of mesh for nets is sometimes fixed. The sea-fishermen in some districts have made regulations in their own interests for the purpose of controlling the market supply, and these they rigorously observe.

3. **Economic Fisheries.**—Australia's food fishes, though abundant, have not led to the development of an industry of national importance, though fresh and salt water fisheries pay handsomely in other countries, and could no doubt do so in Australia. It has been authoritatively asserted that:—"The collection and distribution of the knowledge of the world's work in fish-culture would make an acre of water more valuable than an acre of land, and the toilers of the sea could reap manifold their present harvest." This would involve also better arrangements for the distribution of fish than exist at present. Official reports state that the possession of scientific knowledge by the fishermen would greatly benefit the industry.

4. **Lake and River Fishing.**—Lake and river fishing take even lower industrial rank than marine fishing, though local catches furnish on the aggregate a not inconsiderable amount of food supply.

5. **Distribution of Supplies.**—Present methods of distribution impose serious difficulties on the development of fishing generally, since there is a wide divergence between the price paid by the consumer and the return received by the producer.

State Governments are interesting themselves in the direction of more economic distribution, while municipal oversight has been undertaken in Sydney and is proposed in other capitals. It is anticipated that an efficient system of fish supply to private customers will soon be established in the chief centres of population, where good markets are assured for regular deliveries of fresh fish.

**6. Oyster Fisheries.**—Natural oyster beds, whose ample product is of excellent quality, exist on the foreshores in the shallow waters of inlets and estuaries in several parts of Australia. By husbanding the natural crop, and by judicious transplanting, the oyster output has been very materially augmented, and it is believed that there is a great future for the industry. The areas are leased by the Government to private persons, lengths of foreshore being taken up and profitably exploited. In New South Wales particularly, the industry has developed recently, and satisfactory experiments have been successfully conducted in Victoria. In Queensland, the methodical cultivation of the beds has proved of great benefit to cultivators, besides improving the class of oyster marketed.

**7. Pearl-shelling.**—Pearl-shelling is carried on in the tropical districts of Queensland, the Northern Territory, and Western Australia. The pearl oyster inhabits the northern and western coasts from Cape York to Shark Bay, a length of shore of over 2000 miles. Along the north coast the pearls taken are small, and their aggregate value inconsiderable; but the shells are marketed in considerable quantities, the industry giving directly and indirectly employment to a large number of people, mostly Japanese, Chinese, and Malays. The Shark Bay pearling industry, however, is carried on for both gems and shells. The fishing is generally conducted with the aid of diving apparatus, in water varying from four to twenty fathoms in depth. The inshore banks and shallower waters have been almost entirely worked out, and the deeper waters, from three to twenty miles off shore, are now being worked.

In tropical Queensland pearl-shell diving is actively pursued, and is by far the most important of fishing industries, Torres Straits being the centre of production. With it the pursuit of *bêche-de-mer* is carried on, and tortoiseshell is obtained on the coasts. The industry is supervised by the Marine Department, which administers the Fisheries Acts. A statutory limit is fixed for the minimum size of shell that may be gathered. Experiments have been made in cultivating the pearl oyster on suitable banks. A small variety has been discovered at Stradbroke Island, in Moreton Bay, but the commercial value of the produce is small. In October, 1909, a pearl of great beauty and fine quality from the Thursday Island Fisheries was exhibited in Melbourne. Its weight was 32½ grains, and its value was stated at £1000.

The discovery of mother-of-pearl shell in Port Darwin Harbour in 1884 caused a rush of pearling boats from Torres Straits. But the muddiness of the water, rendered almost opaque by the heavy tides, prevented the divers from satisfactorily working the area, and led to the abandonment of the industry within three years of its birth. Prospecting in new patches has lately been carried out and the industry has been revived. In addition to pearl and trepang fishing, dry-salted fish is also exported from the Territory.

In Western Australia the centres of the industry are Broome, Cossack, Onslow, and Shark Bay. There are two distinct species of mother-of-pearl shell exported. The principal trade is done in the large shell (*Meleagrina margaritifera*), limited in distribution to tropical waters and extending in habitat from Exmouth Gulf northwards. It is used for the larger manufactured articles, such as dessert and fish knife and fork handles, large buttons, and inlaid work. The largest and finest pearls are obtained from it. The second species is that known commercially as the Shark Bay variety (*Meleagrina imbricata*). It is of smaller size and used chiefly for the manufacture of small buttons. The pearls found are of varying value. The Shark Bay pearlshell is collected by dredging in the deeper waters and gathering by hand from the shallow banks at low tide.

The system of licensing boats and men engaged in the pearling industry restricts, in the States where it is in force, indiscriminate exploiting of the areas, and returns a small revenue.

Poaching in Australian territorial waters has long been rife, particularly on the north-west coast. Recently the Commonwealth Customs Department arranged with the Celebes Islands Government for administering a check. One of the vessels of the Australasian Squadron searched the coast for poachers during a recent cruise, and it is believed that the evil has been almost entirely eradicated.

In accordance with the "White Australia" policy, it has been determined that the employment of coloured labour in the pearl-shelling industry shall be restricted, and ultimately cease altogether. After 31st December, 1913, permits to indent Asiatics for the pearling fleet will cease, and all divers and tenders employed upon the luggers must be white men. Arrangements have accordingly been made for the introduction of experienced divers from England. It is believed that practical difficulties will arise in the transition period. In March, 1912, the Commonwealth Government appointed a Royal Commission to inquire into the pearling industry generally, and particularly as regards its labour problems.

The heavy mortality amongst divers has led to suggestions for their medical inspection, and for the establishment of a diving school subsidised by the Government for training white divers.

## § 2. Fisheries Statistics.

1. **Estimates for the Commonwealth.**—The returns given below have been furnished by the State departments, and estimates, where they have been made, are official. The data do not generally lend themselves to presentation on a uniform scheme, but the principal facts have been compiled as far as possible for the Commonwealth.

\* Queensland, Northern Territory and Western Australia only. There is no production in the other States. † As returned.

2. State Fisheries Statistics.—(i.) *New South Wales.* Much of the information is approximate. From 1904 to 1906 the average numbers of men and boats employed in general fisheries were respectively 1730 and 849; the average annual quantity of fish marketed was nearly six million pounds. In recent years the estimated number of men

employed has exceeded 2300, working upwards of 1200 boats. In 1907 the take of fish was 124,078 baskets, averaging 75 lbs. each. In 1908 the take was 134,437 baskets of fish, 11,031 dozen lobsters, and 3478 baskets (80 lbs. each) of prawns. In 1909 the take was 142,573 baskets of fish, 8497 dozen lobsters, and 6762 baskets of prawns; and in 1910, 130,000 cwt. of fish, and 11,100 dozen lobsters. The approximate value in 1907 was £64,000, in 1908 £72,760, in 1909 £74,000, and in 1910 £126,765. The fisheries revenue over a series of years averaged £6000 annually, amounting to £6626 in 1908, £6782 in 1909, and £7071 in 1910.

Considerable portions of the foreshores and shallow areas of the river estuaries are excellent natural oyster-beds, and with constant attention the annual yield of oysters could no doubt be materially increased. In 1907 the oyster leases covered 65 acres of deep water, and 553,975 yards of foreshore, and the yield was 14,406 bags, valued at £25,210. In 1908 there were leased 72 acres of deep water, and 597,495 yards of foreshore, from which 20,590 bags, value £26,900, were taken. The foreshore leased in 1909 was 662,135 yards, the take being 15,538 bags, valued at £27,192. Leases were not quite so extensive in 1910, 651,200 yards representing the foreshore worked, the produce being nearly 30,000 cwt., valued at £30,000.

(ii.) *Victoria.* In 1908 a Fisheries Inquiries Board investigated the conditions of the fishing industry in Victoria. The scope of the inquiry covered questions as to the permanent and temporary closing of areas against fishing; the length and number of nets to be used by any one party; poaching; the destruction of cormorants; the appointment of local inspectors; adequate punishment for offences against the Fisheries Act; trawling and long line fishing experiments; and the handling, freight, and marketing of fish. Some of the recommendations of the Board were given effect to, others are still under the consideration of the Government. The Fisheries Branch was, in 1909, transferred from the Public Works to the Agricultural Department, with a view to its reorganisation on the lines suggested in the Board's report. Legislation is proposed that is expected to result in the industry being considerably advanced in the near future. The number of boats engaged in the industry averages 700 over a series of years, and of men 1100. The take in 1907 was 99,707 cwt. of fish, valued at £60,442; and 24,889 dozen lobsters, valued at £6179. In 1908 it was 93,899 cwt. of fish, valued at £65,184; and 27,127 dozen lobsters, valued at £6726. In 1909 the take was 97,933 cwt. of fish, valued at £67,698; and 29,962 dozen lobsters, valued at £7403, and in 1910, 93,243 cwt. of fish, valued at £64,706; and 32,059 dozen lobsters, valued at £7881. Licenses to net in certain waters are issued without fee. These are not annual, being supplemented every year by new issues, but it is proposed to make the registration annual, and impose a fee. In 1907 legal proceedings, which called attention to the fact that the necessary licenses had not been taken out in many cases, resulted in a large increase in the issue of licenses. There is no separate revenue credited to fisheries, the small amount derived by way of fines being credited to general revenue.

Annual leases have been granted to oyster fisheries, but the return has been insignificant.

(iii.) *Queensland.* Prior to 1907 no account was kept of the value of boats and equipments, but an approximation believed to be very close was furnished. Over a series of years the number of boats and men engaged in general fisheries average 250 and 500. The take in 1907 was 32,500 cwt., valued at £24,437; in 1908, 31,000 cwt., valued at £28,519; in 1909, 34,050 cwt., valued at £32,987; and in 1910, 34,000 cwt. of fish, valued at nearly £33,000. There are no lobster fisheries. The quantity put up in tins in the fish-preserving establishments is not great, but the local demand is growing. The revenue from fisheries in Queensland is considerable, and is chiefly derived from licenses and leases. Since 1904 it has generally exceeded £7000, being in 1907, £7921; in 1908, £8176; in 1909, £8108; and in 1910, £6848.

For oyster fisheries, the deep waters in the Moreton Bay and Sandy Strait are leased as dredge sections, which extend across the channels to the islands, and contain from

100 to 1000 acres each. Within these sections the majority of the oyster banks (ground containing up to 30 acres lying within two feet of low-water mark) are situated on the foreshores of the islands, and on the mud and sand flats. In 1907, 60,000 cwt. of oysters were taken, valued at £37,500; in 1908, 37,000 cwt., valued at £35,000; in 1909, 38,300 cwt., valued at £36,000; and in 1910, 29,829 cwt., valued at £30,592. Leases granted numbered 924 in 1907, 885 in 1908, 807 in 1909, and 820 in 1910.

In the pearlshell industry, the last three years have been satisfactory, notwithstanding the industrial trouble early in 1908. Prices improved considerably, as much as £150 per ton being realised for pearlshell. During recent years, however, there has been a considerable diminution in the production, the number of boats and men engaged being much fewer than in preceding years. In 1907 the take was 577 tons of pearlshell, valued at £70,495; 338 tons of *bêche-de-mer*, valued at £30,033; and 3095 lbs. of tortoiseshell, valued at £1927. In 1908 the take was 424 tons of pearlshell, valued at £50,514; 322 tons of *bêche-de-mer*, valued at £21,631; and 4805 lbs. of tortoiseshell, valued at £2617. In 1909 the take was 516½ tons of pearlshell, valued at £70,505; 314 tons of *bêche-de-mer*, valued at £14,504; and 3156 lbs. of tortoiseshell, valued at £1,389; and in 1910, 571 tons of pearlshell, valued at £82,652; 221 tons of *bêche-de-mer*, valued at £12,785; and 1848 lbs. of tortoiseshell, valued at £838. Almost the whole of the *bêche-de-mer* collected was exported in a cured state to the East, and with few exceptions was fished for by Japanese and Manila men. Prior to 1907 no record of the value of pearls obtained was kept, and it is impossible to make an accurate estimate. In the year named the value was approximately £30,000; in 1908, £20,000; in 1909, £25,000; and in 1910, £26,620.

(iv.) *South Australia*. In 1907 the take was 20,734 cwt. of fish, valued at £25,121, and 1380 dozen lobsters, valued at £369; in 1908, 25,796 cwt. of fish valued at £34,756; and 14,000 dozen lobsters, valued at £3677; in 1909, 23,095 cwt. of fish, valued at £40,087, and 3522 dozen lobsters, valued at £3299; and in 1910, 48,214 cwt. of fish, valued at £87,500, and 3500 dozen lobsters, valued at £4500. The revenue from general fisheries was £286 in 1907, £368 in 1908, £356 in 1909, and £301 in 1910, all from licenses. Oyster fishing has been introduced, but has not, up to the present, attained any great dimensions. In 1907 and 1909, 416 bags were taken, valued at £728. For 1908 no figures are available. In 1910, 167 cwt. of oysters, valued at £167, were marketed.

(v.) *Northern Territory*. The limitation of shelling grounds and the scarcity of suitable labour has considerably hampered the pearl shelling industry, not more than half the fleet of boats having been engaged in late years. No pearls have been declared, but it is hardly possible that none were procured. It is believed that a quantity of pearls pass through the post office without the knowledge of the Customs, and that dishonest divers send some away unknown to the boat owners—in some instances by special messengers. There are indications that trepang fishing will receive more attention than hitherto from Europeans, in whose hands the whole of the industry is now held. The closing of the coast against the Macassar proas must necessarily cause a shrinkage, but it is expected that in the course of a year or two this will prove a great boon to local boats, inasmuch as it will give the fishing grounds time to recoup. Both the pearlshell and the trepang fisheries are capable of expansion. In 1907 pearlshell taken amounted to 64 tons, valued at £8805. Other products were:—342 lbs. of tortoiseshell, valued at £115; 38,976 lbs. of dried fish, valued at £822; and 20 tons of *bêche-de-mer*, valued at £898. In 1908, many of the boats were taken off for want of men, others to carry on different work. The take was 58 tons of pearlshell, valued at £7578; 24 tons of *bêche-de-mer*, valued at £1272; 83,900 lbs. of dried fish, valued at £1697; and 251 lbs. of tortoiseshell, valued at £159. Revenue from licenses amounted in 1908 to £59. In 1909 the licensed pearling fleet consisted of 39 luggers, one steamer, and six canoes. Of these boats only 26 were actually engaged. The area worked over was old ground. The pearlshell taken was 58½ tons, valued at £10,085. With a take equal to that of the previous year, the price realised was about 25 per cent. better. No pearls were reported. The export of trepang was 38 tons, valued at £1906. This industry

has been steadily increasing since 1905, when the coast was closed to the Macassar fishermen. The production of dried fish in 1909 was 63,504 lbs., valued at £1091; and tortoiseshell, 376 lbs., valued at £350. In 1910, 55 tons of pearlshell were produced, valued at £10,030; 30 tons of béche-de-mer, valued at £1303; 34,272 lbs. of dried fish, valued at £5917; and 222 lbs. of tortoiseshell, valued at £160.

(vi.) *Western Australia.* The take in 1908 was 1500 tons of fish, valued at £50,000, and 10,000 doz. lobsters, valued at £3000. In 1909 it was 1500 tons of fish, valued at £52,500, and 10,920 dozen lobsters, valued at £3276, and in 1910, 1511 tons, valued at £56,400, and 9000 dozen lobsters, valued at £3150. Revenue from fisheries amounted in 1907 to £787, in 1908 to £1174, in 1909 to £1234, and in 1910 to £1474.

The quantity of pearlshell obtained in 1907 was 1393 tons, and the value £169,815; in 1908 the quantity was 1286 tons, valued at £161,006; in 1909, 1196 tons, valued at £189,666, and in 1910, 1227 tons, valued at £206,461. Pearls to the value of £64,690, £29,225, £52,788 and £68,148 were taken in 1907, 1908, 1909 and 1910 respectively. The béche-de-mer fisheries are little developed, and no produce of commercial value was obtained during the last four years, although in previous years small quantities have been marketed.

(vii.) *Tasmania.* The fishing boats and fishermen in Tasmania are not licensed, and no record is kept of them. The fish markets are under the control of the municipalities, and these do not keep complete records of quantities sold. In 1908 the estimated take of fish was 17,800 cwt., estimated value £11,400. In 1910 the Hobart fisheries produced 83,269 dozen fish, valued at £14,113, and 6830 dozen lobsters, valued at £2200. The revenue over a series of years averages about £600, mostly derived from licenses to angle for salmon and trout with rod and line. In 1907 the total receipts were £596; in 1908, £569; in 1909, £470; and in 1910, £557.

Oyster fisheries are not worked except in a most primitive way.

The work of the Commissioner trends mostly in the way of breeding and distributing young fresh-water fish, especially acclimatised trout.

### § 3. Oversea Trade in Fish.

That the development of the fishing industry in Australia leaves much to be desired is evident from the fact that the import of preserved fish into the Commonwealth is large, the export inconsiderable. The figures for the trade are as follows:—

#### IMPORTS OF FISH, COMMONWEALTH, 1906 to 1910.

Classification.		1906.	1907.	1908.	1909.	1910.

	{ £	25,027	39,273	24,529	18,452	19,489

A considerable development has taken place lately in the fish preserving industry. Two factories were opened in the Northern Territory in 1907, and a large output resulted from the operations of those previously established. There was, however, for the Commonwealth an excess of imports over exports amounting approximately to £350,000 in 1906 and 1907, £485,000 in 1908, £450,000 in 1909, and £550,000 in 1910.

The exports of pearlshell and tortoiseshell are given hereunder for the five years 1906-10:—

## EXPORTS OF PEARLSHELL AND TORTOISESHELL, 1906 to 1910.

## § 4. Development of the Fishing Industry.

1. **Transport and Marketing.**—The large importations of fish into the Commonwealth indicate the scope for the development of the local fishing industry, and for many years the question of securing to the consumer a regular supply of a wholesome article at a moderate price has been under consideration. In Sydney, the City Council has undertaken the handling and marketing of the product. Where quick transport by rail or steamer is not provided, the catch of fish in tropical or sub-tropical waters can only be locally consumed, since speedy marketing is essential. Adequate refrigerating apparatus on railway waggons and coasting steamers and quick transport to centres of population might, however, alter the economic condition in a satisfactory direction. In the temperate regions there are adequate supplies close to the principal ports—a fact which is of considerable advantage, since short trips mean marketing of the produce in good condition, and lesser sea risks are incurred. At the present time the natural wealth of Australia in fish is exploited only to a very slight extent. The daily supply of fish in Great Britain is 300,000 tons, and the deep sea fisheries cover an enormous area.

2. **Experiment and Culture.**—(i.) *The Existing Fisheries.* In many respects the fishing industry is capable of modification and development. A good deal has been effected by the State Governments in the way of experiment and culture, but much

yet remains to be done before the industry is at all commensurate with the industrial progress and consuming capacities of the Commonwealth. A uniform policy of development for Australia is desirable, and recommendations have been made that the Fisheries Departments of the various States should co-operate with the Federal Government in its efforts to increase the productiveness of the Commonwealth waters, and the research work generally undertaken by it; and that uniform fisheries laws should be adopted by adjacent States. The existing fishing is inshore, the supplies being obtained from the vicinity of river estuaries and lakes. Deep-sea fishing, as established and carried on in older countries, is, so far, practically non-existent in Australia. It has been established that the deposits of fish eggs generally float upon the water. The drift of currents or the influence of winds often carry them a considerable distance from the shore, thus affording very little chance of development. The problem that is now engaging experts all over the world is how to artificially control the drift of eggs, so that the fish may be hatched near shore under the most favourable conditions.

To prevent the importation of fish of predaceous habits, or otherwise undesirable, all live fish arriving in Australia are examined on shipboard.

(ii.) *New South Wales.* In New South Wales, trawling experiments have shewn that considerable areas along the coast are suitable fishing grounds, but practical work on commercial lines is yet undeveloped. The stocking of rivers and lakes was begun by private enterprise, but Government aid was granted later, and eminent success has been attained, particularly with the Californian rainbow trout. Young fry are distributed annually from the trout hatchery at Prospect, and the natural reproduction of the fish in the streams that issue from the mountain ranges is regarded as a valuable asset. In 1902 attempts were successfully made to transport European fishes alive to Australia. A marine hatchery and biological station has been completed at Gunnamatta Bay, Port Hacking, by means of which it is proposed to gradually acclimatise suitable fishes. There is an increasing output each season of ova and fry. The natural oyster beds are also being extended. In September, 1909, a Fisheries Exhibition was held at Sydney, to shew the resources of the State.

With the object of ascertaining something of the movements of oceanic fishes, as well as of those estuarine fishes which make periodical oceanic migrations, lighthouse-keepers on the coast report weekly the various kinds of fishes, etc., observed travelling along the coast, as well as the quantity and size of fish seen. Some very useful information has in this way been obtained.

By arrangement with the Commonwealth Fisheries Department, members of the staff of the Australian Museum, Sydney, accompany the F.I.S. "*Endeavour*" on various cruises. Specimens are collected, mounted for scientific purposes, and distributed to other Australian Museums, a considerable number being put aside for the Fishery Museum to be established by the Commonwealth Government in connection with the department.

(iii.) *Victoria.* In Victoria, besides the culture that has been mainly the work of private individuals and angling clubs, the Government has incurred the expenditure of a sum of money on hatcheries, with good results. Fry and yearlings are distributed, and one consignment of the latter was despatched from the Geelong hatchery and liberated without loss at Mundaring, Western Australia. Young rainbow and Loch Leven trout are also released into the rivers of the State from the hatcheries lately established at the Zoological Gardens. At Studley Park, Melbourne, and at Ballarat, there are also ponds for experimental culture. Trawling experiments were conducted some years ago, but the results were inconclusive.

(iv.) *Queensland.* In Queensland, artificial hatching was undertaken by the Acclimatisation Society of Southern Queensland. Here, also, the American rainbow trout has succeeded, fry being distributed from the hatchery at Spring Creek, Killarney. The lung-fish, formerly known only in two streams, has been successfully transplanted to several other streams. Oyster beds are also being developed in several parts, and

improved methods of culture have largely increased the output. The trawling experiments of 1901 and 1902 point to the improbability of a great trawling industry being established. The trawling area of Queensland would be a mere strip, because of the presence of the coral region immediately to the north, and the fact that the sea deepens very rapidly to the east.

(v.) *South Australia.* In South Australia the indiscriminate exploitation of the Port Lincoln and adjacent oyster beds led to the necessity for their being closed from time to time to prevent the district from being altogether worked out. The future outlook has in this way been improved as regards oyster culture. The South Australian general fishing grounds have been stated to be most desirable areas, only wanting men and boats to ensure a large take. Many new grounds have been opened up on the West Coast and the unsuitable areas have been defined. Trawling by private individuals has been undertaken. The question of establishing a floating hatchery is under consideration.

On the 1st April, 1910, the Fisheries Act Amendment Act of 1909 became law, and revised regulations were promulgated. Provision is made that a fisherman must be a natural born or naturalised British subject, and must be licensed, and have his boat registered and marked. Inspectors are given considerable power to protect the industry and those engaged in it.

The Fisheries Department is taking active steps to increase supplies, and is gathering information respecting natural breeding grounds, with a view to making them sanctuaries for the breeding of young fish. It is believed that the reservation of these spawning places will replenish the supplies with more certainty and less expense than by artificial hatcheries. The closing of certain waters for breeding grounds has had the effect of increasing the fish supply on the coast and in the River Murray.

(vi.) *Western Australia.* In Western Australia the coastal waters have been examined to ascertain whether suitable trawling grounds exist. The Acclimatisation Committee has successfully hatched and liberated trout, the Mundaring Weir being stocked with the Loch Leven variety. Perch were stocked in the lakes near Wanneroo Caves.

(vii.) *Tasmania.* Expert advice indicates that the depths of the ocean surrounding Tasmania are ideal for trawling, and that there are very good openings for a profitable fishing trade in the island. Considerable distributions of ova and fry are annually made from the River Plenty in Tasmania. Besides the supplies to Tasmanian waters, the northern States are also recipients of ova.

## § 5. The Commonwealth Department of Fisheries.

1. **The Federal Council of Australasia.**—The Federal Council had power to legislate with regard to fisheries in Australasian waters beyond territorial limits. In its second session (opened 16th January, 1888), an Act was passed to regulate pearlshell and bêche-de-mer fisheries in Australasian waters adjacent to Queensland; and in the third session, opened shortly afterwards, the Act was made applicable to Western Australia. By the passing of the Commonwealth Constitution Act of 1900, however, the Federal Council was abolished.

2. **Commonwealth Investigations.**—In 1907 the Commonwealth Government decided to demonstrate what may be attained commercially by the application of modern methods and experiences. A Federal Investigation Ship, the *Endeavour*, was constructed specially for the work, and a Director of Fisheries was appointed. Cruises and experiments were immediately instituted. These shew that the Commonwealth possesses an asset of considerable value in her sea fisheries. The scope and results of the inquiries are set out in the Director's reports, and are summarised below.

3. **Scope of the Inquiry.**—The immediate scope laid down for the investigation was, shortly, as follows:—

- (i.) By various means of capture to ascertain what marketable food-fishes may be found in ocean waters adjacent to Australia.
- (ii.) In what quantity they may be taken.
- (iii.) To what extent they migrate, and where.
- (iv.) How they may be conveniently and economically captured.
- (v.) By systematic survey to find out and chart suitable fishing grounds.

In addition to the work which is being thus carried on in the various recognised methods of capture (including long-line and drift-net fishing, etc.), survey, hydrographic work, etc., is conducted, for the purpose of ascertaining the nature of the bottom, depth of water, currents, and sea temperature.

4. **The F.I.S. "Endeavour."**—The construction of the investigation vessel was undertaken in the Commonwealth, and was upon the lines shown by the most recent European experience to be of greatest advantage, with necessary modifications to suit the Australian climate. Australian materials were used. On 1st June, 1908, the keel was laid, and on 27th August the steel hull was ready for launching. The official trial took place in January, 1909, and on 9th March, the equipment being complete, there was put in commission the first Commonwealth-owned seagoing ship, named *Endeavour*, after Captain Cook's historic vessel. The measurements of the vessel are:—134 ft. 9 in. over all; beam, 23 ft.; moulded depth, 11 ft. 9 in.; greatest draft, 11 ft. 9 in. The engines are of triple expansion type, and develop 440 i.h.p. The speed is nearly 11 knots. The vessel is suitably equipped for her work, all available space being put to use; and has proved to be an excellent and reliable sea boat. She closely resembles a modern trawler, fittings for her special service having been added. The main winch is especially powerful, and carries 2000 fathoms of  $2\frac{1}{2}$  in. and  $1\frac{1}{2}$  in. wire rope for trawling purposes. An additional reel attached to the fast running axle on the winch carries 1500 fathoms of  $\frac{3}{4}$ -in. wire rope for hydrographic observations. The starboard side is generally fitted and equipped for operating the large otter trawl (95 feet head line), while on the port rail a Lucas Sounding Machine (5000 fathoms of piano wire) and davits for various purposes have been fixed. The hold is given up to net stores, and a cool chamber for the keeping of fish, etc. On the deck aft is provided a laboratory, where preliminary investigations are carried out. Here also is stored all the special apparatus, including deep-sea water bottles, thermometers, etc.

5. **The "Endeavour's" Cruises.**—The first cruise began on 12th March, 1909, and ended six days later. Up to 19th October, 1910, twenty-nine cruises had been undertaken in the waters off the coasts of Queensland (as far north as Bowen, latitude  $20^{\circ}$  S.), New South Wales, Victoria, South Australia, and Tasmania. In many cases, areas have been revisited and tested at different seasons of the year, thus affording a fair indication of their true fisheries value.

6. **Results.**—The object of the investigations is to shew how and where food-fish may be obtained in quantity, rather than to bring large catches into port. Moreover, in untested areas, sounding and survey work generally becomes a main feature. The surveys were extended to cover fields as large as possible, the duration of each haul with the trawl being limited to average about two hours. A commercial vessel, working on well-known grounds, would remain continuously on the richest fields until a freight was secured, and would work longer drags. The take of the *Endeavour*, therefore, is considerably below what is to be expected from a vessel working the fields for profit.

Experiments with drift nets and long lines, although up to the present not largely carried out, have given promising results. Trawling has been the principal method tried. By this means the fish are disturbed by a large bag-shaped net drawn along the sea bottom, and they are caught and retained in a trap arrangement at the tail-end of the net. Generally, the trials have been limited to waters of not more than 100 fathoms in depth.

The cruises have shown that both suitable and unsuitable trawling grounds were met with in all parts; and that not all suitable grounds are rich in fish life. Over vast areas the bottom consists of coarse ("hungry") sand, which is almost barren and desert-like, while in other instances the sand is covered with quantities of sponges and other growth. The richest grounds were found in localities where a reversal of currents or eddies facilitates the accumulation of fish food.

In conjunction with the survey work, investigations were undertaken regarding the deep water currents and their relation to the abundance of fish food and migrations. Bottom samples have been obtained from various depths down to 1200 fathoms, and water samples and temperatures from intermediate depths. Plankton collections from the surface have also been obtained, particularly to ascertain the distribution of pelagic fish eggs.

A varied and scientifically interesting collection of rare fishes, invertebrates, etc., has also been obtained, and arrangements made with naturalists in various parts of the Commonwealth to classify and mount the specimens.

Reports on the hydrographic, survey, and scientific departments of the vessel's activity are being prepared. At the end of 1911 the first of the zoological results of the fishing experiments of the *Endeavour* was published.

**7. Treatment and Disposal of the Catch.**—It was decided that the wisest method of disposing of the fish was to distribute them to recognised charitable institutions. Clashing with the established industry was thus avoided. Upwards of one hundred charities have benefited.

Upon capture, the prompt gutting and washing of the fish is performed. The necessary records are taken regarding the number, size, food, etc. They are then dried, and stowed in the cool chamber.

Unmarketable fish constitute a considerable proportion of the catch. Experience elsewhere has shewn that fish for which there is no sale for consumption, have a considerable value as material for rich fertilisers, and the extraction of oil. For both these by-products there is a good overseas market.

**8. Possibility and Scope for Future Development.**—The records of the *Endeavour's* cruises are preserved in the departmental office, and there all particulars of the progress of the work are available. The Director's report gives two instances of the remarkable return that experience shews is to be expected to accrue from working the areas examined. A vessel working at Flinders Island with Melbourne as a base would yield profits averaging 40 to 45 per cent., while part of the east coast of New South Wales worked, with Eden as a base, would in one year earn the cost of the trawl and working expenses.

The inadequacy of the present supply of fish is universally admitted, yet all reports agree that there is, on the coast, a bountiful supply of fish. It is not, as in Great Britain and the northern countries of Europe, a popular article of diet, but is rather in the nature of a luxury. While the value of consumption of fish was in Norway 12s., and in Holland, Denmark, and the United Kingdom 5s. per head of population, in Australia it was little over 1s. Moreover, in the European countries named, notwithstanding the fact that the trawlers have generally to go much further afield for their catches, a shilling's worth of fish represents a much larger quantity than could be obtained for the same amount in the Commonwealth, where the wealth of the coastal waters indicates that, with satisfactory handling, the product of the sea would become an article of food for the poorest classes, and a valuable industry would be developed. The uncertainties

and limitations of the market, caused by the irregularity of the supply, will be overcome when the fact is recognised that the ocean product, properly exploited, is adequate to supply the demand, however strong. Under present conditions, it is not surprising that Australians are not great fish-eaters. As a result of the *Endeavour's* experiments, definite steps are being taken to carry out well-considered schemes, which it is hoped will stir up enterprise, and revolutionise the now obsolete and cramped condition of the Australian fish trade.

### § 6. Fish Preserving.

Bounties have been provided by the Federal Government for fish preserving. The amounts paid were £27 in 1907-8; £1727 in 1908-9; £311 in 1909-10; and £115 in 1910-11. The amount available for 1911-12 is £10,000. It is anticipated that the bounties, together with the increased yield that may be expected to result from the fisheries investigations now being conducted, will lead to a considerable output and consumption of locally preserved fish. The abundance of fish in Australian waters offers excellent opportunities for the institution of preserving establishments, particularly in those coastal districts which enjoy a temperate climate. Up to the present but little development has taken place. The establishments for fish preserving at the present time are very few.

#### NUMBER OF FISH-PRESERVING ESTABLISHMENTS IN COMMONWEALTH, 1906 to 1910.

## SECTION XII.

## MINES AND MINING.

## § 1. The Mineral Wealth of Australia.

1. **Place of Mining in Australian Development.**—The value of production from the mineral industry is now considerably less than that returned by the agricultural or the pastoral industry, nevertheless it was the discovery of gold in payable quantities, that first attracted population to Australia, and thus laid the foundation of its nationhood. Prior to 1851, the year when Hargraves' memorable discovery was made, coal and copper had both been mined to some extent, and the existence of deposits of other minerals including gold had been proved. But it was the news of the sensational finds of the precious metal in 1851 and the year immediately following that brought about a constant stream of immigration, and caused an increase in population from 221,000 at the end of 1841 to upwards of 1,168,000 at the end of 1861.

2. **Extent of Mineral Wealth.**—The large production of gold, silver, copper, and tin, the extent of the coal deposits, the presence of large quantities of iron ore, and the great variety of minerals found in appreciable quantities, suggest that the future history of mining will, in all probability, be more remarkable even than that of the past. For the extent of the total mineral wealth of Australia cannot yet be regarded as well ascertained, since the mineral exploration of the country is, after all, still in its infancy. The presence of considerable deposits of valuable minerals has long been known. Thus, coal was discovered in 1797, and a shipload was exported to Bengal in 1799; silver was discovered by Count Strzelecki as early as 1839, and was worked as early as 1864; copper mining dates back to 1844; lead to about 1848; iron to about 1850; while the discovery of gold in payable quantities dates back to 1851. Cobalt, nickel, manganese, chromium, tungsten, molybdenum, mercury, antimony, bismuth, zinc, etc., have all been found, some in fairly large quantities.

Among the more valuable non-metalliferous substances may be mentioned coke, kerosene shale, graphite, alunite, asbestos, diatomaceous earth, clays, ochres, etc.; in building stones, sandstones, syenites, granites, basalts, augite-andesite, porphyries, serpentines, slates, limestones, and marbles; in precious stones, diamonds, emeralds, rubies, sapphires, amethysts, precious opal, turquoise, topazes, garnets, chrysolites, cairngorm, agates, etc. In general it may be said that the variety of Australian mineral wealth is very great.

3. **Value of Production during 1910.**—Compared with the returns for 1909 the total mineral production of the Commonwealth shows an increase in 1910 of over £170,000. The largest advance is exhibited in the figures for New South Wales, where the total was over a million in excess of that for the preceding year. Queensland also shows an increase amounting to upwards of £53,000. The improvement in the States mentioned was, however, counterbalanced by more or less heavy decreases in the remaining States, the return for Western Australia shewing a falling-off amounting to nearly £537,000, while there was a decline in the Victorian yield to the extent of £271,000. In Victoria the decline is attributed to the falling-off in the gold yield, due to diminished returns from the lode mines at Bendigo, Ballarat, Maldon, and Berringa, and the deep alluvial workings at Rutherglen, Creswick, and Clunes. In Western Australia, the principal decreases were in gold and tin, gold alone shewing a falling-off of £529,000, through

exhaustion of the available deposits at some of the principal mines, while the diminished yield in tin is attributable to depletion of the more easily accessible stanniferous wash. In South Australia and Tasmania the production of copper was adversely affected by the low prices ruling for the metal in 1910. In common with the rest of Australia, there was also a falling-off in the gold yield for each of these States.

The value of the production of all minerals raised in each State during 1910 is given in the following table :—

## COMMONWEALTH MINERAL PRODUCTION IN 1910.

Minerals.	N.S.W.	Victoria.	Q'land.	S.A.	W.A.	Tas.	N. Ter'y.	C'wealth.
	£	£	£	£	£	£	£	£

Unenumerated ...	4,493	50	...	15,170	100	530	...	20,343
Total ...	8,449,919	2,629,701	3,708,547	411,862	6,522,263	1,432,193	60,706	23,215,191

\* Not available for publication.

† Including some amount of Wolfram.

It may be pointed out in connection with the figures given in the above table that the totals are exclusive of returns relating to certain commodities, such as stone for building and industrial uses, sand, gravel, brick clays, lime, cement, and slates, which might rightly be included under the generic term "mineral." Valuations of the production of some of these may be obtained from the reports of the various Mines Departments, but in regard to others it is impossible to obtain adequate information. In some instances, moreover, the published information is of little value. Thus, the New South Wales Mines Report for 1910 gives £21,000 as the production of building stone to the end of the year named, but it is explained in a note appended to the table that this sum represents exports only. The Victorian Mines Department estimates the production of building stone as £3,831,000, but the returns are incomplete. It has therefore been considered advisable to discard both totals. By restricting the comparison to the items enumerated above, it is believed that a fairly satisfactory estimate of the progress of the mineral industry can be readily obtained.

**4. Total Production to end of 1910.** In the next table will be found the estimated value of the total mineral production in each State up to the end of 1910. The figures given in this table are also exclusive of the same items referred to in connection with the preceding table.

## COMMONWEALTH MINERAL PRODUCTION TO END OF 1910.

Minerals.	N.S.W.	Victoria.	Q'land.	S. Aust.*	W. Aust.	Tas.	C'wealth.

Coal ...	62,260,508	1,901,927	4,714,973	...	822,424	522,181	70,223,013
Other ...	13,368,512	370,343	1,671,721	1,272,376	74,122	482,534	17,239,608
Total ...	206,740,724	290,998,207	96,067,390	32,130,167	101,463,422	33,800,780	761,200,680

\* Including Northern Territory.

The "other" minerals in New South Wales include antimony, £302,859; bismuth, £125,527; chrome, £101,108; diamonds, £114,343; opal, £1,237,899; oil shale, £2,251,081; and zinc, £4,358,691. In the Victorian returns antimony ore was responsible for £215,784. Included in "other" in the Queensland production were opal, £166,195; gems, other, £161,793; bismuth and wolfram, £735,742; antimony ore, £50,881; manganese, £59,407; limestone flux, £227,335; and ironstone flux, £182,584. The chief item in South Australian "other" minerals was salt, £734,594. In the Tasmanian returns limestone flux was responsible for nearly £100,000.

It will be convenient in the succeeding pages to deal first with gold and the various metals, then with non-metallic minerals and precious stones, and finally to furnish some account of the extent of employment in mining generally.

## (A) METALS.

## § 2. Gold.

**1. Discovery of Gold in Various States.**—The discovery of gold in payable quantities was an epoch-making event in Australian history, for as one writer aptly phrases it, this event "precipitated Australia into nationhood." A more or less detailed account of the finding of gold in the various States appears under this section in each of the preceding Official Year Books, but considerations of space preclude the retention of this matter in the present issue.

**2. Production of Gold at Various Periods.**—In the table hereunder will be found the value of the gold raised each year in the several States and in the Commonwealth from the dates when payable discoveries were first reported. Owing to defective information in the earlier years the figures fall considerably short of the actual totals, for during the first stages of mining development large quantities of gold were taken out of Australia by successful diggers, who preferred to keep the amount of their wealth secret. For South Australia the records in the earlier years are somewhat irregular, and the remark applies to some extent also to the returns for Western Australia and Tasmania.

In New South Wales the yield for 1910 was much below the average, the output from the more important centres, with the exception of Cobar and Hillgrove, showing a considerable falling-off. In Victoria the decrease was mainly due to the falling-off in the returns from the lode mines at Bendigo, Ballarat, Maldon, and Berringa, and the deep alluvial mines at Rutherglen, Creswick, and Clunes. The deficiency in Queensland was due to the reduced returns from Charters Towers, Gympie, and Ravenswood. At Gympie, in common with other centres, the gradual depletion of the richer ore renders increasing attention necessary to the problem of profitably dealing with the low grade material. The fall in the gold production in Western Australia is attributable to a decline in the yield for two or three mines, the most marked decreases being in the Peak Hill, East Coolgardie, and East Murchison fields.

## VALUE OF GOLD RAISED IN AUSTRALIA, 1851 to 1910.

Year.	N.S.W.	Victoria.	Q'sland.	S.A.	W.A.	Tas.	N.T.	C'wealth.

The amount of gold raised in the Commonwealth in any one year attained its maximum in 1903, in which year Western Australia also reached its highest point. For the other States of the Commonwealth the years in which the greatest yields were obtained, were as follows:—New South Wales, 1852, Victoria, 1856, Queensland, 1900, South Australia, 1904, and Tasmania, 1899.

The following table shews the quantity in fine ounces of gold raised in each State and in the Commonwealth during each of the last ten years, the value of one ounce fine being £4 4s. 11½d.

## QUANTITY OF GOLD PRODUCED IN THE COMMONWEALTH, 1901 to 1910.

Year.	N.S.W.	Victoria.	Queensland.	*S. Aust.	W. Aust.	Tasmania.	C'wealth.

\* Including Northern Territory—Production in 1910, 5111 ozs.

3. **Changes in Relative Positions of States as Gold Producers.**—A glance at the figures in the table shewing the value of gold raised will sufficiently explain the enormous increase in the population of Victoria during the period 1851 to 1861, when an average of over 40,000 persons reached the State each year. With the exception of the year 1889, when its output was surpassed by that of Queensland, Victoria maintained its position as the chief gold-producer for a period of forty-seven years, or up to 1898, when its production was outstripped by that of Western Australia, the latter State from this year onward contributing practically half the entire yield of the Commonwealth. New South Wales occupied the second place on the list until 1874, when Queensland returns exceeded those of the parent State, a condition of things that has been maintained ever since. Up to the year 1884 Tasmania and South Australia (including Northern Territory) in turn occupied the position of lowest contributor to the total gold yield of the Commonwealth, but from 1894 onwards the returns from the former State have been in excess of those of the latter. Taking the average of the last ten years the relative positions of each State in regard to the gold production of the Commonwealth were as follows:—

## RELATIVE POSITION OF STATES AS GOLD PRODUCERS, 1902 to 1910.

State.	Annual Average of Gold Production, 1902 to 1910.	Percentage on Commonwealth.	State.	Annual Average of Gold Production, 1902 to 1910.	Percentage on Commonwealth.
	£			£	
Commonwealth ...	14,492,467	100.00	New South Wales	956,949	6.74
Western Australia	7,554,042	53.22	Tasmania ...	256,617	1.81
Victoria	3,013,669	21.24	South Australia *	69,951	0.49
Queensland	2,341,239	16.50			

\* Including Northern Territory.

4. **Methods of Gold Mining adopted in Each State.**—The circumstances of gold mining in the various States are not quite identical, for which reason reference is made to that of each State.

(i.) *New South Wales.* In New South Wales the earlier "rushes" were to surface alluvial or shallow-sinking grounds. Many of these were apparently soon worked out, but there is reason to believe that in some instances payable results would be obtained by treating the rejected wash-dirt on more scientific principles. With the exhaustion of the surface deposits discoveries were made by sinking to what are called deep alluvial leads, representing the beds of old drainage channels in Pliocene times. The first of these deep alluvial leads was discovered at Forbes, in New South Wales, in 1862. The Tertiary deep leads at Gulgong were discovered in 1871. Cretaceous leads occur at Tibooburra, and detrital gold has been found in Permo-carboniferous conglomerates at Tallawang. The method of dredging is at present being extensively used for winning gold from the beds

of running streams, and also in loose river flats and other wet ground where sinking would be impracticable. The system was introduced from New Zealand, where it was originally applied with great success on the Clutha River, and there are now dredges working on practically all the auriferous rivers of New South Wales. Hydraulic sluicing is also employed in several places, the necessary machinery being fitted to a pontoon for convenience in moving from place to place. The quantity of alluvial gold obtained, other than by dredging, amounted to 8505 ozs. in 1910, the chief yields being—Braidwood, 766 ozs.; Windeyer, 660 ozs.; Rockley, 643 ozs.; Hill End, 587 ozs.; and Uralla, 547 ozs. The quantity obtained by dredging was 31,487 ozs.; the largest returns being obtained at Araluen, 10,520 ozs.; Adelong, with 9322 ozs.; Wellington, 4113 ozs.; Braidwood, 3481 ozs.; Sofala, 1259 ozs.; and Stuart Town, 1181 ozs. The dredges in operation during 1910 numbered 70, of which 26 were of the bucket type and 44 were pumping plants. The value of the plants in operation (including recovery plants) was estimated at £364,255. The quantity of gold won from quartz amounted to 133,974 ozs. At the present time the Cobar district is the chief centre of the production from quartz, the yields from the Cobar and Canbelego fields included therein being respectively 37,101 ozs. and 31,433 ozs. Next comes the Hillgrove field, with 9767 ozs.; Wyalong, 9001 ozs.; Wellington, 8601 ozs.; Peak Hill, 6393 ozs.; and Murrumburrah, 5415 ozs.

The table below shews as far as can be ascertained the yield from alluvial and quartz working in each of the principal districts during 1910. Owing to the circumstance that it was impossible to obtain complete returns from the whole of the mine and battery owners the total for the State necessarily falls short of that given in preceding pages.

#### GOLD WON IN NEW SOUTH WALES, ALLUVIAL AND QUARTZ, 1910.

(ii.) *Victoria.* Quartz-reefing predominates in Victoria, although a considerable amount of gold is obtained from alluvial workings, both surface and deep leads. The deepest mines in Australia are found in the Bendigo district, where the two deepest shafts were at the 31st December, 1910, 4614 and 4318 feet deep respectively. Altogether there were at the close of 1910 no less than fifty-three shafts in this district which had reached a depth of over 2000 feet. A considerable amount of attention is given to dredging and hydraulic sluicing, particularly in the Beechworth, Gippsland, Castlemaine, and Ballarat districts, the number of plants in operation at the end of 1910 being 107. The total quantity of gold won from dredge mining in 1910 was 87,156 ounces, and from sluicing 1163 ounces, the total area treated being 704 acres. The yields from alluvial

workings and quartz reefs as returned (in crude ounces) from the chief mining districts of the State during last year were as follows:—

### GOLD WON IN VICTORIA, ALLUVIAL AND QUARTZ, 1910.\*

District.	Alluvial.	Quartz.	Total.
	ozs.	ozs.	ozs.
Ararat and Stawell ... ..	15,003	4,728	19,731

Total ... ..	203,698	390,279	593,977

\* As returned in crude ounces from chief mining districts.

The largest output from lode mines in 1910 was furnished by the Long Tunnel, at Walhalla, with 13,877 ozs.; followed by the Lord Nelson, St. Arnaud, with 11,622 ozs.; the Ajax, Daylesford, with 10,659 ozs.; and the Catherine Reef, Bendigo, with 10,541 ozs. Of the deep alluvial mines the Duke and Main Leads Consols, at Maryborough, produced 16,056 ozs., and the Cathcart, at Ararat, 11,055 ozs. In dredging, the Tewkesbury Amalgamated, at Bright, headed the list with a return of 4161 ozs.

(iii.) *Queensland.* Operations in Queensland are at present chiefly confined to quartz reefing, the yield from alluvial in 1910 being only 6286 ounces, while the quantity produced from quartz was 301,669 ounces; from copper and other ores 120,103 ounces; and from old tailings 13,342 ounces; making a total production of 441,400 ounces, valued at £1,874,955. The yields from the principal fields are given below:—

### GOLD WON IN QUEENSLAND, ALLUVIAL AND QUARTZ, 1910.

(iv.) *South Australia.* In South Australia alluvial gold has been worked for many years in the gullies round Adelaide, while a fair amount of gold has been obtained by this method at Teetulpa, in the northern areas. There are some valuable reefing fields

in the Echunga district, at Mt. Grainger, Barossa, Wadnaminga, Mannahill, etc., but they have not been developed to the extent they deserve. Good stone was discovered a few years ago at Tarcoola, but the present returns are comparatively small. The rich finds at Arltunga in the centre of the continent, within the boundaries of the Northern Territory, have not yielded up to expectations, but the field has not been systematically prospected. It is stated that the gold occurs chiefly in vughs, crevices, and cellular quartz, the latter being at times exceedingly rich. The solid stone is low grade and is not worked. Operations are confined to the vein matter, which is passed through screens, and the larger lumps hand picked, the fines and all that contains vughs or cellular quartz being saved for treatment and the balance discarded. South Australia is not divided into mining districts as is the case in the other States. The Macdonnell Ranges, although within the boundaries of the Northern Territory and coming under the operation of the Northern Territory Mining Act, yet geographically belong to South Australia proper. The total output of gold for 1910 from the Northern Territory amounted to 5111 ounces, valued at £21,711.

(v.) *Western Australia.* In Western Australia the operations are confined principally to quartz reefing, the returns from ordinary alluvial and hydraulic sluicing being comparatively small. Estimates give the average value of ore treated in 1910 as 41.5 shillings as compared with 42.6 shillings in 1909. The total production of gold from all sources during last year was 1,470,632 ounces, of which only 0.4 per cent. was alluvial. Although Western Australia shared in the general decline in gold production which characterised the whole of the Commonwealth in 1910, the prospects at the end of that year were more or less encouraging. Rich discoveries at the Yilgarn field caused an inflow of fresh capital, and this was added to by finds in the Meekatharra, Black Range, Youanmi, and Ora Banda districts. Encouraging results attended deep sinking at the Great Fingall mine, and it is believed that energetic prospecting will be undertaken in the deep levels in the Kalgoorlie district. The production of gold on the various gold-fields during the year 1910 was as follows:—

Kimberley	...	...	...	266	...	...	266
Other goldfields	...	...	...	27	...	846	873
Total	...	...	...	5,726	8,332	1,408,173	1,422,231

The figures in the above table are compiled from returns from the individual mines and are somewhat incomplete ; the total is therefore less than the total shewn on page 487 from mint and export returns.

(vi.) *Tasmania.* The yield from Tasmania is also chiefly obtained from quartz reefing, although there is a little alluvial mining carried on in the Lisle district. The yields as returned from the chief centres in 1910 are shewn hereunder :—

#### GOLD WON IN TASMANIA, ALLUVIAL AND QUARTZ, 1910.

Description.			Northern & Southern.	North-eastern.	Eastern.	Western.	Total.
			ozs.	ozs.	ozs.	ozs.	ozs.
Quartz	...	...	23,473	...	1,434	11,851*	36,758
Alluvial	...	...	199	118	...	127	444

\* Gold contained in blister copper and silver-lead bullion.

The total production equalled 37,048 fine ounces, valued at £157,370.

5. **Remarkable Masses of Gold.**—Allusion has already been made in preceding Year Books to the discovery of “nuggets” and other remarkable masses of gold, but it is not proposed to repeat this information in the present issue.

6. **Modes of Occurrence of Gold in Australia.**—This subject has been alluded to at some length in preceding issues of the Year Book, but considerations of space will not permit of repetition in the present issue.

7. **Place of Commonwealth in the World's Gold Production.**—In the table given below will be found the estimated value of the world's gold production, and the share of the Commonwealth therein during the fourteen years 1897 to 1910. The figures given in the table have been compiled chiefly from returns obtained direct by the Commonwealth Bureau of Census and Statistics from the gold-producing countries of the world.

#### WORLD'S GOLD PRODUCTION, 1897 to 1910.

Year.				World's Production of Gold.	Gold produced in Commonwealth.	Percentage of C'wealth on Total.
				£	£	%
1897	...	...	...	48,196,000	9,890,000	20.52
1898	...	...	...	58,136,000	11,679,000	20.09
1899	...	...	...	63,015,000	14,533,000	23.06
1900	...	...	...	52,086,000	13,578,000	26.07
1901	...	...	...	53,339,000	14,006,000	26.26
1902	...	...	...	60,619,000	14,812,000	24.43
1903	...	...	...	66,761,000	16,295,000	24.41
1904	...	...	...	70,554,000	15,897,000	22.53
1905	...	...	...	76,839,000	15,551,000	20.24
1906	...	...	...	83,180,000	14,632,000	17.59
1907	...	...	...	84,770,000	13,515,000	15.94
1908	...	...	...	90,370,000	13,059,000	14.45
1909	...	...	...	91,910,000	12,605,000	13.71
1910	...	...	...	94,193,000	11,554,000	12.27

While the production of gold in the Commonwealth rose by about 17 per cent. in the fourteen years from 1897 to 1910, the world's total increased by about 95 per cent. in the same period. The following table will be found interesting, as shewing the various foreign countries where the chief increases have taken place during the interval in question:—

#### INCREASE IN GOLD YIELD, VARIOUS COUNTRIES, 1897 to 1910.

Country.	1897.	1900.	1908.	1909	1910.
	£	£	£	£	£
United States ...	11,787,000	16,269,000	19,566,000	20,418,000	19,764,000
Canada ...	1,240,000	5,742,000	2,025,000	1,930,000	2,098,000
Mexico ...	2,045,000	1,884,000	4,137,000	4,582,000	4,930,000
Transvaal ...	11,654,000	1,481,000	29,973,000	30,988,000	31,973,000
Rhodesia ...	800	308,000	2,526,000	2,624,000	2,568,000
Gold Coast ...	85,000	38,000	1,195,000	979,000	780,000
Madagascar ...	8,500	142,000	345,000	434,000	434,000
India ...	1,571,000	1,893,000	2,178,000	2,070,000	2,203,000
Korea ...	208,000	371,000	480,000	390,000	522,750
Japan ...	142,000	290,000	457,000	520,000	518,000
Java ...	24,000	112,000	610,000	630,000	723,000
Costa Rica ...	2,000	31,000	122,000	116,000	96,000

The largest increase was recorded in the Transvaal, where the production nearly trebled itself in the fourteen years 1897 to 1910.

8. **Employment in Gold Mining.**—The number of persons engaged in gold mining in each State during the last ten years is shewn in the following table:—

#### PERSONS EMPLOYED IN GOLD MINING, 1901 to 1910.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'w'lth.
	No.	No.	No.	No.	No.	No.	No.
1901 ...	12,064	27,387	9,438	1,000	19,771	1,112	70,772
1902 ...	10,610	26,151	9,045	1,000	20,476	1,038	68,320
1903 ...	11,247	25,208	9,229	1,000	20,716	973	68,373
1904 ...	10,648	24,331	9,620	1,000	18,804	1,076	65,479
1905 ...	10,309	25,369	10,041	900	18,382	1,207	66,808
1906 ...	8,816	25,304	9,842	900	17,926	988	63,776
1907 ...	7,468	23,291	8,883	914	17,237	953	58,746
1908 ...	6,363	20,853	7,736	1,213	16,075	843	53,083
1909 ...	5,585	18,671	7,150	1,177	17,027	713	50,323
1910 ...	5,247	16,553	6,115	*1,256	16,279	682	46,132

\* Including 306 miners in Northern Territory.

### § 3. Platinum and the Platinoid Metals.

1. **Platinum.**—The existence of platinum was first noted in New South Wales in 1851 by Mr. S. Stutchbury, who found a small quantity near Orange. Since the year 1878 small quantities of the metal have been obtained from beach sands in the northern coastal district. Platiniferous ore was noted in 1889 at Broken Hill. The chief deposits at present worked in the State are situated at Fifield, near Parkes, but the entire production in 1910 was small, amounting to only 332 ozs., valued at £1418, while the total production recorded to the end of 1910 amounted to 11,910 ozs., valued at £22,131.

Operations were somewhat retarded in 1910 owing to the low average rainfall; nevertheless the production was smaller than might reasonably have been expected in view of the rise in price of the metal.

In Victoria the metal has been found in association with copper at the Walhalla Copper Mine in Gippsland. The mine was worked extensively from 1874 to 1881 and then abandoned, but was reopened in 1910. It is stated that there are 70,000 tons of ore in sight, assaying three to four per cent. copper, and containing also platinum and silver.

**2. Osmium, Iridium, etc.**—Small quantities of osmium, iridium, and rhodium are also found in various localities. As far back as 1860, the Rev. W. B. Clarke states that he found native iridium. Platinum, associated with iridium and osmium, has been found in the washings from the Aberfoil River, about 15 miles from Oban, on the beach sands of the northern coast; in the gem sand at Bingara, Mudgee, Bathurst, and other places. In some cases, as for example in the beach sands of Ballina, the osmiridium and other platinoid metals amount to as much as 40 per cent. of the platinum, or about 28 per cent. of the whole metallic content.

In Victoria, iridosmine has been found near Foster, and at Waratah Range, South Gippsland.

#### § 4. Silver.

**1. Occurrence in Each State.**—(a) *New South Wales.* The occurrence of silver in New South Wales was first mentioned by Count Strzelecki in a letter addressed to Captain King, R.N., dated the 26th October, 1839. In his work, "The Southern Gold-fields," published in 1860, the Rev. W. B. Clarke also mentions a discovery of the metal. Since that date silver has been found in a large number of localities throughout the State. The Broken Hill field, the chief lode of which was discovered in 1882 by Mr. Charles Rasp, constitutes one of the richest and most productive mining centres in the world. Further reference to the production from the Broken Hill district will be made on a subsequent page. Amongst other important finds in New South Wales may be mentioned Boorook, near Tenterfield, discovered in 1878; Sunny Corner, originally worked for gold in 1875; Emmaville, 1884; Rivertree, on the Clarence River, 1887; Borah Creek, near Inverell, 1870; Rockvale, 1895.

(b) *Victoria.* Mining for silver is not carried on to any extent in Victoria, the production recorded in the mining returns being chiefly obtained in the process of refining gold, and the same applies in the case of the production from Western Australia.

(c) *Queensland.* In Queensland most of the important gold mines yield also supplies of silver, but the credit of establishing the silver mining industry *per se* belongs to the Ravenswood field, where in 1879 the recovery of a parcel of 40 tons of galena assaying 130 ozs. of silver to the ton, marked the opening of the industry. At Chillagoe in 1884 there were thirty-two silver-lead shows being worked, while during the decade 1885-1895 over 1½ million ozs. were raised at the Mount Albion mine. The Mungana mines are the mainstay of the Chillagoe district, and large deposits of silver and copper are still available in the Lady Jane and Girofla mines. On the Etheridge field silver-lead constitutes a fair proportion of the production, and a group of mines at Mosquito Creek, about twelve miles from Charleston, will considerably aid the output. In 1910 the total quantity of silver produced in Queensland was 861,202 ozs., valued at £92,685.

(d) *South Australia.* In South Australia silver-lead is found in the main range, south of Adelaide. The Wheal Gawl mine, near Glen Osmond, opened in 1841, was probably the first mine worked in the Commonwealth. Silver-lead deposits have also been noted north-east from Farina and west from Beltana. A small amount of silver-lead is also obtained in the Northern Territory.

(e) *Tasmania.* Tasmania is the only State in the Commonwealth besides New South Wales which produces any considerable quantity of silver. The famous Zeehan mine, on the west coast, was discovered in 1885, and the deposits at Heazlewood River in 1887. Both districts are still opening up rich deposits of ore.

2. **Development of Silver Mining.**—In illustration of the development of silver mining in Australia the following table has been compiled, shewing the production of silver, silver-lead and ore, and lead from each State during the years 1881, 1891, and 1901 to 1910:—

**PRODUCTION OF SILVER AND LEAD, AUSTRALIA, 1881 to 1910.**

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	£	£	£	£	£	£	£
1881 ...	...	5,239	13,494	1,182	11,224	...	31,139
1891 ...	3,621,614	6,017	21,879	5,927	250	62,138	3,717,825
1901 ...	1,954,964	6,550	69,234	3,886	7,718	325,335	2,367,687
1902 ...	1,487,837	4,900	72,851	42,063	9,467	387,024	2,004,142
1903 ...	1,539,989	4,898	109,177	10,870	19,153	428,125	2,112,212
1904 ...	2,131,504	4,990	96,418	1,387	45,912	318,971	2,599,182
1905 ...	2,496,709	4,100	102,388	3,244	44,278	415,248	3,065,967
1906 ...	2,864,057	4,980	151,577	12,982	37,612	552,704	3,623,912
1907 ...	4,290,128	4,355	187,870	13,873	26,674	572,560	5,095,460
1908 ...	2,346,941	2,835	206,716	9,030	23,883	322,007	2,911,412
1909 ...	1,839,688	2,310	167,636	673	19,977	298,880	2,329,164
1910 ...	2,110,040	2,090	123,086	907*	20,210	247,576	2,503,909

\* No production in 1910 in Northern Territory.

The figures quoted for New South Wales in the above table represent the *net* value of the product (excluding zinc) of the silver-lead mines of the State. In explanation of the values thus given, it must be noted that the metallic contents of the larger portion of the output from the silver-lead mines in the State are extracted outside New South Wales, and it is considered, therefore, that the State should not take full credit for the finished product. Hence the *net* value referred to above relates to that of the ore, concentrates, and bullion, as declared by the several companies to the Customs Department at date of export. The real importance of the State as a producer of silver, lead, and zinc is thus to some extent lost sight of. The next table, however, which indicates the quantity and value of these metals locally produced, and the quantity and value of concentrates exported during the last seven years, will shew the estimated total value of the yield:—

**VALUE OF PRODUCTION FROM SILVER-LEAD MINES OF NEW SOUTH WALES,  
1904 TO 1910.**

Year.	Value of Silver, Lead, and Spelter produced within the C'wealth.	Value of Concentrates Exported.	Total.
	£	£	£
1904 ...	2,088,784	642,125	2,730,909
1905 ...	2,131,317	1,181,720	3,313,037
1906 ...	2,112,977	1,876,834	3,989,811
1907 ...	2,228,420	3,574,775	5,803,195
1908 ...	2,008,410	2,400,997	4,409,407
1909 ...	1,176,394	2,707,630	3,884,074
1910 ...	1,755,220	3,180,850	4,936,070

As regards silver alone, the following table, which has been prepared on a basis similar to that on which the preceding table was compiled, shews the estimated total quantity and value of that metal yielded by the mines of New South Wales up to the end of 1903 and during the last seven years:—

**ESTIMATED QUANTITY AND VALUE OF SILVER YIELDED BY MINES OF NEW SOUTH WALES, TO END OF 1910.**

Period.	Produced in Australia.		Contained in Concentrates, etc., Exported.		Total Production.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Fine ozs.	£	Fine ozs.	£	Fine ozs.	£
To the end of 1903 ...	82,947,404	13,807,421	104,659,834	18,330,147	187,607,238	32,137,568
1904 ...	7,751,667	920,947	2,945,058	349,891	10,696,725	1,270,838
1905 ...	6,804,934	852,533	3,480,561	436,050	10,285,495	1,288,583
1906 ...	5,575,410	775,409	3,111,013	432,669	8,686,423	1,208,078
1907 ...	5,921,457	795,982	6,228,225	845,845	12,149,682	1,641,827
1908 ...	6,484,288	693,034	5,499,381	587,768	11,983,669	1,280,802
1909 ...	3,717,016	382,605	6,867,775	732,563	10,584,791	1,115,168
1910 ...	5,196,323	561,280	7,608,336	843,257	12,804,659	1,404,537
Total ...	124,398,499	18,789,211	140,400,183	22,558,190	264,798,682	41,347,401

Although no developmental work was done at the Proprietary Mine, which was practically idle throughout the year, the returns from the Broken Hill field for 1910 were considerably in advance of those for the two preceding years. Operations at the Proprietary were confined to retreatment of the surface dumps, but the smelters at Port Pirie were kept busily engaged, large quantities of ore and concentrates having been purchased from other mines and treated. The ore raised from the mines on the Broken Hill field amounted in 1910 to 1,243,684 tons, while the value of the output from all sources was £3,842,630.

In Tasmania the decrease was principally owing to the temporary stoppage of the Tasmanian Smelting Company's works, followed by the closing down of the Magnet and Hercules mines. The output of the Yerranderie field in New South Wales was not so large as in the previous year, operations being restricted owing to transport difficulties.

**3. Chief Centres of Silver Production.**—Broken Hill, in New South Wales, and Zeehan, in Tasmania, are the great centres of silver production in Australasia. The production in Queensland has, however, considerably expanded during the last few years.

(i.) *New South Wales.* (a) *Broken Hill.* The bulk of the production is, of course, from New South Wales, being contributed mainly by the mines in the celebrated Broken Hill district. A description of the silver-bearing area in this district is given in preceding issues of the Year Book.

Although the returns are not complete in all cases, the following table relating to the mines at Broken Hill will give some idea of the richness of the field:—

**RETURNS OF BROKEN HILL SILVER MINES, 1910.**

Mine.	Authorised Capital.	Value of Output to end of 1910.	Dividends and Bonuses Paid to end of 1910.
	£	£	£
Broken Hill Proprietary Co. Ltd. ...	384,000	33,051,904*	9,848,000†
Broken Hill Proprietary Block 14 Co. ...	155,000	3,283,136	459,827
British Broken Hill Proprietary Co. ...	264,000	2,071,243	337,500
Broken Hill Proprietary Block 10 Co. ...	1,000,000	3,685,729	1,235,000
Sulphide Corporation Ltd. (Central Mine) ...	1,100,000	11,142,907†	797,500
Broken Hill South Silver Mining Co. ...	200,000	3,620,500	755,000
North Broken Hill Mining Co. ...	175,000	1,469,487†	291,440

Broken Hill Junction North Silver Mining Co. ...	180,000	960,401†	43,793
Broken Hill South Blocks Ltd. ...	200,000	525,176	...
Broken Hill South Extended Ltd. ...	337,500	150,344	50,000
Totals ...	4,095,500	60,773,882†	13,903,060

\* The value of the ores purchased during 1908, 1909, and 1910 is not included. † Incomplete.  
† Excluding nominal value of shares (£1,744,000) in Block 14, British, allotted to shareholders of Broken Hill Proprietary.

(b) *Yerranderie*. The mines on the Yerranderie field in the Southern Mining District produced 783,295 ozs. of silver in 1910, besides small quantities of gold and lead, the total production being valued at £113,071. It is stated that mining operations are carried on under considerable difficulties owing to the heavy cost of transport, and that the advent of a railway (the construction of which is proposed) would completely change the outlook.

(c) *Kangiarra*. The yield from the Kangiarra field, in the Yass district, consisted of 133,777 ozs. of silver, besides small quantities of other metals, the total production being valued at £69,000.

(d) *Conrad*. The ore raised by the Conrad Mines Ltd., at Howell, in the Tingha division, amounted in 1910 to 23,429 tons, valued at £40,483, of which lead concentrates accounted for £15,220; and copper matte, £22,420.

(ii.) *Tasmania, West Coast*. The silver-lead mines on the west coast are now well established. Amongst the most important are the Mt. Zeehan, Zeehan-Montana, Zeehan-Western, Oonah, Comet, Hercules, Adelaide, North Mt. Farrell, and Tasmanian Copper. The total production of silver-lead ore in 1910 was 51,227 tons, valued at £247,576, the continued decrease since 1907 being due to interruption of work at the Tasmanian Smelting Company's works. The difficulties between the smelters and the producers have now been arranged, and it is hoped that normal conditions will be regained.

(iii.) *Queensland*. The yield for the chief silver-producing centres in 1910 was as follows:—Chillagoe, £37,000; Charters Towers, £12,470; Stanthorpe, £10,000; Etheridge, £9000; and Herberton, £6000.

4. **World's Production of Silver.**—The world's production of silver during the last nine years is estimated to have been as follows:—

#### WORLD'S PRODUCTION OF SILVER, 1902 to 1910.

Year ... ..	1902.	1903.	1904.	1905.	1906.	1907.	1908.	1909.	1910.
World's production* in 1000 fine ozs. ...	163,937	173,222	176,840	181,338	184,552	183,386	212,570	227,291	233,650

\* Add 000 to figures for fine ounces.

Australasia's share in the world's silver production in 1910 was estimated at 14,422,000 ounces, or about  $6\frac{1}{2}$  per cent. on the total production.

5. **Prices of Silver.**—As the production of silver is dependent to a very large extent on the price realised, a statement of the average price per standard ounce paid by the London Mint at various periods and during the last six years is given below.

#### PRICE OF SILVER, 1871 to 1910.

Year ... ..	1871.	1881.	1891.	1901.	1904.	1906.	1907.	1908.	1909.	1910.
Pence per standard oz....	60 $\frac{1}{2}$	51 $\frac{1}{8}$	45 $\frac{1}{8}$	27 $\frac{3}{16}$	26 $\frac{3}{8}$	30 $\frac{7}{8}$	28 $\frac{5}{16}$	24 $\frac{1}{2}$	23 $\frac{11}{16}$	24 $\frac{11}{16}$

During the month of November, 1906, owing to the small sales in New York, and also to the fact that the Indian, American, and Mexican Governments were all buying silver, the price rose to 33 $\frac{3}{4}$ d., the highest realised since 1893, when the average stood at 36 $\frac{5}{16}$ d.

6. **Employment in Silver Mining.**—The number of persons employed in silver mining during each year of the period 1901 to 1910 is given below:—

## NUMBER OF PERSONS EMPLOYED IN SILVER MINING, 1901 to 1910.

Year.	N S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	No.	No.	No.	No.	No.	No.	No.
1901 ..	6,298	...	40	150	...	2,414†	8,902§
1902 ...	5,382	...	100	150	...	2,893†	8,525§

1910 ...	7,999	...	590	125*	21	1,173	9,908

\* Including 60 miners in Northern Territory. † Including copper miners. § Including copper miners in Tasmania.

As the table shews, the bulk of the employment was in New South Wales and Tasmania, the quantity of silver raised in the other States, excepting Queensland, being unimportant.

## § 5. Copper.

1. **Production of Copper.**—The production of copper in the various States of the Commonwealth has been influenced considerably by the ruling prices, which have undergone extraordinary fluctuations. The quantity and value of the production in earlier years and for 1906 to 1910 is shewn in the following tables :—

## PRODUCTION OF COPPER, AUSTRALIA, 1881 to 1910.

\* Including £1196, Northern Territory.

2. *History.*—(i.) *New South Wales.* It is believed that copper was the first metal mined for in New South Wales, the earliest attempts at working taking place about the year 1844. The deposits at Copper Hill, near Molong, were worked in 1845, as well as those in the neighbourhood of Canowindra. In 1847 mining for copper was commenced at the Summerhill Estate, near Rockley. The Rev. W. B. Clarke reported the discovery of copper ores near Marulan in 1851, and at Quidong, in the Snowy River district, in 1852. The Mount Hope field was opened in 1878, Nymagee in 1880, and Lake George in 1882. The principal seat of the copper-mining industry at the present date is in the Cobar district, the value of the deposits there being first recognised in 1869. The value of the output of the Cobar district in 1910 was £282,348, out of a total for the State of £486,527. Operations at the Great Cobar Mines were to some extent interfered with in the early months of the year by the coal miners' strike, but the shortage in production was more than counterbalanced by the increased output later, the total for 1910 being 6248 tons of copper as compared with 4855 in 1909. Owing chiefly to the low price of copper, and the lack of railway facilities, the Nymagee, Shuttleton, Mount Hope and Burruga Mines remained closed down, while operations were conducted on a limited scale only at Girilambone.

From the Grafton Company's mine at Cangai a considerably augmented output was supplied, the production for the year being valued at £41,477. The Kyloe mine, in the Cooma division, contributed materially to the increased output, the production from this mine being valued at £83,372, as against £29,996 in 1909. The Electrolytic and Refining and Smelting Company of Australia Limited, established at Port Kembla, had a successful year, and in view of the increasing business it has been decided to double the capacity of the works. During 1910 the output of electrolytic copper was 9952 tons, most of which was made from blister copper produced at Mt. Morgan, Queensland.

(ii.) *Victoria.* In Victoria copper has been found at Bethanga, Sandy Creek, near Bogong, Walhalla on the Thomson River, and on the Snowy River and at Mount Tara near Buchan. The production shewn in the table was obtained from the old copper mine at Walhalla, which was reopened in 1910.

(iii.) *Queensland.* The first important discovery of copper in Queensland was made in the year 1862, when a rich lode was found near Clermont, on the Peak Downs. A further discovery was made during the same year at Mount Perry. Copper, tin, silver, and gold were found on the Herberton, Walsh, and Tinaroo mineral fields in 1879. The famous Mount Morgan gold mine, discovered in 1882, also produces a considerable amount of copper, the production therefrom in 1910 exceeding that from any other district. As compared with the previous year, the increase in production in 1910 was due principally to the activity at the Mount Elliot mine, at Cloncurry, and the Einasleigh mine, on the Etheridge field. The production in 1910 from the more important districts was as follows:—Mount Morgan, £364,933; Mount Perry, £55,290; Cloncurry, £185,162; Rockhampton, £89,993; Chillagoe, £106,632; Etheridge, £76,132; Gladstone, £28,874.

(iv.) *South Australia.* Taking the entire period over which production extended, the yield of copper in South Australia easily outstrips that of any other State in the Commonwealth. In recent years, however, Tasmania, Queensland, and New South Wales have come to the front as copper producers, as the table on the preceding page will shew. Deposits of copper ore are found over a large portion of South Australia. The Kapunda mine, discovered in 1842 by Messrs. Dutton and Bagot, is situated fifty miles north of Adelaide, and is the oldest copper mine in the State. Up to the end of 1879 the production amounted to 70,000 tons, the metal possessing such a high standard of purity that it always obtained the highest prices in the world's markets. During the nine years 1870 to 1878 the production was valued at £157,000. The Burra Burra mine, located in 1845 by a shepherd named Pickett, is situated about 100 miles north of Adelaide. The original capital invested in this mine was £12,320 in £5 shares, on which no call was ever made, while dividends to the amount of £800,000 were paid. For many years this mine produced from 10,000 to 13,000 tons of ore, averaging 22 to 23 per cent.

of copper. During the 29½ years in which the mine was worked the production was valued at £4,749,000. In 1859 as many as 1170 persons were employed on it. The mine has lain practically idle for many years, but recently there have been attempts at reworking.

Yorke's Peninsula, between Spencer's Gulf and St. Vincent's Gulf, contains a large area of copper-bearing country. The principal mines at Wallaroo and Moonta are situated a few miles from Port Wallaroo, and date back to 1860. For about thirty years the Moonta mines were worked independently, selling their ores to the Wallaroo company. During its separate existence the Wallaroo field produced about £2,600,000 worth of copper, while Moonta yielded £5,396,000, and was the first Australian mining field to produce £1,000,000 in dividends. The amalgamation took place in 1889, and since that year the united properties have produced about £4,281,000 worth of copper. The entire yield from the date of first working is estimated at about £12,500,000. The mines just enumerated represent a very small proportion only of those opened on the copper-bearing areas of the State. Owing to the depression in the price of copper in 1910 mining operations were considerably restricted, except at the old and well-established mines. The Paramatta and Yelta mines, in the Moonta district, have now been acquired by the Government for the sum of £6000.

Copper is also obtained in the Northern Territory; the actual output of ore for the year, however, was only £1196 in value. This poor result was entirely due to the low prices and high cartage rates from outlying fields from which, in the main, copper is produced.

(v.) *Western Australia.* The inception of active mining operations in Western Australia dates from the year 1842, when lead and copper mines were discovered in the Northampton district, but working was carried on in a most perfunctory manner in the early days, sinking being discontinued as soon as the lodes shewed signs of contraction. Rich lodes of copper have been located at Whim Creek, in the Pilbara district, about fifty miles eastward of Roeburne, the copper ore being removed by quarrying. Promising lodes have also been struck at the Irwin mines, between Arrino Springs and the Irwin River. The Kimberley district is intersected in places by copper and lead deposits in association with gold, and a rich lode has been located at Mount Barren, about 120 miles to the eastward of Albany, while various quartz reefs in the Wongan Hills contain copper in association with gold and iron. The centres of production in 1910 were the Phillips River field, with 25,872 tons copper ore, valued at £96,745, and the West Pilbara field, which yielded 8480 tons, valued at £64,861.

(vi.) *Tasmania.* For a long time Tasmania was the largest producer of copper in the Commonwealth, but during the last four years Queensland has occupied the premier position. The cupriferous area in the island State stretches from Mount Lyell, Mount Tyndall, Mount Read, and Mount Murchison, in the western district, to some distance north of the Pieman River. Copper mining has also been started on the north-west coast, notably in the Stowport and Blyth River districts, and some attention has been given to the deposits at Rocky Cape and Boat Harbour. In 1910 the output of the Mount Lyell Mining and Railway Co. Ltd. was 8,193 tons of blister copper, which contained copper valued at £483,806, silver £70,017, and gold £50,367. This company during the year paid £180,000 in dividends. A new copper field at Mount Balfour is attracting considerable attention. A number of sections have been taken up and are being systematically prospected.

The output for the year 1909 was valued at £608,038, which was £1613 less than the previous year, and £261,628 less than that of 1907. Several of the mines which in past years were large producers remained closed down during the whole of 1909, while, taken generally, work at other mines throughout the Commonwealth was, for a variety of reasons, only conducted on a limited scale.

**3. Price of Copper.**—The great variation in price that the metal has undergone is shewn in the following table, which gives the average price in London and New York

during the last ten years. The figures are given on the authority of "The Mineral Industry." Prices of standard and best selected copper are given in preceding Year Books at various periods since 1897.

### FLUCTUATION IN THE VALUE OF COPPER, 1901 to 1910.

Year.	London Price per Ton Standard Copper.	New York. Price in Cents. per lb.	
		* Lake Copper.	Electrolytic Copper.
	£	Cents.	Cents.
1901 ... ..	66.79	16.55	16.11
1902 ... ..	52.46	11.89	11.63
1903 ... ..	57.97	13.42	13.24
1904 ... ..	58.88	12.99	12.82
1905 ... ..	69.47	15.70	15.59
1906 ... ..	87.28	19.62	19.28
1907 ... ..	87.01	20.66	20.00
1908 ... ..	59.90	13.42	13.21
1909 ... ..	58.73	13.34	12.98
1910 ... ..	57.05	13.04	12.74

\* The term "Lake" copper is used to designate all copper sold in the trade as such, regardless of the process by which it is refined.

There is no doubt that the steady rise in the price of copper from the year 1902 onwards caused a large amount of overtrading with consequent unhealthy inflation of values, while the sudden drop in 1908 was directly due to the financial panic in America. It is believed, however, that the increasing demand for the metal in electrical and other industries will, under ordinary circumstances, tend in time to establish prices on a sounder basis, and at higher rates than those quoted for the last twelve months in the table above.

4. **Relationship to World's Production.**—The world's production of copper in 1901 and during the last five years is estimated to have been as follows:—

### WORLD'S PRODUCTION OF COPPER, 1901 to 1910.

Year ... ..	1901.	1905.	1906.	1907.	1908.	1909.	1910.

\* Included with silver miners.

† Excluding Tasmania.

‡ Including 49 miners in Northern Territory.

## § 6. Tin.

1. **Production of Tin.**—The development of tin mining is, of course, largely dependent on the price realised for the metal, and, as in the case of copper, the production has been subjected to somewhat violent fluctuations. The table below shews the production in each of the Commonwealth States during the years 1881, 1891, 1901, and 1906 to 1910:—

## TIN PRODUCED IN AUSTRALIA, 1881 to 1910.

\* Dressed tin ore, about 70% tin. † Tin ingot and ore. ‡ Not available.  
 † Obtained in Northern Territory.

2. **Sources of Production.**—(i.) *New South Wales.* The bulk of the yield in New South Wales comes from the Tingha-Inverell district, the production last year being £103,267, out of a total for the whole State of £228,156. Of the total production in 1910, £158,467, or about 70 per cent., represents the value obtained by dredging. In the Emmaville division the yield of ore was estimated at 788 tons, valued at £76,034, the increase on the previous years' return being due to the satisfactory results of dredging. The known alluvial deposits are, however, being steadily depleted, while the testing of deep alluvial leads has not given very encouraging results. During the year the Sydney Smelting Company at Woolwich produced 847 tons of tin, valued at £127,700, from ore mined in the State.

(ii.) *Victoria.* In Victoria lode tin has been discovered at Mt. Wills, Beechworth, Eldorado, Chiltern, Stanley, and other places in the north-eastern district; and stream tin has been found in a large number of places, including those just mentioned in the north-eastern district. The bulk of the production last year was obtained by dredging and hydraulic sluicing at Toora and Beechworth.

(iii.) *Queensland.* The increased price of the metal in 1910 led to renewed activity in the Herberton district, and several valuable deposits were located. The production from all sources in 1910 amounted to 2953 tons, valued at £243,271, more than half of which was produced at the Herberton mineral field.

(iv.) *Northern Territory.* Valuable lodes of tin are found in the Northern Territory at Mount Wells, West Arm and Bynoe Harbour, and at Horseshoe Creek, south of Pine Creek, but the deposits have not yet been exploited to the extent they deserve. In 1909 there were 355 miners engaged in tin mining in the Northern Territory, and the quantity of tin ores and concentrates exported was 427 tons. This production was largely due to the progress at the Mount Wells mine, where, it is stated, there are enormous bodies of payable material awaiting development.

The metal has also been discovered near Earea Dam in South Australia.

(v.) *Western Australia.* The production of tin ore and ingot for the State during 1910 amounted to 500 tons, valued at £45,129, to which the Greenbushes field contributed 318 tons, valued at £27,974. The Pilbara Goldfield (Marble Bar district) was the only other large contributor.

(vi.) *Tasmania.* Tin mining in Tasmania dates from the year 1871, when the celebrated Mount Bischoff mine was discovered by Mr. James Smith. This mine, which is probably the richest in existence, is worked as an open quarry, and a large proportion of the original hill has been removed in the course of developmental operations. Soon after 1871 deposits were located in the north-east district by Mr. G. B. Bell, while deposits of stream tin were discovered near St. Helens by Messrs. Wintle and Hunt. Further finds were reported from Flinders and Cape Barren Islands, and in 1875 the metal was discovered at Mount Heemskirk. The total production of Tasmania in 1910 was 3701 tons of ore, valued at £399,393, the largest producer being the Briseis Tin Mines Limited, in the North-east division, with a return of 646 tons. The Mount Bischoff mine paid dividends amounting to £39,000, making a total to the end of 1910 of £2,235,000.

3. **World's Production of Tin.**—According to "The Mineral Industry" the world's supplies of tin during each of the last five years were obtained as follows:—

#### THE WORLD'S TIN SUPPLIES, 1906 to 1910.

Total (long tons) ... ..	101,035	99,284	108,833	107,933	104,073

The main users of tin are the manufacturers of tin-plates, while it is also required in conjunction with other metals to produce bronze, brass, Britannia metal, pewter, printers' type, and solder. It is stated that the rising tendency of prices during recent years is due to the fact that production has not been commensurate with the demands for consumption, and also in some measure to the fact that for industrial purposes the metal can be replaced by others to a limited extent only.

4. **Prices of Tin.**—The average price of the metal in the London market for the year 1897 and from 1901 to 1910 was as follows:—

## PRICE PER TON OF TIN, 1897 to 1910.

Year.	Price per Ton.	Year.	Price per Ton.
	£ s. d.		£ s. d.
1897 ... ..	61 8 0	1906 ... ..	180 12 11
1901 ... ..	118 12 8	1907 ... ..	172 12 9
1902 ... ..	120 14 5	1908 ... ..	133 2 6
1903 ... ..	127 6 5	1909 ... ..	134 15 6
1904 ... ..	126 14 8	1910 ... ..	156 12 8
1905 ... ..	143 1 8		

According to "The Mineral Industry" the maximum price obtained for tin during the period 1897-1910 was reached in December, 1906, when the metal was quoted at £195 19s. 9d. per ton.

Recent advices shew that the price of tin has been steadily rising for some time, and it is expected that good values will be maintained sufficiently long to enable a number of new mines in Australia to be properly opened up.

5. **Employment in Tin Mining.**—The number of persons employed in tin mining during each of the years 1901 to 1910 is shewn below:—

## PERSONS ENGAGED IN TIN MINING, COMMONWEALTH, 1901 to 1910.

Year.	N.S.W.	Victoria.	Qld.	S. Aust.	W. Aust.	Tas.	C'wealth

\* In the Northern Territory.

## § 7. Zinc.

1. **Production of Zinc.**—The production of spelter is practically confined to the Broken Hill district of New South Wales, where zincblende forms one of the chief constituents in the enormous deposits of sulphide ores.

Gratifying results have been achieved in the work of the profitable extraction of the zinc contents of the large heaps of accumulated tailings and from the ore raised on the Broken Hill field. The year 1909 witnessed the passing of this problem out of the experimental stage, and the practical solution of the difficulty which has confronted the mining companies for many years. At present not only is the zinc being obtained in a marketable form, but the silver and lead contents are being turned to profitable account. In 1899 the exports of zinc amounted to 49,879 tons; in 1909 they totalled 373,906 tons, valued at £1,041,280; and in 1910, 468,627 tons, valued at £1,289,634, the great bulk of the production being obtained from tailings. The following table shews the production of zinc in New South Wales from 1889 to 1910:—

## NEW SOUTH WALES.—PRODUCTION OF ZINC, 1889 to 1910.

Year.	Quantity of Zinc (Spelter and Concentrates) Produced.	Value.	Year.	Quantity of Zinc (Spelter and Concentrates) Produced.	Value.
	Tons.	£		Tons.	£
1889	97	988	1908	276,720	600,883
1891	219	2,622	1909	373,906	1,041,280
1899	49,879	49,207	1910	468,627	1,289,634
1907	237,219	536,620			

The total quantity of zinc (spelter and concentrates) produced in New South Wales to the end of the year 1910 was 1,782,822 tons, valued at £4,358,691. The average price of spelter per ton in the London market during each of the last five years was £27 1s. 5d. in 1906, £23 16s. 9d. in 1907, £20 3s. 5½d. in 1908, £22 3s. 8d. in 1909, and £23 1s. in 1910.

During the year 1910, 12 tons of zinc, valued at £147, were raised in Western Australia.

## § 8. Iron.

1. **General.**—The fact that iron-ore is widely distributed throughout the Commonwealth has long been known, and extensive deposits have been discovered from time to time at various places in New South Wales, Queensland, South Australia, Western Australia, and Tasmania. It will appear, however, from what is stated below, that until quite recently, little has been done in the way of converting these deposits into a marketable commodity.

(i.) *The Manufactures Encouragement Act 1908.* It was hoped that the passing by the Commonwealth Parliament of the Manufactures Encouragement Act, which came into force on the 1st January, 1909, would assist in firmly establishing the iron industry in Australia on a remunerative basis, both in the smelting of pig iron and in the production of bar iron and steel from Australian ore. The Act referred to provides for the payment of a bounty up to the 30th June, 1914, of a total of £150,000 (not exceeding £30,000 per annum) on all pig iron, puddled bar iron and steel, made from Australian ore and pig iron respectively, and for the payment of bounties up to the 30th June, 1912, to a total of £30,000, on galvanised sheet or plate iron or steel, on wire and wire netting, and on iron or steel tubes or pipes, on the following basis :—

## BOUNTIES PAYABLE ON AUSTRALIAN PIG IRON, BAR IRON, STEEL, etc.

Description of Goods.	Rate of Bounty.	Total Amount which may be authorised.	Date of Expiry of Bounty.
CLASS 1.			
Pig iron made from Australian ore ...	12s. per ton	£150,000	30th June, 1914
Puddled bar iron made from Australian pig iron ...	„		
Steel made from Australian pig iron ...	„		
CLASS 2.			
Galvanised sheet or plate iron or steel (whether corrugated or not) made from Australian ore	10 per cent. on value	£30,000	30th June, 1912
Wire netting, not being prison made and being made from Australian ore or from wire manufactured in the United Kingdom	10 per cent. on value		
Wire made from Australian ore			
Iron and steel tubes or pipes (except riveted or cast), not more than six inches internal diameter, made from Australian pig iron or steel	10 per cent. on value		

Particulars of the bounties paid under the above Act during the half-year ended the 30th June, 1909, and during the financial years 1909-10 and 1910-11 are shewn in the following statement:—

**PARTICULARS OF BOUNTIES PAID ON AUSTRALIAN PIG IRON, BAR IRON,  
STEEL, etc., 1909 to 1911.**

Description of Goods.	Steel made from Australian Pig Iron.	Puddled Bar Iron made from Australian Pig Iron.	Pig Iron made from Australian Ore.	Galvanised Sheet Iron made from Ore.	Wire netting made from wire manufactured in the United Kingdom	Total.
	£	£	£	£	£	£
Half-year ended 30th June, 1909	575	568	2,314	191	...	3,648
1909-10 ... ..	1,491	1,254	23,511	286	6,036	32,578
1910-11 ... ..	1,939	2,080	20,462	122	4,824	29,427
Total ... ..	4,005	3,902	46,287	599	10,860	65,653

So far New South Wales is the only State where bounty has been claimed, and the above figures, taken in conjunction with those in the succeeding table, show that production has not been as rapid as might have been expected. The Government of that State proposes to obtain the services of a well-known Scottish expert to inquire into the quality of the ore deposits, conditions of manufacture, &c.

**2. Production of Iron.**—(i.) *New South Wales.* Reference to the extent of the deposits of iron ore in the State, and the events leading up to the establishment of ironworks at Lithgow will be found in preceding issues of the Year Book: During 1910 the following materials were received at the blast furnace:—Iron ore, 72,825 tons; limestone, 31,890 tons; and coke, 54,619 tons. The output was 40,787 tons of pig iron, valued at £161,948, while 7815 tons of steel ingots were also manufactured. The following table shews the quantity and value of finished iron, pig iron, etc., made in New South Wales during the last seven years, chiefly from scrap iron, but partly from the smelting of iron ore:—

**NEW SOUTH WALES—PRODUCTION OF IRON, 1904 to 1910.**

Particulars.	1904.	1905.	1906.	1907.*	1908.†	1909.‡	1910.§
Quantity Tons	6,303	4,447	8,000	29,902	40,207	29,762	40,487
Value ... £	80,504	85,693	112,848	178,632	118,224	106,357	161,948

\* Includes 18,631 tons pig iron, valued at £60,550, produced from 34,500 tons of iron ore raised within the State. † Includes 30,393 tons pig iron, valued at £98,777, from 51,206 tons of ore raised within the State. ‡ Includes 26,762 tons pig iron, valued at £100,357, from 46,740 tons of iron ore raised within the State. § From ore raised within the State.

The bounty paid in 1909 and 1910 on iron and steel made from ores mined in New South Wales was as follows:—

# BOUNTY PAID ON IRON AND STEEL, NEW SOUTH WALES, 1909 and 1910.

Description.	1909.		1910.	
	Tonnage.	Bounty.	Tonnage.	Bounty.
		£		£
Pig iron ... ..	23,179.50	13,908	40,326.5	24,196
Puddled bar iron ... ..	1,938.50	1,163	3,383.5	2,036
Steel ... ..	1,855.25	1,113	3,410.0	2,046
Total ... ..	26,973.25	16,184	47,120.0	28,278

A quantity of iron oxide is purchased by the various gasworks for use in purifying gas, the output in New South Wales being drawn from the deposits at Port Macquarie and Mittagong. During 1910 the quantity raised was 1351 tons, valued at £714, while the total output to the end of that year was 18,353 tons, valued at £23,607. The quantity of ironstone disposed of for flux in New South Wales during 1910 exhibits a decrease, since the requirements of the smelting companies were diminished, owing to suitable ores being obtained. In 1910 the quantity raised was 1648 tons, valued at £1321, as against 4339 tons, valued at £3471, in the preceding year.

(ii.) *Victoria.* Iron ore has been located at various places in Victoria, particularly at Nova Nova, in the Gippsland district, and at Dookie. A blast furnace was erected in 1881 near Lal Lal, on the Moorabool River, and some very fair quality iron was produced, which was used for truck wheels and stamper shoes in the Ballarat mines. The fall in the price of the metal, however, led to the closing of the works. In his report for 1905 the Secretary for Mines states that without special assistance to the industry there does not seem to be any prospect of the deposits being cheaply worked.

(iii.) *Queensland.* Queensland possesses some extensive deposits of iron ore, which is mined chiefly for fluxing purposes in connection with the reduction of gold and copper ores. During the year 1910, 37,138 tons of ironstone, valued at £35,429, were raised, 33,734 tons of which, valued at £32,876, were procured in the Rockhampton district.

(iv.) *South Australia.* In South Australia iron ore is raised for fluxing purposes only, although the State possesses some rich deposits capable of being mined for an indefinite period. The best known deposit is the Iron Knob, a veritable hill of iron of high percentage, situated about forty miles W.S.W. from Port Augusta. The estimated quantity of iron ore in sight at the Iron Knob and Iron Monarch has been set down at 21,000,000 tons.

(v.) *Western Australia.* This State has some very rich deposits of iron ore, but owing to their geographical position, the most extensive fields at the present time are practically unexploited, the production in the State being confined chiefly to that needed for fluxing purposes. The Murchison field possesses some extensive deposits of high-grade ore. There are also deposits on Koolan Island at Yampi Sound.

(vi.) *Tasmania.* The existence of large quantities of iron ore in Tasmania was noted as far back as 1822, when Surveyor-General Evans alluded to the "surprising abundance of iron within a few miles of Launceston." A company known as the Tasmanian Charcoal Iron Company was formed to work these deposits, and commenced operations in June, 1876. Unfortunately, however, the presence of chromium rendered the pig iron so hard and brittle that the works had to be abandoned. Extensive deposits of specular iron ore are also found in the neighbourhood of the Blythe and Gawler Rivers. The total production of iron ore in 1908 was 3600 tons, valued at £1600, and was all raised by the Tasmanian iron mine at Penguin, but owing to the closing down of that mine in 1909, there has been no further production.

(vii.) *World's Production of Iron, 1910.* The quantity of iron produced in Australia is but a very small proportion of the world's production, which in 1910 amounted to 65,860,000 metric tons (pig iron). The leading position for magnitude of production is held by the United States, which in 1910 produced 27,637,000 tons, compared with Germany's 14,793,000 tons, and the United Kingdom 10,380,000 tons. The position of the three countries named is similar to what it has been for several years past.

## § 9. Other Metals.

1. **Aluminium.**—The ores from which aluminium is chiefly made in other countries are widely distributed in great abundance in New South Wales in the form of hydrous silicate of alumina, which occurs in all clays. In the form of bauxite or hydrous sesquioxide, it is found at Emmaville, Inverell, and Wingello, its existence being first recognised in the last named locality in 1889. The metal, however, has not been manufactured locally.

2. **Antimony.**—This metal is widely distributed in New South Wales, and has been found native at Lucknow, near Orange. Dyscrasite, a silver antimonide, has been found in masses up to one ton in weight in the Broken Hill lodes. It has also been found at various places in Victoria, chiefly in association with gold. In 1910 the export of antimony metal and ore from New South Wales amounted to £1450. The total quantity of antimony ore raised in New South Wales up to the end of 1910 was 16,426 tons, valued at £302,859. Comparatively little attention was given to mining for antimony in New South Wales during 1910 owing to the low price ruling. The metal occurs in large quantities in the Hillgrove division, and can readily be mined extensively should the price warrant operations. The production of antimony ore in Victoria during 1910 amounted to 1262 tons, valued at £6255. The ore was raised by a syndicate operating at Costerfield. In Queensland extensive deposits were discovered at Neerdie, in the Wide Bay district, during 1872, also at Wolfram Camp on the Hodgkinson field, on the Palmer River, in the Ravenswood district, and on the Mitchell River in the Herberton district. The low price of antimony throughout the year 1910 rendered profitable working impossible. In Western Australia good lodes of stibnite carrying gold have been found in the Roeburne district.

3. **Arsenic.**—In the form of arsenopyrite, arsenic is of wide distribution in Victoria, but the deposits are worked to a limited extent only. At Ballarat a small quantity of the oxide is obtained from the flues of roasting furnaces. In New South Wales about 200 tons of arsenic were obtained in 1910 by the Conrad Mines Ltd. at Howell.

4. **Barium.**—A valuable lode of barium sulphate has been discovered near Dalwin, on the North Lyell railway, in Tasmania, and the necessary plant is in course of erection to develop the deposit. It is stated that the lode is from  $2\frac{1}{2}$  to 7 feet wide over a length of over 40 chains.

5. **Bismuth.**—This metal has been found in New South Wales, near Glen Innes, and also in the vicinity of Pambula, its discovery dating from 1877. A large body of bismuth-bearing ore has been located near Oberon, and was being prospected during 1910, while several trial parcels were obtained for treatment from a mine at Kirkdale, in the Yass division. About  $6\frac{1}{2}$  tons of metal and ore, valued at £2004, were exported from New South Wales during 1910; the total quantity exported to the end of that year was 528 tons, valued at £125,527. In Queensland wolfram, molybdenite, and bismuth have been found in various parts of the Herberton and Chillagoe districts, but the chief centres of production are at Wolfram Camp, where they have been found in association, and at Mount Carbine, where chiefly wolfram is mined. Highly payable

deposits of the minerals have been found in shallow ground near Bampton. During 1910 an important new find of bismuth was made at the Glen, near Irvinebank. From the Kangaroo Hills field ore to the value of £2100 was produced in 1910, while the yield of bismuth from the Biggenden Bismuth and Gold Mine was valued at £7100. The total production in 1910, including wolfram, was valued at £14,572. In South Australia deposits are found at Balhannah, at Mount Macdonald, and at Winnininnie, on the shores of Spencer's Gulf. In Tasmania 10 tons, valued at £4249, were raised in 1910 at Middlesex.

6. **Chromium.**—In New South Wales chromium is found at Bowling Alley Point, on the Peel River, and also near Colac, but there was no production in 1910. The total exports to the end of 1910 amounted to 30,663 tons, valued at £101,108. Chrome iron ore is found in Queensland in the Rockhampton district, where the Elgalla mine, at Cawarral, produced 773 tons, valued at £581. A small quantity was also produced near Broadmount.

7. **Carnotite.**—A discovery of carnotite ore was made in 1906 twenty miles E.S.E. from the Olary railway station in South Australia, and steps are being taken to test its value commercially. With this object in view, 30 tons of ore have been sent to Europe for assay.

8. **Cobalt.**—This metal was found at Carcoar in New South Wales in 1888, and subsequently at Bungonia, Port Macquarie, and various other places. During 1910, 9 tons of cobalt ore, valued at £55, were exported, while the total quantity exported from New South Wales up to the end of 1910 was 884 tons, valued at £8065. Deposits have been noted in South Australia near Bimbourie, and South Blinman; in Western Australia at Norseman and Kanowna; and at various places in Victoria.

9. **Lead.**—This metal was first noted in New South Wales in 1849, when small specimens of native metal were found by the Rev. W. B. Clarke. At present lead mining *per se* is not practised to any extent in the Commonwealth, the supply of the metal being chiefly obtained in conjunction with silver. In New South Wales, in addition to the lead contained in silver-lead, ore, and concentrates, 21,195 tons of pig lead (including lead-carbonate and lead-chloride produced from the leaching plants at Broken Hill), valued at £248,561, were produced in 1910, as against 15,476 tons, valued at £186,073, in 1909. In Victoria oxides, sulphides, and carbonates of lead are found in the reefs of most of the goldfields. The deposits are not, however, of sufficient extent to repay the cost of working. In Queensland the deposits are worked chiefly for the silver contents of the ore, the lead produced amounting to 2392 tons, valued at £30,401, of which 986 tons, valued at £12,508, were produced from the mines in the Chillagoe district, while the Etheridge, Herberton, and Charters Towers districts each produced over £5000 worth. At one time South Australia produced a fair amount of lead, £22,303 being raised in 1902, but the production has rapidly decreased, and in 1910, only 20 tons, valued at £260, were obtained.

10. **Mercury.**—In New South Wales mercury was first recorded by the Rev. W. B. Clarke in 1843. Cinnabar has been found in lodes and impregnations at various places, such as Bingara, Clarence River, etc. In the Copmanhurst division a lode yielding encouraging assays is being prospected by the Pulganbar Company. Up to the present the production of quicksilver has been small, the total being only a little over 1000 lbs. Lodes of cinnabar have been found in Queensland at Kilkivan, and at Black Snake, in the Wide Bay district; about four tons were produced between 1824 and 1891. Between O.K. and Mungana several shows have been prospected with encouraging results. Small quantities have been found disseminated over a large area near Willunga in South Australia.

**11. Manganese.**—Ores of this metal occur in considerable quantity in widely separated districts in New South Wales, but the low price of the metal precludes mining to any great extent, and the production to date has been trifling. In Queensland there are extensive deposits at Mount Miller, at Gladstone, and Mount Nansen, near Gympie, the product being utilised chiefly by the Mount Morgan mine. The production from the Mount Miller mine amounted in 1910 to 786 tons of ore, valued at £3106. Small quantities of manganese ore were raised in Victoria during 1910, from mines in the vicinity of Heathcote and Buchan. Extensive deposits of the ore were mined at Boolcunda in South Australia some years ago, but latterly the production has ceased. Deposits have also been noted at Kangaroo Island, Quorn, Tumby, and various other parts of the State. In Western Australia ores of the metal are found widely scattered, the black oxide being especially plentiful in the Kimberley district.

**12. Molybdenum.**—In New South Wales molybdenite (associated with bismuth) is obtained at Kingsgate, near Glen Innes, the export in 1910 being 47 tons, valued at £5667, as compared with 28 tons, valued at £3249, in the previous year. The production in Queensland for 1910 was 106 tons, valued at £12,050, the bulk of which was contributed by the mines in the Chillagoe field.

**13. Radium.**—It is reported that there have been several definite discoveries in Australia of the occurrence of minerals containing radium. The discovery at Olary, in South Australia, of carnotite, which is an alteration product of pitchblende, the compound from which radium is obtained, has already been referred to. In 1910 pitchblende was identified in portion of the workings at Olary, and a specimen, exhibiting a high degree of radio-activity, was obtained. This is the first authentic discovery of the mineral pitchblende in Australia. The deposits of radio-active uranium ores found near Mount Painter are now being mined, and it is hoped that they will prove of economic value as a source of radium. In another case a monazite from Pilbara, Western Australia, has been shewn to give off radium emanations. This mineral has been called "pilbarite." Yet another specimen of mineral having the composition of a secondary pitchblende has been discovered by a prospector. The exact place where this specimen was found is uncertain, but it is believed that it came from the New England district of New South Wales. It is stated that its radio-activity is very marked, the mineral being 1 per cent. more active than the Bohemian variety, and that it contains only such elements as were readily separable from one another by the methods used to obtain pure uranium and radium from Bohemian pitchblende. • Lastly, it is stated that the ores obtained at the Moonta mines, South Australia, contain from one-tenth to one-fifteenth of the amount of radium found in high-grade pitchblende, and that a product having a fairly high degree of radio-activity can be extracted therefrom with comparative ease.

**14. Tungsten.**—Wolfram and scheelite, the principal ores of tungsten, are both mined to a small extent in New South Wales. During 1910 the export of wolfram was 166 tons, valued at £16,258, and of scheelite 151 tons, valued at £15,747. Wolfram was mined chiefly in the Deepwater division, and scheelite at Hillgrove. A mine near Omeo, in Victoria, was developed during 1909, and 18½ tons of concentrates, valued at £1954, were produced during 1910. The Mount Bismarck Wolfram Mining Company, from their mine near Marysville, won 7½ tons of ore, valued at £69. In Queensland, tungsten ores are found in several districts, the chief centres of wolfram production in 1910 being Chillagoe £51,400, and Herberton £29,977. The total production of wolfram in 1910 was valued at £88,116. Small quantities of scheelite were also raised in the districts mentioned. A deposit of wolfram was discovered near Yankalilla in South Australia as far back as 1893, but the production up to date has been small.

In Western Australia a deposit of wolfram has recently been discovered in the West Kimberley district, about 70 miles to the north-east of Derby; two tons, valued at £190, were raised during 1910. Wolfram is mined in Tasmania at Ben Lomond and in the Middlesex district, the production for 1910 being 67 tons, valued at £7280. A rich lode of scheelite has been discovered on King Island in Bass Strait.

15. **Tantalum.**—Tantalite in small quantities has been found in the Greenbushes mineral field of Western Australia for some time past, but recently a lode of fairly extensive proportions was located at the Wodgina tinfield. Up to the end of 1905 the production of this mineral in Western Australia amounted to 73 tons, valued at about £10,000, but early in 1906 it was found that the supply exceeded the demand and production was temporarily stopped; in 1908 a small quantity valued at £400 was exported. About £327 worth was reported as having been raised in the Greenbushes and Pilbara fields during 1909, but none was exported owing to the entire absence of any market. Small quantities of the mineral are also produced in the Northern Territory.

16. **Uranium.**—This mineral has been discovered in South Australia in the country between Mount Painter and Mount Pitts, about 80 miles east from Farina. The uranium ores occur most frequently in the form of torbernite and autunite, and are found over a considerable area. The discovery is therefore of considerable importance, since ores of this mineral are found to a very limited extent in other parts of the world, and uranium is the chief source from which radium is derived.

In addition to the metals enumerated above there is a large number of others occurring in greater or less degree, while fresh discoveries are being constantly reported.

## (B). NON-METALLIC MINERALS.

### § 10. Coal.

1. **Production in each State.**—(i). *Historical.* A historical account of the discovery of coal in each State will be found in preceding issues of the Year Book.

(ii). *New South Wales.*—In the early portion of the year 1910 the coal trade was in a very unsettled state owing to the continuance of labour troubles. The southern collieries did not resume operations till the middle of February, while those in the northern district were idle till March. Under these circumstances, therefore, the total coal production for the year, which amounted to 8,173,508 tons, valued at £3,009,657, may be considered as fairly satisfactory.

(iii). *Victoria.*—During 1910, 369,709 tons of coal were raised, an increase of 241,036 tons on the previous year. A State coal mine was established at Powlett River towards the end of 1909, and its contribution to the total production in 1910 was 201,053 tons. A railway, 27 miles in length, has been constructed from Nyora to the coal-field. There are six shafts at the mine from 30 to 170 feet deep and coal is being raised from five of them. Over 1100 men are employed at the mine and surface works. The township—under the name of Wonthaggi—has been laid out on modern lines, and elaborate arrangements have been made for its lighting and water supply, while State brickworks and quarries have been established. The population of Wonthaggi was given in 1910 as 8000, and the valuation of the borough as £330,000. Other payable seams in this district outcrop about five miles away, near Cape Patterson, and it is believed that the coal-bearing area has an extent of from twelve to fifteen square miles.

(iv.) *Queensland.* The number of collieries contributing to the output in 1910 was 37, and the quantity of coal raised was 871,166 tons, valued at £322,822, as against 756,577 tons, valued at £270,726, for the preceding year. The industry is at present in a very satisfactory position in the northern State, and owing to the wide area over which the deposits stretch, practically no limit can be set to its possibilities of extension.

(v.) *Western Australia.* Six collieries were in operation on the Collie field during 1910, and the output for the year, viz., 262,166 tons, was the highest ever recorded in the State.

(vi.) *Tasmania.* The principal collieries in Tasmania are the Cornwall and Mount Nicholas, the former producing 33,000 and the latter 37,000 tons out of a total yield in 1910 of 82,455 tons.

The quantity and value of coal produced in each State and in the Commonwealth at various periods since 1881, are shewn in the following table:—

### PRODUCTION OF COAL, AUSTRALIA, 1881 to 1910.

1910	3,009,657	189,254	322,822	...	113,699	48,609	3,684,041

In New South Wales the decrease in the output for 1909, as compared with the previous year, was due to labour troubles, and as pointed out previously, the disturbed industrial conditions prejudicially affected the yield in the early months of 1910.

In Queensland the bulk of the increase in 1910 is accounted for by the larger output in the Ipswich and Darling Downs districts, which produced 729,000 tons of coal in 1910 as compared with 643,000 tons in the preceding year.

2. *Distribution and Quantity of Coal in each State.*—(i.) *New South Wales.* Estimates have from time to time been made as to the total quantity of coal available for working in the deposits in New South Wales, and while these naturally differ to some extent, they agree in placing the amount at well over a thousand million tons, without taking into consideration the deposits existing below a depth of 4000 feet. According to Mr. E. F. Pittman, the coal-bearing rocks of New South Wales may be classified as follows:—

## COAL-BEARING ROCKS OF NEW SOUTH WALES.

Geological Age.	Maximum Thickness of Coal-bearing Strata.	Locality.	Character of Coal.
I. Tertiary—Eocene to Pliocene ...	Approx. 100 ft.	Kiandra, Gulgong, and Chouta Bay	Brown coal or lignite.
II. Mesozoic—Triassic ...	2,500 „	Clarence and Richmond Rivers	Coal suitable for local use only.
III. Palæozoic—Permo-Carboniferous	13,000 „	Northern, Southern and Western Coalfields	Good coal, suitable for gas, household and steaming.
IV. Palæozoic—Carboniferous ...	10,000 „	Stroud	Very inferior.

No serious attempt has been made to use the deposits of brown coal or lignite as a source of fuel. The Triassic deposits in the Clarence and Richmond districts contain numerous seams, but the coal is largely intersected by bands, while its large percentage of ash renders it unfit for use as fuel for industrial purposes. Probably these beds extend under the great western plains, but the presence of artesian water precludes the possibility of their being worked. It is in the Permo-Carboniferous division that the great productive coal seams of the State are found, the area which they cover being estimated at about 25,000 square miles. The coal from the various districts embraced in this division differs considerably in quality—that from the Newcastle district being especially suitable for gas-making and household purposes, while the product of the Southern (Illawarra) and Western (Lithgow) is an excellent steaming coal. The Permo-Carboniferous measures have in various places been disturbed by intrusions of volcanic rocks, which in some instances have completely cindered the seams in close proximity to the intrusive masses, while in other instances the coal has been turned into a natural coke, some of which has realised good prices as fuel.

## COAL RAISED IN NEW SOUTH WALES, 1881 to 1910.

District.	1881.		1901.		1905.		1910.

So far back as 1847 the Rev. W. B. Clarke expressed the belief that workable coal would be found in the strata below Sydney, a belief that was also held by subsequent geologists, who based their contentions on stratigraphical and palæontological evidence. The later geologists urged that the Illawarra coal measures of the South Coast district were identical with the Newcastle measures of the Northern district, although it was agreed that the deposits in the neighbourhood of Sydney would probably be found at a considerable depth. Borings were made in several localities close to Sydney, and in 1891 a drill put down at Cremorne Point in Sydney Harbour passed through a seam of coal seven feet four inches thick at a depth of 2801 feet. Unfortunately the site of the bore happened to be in the vicinity of a volcanic dyke, which had cindered the coal near the locality of its intrusion. A second bore was commenced in July, 1892, and in November, 1893, a seam of excellent coal, ten feet three inches thick, was reached at 2917 feet. The results attained led to the formation of a company which acquired land at Balmain, and expended a considerable sum of money in the purchase of plant suitable

for working coal at such a great depth. Sinking operations were commenced in June, 1897, and coal was struck at a depth of 2880 feet on the 21st November, 1901. Up to the present developmental work has not sufficiently advanced to permit of any considerable production. During the year 1910, the colliery passed into other hands, and as the financial conditions have been improved, it is proposed to push on more rapidly with the work of developing the mine.

(ii.) *Victoria.* The deposits of black coal in Victoria occur in the Jurassic system, the workable seams, of a thickness ranging from two feet three inches to six feet, being all in the Southern Gippsland district. The coal is of excellent quality for steaming and household purposes. The full exploitation of the Victorian coal deposits has, however, been rather severely hindered by various obstacles. In the Report of the Royal Commission on the Coal Industry, 1906, these have been summarised as follows:—(a) Labour troubles. (b) Difficulties of working arising from faults, displacements, and thin seams. (c) Increased cost of production as the workings extend. (d) The low price ruling for coal.

As pointed out in a preceding page, however, the production in 1910 was considerably in advance of that recorded in any preceding year.

Deposits of brown coal and lignite of immense extent occur in gravels, sands, and clays of the Cainozoic period throughout Gippsland, Mornington Peninsula, Werribee Plains, Gellibrand, and Barwon and Moorabool basins. In the Latrobe Valley the beds reach a thickness of over 800 feet. When dried, the material makes good fuel, but owing to its excessive combustibility and friability requires to be consumed in specially constructed grates. Attempts have been made to manufacture briquettes from the brown coal, but so far without any great measure of success. At the Melbourne and Altona Colliery Company's mine at Altona, twenty-five men were employed winning brown coal at the end of 1910.

The output of coal from the chief Victorian collieries during the last nine years was as follows:—

#### PRODUCTION OF COAL IN VICTORIA, 1902 to 1910.

Year.	State Coal Mine.	Ontrim Howitt Company	Jumbunna Coal Company	Coal Creek Proprietary.	Silkstone Co-operative Company	Austral Coal.	Other Companies.	Total Production.	Value.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	£
1902	...	114,686	67,876	39,257	2,257	...	1,088	225,164	155,850
1903	...	20,602	18,517	20,727	4,354	...	5,661	69,861	43,645
1904	...	57,328	39,364	22,547	2,014	...	489	121,742	70,208
1905	...	71,989	49,009	27,710	1,624	...	4,804	155,136	79,060
1906	...	74,812	64,222	13,214	3,977	...	4,406	160,631	80,283
1907	...	64,083	61,755	3,762	7,565	...	1,470	138,635	79,706
1908	...	47,633	58,552	...	6,967	...	810	113,962	64,778
1909	2,946	44,156	65,945	3,265	...	10,631	1,230	128,673	76,945
1910	201,053	46,832	61,954	10,968	...	36,052	12,200	369,709	189,254

The separate entries for the various companies refer to production of black coal only, but for 1909, 500 tons of brown coal, valued at £75, which were obtained at Morwell, and for 1910, 50 tons, valued at £12, raised at Morwell, and 600 tons, valued at £265, obtained at Altona, have been included in the total production.

(iii.) *South Australia.* The coal from Leigh's Creek in South Australia is subject to similar disabilities to the Victorian brown coal, and until some means are devised of overcoming these, production will probably languish.

(iv.) *Queensland.* In Queensland the coal-bearing strata are of vast extent and wide distribution, being noted under the greater portion of the South-eastern districts, within 200 miles of the sea, as far north as Cooktown, and under portions of the far western interior. The Ipswich beds are estimated to occupy about 12,000 square miles of country, while the Burrum fields occupy a considerably larger area. At Callide, fifty miles west of Gladstone, a seam of coal free from bands has been struck in a shaft only

sixty feet deep, and borings have proved the deposit to be of considerable magnitude. The beds in the Cook district are estimated to comprise rather more than 1000 square miles, but coal measures extend to the south-west far beyond Laura and to the north of the railway. Extensive beds occur in the basin of the Fitzroy River, in the Broadsound district, and at the Bowen River. Amongst other places where the mineral is found may be enumerated Clermont, the Palmer River, Tambo, Winton, Mount Mulligan, and the Flinders River. A bituminous coal is yielded by the Ipswich seams, those of the Darling Downs yield a cannel, while anthracite of good quality is furnished by the Dawson River beds.

The quantity and value of coal raised in Queensland at various periods since 1861 were as shewn below :—

#### PRODUCTION OF COAL IN QUEENSLAND, 1861 to 1910.

Year ... ..	1861.	1871.	1881.	1891.	1901.	1910.
Quantity ... Tons	14,212	17,000	65,612	271,603	539,472	871,166
Value ... £	9,922	9,407	29,033	128,198	189,877	322,822

At present coal mining in Queensland is in a very satisfactory position, the increasing volume of the trade being chiefly due to the action of the Government in granting concessions to vessels coaling at local ports.

The distribution of production during the last two years was as follows :—

#### QUEENSLAND COLLIERIES, 1909 and 1910.

Collieries	1909.		1910.	
	Tons Raised.	Average Value at Pit's Mouth.	Tons Raised.	Average Value at Pit's Mouth.
Ipswich and Darling Downs ... ..	642,864	s. d. 6 8½	729,012	s. d. 6 11
Wide Bay ... ..	92,573	9 7½	93,055	10 5½
Rockhampton ... ..	15,538.	11 6	14,392	11 9
Clermont ... ..	5,469	4 6	34,707	8 0
Other (Nundah) ... ..	133	...	...	...
Total ... ..	756,577	7 1½	871,166	7 5

The output in 1910 was distributed approximately as follows :—Bunker and cargo coal, 393,000 tons ; Railway and Government Departments, 261,000 tons ; factories, works, etc., 217,000 tons.

(v.) *Western Australia.* The coal seams in Western Australia belong to the Carboniferous, Mesozoic, and Post-tertiary ages. Most of the coal contains a large proportion of moisture, and belongs partly to the hydrous bituminous and partly to the lignite class. The only coalfield at present worked is at Collie, in the Mesozoic beds of the south-west. The coal produced is bright and clean, but very fragile when free from moisture. The record output in 1909 and 1910 is consequent on the establishment of a bunkering trade at Bunbury and Fremantle, which has developed very satisfactorily. The production from this field since 1901 was as follows :—

#### PRODUCTION OF COAL IN WESTERN AUSTRALIA, 1901 to 1910.

Year ... ..	1901.	1904.	1905.	1906.	1907.	1908.	1909.	1910.
Quantity Tons	117,836	138,550	127,364	149,755	142,373	175,248	214,302	262,166
Value £	68,561	67,174	55,312	57,998	55,158	75,694	90,965	113,699

(vi.) *Tasmania.* In Tasmania coal occurs in the Carboniferous and Mesozoic systems, the product of the former class being, however, far inferior to that of the latter. Carboniferous seams occur at the Don, Tarleton, Latrobe, Port Cygnet, Tippagory Range, St. Mary's, and Adventure Bay, the seam at Port Cygnet having a thickness of two feet and being of fair quality. The Mesozoic coal measures are well developed in the Fingal basin, the Cornwall coal from this locality being excellent for household purposes. The chief production of recent years has been furnished by the Mt. Nicholas and Cornwall mines, the quantity raised by these mines in 1910 being 33,000 and 37,000 tons respectively. The quantity of coal raised during the years 1901 to 1910 in the various districts was as follows:—

#### PRODUCTION OF COAL IN TASMANIA, 1901 to 1910.

District.	1901.	1904.	1905.	1906.	1907.	1908.	1909.	1910.

3. *Production of Coal in Various Countries.*—The total known coal production of the world in 1910 amounted to about 1140 million tons (exclusive of brown coal or lignite), towards which the Commonwealth contributed 10 million tons, or less than 1 per cent. The following table shows the production of the British Empire and the chief foreign countries in units of 1000 tons during each year of the period 1901 to 1910:—

#### COAL PRODUCTION, BRITISH EMPIRE, 1901-10.

Year.	United Kingdom.	British India.	Canada.	Australian C'wealth.	New Zealand.	Transvaal.

\* Not available.

Including New Zealand the production from Australasia takes second place amongst the possessions of the British Empire, British India coming first in order.

**5. Export of Coal.**—The exports of coal from the Commonwealth are practically confined to New South Wales.

The total quantity of coal of Australian production (exclusive of bunker coal) exported from the Commonwealth to other countries in 1910 was 1,701,875 tons, valued at £908,969, of which amount 1,700,184 tons, valued at £907,961, were exported from New South Wales. The quantity of bunker coal taken by overseas vessels was 1,159,658 tons, of which 901,480 tons were taken from New South Wales.

(i.) *New South Wales.* In the following table will be found the quantity and value of the exports at decennial intervals since 1881 and during the last five years. The figures for New South Wales are given on the authority of the Mines Department of that State, and include both bunker coal and coal exported from New South Wales to other States of the Commonwealth.

#### EXPORTS OF NEW SOUTH WALES COAL, 1881 to 1910.

Year.	1881.	1891.	1901.	1906.	1907.	1908.	1909.	1910.
Quantity ... 1000 tons	1,030	2,514	3,471	4,962	5,744	6,099	4,394	4,690
Value ... £1000	417	1,307	1,682	2,081	2,662	3,021	2,234	2,459

The principal overseas countries to which coal was exported from New South Wales during the year 1910 were as shown hereunder. The quantity and value refer strictly to exports, and exclude bunker coal.

#### DESTINATION OF NEW SOUTH WALES OVERSEA EXPORTS OF COAL, 1910.

Country.	Quantity.	Value.	Country.	Quantity.	Value.
	Tons.	£		Tons.	£
Chile ...	553,302	303,627	Peru ...	41,796	22,989
Philippine Islands...	199,509	105,194	Hawaii...	64,016	33,842
Straits Settlements	140,620	72,553	United States ...	202,474	111,112
Fiji ...	36,267	17,899	India ...	67,763	32,753
New Zealand ...	228,023	117,974	Java ...	92,343	47,856

The quantity of bunker coal taken from New South Wales by overseas vessels was about 901,000 tons, valued at £493,000.

The distribution of the total output from New South Wales collieries during the last six years was as follows; the particulars given of amounts exported include coal shipped as bunker coal:—

#### DISTRIBUTION OF TOTAL OUTPUT OF NEW SOUTH WALES COAL, 1905 to 1910.

Year.	Exports to Australasian Ports.	Exports to other Ports.	Local Consumption.	Total.
	Tons.	Tons.	Tons.	Tons.
1905 ...	2,066,576	1,651,477	2,914,085	6,632,138
1906 ...	2,260,090	2,701,450	2,664,822	7,626,362
1907 ...	2,379,024	3,364,483	2,914,417	8,657,924
1908 ...	2,715,310	3,383,366	3,048,349	9,147,025
1909 ...	2,200,769	2,192,834	2,626,276	7,019,879
1910 ...	2,478,497	2,211,936	3,483,075	8,173,508

The figures quoted above are given on the authority of the New South Wales Mines Department. Owing to the abolition of the record of interstate trade it is impossible to give the quantities forwarded to each of the States of the Commonwealth.

**5. Consumption of Coal in Australia.**—An estimate of the consumption of coal in the Commonwealth may be arrived at by adding the imports to the home production, and deducting the exports (including bunker coal taken by oversea vessels). The following table shows the consumption of coal in Australia, computed in the manner specified, for the last six years:—

**CONSUMPTION OF COAL IN AUSTRALIA, 1905 to 1910.**

Year.	Quantity of Coal Consumed.			
	Home Produce.	Produce of the United Kingdom.	Produce of Other Countries.	Total.
	Tons.	Tons.	Tons.	Tons.
1905 ... ..	5,468,000	...	8,000	5,476,000
1906 ... ..	5,352,000	1,000	15,000	5,368,000
1907 ... ..	5,954,000	3,000	12,000	5,969,000
1908 ... ..	6,037,000	4,000	11,000	6,102,000
1909 ... ..	5,367,000	2,000	7,000	5,376,000
1910 ... ..	6,897,000	110,000	198,000	7,205,000

The figures for 1910 are, of course, abnormal, the comparatively heavy importation from the United Kingdom and foreign countries being due to uncertainty in the local supply on account of the strike of coal-miners in New South Wales. Of the total importation from foreign countries, India supplied 138,000 tons, and Japan 28,000 tons.

**6. Price of Coal.**—(i.) *New South Wales.* The price of coal in New South Wales has been subject to considerable fluctuation since the date of first production. Up to the end of 1857 the average value of the total output was 11s. 10d. per ton. Next year the value had risen to nearly 15s., declining thereafter until in 1871 the price realised was 7s. From 1872 to 1879 there was a rise in value to 12s. Between 1882 and 1891 the price ranged between 8s. and 10s. From 1891 onwards there was a steady decline until 1898, when the average was 5s. 4d. Henceforward prices rose again until 1902, when 7s. 5d. was the average. A decline then set in until 1905, when the price stood at a little over 6s., followed by a rise of one penny in 1906, and a further rise of eightpence in 1907. In 1908 the average was 7s. 4d.; in 1909, 7s. 5½d.; and in 1910, 7s. 4d. per ton. The price of New South Wales coal depends on the district from which it is obtained, the northern (Newcastle) coal always realising a much higher rate than the southern or western product. The average rate in each district during the last six years was as follows:—

**PRICE OF COAL IN NEW SOUTH WALES (PER TON), 1905 to 1910.**

Year.				Northern District.	Southern District.	Western District.
				s. d.	s. d.	s. d.
1905 ... ..	...	...	...	6 4.15	5 5.03	5 0.15
1906 ... ..	...	...	...	6 5.28	5 6.60	4 10.81
1907 ... ..	...	...	...	7 4.41	5 7.44	4 6.90
1908 ... ..	...	...	...	8 0.78	5 10.91	4 5.52
1909 ... ..	...	...	...	8 3.48	5 11.91	4 9.34
1910 ... ..	...	...	...	8 1.44	6 1.76	5 5.56

(ii.) *Victoria.* In Victoria the average price of coal up to the 31st December, 1890, was 19s. 3d. per ton. In 1895 the price was still as high as 12s. 2d., but in the following

five years there was a serious decline, the value in 1900 being quoted at 9s. 7d. per ton. In 1901, however, there was an astonishing rise, the figure being as high as 14s. 7d. Since that year, however, the price again declined, the average for 1905 being 10s. 2d.; for 1906, 10s.; for 1907, 11s. 6d.; for 1908, 11s. 5d.; for 1909, 12s.; and for 1910, 10s. 6d.

(iii.) *Queensland.* The average annual price of coal at the pit's mouth in Queensland during the period 1901 to 1910 ranged from 5s. 8½d. in 1906 to 7s. 5d. in 1910. Prices in the principal coal-producing districts during the last five years were as follows:—

#### PRICE OF COAL, QUEENSLAND, 1906 to 1910.

District.	Value at Pit's Mouth.				
	1906.	1907.	1908.	1909.	1910.
	Per ton. s. d.	Per ton. s. d.	Per ton. s. d.	Per ton. s. d.	Per ton. s. d.
Ipswich and Darling Downs ...	5 2½	6 1½	6 6½	6 8½	6 11
Wide Bay and Maryborough ...	8 0½	8 4	9 5½	9 7½	10 5½
Rockhampton ...	11 2½	11 6½	11 7½	11 6	11 9
Clermont ...	...	...	...	4 6	8 0

(iv.) *Western Australia.* The average price of the Collie (Western Australia) coal up to the end of 1901 was 9s. 4d. per ton, the price in 1901 being 11s. 7d. In 1902 the average stood at 12s. 3d., and from that time the price fell steadily until 1906, when it was 7s. 7½d. per ton. In 1907, the average price was 7s. 8½d.; in 1908, 8s. 7½d.; in 1909, 8s. 5½d.; and in 1910, 8s. 8d. per ton.

(v.) *Tasmania.* The average price per ton of coal at the pit's mouth in Tasmania was 8s. in 1901. In 1902 it was 8s. 7d.; in 1903, 8s. 9d.; in 1904 and 1905, 9s. 8d.; in 1906, 9s. 9d.; in 1907, 1908, and 1909, 8s.; and in 1910, 11s. 9d.

7. **Price of Coal in other Countries.**—According to a report published by the Board of Trade the average value of coal at the pit's mouth in the five principal coal-producing countries of the world, for the six years ended 1910, was as follows:—

#### PRICES OF FOREIGN COAL, 1905 to 1910.

Year.	United Kingdom.	Germany.	France.	Belgium.	United States.
	Per ton. s. d.	Per ton. s. d.	Per ton. s. d.	Per ton. s. d.	Per ton. s. d.
1905 ...	6 11½	8 7½	10 6½	10 2½	5 8
1906 ...	7 3½	8 11	11 2½	12 2½	5 9½
1907 ...	9 0	9 8½	12 3	13 8½	5 11½
1908 ...	8 11	10 3½	12 11½	13 1½	5 11½
1909 ...	8 0½	10 2½	12 5½	11 8½	5 7½
1910 ...	8 2½	9 11½	*	11 10½	5 10½

\* Not available.

The price of coal at the pit's mouth in the principal British possessions is averaged by the same authority as follows:—

#### PRICE OF COAL, BRITISH POSSESSIONS, 1905 to 1910.

Year.	British India.	C'wealth of Australia.	New Zealand.	Canada.	Transvaal.	Cape of Good Hope.	Natal.
	Per ton. s. d.	Per ton. s. d.	Per ton. s. d.	Per ton. s. d.	Per ton. s. d.	Per ton. s. d.	Per ton. s. d.
1905	3 4	6 2	10 7	9 4	7 3	18 8	8 3
1906	3 11	6 3	10 7	9 4	6 5	18 5	8 6
1907	4 8	6 10	10 7	10 8½	6 0	18 5	9 0
1908	5 3	7 4½	10 4½	10 8	5 10½	16 8½	8 10
1909	4 8½	7 6½	10 10½	10 10½	5 8	14 4½	7 1½
1910	4 1	7 6½	11 1½	10 8½	5 6½	13 7½	6 0

8. **Employment and Accidents in Coal Mining.**—The number of persons employed in coal mining in each of the States during the year 1910 is shewn below. The table also shews the number of persons killed and injured, with the proportion per 1000 employed, while further columns are added shewing the quantity of coal raised for each person killed and injured, this being a factor which must be reckoned with in any consideration of the degree of risk attending mining operations.

Returns published by the Board of Trade, England, give the total known number of persons engaged in mining and quarrying throughout the world as over 6 millions, more than one-half of whom were employed in coal mining, the number in the United Kingdom being 992,000; the United States, 666,000; Germany, 613,000; France, 187,000; Belgium, 143,000; India, 116,000; and Austria, 74,000.

Recent returns shew the rate in the United Kingdom in respect of deaths through accidents in coal mines as 1.43, and for the British Empire 1.48 per 1000 persons employed in coal mines. For France the rate is given as 1.17, for Germany 2.30, and the United States 3.35. For foreign countries generally the rate is stated at 2.48 per 1000.

#### EMPLOYMENT AND ACCIDENTS IN COAL MINING, 1910.

State.	Persons Employed in Coal Mining.	No. of Persons.		Proportion per 1000 Employed.		Tons of Coal Raised for Each Person.	
		Killed.	Injured.	Killed.	Injured.	Killed.	Injured.
New South Wales ...	17,618	21	109	1.16	6.04	389,215	75,000
Victoria ...	1,532	3	22	1.90	14.36	123,236	16,805
Queensland ...	1,823	3	34	1.65	18.65	290,389	25,633
South Australia ...	...	...	...	...	...	...	...
Western Australia ...	521	2	78	4.00	149.71	131,083	3,361
Tasmania ...	248	...	4	...	16.13	...	20,614
Commonwealth	21,742	29	247	1.33	11.36	336,517	39,672

#### § 11. Coke.

1. **Production of Coke.**—Notwithstanding the large deposits of excellent coal in Australia, there is at the present time a fairly considerable amount of coke imported from abroad, the oversea import during the year 1910 amounting to 16,891 tons, valued at £20,630, the bulk of which came from the United Kingdom, Belgium, and Germany, and was taken chiefly by South Australia, Victoria, and Western Australia. The table hereunder gives the production in New South Wales during the last five years.

#### COKE MADE IN NEW SOUTH WALES, 1906 to 1910.

Year.	1906.	1907.	1908.	1909.	1910.
Quantity ... Tons	186,060	254,609	283,873	204,274	282,337
Value, total ... £	110,607	159,316	199,933	137,194	189,069
Value per ton ...	11s. 11d.	12s. 6d.	14s. 1d.	13s. 5d.	13s. 4d.

The falling-off in the returns for 1909 is, of course, due to the shortage of supplies occasioned by the coal strike.

A small quantity of coke is made in Queensland, but the bulk of that used in ore reduction is imported, mainly from New South Wales. The following table shews the amount manufactured locally, and the amount imported during the last five years; the quantities imported include shipments landed from other States of the Commonwealth.

**QUEENSLAND—COKE MANUFACTURED LOCALLY AND IMPORTED, 1906 to 1910.**

Year.	1906.	1907.	1908.	1909.	1910.
Manufactured locally ... .. tons	8,672	8,280	10,684	8,633	11,188
Imported ... .. „	22,661	34,013	58,804	55,559	*32,054

\* Nine months only.

The development in smelting operations in Queensland is reflected in the increased consumption of coke. It must be understood that the coke referred to above is the production of coke-making establishments only, and does not include the inferior article produced at gasworks.

## § 12. Oil Shale and Mineral Oils.

1. **Production of Shale.**—(i.) *New South Wales.* As pointed out by Mr. E. F. Pittman, the name kerosene shale has been rather inaptly applied to a variety of torbanite, cannel, or boghead mineral found at various geological horizons in New South Wales. The mineral does not, as a rule, split in parallel layers, the fracture being rather of a conchoidal type. Pure samples have been found to contain over 89 per cent. of volatile hydro-carbons and over 5 per cent. of fixed carbons. The discovery of the mineral in New South Wales dates probably from 1827, although the first authentic mention by a scientific observer dates from 1845, when its occurrence in the Hartley Vale district was noted by Count Strzelecki. The mineral has been found at several places in the Upper Coal Measures, and in at least two in the Lower Carboniferous. Production on anything like a large scale commenced in 1868, when about 17,000 tons, valued at £48,000, were raised. The production in 1910 amounted to 68,293 tons, valued at £33,896, as compared with 48,718 tons, valued at £23,617, in 1909. With the exception of 1500 tons obtained in the Greta Measures, the whole of the output for 1910 was won in the Western District, chiefly from the mines of the Commonwealth Oil Corporation at Wolgan, and New Hartley, near Capertee. The retorts at Wolgan were ready for operation at the close of the year, while the British Australian Oil Company is erecting works for the production of oil at Hamilton. Up to the end of 1910 the entire production for the State amounted to 1,490,312 tons, valued at £2,251,081.

(ii.) *Victoria.* Up to the present no extensive deposit of oil shale has been located in Victoria.

(iii.) *Queensland.* Deposits of oil shale are known to exist at various localities in Queensland, and what is believed to be a payable oil-bearing area has been located near Roma. In 1907 a contract was let for sinking a bore at this place to search for artesian water, natural gas, or petroleum, to a depth of 4500 feet. In October, 1908, when the bore had reached a depth of 3702 feet, a flow of gas, estimated at over 1,000,000 cubic feet per day, was struck and became ignited accidentally. The fire was extinguished, and after an extra length of casing had been put down the gas was apparently shut off from below. It was then intended to continue the boring till the stipulated depth of 4500 feet was reached, but up to the present this has not been carried out.

(iv.) *South Australia.* In this State large areas of bituminous shale, of which the boundaries are only approximately known, occur at Leigh's Creek and Lake Phillipson. Reference to the mineral known as coorongite is made in sub-section 13.

(v.) *Western Australia.* A deposit of carbonaceous shale of considerable thickness is known to exist at Coolgardie, but the mineral has not yet been raised in any quantity.

(vi.) *Tasmania.* The extensive deposits of oil shale (tasmanite) in the Mersey district were not worked prior to 1910. The known shale area extends over a strip of country about six miles long and two miles wide, but it is probable that the area in which the shale beds occur is more extensive than is at present known. Two companies recently commenced operations in the vicinity of the Mersey, and about 14,000 acres of Crown land were applied for by investors and speculators. The production of shale in 1910 amounted to 364 tons, valued at £214. Kerosene shale of fine quality is found in the country between the Jessie and Flowerdale Rivers, but the extent of the beds has not been proved. The seams are in a series of sandstones and clays, approximately 250 feet thick; one of these seams is 20 inches in thickness.

2. **Export of Shale.**—In 1910 New South Wales exported 9085 tons of shale valued at £16,785, of which 2308 tons were sent to the United Kingdom, 6193 tons to the Netherlands, and 312 tons to India.

3. **Shale Oils Bounties.**—The Shale Oils Bounties Act 1910 provides for the payment of bounties on certain goods manufactured in Australia from Australian shale on or after the 1st July, 1910, and before the 1st July, 1913. The total amount to be made available for bounties under this Act is £50,000. Particulars are given in the following tabular statement:—

**COMMONWEALTH SHALE OILS BOUNTIES—AMOUNT PAYABLE.**

Description of Goods.	Rate of Bounty.	Maximum Amounts which may be paid during the Financial Year 1910-11.	Maximum Amounts which may be paid during each of the Financial Years 1911-12 and 1912-13.	Date of Expiry of Bounty.
Kerosene* ...	2d. per gallon.	£ 8,000	£ 16,000	30th June, 1913.
Refined paraffin wax ...	2s. 6d. per cwt.	2,000	4,000	

\* The product of shale, having a flashing point of not lower than 73 degrees Fahrenheit, determined by the "Abel Pensky" test apparatus in manner prescribed.

During the year ended 30th June, 1911, the Commonwealth Oil Corporation Limited, operating at Hartley Vale, New South Wales, received bounty on kerosene to the amount of £920, and on refined paraffin wax to the amount of £553.

### § 13. Other Non-Metallic Minerals.

1. **Alunite.**—Probably the most remarkable deposit of alunite in the world occurs at Bulladelah, in the county of Gloucester, New South Wales, a large proportion of a low range of mountains in the district being composed of this mineral. The deposits are worked by quarrying, and up to the end of 1910, 34,604 tons had been exported, valued at £102,048, the exports for the year 1910 being 1136 tons, valued at £2840. Supplies of accessible mineral having been largely depleted, the company which owns the quarries is now endeavouring to locate further deposits of a sufficiently high grade to pay for working.

It is reported that large deposits of a high-class alunite have been discovered near Sunbury, Victoria.

2. **Asbestos.**—This substance has been found in various parts of Australia, but up to the present has not been produced in any considerable quantity. In New South Wales the deposits at Jones' Creek, in the Gundagai division, were opened up during the year 1909 and a trial parcel of 15 tons shipped to Germany. It is stated that if reports are satisfactory a plant will be erected and mining operations actively carried on. In Western Australia what may prove to be a valuable deposit of the fibrous chrysotile variety has been located at Tambourah, on the West Pilbara goldfield, and in 1909 £154 worth of this mineral was raised. In 1899 Tasmania raised 200 tons, valued at £363, but there has been no production during the last ten years. Deposits of asbestos of the mountain leather and mountain cork varieties have recently been discovered at Oodlawirra in South Australia.

3. **Barytes.**—In New South Wales during 1910 about 343 tons of barytes, valued at £618, were obtained at Bethungra, in the Cootamundra division, while 100 tons were raised at Cobargo.

4. **Clays and Pigments.**—Valuable deposits of clays and pigments of various sorts are found throughout the Commonwealth. There is a considerable local production of earthenware, bricks, and tiles, but the finer clays have not as yet been extensively used. It is stated that kaolin of a high class has been discovered at Dunbible, near Murwillumbah, in New South Wales; during 1909 these deposits were being opened up, and parcels aggregating 30 tons realised £37 10s., but there was no production in 1910. From Tichborne, in the Parkes division, kaolin is despatched to Sydney for manufacturing purposes, while at Ulladulla about 100 tons of pottery clay were mined. Deposits of steatite near Wallendbeen were worked during 1910, the quantity disposed of during the year amounting to 98 tons. In Victoria 288 tons of kaolin, valued at £202, were raised during 1910, of which 198 tons were raised at Egerton, and the balance at Knowsley and Gordons. In Queensland 4186 tons of fireclay, valued at £1675, were mined during the year 1910. On Kangaroo Island, South Australia, where, it is stated, the first pottery mill in the Commonwealth was erected, there are vast deposits of felspar, china stone, silica, and firebrick clay. There are also very extensive deposits of fireclay near Ardrossan on the Yorke Peninsula, and it is stated that a syndicate has recently been formed to work these deposits. Deposits of ochre have been opened up at Dubbo and Wellington in New South Wales, and ochres and pigments of excellent quality have been produced therefrom. Extensive deposits of iron oxide, giving a return of 80 per cent. ochre, have recently been discovered near Oodlawirra in South Australia.

5. **Coorongite.**—This peculiar indiarubber-like material was first noted many years ago near Salt Creek and in the vicinity of Coorong Inlet, in South Australia. It was thought that the substance owed its origin to subterranean oil-bearing strata, but so far the search for petroleum has not been attended with success.

6. **Fuller's Earth.**—A deposit of this mineral has been located at Boggabri, in New South Wales, and trial samples have realised from £4 to £6 10s. a ton in Sydney. The deposit, which is of considerable extent, is situated in close proximity to the railway, and can, therefore, be handled very cheaply.

7. **Graphite.**—Graphite is found in New South Wales near Undercliff Station, in the county of Buller, but the deposit is not sufficiently pure to prove remunerative. In Victoria the mineral occurs in Ordovician slates in several of the goldfields, but is not worked. In Queensland the mineral was raised some years ago by the Graphite Plumbago Company at Mt. Bopple, near Netherby, on the Maryborough-Gympie line. There is an extensive deposit of the mineral at Mt. Bopple, but the quality is rather inferior. In Western Australia a company has recently been formed to work deposits near Bunbury.

8. **Gypsum.**—This mineral is found at various places in the Commonwealth. There is a large quarry at Boort, Victoria, while in South Australia deposits are being worked at Lake Fowler and near Marion Bay, Yorke Peninsula.

9. **Tripolite, or Diatomaceous Earth.**—Although tripolite has been found at Barraba, Cooma, Wyrallah, and in the Warrumbungle Mountains in New South Wales, the deposits have not yet been worked commercially on any considerable scale. From the deposits at Bunyan, in the Cooma division, 57 tons of diatomaceous earth, valued at £242, were produced in 1910. In Victoria there is a remarkably pure deposit at Lillicur, near Talbot, while beds of the mineral are also met with at Clunes and Portland. From the deposit at Talbot, 500 tons, valued at £2000, were obtained in 1910.

10. **Salt.**—Salt is obtained from salt lakes in the western and north-western districts of Victoria, and from salterns in the neighbourhood of Geelong. Large quantities are also obtained from the shallow salt lakes of South Australia, chiefly on Yorke Peninsula. Lake Hart, about sixty square miles in area, situated about 120 miles N.W. from Port Augusta, contains immense supplies of salt of good quality, which at present, however, owing to distance from market, possess no economic value. The salt is simply scraped from the beds of the lakes in summer time and carted to the refinery. It is stated that care must be taken not to leave too thin a crust of salt over the underlying mud, as the resultant "crop" after the winter rains will in that case be smaller than usual. A bore recently put down near Kingscote, on Kangaroo Island, revealed brine which can be profitably used by evaporation. The production of crude salt in South Australia during 1910 was 54,000 tons, valued at £27,000. In Western Australia supplies are obtained from dried-up shallow lakes and consumed locally or exported. The chief centres of production were formerly Rottnest Island, near Fremantle, and Middle Island, near Esperance, but the greater part of that now produced is obtained at Port Gregory.

11. **Natural Manures.**—In Victoria large quantities of "copi," an impure hydrous sulphate of lime, are obtained in the North-western district. South Australia possesses deposits of rock phosphate near Port Clinton and Ardrossan on Yorke Peninsula, at Belvedere near Kapunda, and at Kooringa, and also at many other places which have only been prospected to a small extent. The production in 1910 was valued at £5200. Although it can hardly be considered a mineral product, mention may be made here of the large accumulations of guano on the Abrolhos Islands, off the coast of Western Australia, in the neighbourhood of Geraldton. The deposits vary in thickness from four to twenty-seven inches. During the years 1876-80 over 36,000 tons were raised; no figures are available shewing the production of recent years.

## § 14. Gems and Gemstones.

1. **Diamonds.**—Diamonds were first noted in New South Wales by E. J. Hargraves in 1851, and in October of the same year by Geological Surveyor Stutchbury. The Cudgong field was discovered in 1867, and shortly afterwards the Bingara diamondiferous deposits were located. None of the diamonds so far discovered have proved of any considerable size, the largest weighing about  $6\frac{1}{2}$  carats. Stones of small size are also found at Cope's Creek and other places in the Inverell district. It is difficult to obtain accurate returns in connection with the production of precious stones, but the yield of diamonds in 1910 was estimated at 3606 carats, valued at £2881, while the total production to the end of 1910 is given as 170,960 carats, valued at £114,343. The yield in 1910 was contributed by miners working in the vicinity of Copeton, in the Tingha division. Small quantities of diamonds are found in Victoria in the gravels of streams running through granite country in the Beechworth district; at Kongbool in the Western District; and near Benalla. The stones are generally small, and the production up to date has been trifling. A few small diamonds have been found in the Pilbara district in Western Australia. In South Australia diamonds have been found on the Echunga goldfield, the most notable gem being Glover's diamond, which was sold for £70.

2. **Sapphires.**—These gems were discovered in New South Wales in 1851, near Burrandong. They have also been found in small quantities near Inverell, and at a few other localities in the State. There is no record of production. Specimens of sapphire have been found in Victoria, but the stones of commercial size are generally of little value owing to flaws.

In Queensland sapphires are found in the gravel of creek beds, between Withersfield and Anakie on the Rockhampton-Winton railway line. The gems show excellent fire and lustre, but the colour is darker blue than the Oriental sapphire. Hyacinths are occasionally found in association with the gems. The production of sapphires in Queensland in 1910 was valued at £21,200, and up to the end of 1910 the total was £161,793.

3. **Precious Opal.**—This stone was first discovered in New South Wales at Rocky Bridge Creek on the Abercrombie River, in the year 1877, and later a most important discovery was made at White Cliffs in the Wilcannia district, which, until recently, contributed the bulk of the production. In 1910, however, out of a total production valued at £66,200, the yield from the Lightning Ridge field near Walgett, amounted to £46,200, while the output from the White Cliffs field was returned at £20,000. At the Lightning Ridge field, operations extended over a large area, and some fine gemstone was won at the deeper levels. The colour and brilliance of the stones generally were quite up to the standard. Occasionally, black opals of very fine quality are found on this field, one specimen weighing  $6\frac{1}{2}$  carats being sold in 1910 for £102.

The total value of opal won in New South Wales since the year 1890 is estimated at £1,237,899.

Small quantities of precious opal are also found in the Beechworth district in Victoria. In Queensland, the first recorded discovery of the gem dates from about 1875. The opaliferous district stretches over a considerable area of the western interior of the State, from Kynuna and Opalton as far down as Cunnamulla. The yield in 1910 was estimated at £3000, and up to the end of that year at £166,500. These figures are, however, merely approximations, as large quantities of opal are disposed of privately to buyers on the fields, no record of which is obtained. At present, the industry is not in a very satisfactory position as the shallower grounds of the older centres have been worked out, and there appears to be little disposition to explore the deeper grounds.

4. **Other Gems.**—Emeralds were found in New South Wales in the year 1890, near the township of Emmaville, the largest specimen found in the district weighing twenty-three carats in the rough. Altogether 2225 carats were sent to London during that year, some of the gems bringing £4 a carat, but the production has since dwindled. The mine at The Glen in the Emmaville division was reopened and worked for a short period during 1908, when about 1000 carats of emeralds, valued at about £1650, were obtained. The largest stone in the rough weighed 60 carats. Amongst other gems found in New South Wales at various times may be mentioned *turquoises*, discovered in 1894, near Bodalla; *topazes*, fine specimens of which have been obtained in the New England district, and *zircon*s and *garnets*. *Turquoises* are also found in thin veins in Victoria, but the deposit is not rich enough to pay for expenses of working. Fine *agates* are found in many places in Victoria, but have not been made use of to any extent. *Garnets* are found in Western Australia, and beautiful specimens of *crocidolite* have been obtained at Yarra Creek in the Murchison district. *Rubies* have been found at various places in New South Wales and Queensland. *Tourmaline* has been found on Kangaroo Island, in South Australia, and *beryls* near Williamstown, Victoria.

### (C). GENERAL.

#### § 15. Numbers Engaged, Wages Paid, and Accidents in Mining.

1. **Total Employment in Mining.**—The number of persons engaged in the mining industry in each State and in the Commonwealth is an index of the significance of the mineral wealth. During the year 1910 the number so employed was as follows:—

## NUMBER OF PERSONS ENGAGED IN MINING, 1910.

State.	Number of Persons Engaged in Mining for						Total.
	Gold.	Silver, Lead, and Zinc.	Copper.	Tin.	Coal and Shale.	Other.	
New South Wales ...	5,247	7,999	2,286	2,028	18,044	1,809	37,413
Victoria ...	16,553	...	40	25	1,532	120	18,270
Queensland ...	6,115	590	2,418	1,932	1,823	1,287	14,165
South Australia ...	950	60	4,150	...	...	1,020	6,180
Western Australia ...	16,279	21	559	326	521	5	17,711
Tasmania ...	682	1,173	2,042	1,598	248	27	5,770
Northern Territory ...	306	65	49	322	...	...	742
Commonwealth ...	46,132	9,908	11,544	6,231	22,168	4,268	100,251

The following table shews the number of persons engaged in mining in the Commonwealth during each of the years 1891, 1901, and 1910, together with the proportion of the total population so engaged:—

## PROPORTION OF PERSONS ENGAGED IN MINING, AUSTRALIA, 1891, 1901, 1910.

State.	1891.		1901.		1910.	
	Miners Employed.	No. per 100,000 of Popu- lation.	Miners Employed.	No. per 100,000 of Popu- lation.	Miners Employed.	No. per 100,000 of Popu- lation.
New South Wales ...	30,604	2,700	36,615	2,685	37,413	2,291
Victoria ...	24,649	2,151	28,670	2,381	18,270	1,425
Queensland ...	11,627	2,934	13,352	2,664	14,165	2,394
South Australia ...	2,683	834	7,007	1,931	6,922	1,726
Western Australia ...	1,269	2,496	20,895	11,087	17,711	6,534
Tasmania ...	3,988	2,695	6,923	4,017	5,770	3,020
Commonwealth ...	74,820	2,341	113,462	2,992	100,251	2,294

**2. Wages Paid in Mining.**—In the next table will be found a statement of the average wages earned by employees in the chief branches of the mining industry in Australia. The value of the figures is rather prejudiced by the wide diversity of conditions, not only in the several States but in different districts of the same State.

The figures quoted for New South Wales in gold mining refer to the Hillgrove district. For copper the figures refer to the Cobar district, and represent rates as awarded by the Arbitration Court. The maximum is paid when copper is £115 per ton or over, and the minimum when the metal is £70 per ton or under, a graduated rate prevailing between the extremes. The rates for silver miners are those ruling at Broken Hill. As regards Queensland the rates for hewing in coal mines are for miners not doing their own wheeling. Where own wheeling is done the rate varies from 2s. 3d. to 5s. 6d. For Western Australia, the rates shewn in gold mining refer to the chief centres only, and are exclusive of Nullagine where much higher rates prevail owing to increased cost of living consequent on the remoteness of the district. Generally speaking, the classification of the labour in the various States does not permit of very satisfactory comparisons.

## WAGES PAID IN MINING INDUSTRY IN THE COMMONWEALTH, 1910-11.

Class of Mine.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.

**§ 16. State Aid to Mining.**

**1. Introduction.**—The development of the mineral resources of the several States is fostered and encouraged by the respective Governments in various ways. It is proposed to deal below only with the more direct and special methods by which assistance is rendered for developmental or other purposes, and not to include herein particulars of certain general developmental works found in nearly all civilised countries, such as geological surveys and schools of mines; there is also, as a general rule in all States, some provision for free assays for prospectors. Particulars as to the total expenditure on mining development in each State from loan funds are given in the section of this book dealing with the subject of *State Finance* (see Section XX. § 4); it should be noted, however, that in addition considerable sums have been spent in some of the States on Government aid to mining out of the consolidated revenue.

**2. New South Wales.**—Though there is no Act in force in this State specifically relating to the provision of loans in aid of mining development and prospecting, various arrangements have been made for rendering financial assistance to prospectors and others.

(i.) *Prospecting Votes.* Since the year 1887 annual appropriations have been made by Parliament “to promote prospecting for gold or other minerals, and to encourage the opening of new goldfields.” The total amount expended under these votes to the 31st

December, 1910, was £416,215. During the year 1910 aid was granted by the Prospecting Board in 208 cases, and refused in 158, while the total amount expended from the vote during the year was £11,280.

(ii.) *Boring Plants.* No special provision exists in New South Wales for the expenditure of funds on boring for minerals, though on several occasions, as, for instance, where the proving of the occurrence of coal in certain localities was considered to be a question of national importance, diamond drills have been provided from special votes.

(iii.) *Government Batteries.* Provision has been made for the erection of crushing batteries by the State, and also for assistance to prospectors in the erection of plants. In the latter case the amount advanced is to be repaid by agreement with the Secretary for Mines.

3. *Victoria.*—State assistance to mining in Victoria is provided for by the Mining Development Acts, 1896 to 1911. The original Act provided for the advances and grants to be made out of the sum of £140,000 raised by the issue of Treasury bonds, but an amending Act of 1898 provided that they should be paid also out of any moneys authorised from time to time. Various Acts have been passed for the appropriation of money, generally out of surplus revenue, for mining development or for special purposes in connection therewith, such as the equipment of Schools of Mines, the purchase of cyanide patents, of a metallurgical laboratory, or of boring machinery. A considerable amount of boring for the purpose of locating mineral deposits is also carried out by the Government.

(i.) *Advances to Miners for Prospecting.* Any two or more persons in combination may apply for an advance not exceeding £250 for the purpose of assisting them to prospect for any minerals or metals, and, subject to the usual evidence as to *bona fides*, undertakings to secure repayment, and proof of previous expenditure of £1 for every £1 granted, the Minister may recommend the granting of the loan.

(ii.) *Advances to Companies for Development of Mining.* Under Part I. of the Act of 1896, a company may apply for a loan for the purpose of (a) carrying on pioneer mining, (b) procuring and erecting machinery, and (c) providing all works necessary for carrying on such pioneer mining. The loans to any one company may not exceed £10,000, and are subject to the same conditions as advances to miners (see (i.) above). Under the amending Act of 1908 a sum of not more than £50,000 is authorised to be advanced by way of loan to companies for development of deep alluvial or of deep quartz mining. Evidence and information must be furnished by an applicant for a loan as to the history of the company, the nature of the land upon which it is intended to carry on mining operations, the machinery and appliances which it is proposed to use, and as to the estimated cost of such machinery; and a statement must be provided shewing the period of time over which the advance is to extend. Applications are referred by the Minister to the Government Geologist for report and are then dealt with by the Executive Council. Interest on loans at the rate of  $3\frac{1}{2}$  per cent. per annum must be paid half-yearly, and the payments to the Treasurer form a first charge on the profits and assets, except uncalled capital, of the company.

(iii.) *The Establishment of Plant for Testing Metalliferous Material.* Government testing plants may be established only in districts where there is no battery where ore is crushed or dealt with for payment. If the Minister be of opinion that there is a necessity in the interest of the mining industry for the establishment of a testing plant in any district, he may submit to the Treasurer such evidence as in his opinion is sufficient to justify the expenditure necessary to procure and erect the same, and the Treasurer may recommend the Governor to grant, and the Governor may grant, the necessary funds. The purchase, transport, erection, and removal of any testing plant, and the rates to be charged for its use must be in accordance with regulations made under the Act.

GRAPHS SHEWING VALUES OF PRINCIPAL MINERALS PRODUCED IN THE  
COMMONWEALTH, 1842 to 1910.

(See pages—for total mineral production, 484; gold, 486; silver, 494; copper, 497; tin, 501; coal, 511.

EXPLANATION OF GRAPHS—The values shewn in the above diagrams are those of the total Commonwealth production of the most important minerals in successive years from 1842 to 1910.

The base of each small square represents an interval of one year, and the vertical height represents, in the case of gold £300,000; copper, £120,000; silver, lead, etc., £100,000; coal, £40,000; tin, £25,000; and total mineral production, £800,000.

The names of the various minerals are written on the graphs which respectively represent them, and the distinctive types of line used are exhibited in detail in the central portion of the diagram.

Of the twenty-four batteries which had been erected by the Government up to the end of the year 1910, sixteen have been managed by local committees, without expense to the Mines Department as far as the cost of working is concerned, while the remaining eight were worked directly under the supervision of departmental officers. The quantity of ore treated during 1910 was 2827 tons for a yield of 2349 ozs. of gold, shewing an average of 16½ dwts. per ton. The total cost of working and maintenance during the year amounted to £2982, and the sum received from the public for crushing was £841, giving a net cost of £2141. From 1897, when the first battery was erected, to the end of 1910, a total of 36,074 tons, yielding, 22,313 ozs., has been treated. A sum of £22,705 has been spent on the erection of the twenty-four plants; the amount received for crushing was £7905, and as the cost of maintenance was £30,012, the net cost amounted to £22,107.

Diamond drills are hired out by the Government under specified conditions to companies at a rental of from £2 to £4 per month according to size and kind of drill, £200 being lodged as security to cover breakages, and hand-boring plants are also hired under similar conditions at a rental of 10s. per month.

(iv.) *Construction of Roads and Tracks for Mining.* Under Part II. of the Act of 1896 the Minister may, subject to certain conditions, on the application of the council of any shire situated in an outlying or mountainous part of Victoria, construct a road suitable for the transport of mining machinery and appliances to any locality where mining is being carried on by more than one company, or by holders of miners' rights.

(v.) *Construction of Races and Dams.* Under Part IV. of the Act of 1896 the Minister is empowered, subject to the report of the Government Geologist and the Chief Engineer of Water Supply, and to the approval of the Treasurer and Governor in Council, to construct races and dams for working alluvial deposits for gold, to divert water for such uses subject to all existing rights, and to make regulations for the payment of rates for the use of the water.

(vi.) *Dissemination of Information.* Part VI. of the Act of 1896 provides that if the Minister be of opinion that it is advantageous to expend money for the purpose of disseminating information in Great Britain and other countries as to the mining resources of Victoria, and for holding in Victoria a public exhibition of mining machinery and appliances, he may recommend the Governor through the Treasurer to grant moneys necessary for the purpose.

(vii.) *Expenditure on Government Aid to Mining.* The following statement shews the total expenditure under the Mining Development and Surplus Revenue Acts up to the end of the year 1910 :—

#### VICTORIA.—EXPENDITURE ON GOVERNMENT AID TO MINING

TO END OF YEAR 1910.

Particulars.	Advances to Mining Com- panies.	Advances to Pros- pectors.	Boring for Gold and Coal.	Roads and Tracks.	Erection of Testing Plants.	Mis- cellaneous.	Total.
Amount	£ 142,977	58,429	59,231	69,425	22,705	48,224	400,991

In addition, the expenditure from votes from the 30th June, 1904, to the 30th June, 1910, was £76,771 on boring for gold and coal, and £16,417 on testing plants.

The repayments by companies of the loans advanced amounted on the same date to £17,851, and by parties of miners to £1977. A sum of £5292 has been repaid for part of the cost of boring, and also hire of plant and loss of diamonds. Several companies have

discontinued operations, and their security in the way of plant was taken possession of and sold for a total of £13,956. The amount of loans was, however, £30,626, and thus a loss of £16,670 was incurred.

4. **Queensland.**—Special assistance granted to the mining industry in this State may be conveniently dealt with under the headings specified below:—

(i.) *Assistance to Prospectors.* Assistance is granted in connection with sinking wells and providing equipment or rations for small parties of miners, and in some cases for prospecting or developing lodes. Such assistance is granted directly by the Minister, sometimes to a local authority, sometimes through the warden, and sometimes to miners or progress associations.

(ii.) *Grants for Roads and Bridges to Gold and Mineral Fields.* These grants are made either for the purpose of repairing existing roads and bridges or of constructing new ones; they are made with Executive approval, generally to local authorities.

(iii.) *Loans in aid of Deep Sinking.* These loans are made with the approval of the Executive in order to prove lodes at a depth or for diamond drilling.

(iv.) *The Mining Machinery Advances Act 1906.* Under this Act loans may be made for (a) procuring and erecting machinery for carrying on mining operations, or (b) procuring, erecting, or removing and re-erecting plant for treating minerals. Loans are granted by the Minister on the approval of the Governor in Council, interest at a rate not exceeding 5 per cent. per annum being charged. There is no limit to the amount which may be advanced, but the borrower must contribute £1 for £1 towards the work for which the loan is granted. The borrower must also execute a bill of sale or mortgage over the machinery or property, but the moneys advanced are not recoverable against the borrower personally, but only against the secured property.

(v.) *Amounts Granted or Advanced, 1910.* The total amount granted or advanced under the several systems above mentioned to the end of 1910 was as follows:—

**QUEENSLAND.—PARTICULARS OF AMOUNTS GRANTED OR ADVANCED, 1910.**

Purposes for which Granted, etc.	Prior to 1910.	During 1910.	Total to end of 1910.
	£	£	£
Assistance to prospectors ... ..	30,398	1,391	31,789
Grants for roads and bridges ... ..	15,314	3,732	19,046
Loans in aid of deep sinking ... ..	58,050	4,770	62,820
Advances under Act of 1906 ... ..	3,751	763	4,514
Total ... ..	107,513	10,656	118,169

In addition special sums are occasionally granted or advanced in certain cases; for example, in 1908 sums of £2460 and £306 were advanced for the purposes of oil boring and coal prospecting, respectively; while in 1910, there was a special allowance of £3505 for boring for coal.

5. **South Australia.**—By regulations made in February, 1894, and amended in January, 1899, under Part VI. of the Mining Act of 1893, provision is made for State aid to mining by way of:—(i.) Rewards to discoverers, (ii.) subsidies, and (iii.) loan of boring plant.

(i.) *Rewards to Discoverers.* Rewards may be paid to the discoverer (being the holder of a miner's right) of any new mineral district, or of any new and valuable

deposits of metals, minerals, coal, or oil. The amount of the reward depends upon the distance of the discovery from the nearest payable mineral deposits already worked, and upon the number of men employed on the new field within six months after the report of the discovery has been made; the reward may not in any case exceed £1000. No rewards have yet been granted.

(ii.) *Subsidies.* Applications for subsidies may be made by any person engaged in deep sinking, prospecting, or mining. No subsidy may exceed 100 per cent. on the amount proposed to be expended by the applicant, and the total grant to any one person or company may not exceed £1000. Fifty per cent. of the net profits must be applied in payment of the subsidy, and a bill of sale of all chattels belonging to the applicant and used in connection with the mine must be executed. If an applicant for assistance is mining on private land, the granting of a subsidy is subject to additional conditions. The total amount advanced by subsidies up to the 30th June, 1911, was £53,822; while the total repayments to date amounted to £6112. Portion of the outstanding debit is represented by machinery that has fallen into the hands of the Government.

(iii.) *Loan of Boring Plant.* The regulations also provide for the loan of diamond drills. There are two Government boring plants in South Australia, the capital expenditure thereon up to the 30th June, 1909, amounting to £6057.

(iv.) *Government Batteries and Cyaniding Plants.* There are four Government batteries and cyanide works in South Australia, the capital cost thereof amounting to £14,319. Up to the end of the year 1910 the total quantity of ore treated by these plants amounted to 18,338 tons, from which 15,207 ounces of gold, valued at £55,669, were extracted.

**6. Northern Territory.**—In the Northern Territory, Government assistance in the form of free rations is granted to prospectors and free assays are made. There are three Government boring plants, and two batteries and cyanide plants (both the latter being situated in the Macdonnell Ranges). The total amount of ores treated at the batteries up to the end of 1910 was 11,349 tons, from which 14,067 ounces of gold, valued at £52,133, were recovered.

**7. Western Australia.**—In this State, Government aid to mining is provided both under the Mining Development Act 1902 and under a more general vote for developmental purposes. A large amount of general developmental work has been carried out by the Government, particularly in regard to water supply; particulars of the eastern goldfields water supply scheme may be found in the section of this book dealing with *Water Conservation and Irrigation* (see Section XIV. § 1). The Act of 1902, referred to above, is in many respects similar to the Victorian Act of 1896; its chief provisions may conveniently be considered under the headings indicated below.

(i.) *Advances to Prospectors.* The Minister may, after obtaining a report from a professional officer, grant a loan not exceeding £300 to any miner who applies for assistance to enable him to prospect for gold or minerals. An applicant must furnish the necessary descriptions, statements, and information, verified by statutory declarations, and for every £1 advanced the borrower must expend £1 in work, labour, or material.

(ii.) *Advances for Pioneer Mining.* The purposes for which, and the conditions upon which, advances may be made are similar to those specified under Part 1 of the Victorian Act of 1896 (see 3 ii. above); the amount advanced to any one borrower is limited to £1000.

(iii.) *Establishment of Testing Plants.* Plant for crushing, ore-dressing, cyaniding, or smelting may either be established by the Minister or he may subsidise companies who are willing to erect and work such plant for the public at prescribed rates. Any such plant may only be erected in a district (a) in which large deposits of ore exist,

(b) where existing plant for treating deposits in bulk at reasonable rates is not available, and (c) where the establishment of such plant is necessary for the development of mining.

In 1910 there were thirty-four State batteries and twenty-four cyanide plants in operation; there were also five slime plants and two tin-dressing plants. The total amount expended on the erection of State batteries up to the end of 1910 was £91,982 from revenue, and £192,319 from loan, giving a total of £284,301. During the year receipts amounted to £75,975, and working expenditure to £77,458.

The total value of gold and tin recovered to the end of 1910 at the State plants was £3,480,671, resulting from the treatment of 784,407 tons of gold ore and 45,492 tons of tin ore.

(iv.) *Assistance for Boring.* Subject to certain conditions the Minister may agree to pay not more than half the cost of boring either for gold, minerals, or water, and with the approval of the Governor and after receiving a report from the proper officer that such boring is in the general interest of the State, he may pay the whole cost.

(v.) *Miscellaneous.* The Minister may advance or himself expend moneys (a) to drain any area, (b) to assist mining by sinking or cross-cutting; (c) to sink shafts for minerals at great depths, and (d) to provide means of transport for miners to prospect unproved country.

(vi.) *Particulars of Advances, 1910.* The following statement shews the sums advanced during the year 1910 under the provisions of the Mining Development Act:—

**WESTERN AUSTRALIA.—ADVANCES MADE IN 1910 UNDER MINING DEVELOPMENT ACT, 1902.**

Particulars.	Advances in Aid of Mining Work and Equipment of Mines.	Advances in Aid of Boring.	Subsidies to Crushing Plants.	Providing Means of Transport.	Total.
Amount... £	4,873	276	930	202	6,281

In addition to the above, amounts totalling £1620 were expended from the Mining Development Vote on various matters, such as water supply, roads, subsidies to assist cartage of ore, drainage, timber tramways, and subsidies for development work done below the 100 feet level in small mines. Subsidies to the extent of £1240 were paid to private crushing plants, the condition being that they crush for the public at fixed rates. The receipts under the Mining Development Act, exclusive of interest payments, amounted to £2333 for refunds of advances, £141 for sales of plant, and £728 miscellaneous—a total of £3202.

8. *Tasmania.*—In Tasmania provision is made for State aid to mining under the Deep-Sinking Encouragement Acts 1899, 1900, and 1901. Under these Acts sums of £5000, £2000, and £1000 respectively were provided for assisting persons and companies to sink shafts or to drive tunnels below a specified depth, the amount advanced in any particular case varying according to the amount expended by the borrower. The total amount advanced to October, 1909, was £6861, granted to five companies in sums ranging from £682 to £1452, leaving an unexpended balance of £1139. None of the companies to whom the advances were made has been successful, and consequently none of the sums advanced, which were to be repaid out of profits, has been refunded. A sum of £200 was placed on the estimates for 1910-11 for the purpose of assisting prospectors, the money to be expended on the £ for £ principle, not exceeding £50 in any one case.

## SECTION XIII.

## MANUFACTURING INDUSTRIES.

## § 1. General.

1. **Industrial Progress.**—The statistics of manufactures in the Commonwealth during recent years shew that many industries have now been permanently established on a secure basis, and also indicate a consistent progress both in regard to the extension of existing industries and the establishment of new ones. The scale on which many manufactories are established in Australia naturally appears small in comparison with that of similar establishments in older countries of the world; but it should be remembered that the scope of Australian manufactories is necessarily limited by the comparative sparseness of the population, and that, prior to 1901, development was retarded by the existence of intercolonial tariffs.

(i.) *The Gold Discoveries, 1851.* During the period prior to the gold discoveries (1851) little was done in regard to manufacturing industries in Australia. Such industries as had then been established were chiefly connected with the preparation of food-stuffs, and were to a large extent called into being by the isolated position of the country. It was found that, owing to the comparatively high prices which could be obtained for the products of the pastoral industry, those engaged in such pursuits in Australia could compete successfully in the world's markets. Owing to the sparseness of its population and to the distance of Australia from the world's centres of distribution, there was but little incentive towards any decided progress in agriculture, which was accordingly for many years almost entirely subsidiary to sheep and cattle raising. With the adoption of improved methods of agriculture, however, there were signs of an early extension in the cultivation of wheat, when the discovery of gold in 1851 completely changed the economic aspect in Australia and effected a revolution in all industrial relations. The large towns were practically depleted of their male able-bodied population, and the first effect of the gold rush upon manufacturing industries was disastrous. The supply of labour in many occupations was exhausted, and most branches of industry came to a standstill. There was, however, a rapid change. A decline in the activity of the gold-fields threw many immigrants, whose early lives had been passed in English cities, out of employment. The surplus of labour thus engendered accumulated in Melbourne and a few other large towns, establishing incipient artisan communities. This no doubt intensified the early impulses towards industrial employment. In Victoria, in particular, it was sought to encourage the investment of capital in manufacturing enterprises by the establishment of protective customs duties. Manufacturing industries were revived on a larger scale than formerly, and the population attracted by the discovery of gold remained in Australia and furnished the labour necessary to operate the factories thus established.

(ii.) *Later Progress.* Soon after the discovery of gold, the construction of the first railways (1854) and the re-establishment of regular steamship communication with Europe (1856) helped to encourage the nascent industrial activity. The Colonies of New South Wales and Victoria, which had recently (1855) received the benefits

of responsible government, soon turned their attention to the settlement of an agricultural population on the land. The Acts which were passed had a beneficial effect on the working classes, giving them opportunities for employment not previously open to them, and fostering the manufacturing industries by increasing the measure of primary production. During the following years the various manufacturing industries prospered. The statistics of the States are not sufficiently complete or uniform to enable a statement of the progress of these industries to be given. The following table, however, shewing, so far as returns are available, the number of factories and the number of employees in each State at decennial periods since 1861 and in 1910, will serve to indicate generally the progress which has been made:—

#### NUMBER OF FACTORIES AND EMPLOYEES IN EACH STATE, 1861 to 1910.

Year.	N.S.W.	Victoria.	Queensland.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
NUMBER OF FACTORIES.							
1861	601	531	...	...	...	...	...
1871	1,813	1,740	...	...	...	...	...
1881	2,961	2,488	571†	823†	...	...	...
1891	3,056	3,141	1,328†	996†	175	...	...
1901	3,367	3,249	2,110†	1,335†	662	420*	11,143†
1910	4,823	4,873	1,563	1,278	680	605	13,822
NUMBER OF EMPLOYEES.							
1861	...	4,395	...	...	...	...	...
1871	13,583	19,569	...	5,629†	...	...	...
1881	31,191	43,209	...	10,995†	...	...	...
1891	50,879	53,525	...	14,099†	...	...	...
1901	66,135	66,529	26,172†	19,233†	12,198	7,466*	197,783†
1910	99,746	102,176	33,944	27,010	14,107	9,848	286,831

\* For 1902. † Not on same basis as other States. ‡ Not on same basis for some of States as in 1910.

NOTE.—In this and all subsequent tables, except where specially mentioned, "Number of Employees" includes working proprietors.

Since the inauguration of the Commonwealth, the throwing open of the whole of the Australian markets to the industrial products of each State has facilitated the internal distribution of the products of Australian industry.

**2. Defects in Industrial Statistics.**—A complete statistical account of the growth of the manufacturing industries in Australia unfortunately cannot be given for any lengthy period, owing to the fact that the necessary statistics have not been collected in past years by the several States upon a definite and identical basis. Even in respect of either the definition of a "factory" or (so far as they might be included in related returns) the statistics of persons employed therein, there was formerly no common agreement. The relatively minor place that manufacturing industry held in relation to the total activity of Australia was, perhaps, responsible for the fact that the necessity for uniform method was not earlier recognised.

In 1896 it was agreed, as between Victoria and New South Wales, to adopt a common definition of the term "factory," viz., "any factory, workshop, or mill where four or more persons are employed or power is used." This agreement was adopted for the States generally at the Conference of State Statisticians in 1902, when it was decided, however, that the term "factory" should include also "all establishments, whether making for the trade, wholesale or retail, or for export." It was further agreed that

industries should be arranged, as far as possible, under a uniform classification. As a result of the conference of 1902 a higher degree of uniformity in the collection and presentation of industrial statistics was attained in the several States, so that returns upon which anything like a proper comparative study of the development and progress of various manufacturing industries in the Commonwealth may be based date back only as far as the year 1903, when the resolutions of the conference first came to be put into force. All the States did not, however, fall completely into line, and, as may be seen in the succeeding parts of this section, the comparisons afforded by the returns for the years 1903 to 1906 inclusive, are in some cases subject to various limitations. At the Conference of Statisticians held in Melbourne in 1906 special consideration was given to the methods to be adopted for the collection of statistical information regarding primary and secondary production and industry. A definite classification of industries was adopted, and a set of forms for the collection and compilation of industrial statistics on a definite and uniform basis in each State was agreed upon. The States have not, even yet, fallen entirely into line in collecting and classifying the returns. The particulars for the years 1909 and 1910 are, however, in more complete co-ordination than those for previous years, and it will be possible to give particulars for future years for the several States in greater detail and on a more uniform basis throughout.

**3. Classification of Manufacturing Industries.**—Under the classification adopted at the Conference of Statisticians held in 1906, factories were placed under nineteen different categories, according to the nature of the industry carried on therein; many of the categories were also subdivided. Where two or more industries are carried on by one proprietor in one building, each industry is, when possible, treated as a separate establishment. The statement given below shews the classification which has been adopted; it must be understood, however, that this classification does not pretend to be exhaustive, but merely serves as a guide for the collection and presentation of statistics in the several States on a definite and uniform basis:—

#### CLASSIFICATION OF MANUFACTURING INDUSTRIES.

<p><b>CLASS I.—TREATING RAW MATERIALS, ETC.</b></p> <p>Boiling-down, Tallow Refining, etc.</p> <p>Tanneries</p> <p>Woolscouring &amp; Fellmongering</p> <p>Chaff-cutting, etc.</p> <p><b>CLASS II.—OILS AND FAT, ETC.</b></p> <p>Oil and Grease</p> <p>Soap and Candles</p> <p><b>CLASS III.—STONE, CLAY, GLASS, ETC.</b></p> <p>Bricks and Tiles</p> <p>Glass (including Bottles)</p> <p>Glass (Ornamental)</p> <p>Lime, Plaster, Cement and Asphalt</p> <p>Marble, Slate, etc.</p> <p>Modelling, etc.</p> <p>Pottery and Earthenware</p> <p><b>CLASS IV.—WORKING IN WOOD.</b></p> <p>Boxes and Cases</p> <p>Cooperage</p> <p>Joinery</p> <p>Saw Mills</p> <p>Wood-turning, etc.</p> <p><b>CLASS V.—METAL WORKS, MACHINERY, ETC.</b></p> <p>Agricultural Implements</p> <p>Brass and Copper</p>	<p>Cutlery</p> <p>Engineering</p> <p>Galvanised Iron-working</p> <p>Ironworks and Foundries</p> <p>Lead Mills</p> <p>Railway Carriages</p> <p>Railway and Tramway Work-shops</p> <p>Smelting</p> <p>Stoves and Ovens</p> <p>Tinsmithing</p> <p>Wireworking</p> <p>Other Metal Works</p> <p><b>CLASS VI.—FOOD AND DRINK, ETC.</b></p> <p>Bacon Curing</p> <p>Butter Factories</p> <p>Butterine and Margarine</p> <p>Cheese Factories</p> <p>Condensed Milk</p> <p>Meat and Fish Preserving</p> <p>Biscuits</p> <p>Confectionery</p> <p>Corn-flour, Oatmeal, etc.</p> <p>Flour Mills</p> <p>Jam and Fruit Canning</p> <p>Pickles, Sauces, and Vinegar</p> <p>Sugar Mills</p> <p>Sugar Refining</p> <p>Aerated Waters, Cordials, etc.</p> <p>Breweries</p> <p>Condiments, Coffee, Spices, etc.</p> <p>Distilleries</p> <p>Ice and Refrigerating</p> <p>Malting</p> <p>Tobacco, Cigars, etc.</p>	<p><b>CLASS VII.—CLOTHING AND TEXTILE FABRICS.</b></p> <p>Woollen and Tweed Mills</p> <p>Boots and Shoes</p> <p>Slop Clothing</p> <p>Clothing (Tailoring)</p> <p>Dressmaking and Millinery—</p> <p>Makers' material</p> <p>Customers' material</p> <p>Dyeworks and Cleaning</p> <p>Furriers</p> <p>Hats and Caps</p> <p>Waterproof and Oilskin</p> <p>Shirts, Ties, and Scarfs</p> <p>Rope and Cordage</p> <p>Tents and Tarpaulins</p> <p><b>CLASS VIII.—BOOKS, PAPER, PRINTING, ETC.</b></p> <p>Electrotyping &amp; Stereotyping</p> <p>Paper-making, Paper Boxes, Bags, etc.</p> <p>Photo-engraving</p> <p>Printing and Binding</p> <p><b>CLASS IX.—MUSICAL INSTRUMENTS, ETC.</b></p> <p>Musical Instruments and Sewing Machines</p> <p><b>CLASS X.—ARMS &amp; EXPLOSIVES</b></p> <p>Explosives</p>

## CLASSIFICATION OF MANUFACTURING INDUSTRIES.—Continued.

## CLASS XI.—VEHICLES, SADDLERY, HARNESS, ETC.

Coach and Wagon Building  
Cycles  
Perambulators  
Saddlery, Harness, etc.  
Spokes, etc.

## CLASS XII.—SHIP AND BOAT BUILDING AND REPAIRING.

Docks and Slips  
Sailmaking  
Ship and Boat Building and Repairing

## CLASS XIII.—FURNITURE, BEDDING, ETC.

Bedding, Flock, & Upholstery  
Billiard Tables  
Furniture and Cabinet Making  
Picture Frames  
Window Blinds

## CLASS XIV.—DRUGS AND CHEMICALS, ETC.

Chemicals, Drugs, and Medicines  
Fertilisers  
Paints, Varnishes, and By-products

## CLASS XV.—SURGICAL AND OTHER SCIENTIFIC INSTRUMENTS.

Surgical, Optical, and other Scientific Instruments

## CLASS XVI.—TIMEPIECES, JEWELLERY, &amp; PLATED WARE.

Electro-plating  
Manufacturing Jewellery, etc.

## CLASS XVII.—HEAT, LIGHT, AND POWER.

Coke Works  
Electric Apparatus  
Electric Light and Power  
Gas Works and Kerosene Lamps and Fittings, etc.  
Hydraulic Power

## CLASS XVIII.—LEATHERWARE (N.E.I.)

Leather Belting, Fancy Leather, Portmanteaux & Bags

## CLASS XIX.—MINOR WARES.

Basket and Wickerware, Matting, etc.  
Brooms and Brushware  
Rubber Goods  
Toys  
Umbrellas  
Other Industries

## § 2. Number of Manufactories.

1. **General.**—In stating the number of factories in the States of the Commonwealth it is to be remembered that in the collection of statistics, for years prior to 1907, the same basis has not been adopted in each State. In 1906 in Queensland, for example, 689 factories would have been added under the system previously adopted in that State. This would bring the total up to 1993 on the former basis. The factories excluded, however, are those employing only two hands and no power, and the difference in other respects is not material.

In the following table shewing the total number of manufactories in the Commonwealth during the years 1903 to 1910, it should be noted that not only are the results affected by differences of classification, but also that the number of factories from year to year does not unequivocally indicate a change in the position of the industry, since amalgamations may account for part of the reduction of the numbers.

## MANUFACTORIES OF THE COMMONWEALTH, 1903 to 1910.

Year.	N.S.W.	Victoria.	Queensland.	South Aust.	West. Aust.	Tasmania.	C'wealth.
1903 ...	3,476	4,151	2,001*	906*†	586	431	11,551
1904 ...	3,632	4,208	1,909*	906*	672	444	11,771
1905 ...	3,700	4,264	1,911*	985	649	436	11,945
1906 ...	3,861	4,360	1,304	1,012	665	373	11,575
1907 ...	4,432	4,530	1,359	1,086	643	505	12,555
1908 ...	4,453	4,608	1,371	1,237	627	557	12,853
1909 ...	4,581	4,755	1,420	1,265	632	544	13,197
1910 ...	4,823	4,873	1,563	1,278	680	605	13,822

\* Not on same basis as other States. † 1904 results repeated.

(i.) *Classification of Factories in Commonwealth, 1906 to 1910.* The following table shews the total number of factories in the Commonwealth at the end of each year from 1906 to 1910, classified on the basis indicated in § 1.3 hereof:—

## CLASSIFICATION OF FACTORIES IN THE COMMONWEALTH, 1906 to 1910.

Class of Industry.	1906.	1907.	1908.	1909.	1910.
	No.	No.	No.	No.	No.
I. Treating raw material, product of agricultural and pastoral pursuits, etc. ....	742	807	812	823	825
II. Treating oils and fats, animal, vegetable, etc. ....	99	92	97	94	100
III. Processes in stone, clay, glass, etc. ....	610	626	627	645	703
IV. Working in wood ....	1,119	1,215	1,322	1,411	1,474
V. Metal works, machinery, etc. ....	1,394	1,504	1,548	1,588	1,620
VI. Connected with food and drink, etc. ....	2,177	2,250	2,253	2,258	2,286
VII. Clothing and textile fabrics, etc. ....	2,335	2,661	2,681	2,774	2,982
VIII. Books, paper, printing and engraving ....	919	964	993	1,011	1,062
IX. Musical instruments, etc. ....	10	16	17	18	20
X. Arms and explosives ....	8	8	8	9	13
XI. Vehicles and fittings, saddlery and harness, etc. ....	941	1,071	1,105	1,117	1,195
XII. Ship and boat building and repairing ....	83	70	76	84	85
XIII. Furniture, bedding, and upholstery ....	418	470	483	512	560
XIV. Drugs, chemicals, and by-products ....	156	144	153	164	176
XV. Surgical and other scientific instruments ....	26	26	29	30	35
XVI. Jewellery, timepieces, and platedware ....	121	142	153	150	155
XVII. Heat, light, and power ....	272	309	307	314	328
XVIII. Leatherware, n.e.i. ....	41	45	54	55	60
XIX. Minor wares, n.e.i. ....	104	135	136	140	143
Total ... ..	11,575	12,555	12,853	13,197	13,822

For the purpose of the returns in the above table the definition of a factory adopted at the Conference of Statisticians in 1902 (see § 1. 2 hereof) is used, viz., "Any factory, workshop or mill where four or more persons are employed or power is used." The total increase in the number of factories according to this table from 1906 to 1910 was 2247, or an average of 562 a year. The state of the manufacturing industries throughout Australia cannot, however, be gauged from a mere enumeration of the number of factories. Some of the factories concerned were practically in their infancy, employing but few hands, while others were developed on a large scale. Also, as pointed out previously, amalgamations may in some instances account for a reduction in the numbers.

(ii.) *Classification of Factories in each State, 1910.* The following table shews the number of factories in each State of the Commonwealth at the end of the year 1910, classified according to the nature of the industry. (See classification given in § 1. 3 hereof):—

## CLASSIFICATION OF FACTORIES IN EACH STATE, 1910.

Class of Industry.	N.S.W.	Vic.	Q'land.	S. Aus.	W. Aus.	Tas.	Cwltth.
	No.	No.	No.	No.	No.	No.	No.
I. Treating raw material, product of agricul. and pastoral pursuits, etc. ....	289	324	44	126	25	17	825
II. Treating oils and fats, animal, vegetable, etc. ....	43	21	17	13	4	2	100
III. Processes in stone, clay, glass, etc. ....	298	212	39	80	42	32	703
IV. Working in wood ....	620	350	233	98	63	110	1,474
V. Metal works, machinery, etc. ....	476	650	301	177	61	55	1,620
VI. Connected with food and drink, etc. ....	767	633	381	255	147	103	2,286
VII. Clothing and textile fabrics, etc. ....	936	1,340	228	217	133	128	2,982
VIII. Books, paper, printing & engraving ....	407	369	133	65	59	29	1,062
IX. Musical instruments, etc. ....	13	5	...	2	...	...	20
X. Arms and explosives ....	5	8	...	...	...	...	13
XI. Vehicles and fittings, saddlery and harness, etc. ....	361	410	149	145	54	76	1,195
XII. Ship and boat building & repairing ....	42	10	12	7	6	8	85
XIII. Furniture, bedding, and upholstery ....	176	228	70	38	31	17	560
XIV. Drugs, chemicals, and by-products ....	76	74	3	12	11	...	176
XV. Surgical and other scientific instruments ....	11	14	5	2	3	...	35
XVI. Jewellery, timepieces, & platedware ....	46	69	12	14	5	9	155
XVII. Heat, light, and power ....	173	77	25	9	26	13	328
XVIII. Leatherware, n.e.i. ....	21	30	3	4	2	...	60
XIX. Minor wares, n.e.i. ....	58	49	8	14	8	6	143
Total ... ..	4,823	4,873	1,563	1,278	680	605	13,822

2. **Use of Mechanical Power.**—The principal motive power is steam, but the chief towns possess electric power stations owned either by the Government, or by public bodies or private companies. From these many manufactories find it convenient to derive their motive power.

The following table shews the number of factories in which machinery was worked by steam, gas, oil, or electricity, and the horse-power of engines or motors used, in each State and in the Commonwealth, during the year 1910 :—

**UTILISATION OF MECHANICAL POWER IN FACTORIES IN EACH STATE, 1910.**

State.	Number of Establishments.			Actual Horse-power of Engines Used.				
	Using Machinery worked by Steam (Gas, Oil, or Electricity)	Others.	Total.	Steam.	Gas.	Oil.	Electricity.	Total.
	No.	No.	No.	H.P.	H.P.	H.P.	H.P.	H.P.
New South Wales	3,259	1,534	4,823	103,857	10,123	694	15,991	130,665
Victoria	3,132	1,741	4,873	49,013	9,415	1,316	9,629	69,373
Queensland	1,078	485	1,563	29,386	2,928	383	2,046	34,743
South Australia	999	379	1,278	17,667	4,382	1,730	2,882	26,661
Western Australia	496	184	680	21,037	1,248	735	2,954	25,974
Tasmania	340	265	605	7,564	227	81	2,935	10,807
Commonwealth	9,234	4,588	13,822	228,524	28,323	4,939	36,437	298,223

A comparison of the above table with that immediately preceding will explain the preponderance of horse-power employed in the New South Wales factories, this State possessing by far the largest number of industries demanding a considerable amount of power; Victoria, on the other hand, has the largest number of establishments, such as those connected with clothing and textile fabrics, wherein much less mechanical power is utilised.

The number of establishments in the Commonwealth using machinery worked by steam, gas, oil, or electricity was 8706, being 66.81 per cent.; 4588 establishments, representing 33.19 per cent., used no mechanical power. The total average horse-power in use was 298,223, of which engines in which the motive power was steam formed 76.63 per cent.; gas, 9.50 per cent.; oil, 1.65 per cent.; and electricity, 12.22 per cent. During 1910 there were fifty-two more establishments using power than in 1909, the increase in horse-power employed being 21,259, or nearly eight per cent.

### § 3. Numbers Employed in Australian Factories.

1. **Total Number Employed.**—Each person employed in and about a factory, in whatever capacity, is now included as a factory employee, consequently every proprietor who works in his business is counted as an employee, and all "outworkers" (see paragraph 6 hereinafter) are also included. The individuals embraced may be classed under the following heads, viz.:—(i.) Working proprietors; (ii.) managers and overseers; (iii.) accountants and clerks; (iv.) enginedrivers and firemen; (v.) skilled and unskilled workers in the factories, mills, or workshops; (vi.) carters and messengers; and (vii.) others.

(i.) *Average Numbers Employed, 1904 to 1910.* The following table shews, for each year from 1904 to 1910 inclusive, (a) the average numbers of persons (including both sexes and all ages) employed in manufacturing industries in each State; (b) the percentage of the numbers employed in each State on the total numbers employed in the Commonwealth; and (c) the numbers employed per ten thousand of the mean population in each State and the Commonwealth :—

**AVERAGE NUMBER OF PERSONS EMPLOYED IN MANUFACTURING INDUSTRIES,  
1904 TO 1910.**

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
AVERAGE NUMBER.

1910 ...	611	797	574†	673	521	516	656

\* Inclusive of factories with two persons. † Including a number of drapery and tailoring shops making to order of customer; this class of establishment was omitted in Queensland in previous years.

(ii.) *Rates of Increase, 1904 to 1910.* From the preceding table it may be seen that there has been a general increase in the average number of persons employed in manufacturing industries during the period referred to. The following table shews the percentage of increase during each year on the average number for the preceding year:—

**PERCENTAGES OF INCREASE IN AVERAGE NUMBER EMPLOYED, 1904 to 1910.\***

Years.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
1903-4 ...	3.66	4.18	4.15	...	7.24	5.64	3.84
1904-5 ...	6.08	5.18	8.21	6.67	0.38	3.61	5.52

XVII. Heat, light, and power ....	4,834	5,372	5,754	5,986	6,860
XVIII. Leatherware, n.e.i. ....	731	788	893	924	1,097
XIX. Minor wares, n.e.i. ....	2,041	2,564	2,665	2,631	2,783
<b>Total ... ..</b>	<b>228,560</b>	<b>248,859</b>	<b>257,494</b>	<b>266,418</b>	<b>286,861</b>

\* Excluding Queensland Government Railways. For preceding years the Queensland statistics include all establishments where two or more hands were employed except Government Railway workshops.

The total increase in the average number of hands employed from 1906 to 1910 was 58,271, or an annual average of 14,568. The increase was general throughout all the various classes of industry. The greatest development took place in Classes VII. and V., the increases being 16,389 and 10,807 respectively.

**3. Classification of Numbers Employed in each State, according to Class of Industry, 1910.**—The following table shews a similar classification of employees in manufacturing industries in each State for the year 1910:—

**AVERAGE NUMBER OF PERSONS EMPLOYED IN VARIOUS FACTORIES IN EACH  
STATE, 1910.**

Class of Industry.	N.S.W.	Vic.	Q'land.	S. Aus.	W. Aus.	Tas.	C'wlth.
I. Treating raw material, product of agricul. and pastoral pursuits, etc. ....	3,986	3,298	796	1,011	217	116	9,424
II. Treating oils and fats, animal, vegetable, etc. ....	765	596	168	261	50	32	1,872
III. Processes in stone, clay, glass, etc. ....	4,882	3,472	517	1,120	509	237	10,737
IV. Working in wood ....	7,423	5,938	3,797	1,716	3,922	1,734	24,520
V. Metal works, machinery, etc. ....	20,703	15,721	5,534	7,854	2,475	1,951	54,238
VI. Connected with food and drink, etc. ....	13,118	13,363	9,792	3,447	1,501	1,700	42,921
VII. Clothing and textile fabrics, etc. ....	24,597	37,173	7,320	5,427	2,577	1,869	78,988
VIII. Books, paper, printing & engraving ....	8,642	8,220	2,547	1,792	1,033	776	23,064
IX. Musical instruments, etc. ....	383	150	...	20	...	...	553
X. Arms and explosives ....	45	386	...	...	...	...	431
XI. Vehicles and fittings, saddlery, and harness, etc. ....	4,055	4,244	1,365	1,728	598	494	12,484
XII. Ship and boat building & repairing ....	1,905	122	189	110	37	55	2,506
XIII. Furniture, bedding and upholstery ....	3,218	2,700	982	893	363	278	8,434
XIV. Drugs, chemicals, and by-products ....	1,342	1,501	68	642	274	...	3,827
XV. Surgical and other scientific instruments ....	87	57	26	7	13	...	190
XVI. Jewellery, timepieces, & platedware ....	658	838	144	157	56	43	1,896
XVII. Heat, light, and power ....	2,516	2,426	481	596	342	508	6,860
XVIII. Leatherware, n.e.i. ....	392	586	70	29	20	...	1,097
XIX. Minor wares, n.e.i. ....	939	1,335	148	200	120	41	2,783
<b>Total ... ..</b>	<b>99,746</b>	<b>102,176</b>	<b>33,944</b>	<b>27,010</b>	<b>14,107</b>	<b>9,848</b>	<b>286,831</b>

The largest number employed in any particular class in the Commonwealth was in Class VII., in which there were 78,983 employees, or 27.54 per cent. of the whole number. The class affording employment to the smallest number of hands was Class XV., in which there were 190 hands, or 0.07 per cent. of the total number of employees. Classes VI., VII., and VIII. comprise those industries in which female labour is largely employed. (See § 4 hereof.)

4. **Classification of Numbers Employed in each State according to Nature of Employment, 1910.**—In the following table the average numbers of persons employed in each State during the year 1910 are classified according to the nature of their employment:—

**AVERAGE NUMBER OF PERSONS EMPLOYED IN EACH STATE, CLASSIFIED  
ACCORDING TO NATURE OF EMPLOYMENT, 1910.**

State.	Average Number of Persons Employed.						Total.
	Working Pro- priators.	Managers and Overseers	Account- ants and Clerks.	Engine- drivers and Firemen.	Workers, Skilled & Unskilled in Factory Mill or Workshop	Carters, Messen- gers and Others.	
New South Wales ...	4,057	3,158	3,505	2,578	84,618	1,830	99,746
Victoria ...	4,953	2,877	3,245	1,587	85,680	3,834	102,176
Queensland ...	1,329	1,129	1,405	1,246	26,624	2,211	33,944
South Australia ...	1,321	644	912	505	22,549	1,079	27,010
Western Australia ...	521	513	507	414	10,966	1,186	14,107
Tasmania ...	574	399	359	325	7,807	384	9,848
Commonwealth ...	12,755	8,720	9,933	6,655	238,244	10,524	286,831

5. **Classification of Factories according to Number of Hands Employed, 1910.**—The number of factories in each State classified according to the number of hands employed, and the total number of hands employed in each class of factory, are shewn in the following table:—

**CLASSIFICATION OF FACTORIES ACCORDING TO NUMBER OF HANDS EMPLOYED,  
1910.**

No. of Persons Employed in each Factory.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
NUMBER OF FACTORIES.							
Under 4 ...	750	703	161	138	116	183	2,051

## CLASSIFICATION OF FACTORIES ACCORDING TO NUMBER OF HANDS—Continued.

No. of Persons Employed in each Factory.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
AVERAGE NUMBER OF HANDS EMPLOYED.							
Under 4 ...	1,755	1,722	376	348	256	359	4,816
4 ...	2,076	2,336	668	544	232	180	6,036
5 to 10 ...	11,777	12,102	3,883	3,547	1,588	1,298	34,195
11 to 20 ....	12,618	12,869	4,352	3,181	1,913	1,367	36,800
21 to 50 ...	18,211	18,801	6,675	5,294	2,903	1,973	53,857
51 to 100 ...	16,471	13,566	6,558	4,359	2,067	1,383	44,404
Over 100 ...	36,838	40,780	11,432	9,737	5,148	3,288	107,223
Total ...	99,746	102,176	33,944	27,010	14,107	9,848	286,831

**6. Outworkers.**—The term “outworker” or “homeworker” has acquired a special meaning in connection with manufacturing industries, and technically embraces only those to whom work is given out by factory owners to be wrought upon in the employees' own homes. Individuals working for themselves are not included. The following table gives particulars, so far as available, of the average number of outworkers connected with factories in each State during each year from 1904 to 1910 inclusive :—

## NUMBER OF OUTWORKERS\* CONNECTED WITH FACTORIES, 1904 to 1910.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
1904 ...	374	991	†	†	†	42	†
1905 ...	439	1,186	†	†	†	86	†
1906 ...	501	1,431	†	†	†	57	†
1907 ...	592	1,429	264	66	18	60	2,429
1908 ...	596	1,457	171	74	11	11	2,320
1909 ...	630	1,695	144	65	13	...	2,547
1910 ...	720	1,584	224	68	20	76	2,692

\* In all tables relating to number of hands employed in factories outworkers are included.

† Not available.

Although the figures from 1904 to 1910, for the States of New South Wales and Victoria, shew generally a fairly steady increase in the number of outworkers, they are considerably smaller than the figures for early years. For example, in 1897 there were 2382 outworkers registered in Victoria in the clothing trades, while the number of employees in factories for those trades was 14,293. The corresponding figures for the same year in New South Wales were 546 outworkers and 8602 factory employees. Thus it will be seen that the number of employees in factories has largely increased, while the increase in the number of outworkers has been relatively small.

The Factories Acts in each State contain provisions regulating the employment of outworkers. Generally records of out-work must be kept by factory proprietors, specifying the names and remuneration of workers, and stating the places where the work is done. Further particulars are given in a later part of this book. (See Section XXVII. *Industrial Unionism and Industrial Legislation.*

## § 4. Sex Distribution in Factories.

**1. Employment of Females in Factories.**—In all the States the employment of female labour in factories is now regulated by Act of Parliament. In Victoria the first Act dealing with the subject was passed in the year 1873, and provided that no female should be employed for more than eight hours a day without the permission of the Chief

Secretary. The number of working hours for women is now limited to forty-eight per week in all the States except Tasmania, where the maximum number of working hours is ten per day. The maximum periods of continuous labour, and the intervals of cessation therefrom, are also prescribed by the several Acts. Further reference is made to the restrictions regarding the employment of females in a later part of this book. (See Section XXVII. *Industrial Unionism and Industrial Legislation.*)

**2. Distribution of Employees according to Sex, 1906 to 1910.**—In New South Wales the ratio of the number of females employed in factories to the number of males during 1886 was about one to seven; in 1891 one to six; in 1903 it became about one to four; and is now rather lower than one to three. In Victoria the ratio of females to males during the year 1886 was about one to five. Five years later (1891) it was somewhat less, but in 1896 had increased to about one woman to three men, and at present is about one to two. The employment of women is, however, largely confined to a few trades.

The great prosperity in clothing and textile industries is one of the main causes of increase in female employment. Certain trades are specifically known as women's trades, such as clothing and textile trades, preparation of food, book-binding, and lighter work connected with the drug trade, as for example wrapping. In common with commercial establishments, a considerable number of women are also employed as clerks and typists in factories.

(i.) *Average Number of Males and Females Employed, 1906 to 1910.* The following table shows the average number of male and female employees in factories in each State from 1906 to 1910:—

**AVERAGE NUMBER OF MALES AND FEMALES EMPLOYED IN MANUFACTURING INDUSTRIES, 1906 to 1910.**

State.	1906.	1907.	1908.	1909.	1910.

Note.—(—) indicates decrease. \* See note (†) to § 3. 1. (i).

The above table shews that in each State for the past five years, with a few exceptions, there has been relatively a larger increase in the number of female than in the number of male employees. This matter is referred to further in the following paragraph hereof.

**4. Increasing Ratio of Female Employment in Factories.**—The increasing extent to which females are employed in the factories of the Commonwealth may perhaps be best shewn by giving the number of females to every 100 male employees for each State for each year from 1904 to 1910 inclusive:—

**NUMBER OF FEMALES PER 100 MALES IN AUSTRALIAN FACTORIES, 1904 to 1910.**

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
1904	27.27	50.90	*19.89	26.07	14.51	19.53	32.78
1905	28.63	51.60	*19.89	22.35	14.80	19.46	33.15
1906	29.75	51.28	*20.04	23.31	17.09	17.68	33.69
1907	31.10	52.29	20.53	23.22	18.19	17.74	34.58
1908	31.77	54.10	18.51	23.36	18.86	18.99	35.12
1909	32.55	54.97	18.60	23.88	19.74	18.16	35.76
1910	32.26	54.09	†24.95	23.54	21.05	20.91	36.23

\* Estimated. † See note (†) to § 3. 1. (i).

Although this table shews that from 1904 to 1910 there has been an increase in the percentage specified from 32.78 to 36.23, the tables given in the next succeeding paragraph shew that this increase has not been due so much to the incursion of female labour into what may be termed men's trades, as to the activity in those trades in which women are ordinarily engaged, more especially in dressmaking, millinery, etc.

5. **Employment of Females in Particular Industries, 1910.**—The employment of women in manufacturing industries in Australia is largely confined to a few trades, of which the more important are comprised in Classes VI., VII., and VIII., viz., in connection with food, drink, etc., clothing and textile fabrics, and books, paper, printing, etc. The following table shews the average number of females employed in each of these classes during the year 1910 in each State, and also shews the percentages of the average number so employed on the total average number of females employed in all classes of factories :—

**AVERAGE NUMBER OF FEMALES EMPLOYED IN PARTICULAR INDUSTRIES, AND  
PERCENTAGES ON AVERAGE TOTAL EMPLOYED. 1910.**

Class.	N.S.W.	Vict.	Q'land.	S. Aust.	W.Aust.	Tas.	Cwlth.
AVERAGE NUMBER.							
VI. Food, drink, etc. ...	2,988	3,637	546	467	143	307	8,088
VII. Clothing and textile fabrics ...	17,272	27,878	5,459	3,998	2,030	1,232	57,869
VIII. Books, paper, printing, etc. ...	2,118	2,167	465	487	177	93	5,507
All other classes ...	1,949	2,185	309	194	103	71	4,811
Total ...	24,327	35,867	6,779	5,146	2,453	1,703	76,275

**PERCENTAGES ON TOTAL AVERAGE FEMALE EMPLOYEES.**

VI. Food, drink, etc. ...	12.28	10.14	8.05	9.08	5.83	18.03	10.60
VII. Clothing and textile fabrics ...	71.00	77.73	80.53	77.69	82.75	72.34	75.87
VIII. Books, paper, printing, etc. ...	8.71	6.04	6.86	9.46	7.22	5.46	7.22
All other classes ...	8.01	6.09	4.56	3.77	4.20	4.17	6.31
Total ...	100.00	100.00	100.00	100.00	100.00	100.00	100.00

It will be seen that by far the greater part of the total number of females employed in factories work in one or other of the three classes of industry indicated, Class VII. being the most important. The classification of the employment of females in the several industries in that class, and the ratio they bore to males so employed, is shewn in the following table :—

## FEMALE EMPLOYMENT IN EACH INDUSTRY IN CLASS VII. DURING 1910.

Industry.	New South Wales.			Victoria.			Other States.

## § 5. Child Labour in Factories.

1. **Conditions of Child Labour.**—The employment of young persons in factories in each State of the Commonwealth is regulated by Acts of Parliament in a similar manner to the employment of female labour. Excepting under special circumstances, children under a certain age may not be employed in factories. The minimum age in New South Wales, Queensland, and Western Australia is fourteen, and in the other States thirteen years. Other restrictions on the employment of young persons in factories are more particularly referred to in a later part of this book. (See Section XXVII. *Industrial Unionism and Industrial Legislation.*) The general object of the restrictions imposed is to assure that a proper period shall be devoted to primary education, and that the early years of toil shall not exhaust the worker before the attainment of full growth.

2. **Average Number of Children Employed in Factories, 1906 to 1910.**—In the statistical compilations of the various States the term "child" may be taken to denote any person under sixteen years of age, excepting in New South Wales, where it denoted, for years prior to 1907, any person under fifteen. The following table shews the average number of children of each sex employed in manufacturing industries in each State during the years 1906 to 1910. It will be seen that the Commonwealth figures for years prior to 1907 are incomplete. During the period under review, there was an increase in the average number employed in every State, with the exception of Victoria, where there was a decrease of 1283.

## AVERAGE NUMBER OF CHILDREN EMPLOYED IN FACTORIES, 1906 to 1910.

Western Australia ...	329	375	540	531	606
Tasmania ...	350	311	374	385	377
Commonwealth ...	†9,915	14,622	14,726	13,863	13,935

\* Not available. † Incomplete. ‡ See Note (†) to § 3. 1 (i).

The relatively large increase in the figures for the Commonwealth for the year 1907 is accounted for largely by the fact that in New South Wales, the term "child" denoted any person under the age of fifteen years, which, in 1907, was raised to sixteen years in order to come into line with the other States of the Commonwealth. It should be noted also that the Commonwealth figures for the year 1906 are exclusive of returns for Queensland.

**3. Industries Employing Child Labour, 1910.**—The employment of children is largely confined to a limited number of industries, the most important of which are specified in the table below, which shows the average number of children of each sex employed in the several industries indicated in each State during the year 1910:—

## NUMBER OF CHILDREN ENGAGED IN VARIOUS INDUSTRIES, 1910.

4. **Apprenticeship.**—The apprenticeship systems of the several States may be summarised as follows :—

In New South Wales, no child may be apprenticed until the attainment of the age of fourteen years, in Victoria and Queensland, twelve years. There is no limitation in the case of the other States, nor any regulating Acts except as applying to charity apprentices. The statutes limiting the age at which children may begin to work may be regarded as applicable by way of preventing too early apprenticeship, so also may those directing that education be continued up to a certain age or standard.

Indentures must be entered into specifying the conditions of the employment. Apprenticeships may not exceed seven years in duration, and become inoperative at twenty-one years of age, or in the case of women, on marriage.

The Arbitration Courts and Wages Boards have power to limit the number of apprentices which may be taken into a factory. No general statistics of the number of apprentices in Australia have been collected up to the present time. Other enactments relating to child labour are referred to in Section XXVII. of this book, *Industrial Unionism and Industrial Legislation*.

## 6. Amount of Wages Paid and Value of Production.

1. **Introduction.**—The importance of the manufacturing industries of the Commonwealth is indicated by the fact that the total value of the output for 1910 was £120,770,674, of which amount the sum of £72,722,642 represents the value of the raw

materials used. The difference between these two amounts, viz., £48,048,032, represents the amount by which the value of the raw materials was enhanced in the process of manufacture. The total amount of salaries and wages paid in factories during 1910 was £23,874,959.

2. **Amount of Salaries and Wages Paid, 1910.**—The total amount of salaries and wages paid during the year 1910 in various classes of factories in the Commonwealth (excluding all sums drawn by working proprietors) is shewn in the following table.

It has been found impracticable to shew satisfactorily in this book the rates of wages paid to employees in various classes of manufacturing industries in Australia, owing to the facts—firstly, that the rates in many industries vary very considerably in different parts of the country; and secondly, that the necessary particulars are not collected by the several States on a uniform basis; while for some of the States the information given is meagre and unsatisfactory.

**AMOUNT OF SALARIES AND WAGES PAID IN FACTORIES IN COMMONWEALTH,  
1910.\***

Class of Industry.	N.S.W.	Vict.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wlth.

\* Excluding all amounts drawn by working proprietors.

The maximum amount of salaries and wages paid in any particular class was in Class V., the amount being £5,872,917, or 24.60 per cent. on the total amount; the minimum amount was in Class XV., £15,826, or 0.07 per cent. on the total amount. The State in which the largest amount was paid was New South Wales. The following statement shews the total amount of salaries and wages paid, and the average amount paid per employee in each State during each of the years 1906 to 1910; the figures are exclusive of the amounts drawn from the business by working proprietors:—

**AMOUNT OF SALARIES AND WAGES PAID AND AVERAGE AMOUNT PER ANNUM  
PAID PER EMPLOYEE, 1906 to 1910.**

Year.	Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	C'with.

\* Information not available.

† Exclusive of Queensland and South Australia.

In comparing the figures in the above table regard should be paid to the nature of certain industries which are carried on to a greater extent in some States than in others (see § 2 hereof). In Victoria, for instance, where the average is lowest, there are a large number of factories and hands employed in Class VII., and in that class wages are low, a great many women and children being employed. The position occupied by Western Australia is no doubt partly due to the higher cost of living in that State.

It will be noted that—except in Western Australia—there has been a persistent increase in the average wage paid per employee in each of the States during the period under review, despite the tendency of the number of females employed in certain industries to increase at a higher ratio than males. Taking the Commonwealth as a whole, during the period 1907-10 there has been an increase of 30 per cent. on the total amount of wages paid and 12.67 per cent. on the average paid per employee.

The following table shews the approximate amount paid in salaries and wages to males and females in New South Wales and Victorian factories during 1909 and 1910. Similar information for the other States is not available :—

**APPROXIMATE AMOUNT OF SALARIES AND WAGES PAID TO MALES AND FEMALES  
IN FACTORIES IN NEW SOUTH WALES AND VICTORIA, 1909 and 1910.**

Particulars.	New South Wales.		Victoria.

**3. Value of Fuel and Light used in Factories, 1910.**—The amount expended in factories on fuel and light is of considerable importance; in 1910 it amounted to £2,634,831, being an increase on the previous year's figures of £407,326. The classes of industry in which fuel was most extensively used were Class V., Metal Works, Machinery, etc., £863,485; Class VI., Connected with Food, Drink, etc., £594,306; Class XVII., Heat, Light, Power, etc., £403,441, of which amount £329,750 was expended on generating

electric light and power; and Class III., £317,133, of which £249,755 was represented in brick and pottery works, etc., and glass factories. The following tables shew the value of fuel and light used in the different classes of industry in the several States of the Commonwealth during 1910, and of the total used for the four years ended 1910 as far as the figures are available:—

#### VALUE OF FUEL AND LIGHT USED IN FACTORIES IN COMMONWEALTH, 1910.

4. Value of Raw Materials used in Factories, 1910.—The total value of raw materials worked up (*i.e.*, exclusive of fuel, lubricants, etc.) in factories in the Commonwealth during 1910 was £72,722,642, which represents 60.22 per cent. of the total value of the finished products. (See next paragraph hereof.) The following table shows the value of the raw materials worked up in various factories in each State during the year 1910:—

## VALUE OF RAW MATERIALS WORKED UP IN FACTORIES IN COMMONWEALTH, 1910.

Class of Industry.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	C'with.
	£	£	£	£	£	£	£
I. Treating raw material, product of agricultural and pastoral pursuits, etc. ...	3,959,481	2,005,365	1,342,883	423,741	192,505	50,122	7,974,097
II. Treating oils and fats, animal, vegetable, etc. ...	625,432	395,399	71,404	117,592	59,348	11,000	1,280,175
III. Processes in stone, clay, glass, etc. ...	226,084	153,343	7,417	32,555	12,410	5,086	436,895

IX. Musical instruments, etc. ...	71,443	6,361	...	1,370	...	...	79,174
X. Arms and explosives ...	4,819	60,850	...	...	...	...	65,669
XI. Vehicles and fittings, saddlery and harness, etc. ...	420,608	361,263	108,920	190,262	72,327	34,742	1,188,122
XII. Ship and boat building and repairing ...	123,400	9,961	7,184	9,038	5,755	2,448	157,786
XIII. Furniture, bedding, and upholstery ...	422,805	383,073	85,737	77,732	54,510	20,072	1,043,929
XIV. Drugs, chemicals, and by-products ...	442,755	585,885	8,325	247,310	35,019	...	1,319,294
XV. Surgical and other scientific instruments ...	6,918	3,459	2,219	700	70	...	13,366
XVI. Jewellery, timepieces, and platedware ...	87,294	142,397	15,651	19,550	12,827	1,350	279,069
XVII. Heat, light, and power ...	621,502	259,572	26,552	53,876	17,998	15,256	994,756
XVIII. Leatherware, n.e.i. ...	106,250	155,611	11,359	4,821	2,670	...	280,711
XIX. Minor wares, n.e.i. ...	174,923	407,222	9,779	15,085	8,107	1,441	616,557
Total ...	31,416,579	21,941,255	9,476,819	6,695,255	1,809,959	1,382,775	72,722,642

The class in which the maximum value of raw materials was used was Class VI., "Connected with Food and Drink, etc.," the value being £32,357,658. The next important class in order of value was Class V., "Metal Works, Machinery, etc.," in which raw materials to the value of £11,599,747 were used. The class in which the minimum value appears is Class XV., "Surgical and other Scientific Instruments," the value being only £13,366. The year 1910 is the first for which reliable and complete returns have been collected in every State relating to the value of raw materials worked up in factories; the following table, however, gives particulars for the four years ended 1910, so far as information is available:—

## VALUE OF RAW MATERIAL WORKED UP IN FACTORIES IN COMMONWEALTH DURING THE YEARS 1907 to 1910.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	£	£	£	£	£	£	£
1907 ...	22,746,162	17,926,128	6,490,086	5,379,636	*	†	‡
1908 ...	25,507,414	18,662,070	6,946,550	6,690,976	1,592,216	†	†
1909 ...	27,314,486	19,706,530	7,658,195	6,004,459	1,529,211	‡2,980,359	65,193,240
1910 ...	31,416,579	21,941,255	9,476,819	6,695,255	1,809,959	1,382,775	72,722,642

\* Details too incomplete for publication. † Figures not available. ‡ 1909 being the first year in which an attempt was made to collect this information in Tasmania, the returns cannot be accepted as being reliable and are probably overstated.

5. Total Value of Output of Manufacturing Industries, 1910.—The value of the output of new goods manufactured and repairs effected in factories of various classes in each State during the year 1910 is shewn in the following table. The figures given represent not only the increased value due to the process of manufacture, but also

include the value of the raw materials used. The difference between the value of the materials used and the total output (see paragraph 6 hereof) is the real value of production from manufactories.

### TOTAL VALUE OF OUTPUT OF FACTORIES IN COMMONWEALTH, 1910.

Class of Industry.	N.S.W.	Victoria.	Q'land.	S.A.	W.A.	Tas.	C'w'lt'h.
	£	£	£	£	£	£	£
I. Treating raw material, product of agricultural & pastoral pursuits, etc.	4,688,061	2,549,910	1,719,840	556,115	235,814	71,640	9,821,380
II. Treating oils and fats, animal, vegetable, etc.	886,027	565,989	110,885	192,512	72,118	17,000	1,944,531
III. Processes in stone, clay, glass, etc.	1,186,274	784,791	89,390	211,160	109,058	38,634	2,419,307

X. Arms and explosives	7,500	122,066	...	...	...	...	129,566
XI. Vehicles and fittings, saddlery and harness, etc.	968,173	842,054	297,107	437,605	160,383	78,568	2,783,890
XII. Ship and boat building and repairing	402,363	34,184	21,493	27,342	11,563	7,905	504,850
XIII. Furniture, bedding, and upholstery	857,946	724,104	217,336	193,209	106,834	49,502	2,148,931
XIV. Drugs, chemicals, and by-products	533,161	1,009,201	20,907	365,470	61,218	...	2,289,957
XV. Surgical and other scientific instruments	24,444	11,855	7,938	2,200	1,344	...	47,781
XVI. Jewellery, timepieces, and platedware	190,310	291,817	29,748	49,977	22,679	5,481	590,012
XVII. Heat, light, and power	2,056,192	1,077,378	225,561	237,374	249,500	94,446	3,940,451
XVIII. Leatherware, n.e.i.	161,518	223,256	16,729	8,708	5,434	...	415,645
XIX. Minor wares, n.e.i.	289,953	620,169	20,266	32,443	18,995	4,485	986,311
Total ...	49,615,643	36,660,854	15,792,109	11,184,695	4,533,611	2,983,762	120,770,674

It may be seen that the State of New South Wales far outstrips the other States in the total value of the output of her factories, the value being £49,615,643, or 41.08 per cent. on the total for the Commonwealth. The next State in order of value is Victoria, which produced 30.36 per cent.; the value of the output of Queensland was 13.08 per cent.; of South Australia 9.26 per cent.; of Western Australia 3.75 per cent.; and of Tasmania 2.47 per cent. The two most important classes in order of value of output (Classes VI. and V.) are the same as in order of value of raw materials used. As regards output the next class is Class VII., and as regards raw materials used Class I. The following statement shews the value of output of factories in each State during the four years ended 1910 so far as particulars are available:—

### TOTAL VALUE OF OUTPUT OF FACTORIES IN COMMONWEALTH DURING THE YEARS 1907 to 1910.

Year.	N.S.W.	Victoria.	Q'land.	S.A.	W.A.	Tas.	C'wealth.

6. **Value of Production of Manufacturing Industries, 1910.**—The difference between the figures given in paragraph 5 and the corresponding figures in paragraph 4 hereof represents the amount added to the value of the raw materials by the process of manufacture. This is the real measure of the value of production of manufacturing industries. The following table shews the value added in this manner in each State during the year 1910 for the various classes of factories:—

**VALUE OF PRODUCTION OF MANUFACTURING INDUSTRIES IN COMMON-WEALTH, 1910.**

Class of Industry.	N.S.W.	Victoria.	Q'land.	S.A.	W.A.	Tas.	Cwealth.
	£	£	£	£	£	£	£
I. Treating raw material, product of agricultural and pastoral pursuits, etc. ...	728,580	544,545	376,957	132,374	43,309	21,518	1,847,283
II. Treating oils and fats, animal, vegetable, etc. ...	260,595	170,590	39,481	74,920	12,770	6,000	564,356
III. Processes in stone, clay, glass, etc. ...	960,190	631,448	81,973	178,605	96,648	33,548	1,982,412
IV. Working in wood ...	1,026,733	869,000	590,673	287,116	738,886	199,074	3,711,482
V. Metal works, machinery, etc. ...	4,685,134	2,530,171	797,435	1,523,028	396,037	710,176	10,642,583
VI. Connected with food and drink, etc. ...	3,500,750	2,986,667	2,753,594	862,950	515,180	261,500	10,880,641

X. Arms and explosives ...	2,681	61,216	...	...	...	...	63,897
XI. Vehicles and fittings, saddlery and harness, etc. ...	547,565	430,791	188,187	247,343	88,056	43,826	1,595,768
XII. Ship and boat building and repairing ...	278,963	21,223	14,309	18,304	5,808	5,457	347,064
XIII. Furniture, bedding, and upholstery ...	435,141	341,031	131,599	115,477	52,324	29,430	1,105,002
XIV. Drugs, chemicals, and by-products ...	390,406	423,316	12,582	118,160	26,199	...	970,663
XV. Surgical and other scientific instruments ...	17,526	8,396	5,719	1,500	1,274	...	34,415
XVI. Jewellery, timepieces, and plated ware ...	103,016	149,420	14,097	30,427	9,852	4,131	310,943
XVII. Heat, light, and power ...	1,434,690	817,806	199,009	183,498	231,502	79,190	2,945,695
XVIII. Leatherware, n.e.i. ...	55,268	67,645	5,370	3,887	2,764	...	134,934
XIX. Minor wares, n.e.i. ...	115,030	212,947	10,487	17,358	10,888	3,044	369,754
Total ...	18,199,064	14,719,599	6,315,290	1,489,440	2,723,652	1,600,987	48,048,032

It may be seen that the amount of the value added in each State is in the same order as in the case of value of output. The value added to raw material by process of manufacture and amount per head of mean population is shewn in the following statement for the years 1907 to 1910:—

**VALUE OF PRODUCTION OF MANUFACTURING INDUSTRIES IN THE COMMON-WEALTH, 1907 to 1910.**

Year.	N.S.W.	Victoria.	Queensland.	S. Aust.	W. Aust.	Tas.	C'wealth.
VALUE.							
1907 ...	£ 14,484,850	£ 11,767,506	£ 4,719,429	£ 3,543,368	£ *	£ †	£ †
1908 ...	14,656,412	12,125,690	4,235,459	3,780,695	2,464,149	†	†
1909 ...	15,646,203	13,191,705	5,165,500	3,923,646	2,479,393	£ 1,810,046	£ 42,216,498
1910 ...	18,199,064	14,719,599	6,315,290	4,489,440	2,723,652	1,600,987	48,048,032
PER HEAD OF MEAN POPULATION.

1908 ...	9.32	9.77	7.80	9.91	9.56	†	†
1909 ...	9.79	10.46	9.33	10.01	9.42	9.52	9.88
1910 ...	11.14	11.48	10.68	11.19	10.05	8.38	9.94

\* Details too incomplete for publication. † Figures not available. ‡ See note (1) to last table § 6, 4.

It may thus be seen that in 1910 the positions of the two leading States, New South Wales and Victoria, as also those of Queensland and Western Australia, in regard to total value of output of factories per head of mean population, are all different in regard to value added per head. The other two States retain their relative positions.

As the total value of the output for the Commonwealth was estimated at £120,770,674, there remained, after payment of £72,722,642, the value of the raw materials used, of £23,874,959 for salaries and wages, and of £2,634,831 for fuel, the sum of £21,538,242 to provide for all other expenditure and profits. The following table gives corresponding particulars for each State, expressed absolutely and as percentages of the total value of the output:—

**VALUE OF OUTPUT AND COST OF PRODUCTION IN COMMONWEALTH FACTORIES,  
1910.**

State.	Raw Materials Used.	Fuel and Light.	Salaries and Wages.	All other Expenditure Interest, and Profits.	Total Value of Output.
VALUE AND COST, ETC.

## § 7. Land, Buildings, Plant and Machinery.

1. **General.**—As an indication of the permanent character and stability of the industries which have been established in the Commonwealth, it may be noted that the values of land and buildings and of plant and machinery used in the factories are rapidly increasing. Thus, for the whole Commonwealth the total value of land and buildings and plant and machinery has increased from 1906 to 1910 by £11,637,850, i.e., from £46,824,489 to £58,462,339, or at the rate of £2,909,463 per annum.

The following statement shews for the year 1910 the values of land and buildings and of plant and machinery used in connection with manufacturing industries in each State:—

**VALUE OF LAND, BUILDINGS, PLANT AND MACHINERY, IN CONNECTION WITH  
MANUFACTURING INDUSTRIES, 1910.**

Value of—	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	O'with.
	£	£	£	£	£	£	£
Land and buildings ...	12,108,776	9,012,263	3,045,974	2,648,658	1,674,953	1,021,015	29,511,639
Plant and machinery ...	11,578,620	7,601,085	4,631,519	2,225,718	1,893,602	1,020,156	28,950,700
<b>Total</b> ...	<b>23,687,396</b>	<b>16,613,348</b>	<b>7,677,493</b>	<b>4,874,376</b>	<b>3,568,555</b>	<b>2,041,171</b>	<b>58,462,339</b>

It may be seen from the above table that the total capital invested in land, buildings, plant, and machinery in manufacturing industries in the Commonwealth during the year 1910 was approximately £58,462,339 (or £13.38 per head of mean population); of that sum £29,511,639 was invested in land and buildings occupied as manufactories, the remaining £28,950,700 being the value of the plant and machinery used in connection therewith.

**2. Value of Land and Buildings.**—The value of the land and buildings occupied in connection with manufacturing industries may be conveniently classified according to the nature of the industry conducted therein.

(i.) *Total Value in Commonwealth, 1906 to 1910.* The following table shews for the whole Commonwealth the approximate values of land and buildings occupied in connection with manufacturing industries of various classes during each year from 1906 to 1910 inclusive:—

**VALUE OF LAND AND BUILDINGS OCCUPIED AS FACTORIES IN COMMONWEALTH,  
1906 to 1910.**

Class of Industry.	1906.	1907.	1908.	1909.	1910.
	£	£	£	£	£
I. Treating raw material, product of agricultural and pastoral pursuits, etc. ...	777,871	781,733	847,113	869,488	920,685

XIII. Furniture, bedding, and upholstery ...	618,422	633,237	666,289	697,273	764,170
XIV. Drugs, chemicals, and by-products ...	335,393	444,060	531,765	543,507	687,162
XV. Surgical and other scientific instruments ...	37,197	31,779	33,054	56,378	56,149
XVI. Jewellery, timepieces, and platedware ...	159,356	204,734	226,352	232,483	271,834
XVII. Heat, light, and power ...	1,510,520	1,855,438	1,923,734	2,026,611	2,112,220
XVIII. Leatherware, n.e.i. ...	60,365	57,043	91,036	83,578	100,096
XIX. Minor wares, n.e.i. ...	143,204	193,797	218,540	210,325	220,984
<b>Total</b> ...	<b>23,080,191</b>	<b>24,758,774</b>	<b>26,714,676</b>	<b>27,677,595</b>	<b>29,511,639</b>

The figures in the above table are subject to the limitation that the actual returns for 1906 for the States of New South Wales and South Australia are not available. In order to present an approximate total for the Commonwealth, however, 1901 figures for New South Wales, and 1907 figures for South Australia are included for the year specified. It may be seen that the total net increase during the four years was £6,431,448, or an annual average of £1,607,862. In Class XII., there was a comparatively small decrease, which amounted to £58,884. The largest increases were in Classes V. and VII., and amounted to £1,241,493 and £1,272,187 respectively.

(ii.) *Value in each State, 1910.* The following table gives similar information for each State up to the 31st December, 1910:—

## VALUE OF LAND AND BUILDINGS OCCUPIED AS FACTORIES IN EACH STATE, 1910.

Class of Industry.	N.S.W.	Victoria.	Q'land.	S.A.	W.A.	Tas.	C'w'lth.
	£	£	£	£	£	£	£

XVIII. Leatherware, n.e.i. ...	36,831	44,675	8,150	7,060	3,380	...	100,096
XIX. Minor wares, n.e.i. ...	99,042	80,845	4,420	24,955	8,882	2,900	220,984
Total ...	12,108,776	9,012,263	3,045,974	2,648,658	1,674,953	1,021,015	29,511,639

The maximum value for the Commonwealth of land and buildings in any particular class was in Class VI., amounting to £7,399,625, or 25.07 per cent. on the total value. The next classes in importance were Classes V., VII., VIII., and XVII., in which the values were £4,554,693, £4,191,488, £2,779,754, and £2,112,220 respectively. The sum of the values for the five classes mentioned amounted to £21,037,780, or 71.23 per cent. on the total value for all classes.

(iii.) *Total Value in each State, 1904 to 1910.* The following table shews the total value, so far as returns are available, of land and buildings occupied as manufactories in each State at the end of each year from 1904 to 1910 inclusive:—

## TOTAL VALUE OF LAND AND BUILDINGS OCCUPIED AS FACTORIES IN EACH STATE, 1904 to 1910.

Year.	N.S.W.	Victoria.	Queensland.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	£	£	£	£	£	£	£
1904...	*8,029,890	7,641,051	2,699,191	2,140,516†	1,731,233	1,000,481	23,242,362
1905...	*8,029,890	7,771,238	2,709,951	2,140,516†	1,685,597	963,517	23,300,709
1906...	*8,029,890	8,062,110	2,405,559	2,140,516†	1,775,279	666,837	23,080,191
1907...	9,508,259	8,376,642	2,261,539	2,140,516	1,637,207	834,611	24,758,774
1908...	10,440,260	8,589,027	2,763,085	2,311,650	1,565,756	1,044,898	26,714,676
1909...	11,014,362	8,642,344	2,888,923	2,432,655	1,522,692	1,176,619	27,677,595
1910...	12,108,776	9,012,263	3,045,974	2,648,658	1,674,953	1,021,015	29,511,639

\* 1901 figures. † 1907 figures, those for previous years not being available.

It may be seen that, so far as returns are available, there has been a general though irregular increase in all the States with the exception of Western Australia, where there was a slight fall; this is probably due to the general reduction in values of real estate in that State during the past few years. The fall in Tasmania for 1910 was due

to the temporary closing down of a large pyrites works, otherwise a further increase would have been shown for that State. The irregularities in some of the States are probably due partly to the returns having been made on different bases for the succeeding years in carrying into effect the resolutions passed at the Conferences of Statisticians (see § 1. 2 hereof).

**3. Value of Plant and Machinery.**—The following table shews for the whole Commonwealth the approximate value of plant and machinery used in connection with factories at the end of each year from 1906 to 1910 inclusive. The figures, however, are subject to certain limitations, inasmuch as returns for South Australia for 1906 are not available; South Australian figures for 1907 have therefore been taken for that year.

**VALUE OF PLANT AND MACHINERY USED IN FACTORIES IN COMMONWEALTH,  
1906 to 1910.**

Class of Industry.	1906.	1907.	1908.	1909.	1910.

Total ... ..	23,744,298	24,686,108	25,927,763	26,827,442	28,950,700

It may be seen that during the period in question there has been a steady and substantial net increase amounting in all to £5,206,402, or an annual average of £1,301,601. The increase has occurred in all classes of industry, the largest increase being in Class V., "Metal Works, Machinery, etc.," amounting to £1,505,794, while the two next largest were in Class VI., "Connected with Food and Drink, etc.," amounting to £775,449, and Class XVII., "Heat, Light, and Power," with an increase of £719,307.

(i.) *Total Value in each State, 1904 to 1910.* The classified figures in the preceding table for the whole Commonwealth are shewn below for each State. It will be seen that the progress in value referred to is general throughout the States. New South Wales shews by far the largest increase, viz., £3,929,717; while Victoria comes next with £1,573,951.

**VALUE OF PLANT AND MACHINERY IN FACTORIES, 1904 to 1910.**

Year.	N.S.W.	Victoria.	Queensland.	S. Aust.	W. Aust.	Tasmania.	C'wealth.

XIII. Furniture, bedding, and upholstery ...	43,375	50,194	19,537	26,074	7,453	4,141	150,774
XIV. Drugs, chemicals, and by-products ...	167,449	168,379	4,250	107,002	70,701	...	517,781
XV. Surgical and other scientific instruments ...	3,951	2,408	1,645	900	1,025	...	9,929
XVI. Jewellery, timepieces, and platedware ...	20,298	20,602	2,887	3,757	1,316	630	49,490
XVII. Heat, light, and power ...	2,068,638	1,984,043	493,822	582,479	530,621	297,213	5,961,816
XVIII. Leatherware, n.e.i. ...	11,474	11,738	649	240	550	...	24,651
XIX. Minor wares, n.e.i. ...	54,640	60,352	976	2,655	1,681	365	120,669
Total ...	11,578,620	7,601,085	4,631,519	2,225,718	1,893,602	1,020,156	28,950,700

The greatest value for any particular class of industry is for Class VI., "Connected with Food and Drink, etc.," and amounts to £8,212,440, or 28.37 per cent. on the total for all classes. The next in order of importance is Class XVII., "Heat, Light, and Power," which amounts to £5,961,816, or 20.59 per cent. on the total; followed by Class V., "Metal Works, Machinery, etc.," amounting to £5,255,575, or 18.15 per cent. on the total value. The total for the three classes just specified amounts to £19,429,831, or 67.11 per cent. on the total value for all classes.

## § 8. Individual Industries.

1. *General.*—The preceding remarks and tables furnish a general view of the recent development of particular classes of industries in Australia treated under the nineteen categories referred to in § 1.3 hereof. In order to make the information complete, it must necessarily be supplemented by details exhibiting the development of individual industries. This alone will furnish adequate information as to the channels into which the main efforts of Australian manufacture flow. While it is not possible, within the limits of this article, to give anything like a detailed account of the manufacturing industries of the Commonwealth, it is proposed to deal herein with such particular industries as are of special importance by reason of the number of persons employed, the number of factories, the amount of capital invested therein, the value of the production, or other features of special interest. In cases where there are only one or two establishments of a particular class in any State, returns relative to output are not published, in order to avoid disclosing information as to the operations of individual factories.

**2. Tanning Industry.**—In Class I. (see § 1. 3 hereof) the most important industry is tanning. Until recent years the production of tanneries in Australia was confined to the coarser class of leathers, but lately the tanning of the finer skins has been undertaken with satisfactory results. The position of the industry in the several States in 1910 was as follows:—

**TANNERIES, 1910.**

(i.) *Progress of Tanning, etc. Industries, 1906 to 1910.* For years prior to 1908 returns for tanneries are not generally available separately, but are grouped with the wool-scouring and fellmongering industries. The development of the tanning, fellmongering, and wool-scouring industries during the period 1906 to 1910 is shewn in the following table, from which it will be seen that though the number of factories is almost stationary, the number of employees shews a satisfactory increase, amounting to 14.35 per cent. during the period under consideration.

**DEVELOPMENT OF TANNING, Etc., INDUSTRIES, 1906 to 1910.**

\* Not available.

3. **Soap and Candle Factories.**—In Class II. (see § 1. 3 hereof) the manufactures of soap and candles are the most important industries. These two manufactures are frequently carried on in the same establishments, so that separate returns cannot be obtained; it may, however, be said generally that the manufacture of soap is the more important of the two. The following table gives particulars of soap and candle factories in each State during the year 1910:—

### SOAP AND CANDLE FACTORIES, 1910.

Items.	N.S.W.	Vic.	Qld.	S.A.	W.A.	Tas.	Cwltth.

\* Information not available. † Exclusive of South Australia.

(ii.) *Production of Soap and Candles, 1906 to 1910.* The subjoined statement shews that there has been a considerable increase in the output of both of these products. As regards the production of soap an increase is shewn in all the States. The returns as to the production of candles are incomplete for 1906 and 1907; it will be seen, however that there has been a considerable increase in New South Wales during the past four years, and that the production in the whole of the Commonwealth during 1910 shews an increase of 1,865,716 lbs. over that for 1908.

5. *Agricultural Implement Factories.*—The manufacture of agricultural implements is an important industry in Australia, and is of particular interest owing to the fact that it is one of the first industries to which what has been called the "New Protection" system was sought to be applied (see Section XXVII. hereof). The nature of the machines manufactured may be gathered from the machines scheduled in the Customs tariff, 1906-7, which includes stripper harvesters, strippers, stump-jump ploughs, disc cultivators, winnowers, corn-shellers and baggers, drills, and other implements usually employed in agriculture. The stripper-harvester, which combines the stripper with a mechanism for winnowing and bagging grain, is an Australian invention, and is exported to many countries.

The following table gives particulars of the agricultural implement works of Australia for the year 1910 :—

#### AGRICULTURAL IMPLEMENT WORKS, 1910.

6. **Engineering, Ironworks, and Foundries.**—The classification in these industries is not very satisfactory. Generally, engineering shops, ironworks, and foundries are included, as also are factories for making nails, safes, patterns, meters, and springs. Railway workshops, agricultural implement factories, cyanide, smelting, pyrites, and metallurgical works, galvanised iron, stoves and ovens, and wire working establishments are not included. The combination of industries is rendered necessary by the limited classification still adopted by some of the States.

## ENGINEERING, IRONWORKS, AND FOUNDRIES, 1910.

Value added in process of manufacture £	1,257,051	1,117,539	369,153	263,248	160,421	54,426	3,221,838

In addition to engineering works which supply local domestic requirements, there are now a number of large and important establishments which engage in the manufacture of special classes of machinery and implements. The manufacture of mining and smelting machinery and apparatus forms an important section of this industry, and many Australian mines have been locally equipped.

7. **Railway Carriages and Rolling Stock, Railway and Tramway Workshops.**—The railway workshops of Australia form an important item in the metal and machinery class, and are chiefly State institutions. The following table gives the details concerning them, but includes also private establishments manufacturing rolling stock :—

## RAILWAY CARRIAGES AND ROLLING STOCK, RAILWAY AND TRAMWAY WORKSHOPS, 1910.

**8. Smelting Works.**—The subjoined table gives particulars of metal smelting, cyanide, pyrites, and metallurgical works. The classification of these works does not appear to be carried out on an uniform basis in the several States, and the combination of industries is, therefore, somewhat unsatisfactory. The returns do not include particulars of plants used on mines.

**SMELTING, CYANIDE, PYRITES, Etc., WORKS, 1910.**

\* See third paragraph below.

In New South Wales and Queensland the above figures represent smelting works; those for Victoria include eighty-eight cyanide works, four metallurgical, four pyrites, and two smelting works; South Australia five cyanide and two smelting; and Tasmania four smelting and three pyrites works.

The largest output for the year under review was in New South Wales, viz., £5,659,203, or 63.16 per cent. on the total output for the Commonwealth. South Australia came next with £1,651,238, or 18.43 per cent.; this amount is made up of £1,643,497 smelting and £7791 cyanide. Of the total for Tasmania the output of smelting was £1,130,534, the balance £8070 representing that obtained from pyrites works. The output in Victoria was £118,285, £17,629, £40,519, and £26,838 from cyanide, metallurgical, pyrites, and smelting works in the order named.

In Western Australia all the plants are worked on the mines and are therefore not collected.

**9. Bacon-curing Factories.**—The following table gives particulars of factories engaged in bacon-curing in each State during the year 1910:—

**BACON-CURING FACTORIES, 1910.**

Items.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	C'w'lth.

The butter, cheese and condensed milk industries are dealt with more fully in Section IX., *Farmyard and Dairy Production*.

11. **Meat and Fish Preserving, Ice and Refrigerating Works.**—These industries are now of considerable importance in Australia. The freezing of various kinds of produce for export has long been an established industry. Large freezing works have been installed at many ports in the Commonwealth for the purpose of freezing produce chiefly for export, and insulated space for the carriage of frozen produce is provided by a number of steamship companies trading between Australia and other parts of the world. Particulars regarding the export of frozen beef and mutton may be found on pages 343 and 347 hereof respectively. Special terms have been made by the Commonwealth Government in its English mail contract for the provision by the contractors of ample cold-storage facilities. The export of frozen produce is stated to be capable of considerable expansion. The particulars given in the subjoined table include ice-making and freezing works, and also meat-canning factories, separate particulars for each item for all the States not being available.

## MEAT AND FISH-PRESERVING, ICE AND REFRIGERATING WORKS, 1910.

\* Including confectionery.

13. **Jam and Fruit Preserving, Pickles, Sauces, and Vinegar Manufactories.**—The jam and fruit-preserving industry has increased in importance of late years, consequent on the extension of fruit-growing. As an exporting industry it is comparatively young, but is of increasing value, and is stated to be capable of considerable expansion. The subjoined table gives particulars of factories at which these industries were carried on in each State during the year 1910. Separate returns for the individual industries are not available for most of the States.

## JAM AND FRUIT PRESERVING, PICKLES, SAUCES, AND VINEGAR MANUFACTORIES, 1910.

\* Tons of 2000 lbs. † Not available. ‡ Exclusive of South Australia.

The total production of flour for the Commonwealth for 1910, viz., 649,282 tons, was valued at £5,843,525; in addition 274,856 tons of bran and pollard, valued at £1,311,198, were made. The total quantity of wheat ground in 1910 was 32,004,658 bushels.

16. **Sugar Mills.**—The following table shews the position of the cane-crushing branch of the sugar-making industry in 1910. This industry is carried on in Queensland and New South Wales, the only States of the Commonwealth in which the sugar-cane is grown.

## SUGAR MILLS, 1910.

Items.	N.S.W.	Queensland.	Total.
Number of factories ... ..	4	49	53

Value added in course of manufacture £	127,550	986,206	1,113,756

The first crushing of sugar for commercial use is said to have taken place in New South Wales about 1850 on the plantation of Mr. Thomas Scott; the planting-out of cane was not, however, taken up by settlers, notwithstanding Mr. Scott's earnest advocacy of the industry, until 1862, when a small growth resulted in the establishment of a mill in Queensland. The appliances were rude, but the result satisfactory. In April, 1864, a mill with a modern crushing and boiling plant was opened at Cleveland (Q.) by Hon. Lionel Hope, but success was only partial, and the works were closed down till 1867. In 1866 the Pampania Company opened a small factory in Queensland, and in the following year two other mills started work. Two factories were erected in the Maryborough district, and in 1868 others were working in the Mackay, Bowen and other districts. The industry was by the end of 1870 firmly established.

An unfortunate feature of the industry is that large quantities of molasses have been and still are allowed to run to waste. Part of the molasses produced is used in distillation, part is turned into food cake for cattle, and part is used for manuring land, but the greater part produced is put to no use whatever.

The product of the sugar mill is raw sugar and molasses, the former being sent to the refineries in different parts of Australia for further treatment. The following tables shew the progress of this industry from the dates at which information is first obtainable :—

## SUGAR MILLS, NEW SOUTH WALES, 1870 to 1910.

Items.	1870.	1877.	1886.	1891.	1896.	1901.	1908.	1909.	1910.

„ employees ...	...	1,065	2,259	1,621	1,475	695	543	529	506
Sugar produced tons	677	7,537	13,750	16,033	28,557	19,519	14,995	14,810	20,115
Molasses produced gals.	...	345,543	507,000	1,074,080	2,520,580	1,300,909	922,549	1,072,400	918,900

During the year 1910, 160,311 tons of cane were crushed in sugar mills in New South Wales. The reduction in the number of New South Wales mills is due chiefly to the tendency towards concentration of cane-crushing in mills fitted with modern machinery, and the consequent closing of the small home mill. On the north coast of New South Wales some land formerly devoted to sugar-growing has been turned into pastures in connection with the dairying industry.

## SUGAR MILLS, QUEENSLAND, 1868 to 1910.

Items.	1868.	1876.	1886.	1891.	1896.	1901.	1908.	1909.	1910.

\* Not available. † 1890. ‡ Tons of cane crushed.

Information regarding the cultivation of sugar-cane and the bounties payable on cane grown by white labour may be found in the section of this book dealing with *Agricultural Production*. (See pages 391 to 395.)

**17. Sugar Refineries.**—The establishment of the sugar-refining industry considerably antedates the establishment of the sugar-milling industry, the raw material operated upon being originally brought chiefly from Mauritius and the East. In 1910 there were two sugar refineries in Queensland; and one in each of the States of New South Wales, Victoria and South Australia. The returns for the individual States cannot be disclosed.

In the five refineries in the Commonwealth, an average number of 148½ hands were employed during the year 1910. The approximate value of land and buildings was £278,776; of plant and machinery, £898,263; and the total amount of wages paid during the year was £170,904.

As regards production, the amount of crude sugar used was 183,529 tons, and of refined sugar produced 174,090 tons, valued at £2,782,532, both these amounts being exclusive of the two refineries in Queensland, for which returns are not available.

**18. Breweries.**—Established at an early date in Australia, the main feature of the history of the brewing industry has been the change from the small local brewery in every township of moderate size to the large centralised city brewery. A recent amalgamation in Melbourne resulted in the closing of several large breweries. A workmen's co-operative brewery has been opened in Sydney and a co-operative brewery has been opened in Melbourne by a number of "free" hotelkeepers.

The following table gives particulars of breweries in each State during the year 1910:—

## BREWERIES, 1910.

(i.) *Production of Spirits and Materials Used, 1910.* The total quantity of brandy distilled in 1910 was 262,336 proof gallons, and of other spirits was 1,937,367 proof gallons. The materials used comprised 407,651 cwt. of molasses and 2,088,933 gallons of wine. Particulars for the separate States are not available for publication.

20. **Tobacco, Cigars and Cigarettes.**—During the year 1910 there were thirty-five establishments in which the manufacture of tobacco, cigars, and cigarettes was carried on. In Queensland there were only two such establishments, and particulars as to output, etc., are therefore not disclosed. In Tasmania there were no factories engaged in this industry.

(ii.) *Development of Industry.* This industry was among the first to be established in Australia. In 1861 New South Wales had eleven factories, producing 177,744 lbs. of manufactured tobacco; in the same year there was one factory in Victoria, but the quantity of tobacco manufactured is not available. In 1896 there were in

New South Wales eight establishments employing 641 persons, of whom 471 were males and 170 females. The plant and machinery employed were valued at £55,700. The production was—tobacco 1,857,616 lbs., cigars 16,553 lbs., and cigarettes 169,520 lbs.; the quantity of leaf used was—Australian 1,349,776 lbs. and imported 693,913 lbs. In Victoria, in the same year, there were twelve establishments employing 650 persons, of whom 424 were males and 226 females. The value of the plant and machinery employed was £42,210. The quantity of manufactured tobacco was 985,811 lbs. and of cigars and cigarettes 92,698 lbs. and 164,766 lbs. respectively. The Australian market has for many years been largely supplied with local manufactures. The quantities imported into Australia during 1910 were—manufactured tobacco 2,260,571 lbs., cigars 330,256 lbs. and cigarettes 114,851 lbs., while the quantities manufactured in Australian factories were respectively 9,993,087 lbs., 319,903 lbs. and 1,862,178 lbs. The following tables shew the development of the tobacco industry in the several States and the Commonwealth during recent years:—

21. **Woollen and Tweed Mills.**—The manufacture of woollens and tweeds was established in Australia at a comparatively early period in its industrial history, the first record in Victoria dating back to 1867. The following table, which gives particulars of the mills in each State during the year 1910, shews that the industry is now well established :—

### WOOLLEN AND TWEED MILLS, 1910.

\* Including one cotton ginning establishment. † Not available.

(ii.) *Quantity and Value of Production, 1910.* The production of the woollen mills of Australia consists chiefly of tweed cloths, flannels, and blankets, all of which have acquired a reputation for purity and durability. Detailed particulars for the several States are not available for publication. The total length of tweed and cloth manufactured was about 2,000,000 yards, valued at, approximately, £250,000. In New South Wales 804,146 yards of tweed and cloth, in Victoria 890,281 yards, and in Tasmania 37,184 yards were manufactured. The production of flannel in the Commonwealth in 1910 amounted to about 5,000,000 yards, valued at £260,000, and of blankets, shawls, and rugs to the number of 532,000, valued at £128,000.

No cotton spinning or weaving or linen weaving is carried on in Australia. Cotton ginning has been carried on at periods far apart in the northern States, and a mill was lately reopened at Ipswich in Queensland.

22. **Boots and Shoes.**—Among the manufactures of Australia the boot and shoe industry holds an important place both in respect to the employment afforded by it and the range of its output. The following table shews particulars of this industry for each State during the year 1910 :—

(ii.) *Quantity and Value of Production, 1910.* Particulars regarding the quantity and value of the production of hat and cap factories in each State are not available for separate publication. The total value of hats and caps made in Australia in 1910 was £648,770.

24. *Coach and Wagon Building Works.*—This industry forms the principal branch of manufacture in Class XI. (see § 1, 3 above). The subjoined table gives particulars of factories in this branch of industry in each State during the year 1910. The returns include establishments for the manufacture of wheels, spokes, etc.

## SECTION XIV.

## WATER CONSERVATION AND IRRIGATION.

## § 1. Water Supply Works.

1. **General.**—In every country in which droughts are recurrent, there are few problems the solution of which is of greater importance than that of an adequate system of water conservation. Much has been done in the Commonwealth so far as the supply of water to centres of population is concerned, and a description of several of the metropolitan water works will be found herein, viz., in the section dealing with "Local Government."

2. **The Goldfields Water Supply of Western Australia.**—The scheme by which the Government of Western Australia undertook to provide a permanent supply of water for the population on the eastern goldfields of that State comes properly under the heading of "Water Supply Works."

The Act under which the works were constructed was introduced in Parliament by Sir John Forrest, G.C.M.G., then Premier of Western Australia, in September, 1896, and provided for an expenditure of £2,500,000 and a daily supply of 5,000,000 gallons. The works, designed by the late Mr. C. Y. O'Connor, Engineer-in-Chief of the State, were originally known as the "Coolgardie Water Scheme," but are now officially called the "Goldfields Water Supply." The first construction work in connection with the scheme was commenced early in 1898, and the water was delivered in Kalgoorlie in January, 1903. The source of supply is the Helena River, in the Darling Ranges, where, at about 18 miles from Perth, an impounding reservoir, 760 acres in extent, with a catchment area of 569 square miles, has been constructed. From the impounding reservoir the water is pumped through a steel main of the locking-bar type, 30 inches in internal diameter, by a series of eight pumping stations located at intervals along the main. Each pumping station, except No. 1, which draws direct from the reservoir, is provided with a suction tank which receives the water pumped by the preceding station. The last pumping station delivers the water into a main service reservoir of 12 million gallons capacity, situated at Bulla Bulling at a height of 1290 feet above the lowest off-take from the Helena Reservoir, and distant  $307\frac{1}{2}$  miles therefrom. From the main service reservoir the water flows by gravity to Kalgoorlie, a further distance of 44 miles; the total length of the 30 in. main being  $351\frac{1}{2}$  miles. The water is distributed to the various townships and to the mining centres from service reservoirs, and a considerable area of agricultural country is also supplied by branch pipe lines from the main conduit. The area of operations embraces 16,000 square miles, the total length of the water area being approximately 380 miles. The cost of the original works, including expenses of raising loans, was £2,866,454, and of supplementary works £386,247, making a total of £3,252,701. The Mundaring reservoir cost £249,000. Its capacity is 4600 million gallons, and its surface area at full supply level 672 acres. The height of the wall above the river bed is 100 ft.; length of wall, 757 ft.; width of wall at bottom, 85 ft.; at top, 11 ft.; and when the reservoir is full the water runs back for a distance of seven miles.

During the financial year 1910-11 the total consumption amounted to 1,058,900,000 gallons, an increase on the previous year of 57,200,000 gallons. The gross revenue was £237,668, and the working expenses £70,972, leaving a surplus available towards interest and sinking fund of £166,696. The outlay for interest and sinking fund charges in respect of supplementary capital borrowed on debentures absorbed £21,261, leaving £145,435 payable to the State Treasury. During the financial year the State Treasury paid £171,050 interest and sinking fund on State loans in respect of these works, leaving a net deficiency of £25,615.

**3. The Mines Water Supply Branch.**—Prior to the commencement of the Goldfields Water Supply Scheme, works of different kinds were carried out by the Government in order to afford temporary relief to the population on the goldfields. These works comprised shallow and artesian boring, conservation and protection of water in natural and artificial reservoirs, sinking of wells, erection of condensers, etc. About 2000 shallow bores have found fresh water, and a few hundred, salt water, which, however, is serviceable for battery purposes. Administratively, the goldfields area is divided into three water supply districts—Coolgardie, Murchison, and Pilbara. It has been the policy of the department charged with the supervision of water supply works, viz., the Mines Department, to lease watering stations wherever that could be done to advantage, and from twenty to thirty leases are generally executed in the course of a year. The tanks which have been constructed by the department vary in size from 200,000 gallons to 37,500,000 gallons (at Niagara).

## § 2. Artesian Wells.

**1. General.** (i.) *The Great Australian Artesian Basin.* Although there are some artesian wells outside this area, yet, in speaking of the "Great Australian Artesian Basin," the area is understood which includes (a) considerably more than one-half of Queensland, taking in practically all that State lying west of the Great Dividing Range, with the exception of an area in the north-west contiguous to the Northern Territory; (b) a considerable strip of New South Wales along its northern boundary and west of the Great Dividing Range; and (c) the north-eastern part of South Australia proper, together with the extreme south-eastern corner of the Northern Territory. This basin (shewn approximately by map in Section XXVI., Local Government), is said to be the largest yet discovered, and is about 569,000 square miles, of which 376,000 square miles are in Queensland, 110,000 square miles in South Australia, and 83,000 square miles in New South Wales. The area of the intake beds is estimated at 60,010 square miles, viz., 50,000 square miles in Queensland and 10,010 square miles in New South Wales. The basin is what is technically known as a one-sided or half-basin, the intake beds outcropping along its eastern and north-eastern sides only, while the remainder of the water-bearing formation is hidden under the superficial deposits forming the plains of the interior of the States. Although it has not been definitely decided whether the basin has outlets towards the Gulf of Carpentaria in the north, and towards the Great Australian Bight or towards Lake Eyre in the south, there is a preponderance of opinion and strong evidence in favour of the existence of such outlets, an opinion which receives strong support from the maps published by the Geological Department of Queensland, which shew an apparent dip in the water-bearing strata towards the Gulf of Carpentaria in the north and towards Lake Eyre and the Great Australian Bight in the south. It is estimated that at present there are about 1650 bores tapping the basin in the three States.

(ii.) *The Western Australian Basin.* The Recent and Tertiary strata which enter Western Australia at its eastern border, and which have a prevailing dip towards the

Great Australian Bight, form an artesian water area. But where boring operations have been undertaken the water has been found to be salt or brackish, and there are other conditions affecting the supply, such as local variations in the thickness of the beds, their relative porosity, and the unevenness of the floor upon which they rest, which so far have not been examined with sufficient thoroughness to enable many particulars to be given in regard to this basin.

In the coastal area to the west of the Darling Ranges artesian boring has, on the other hand, been carried on successfully for many years.

(iii.) *The South Australian-Victorian Basin.* In August, 1910, a report was issued by the Government Geologist of South Australia on the geology of the country south and east of the Murray River, with special reference to subterranean water supply in wells and bores along the Pinnaroo and Bordertown railways. The tertiary formation in the district under consideration occupies the western portion of a vast basin or depression, of which the greater part extends eastward into Victoria and northward into New South Wales. This basin is bounded on the west by the azoic and palæozoic rocks of the Mount Lofty and other ranges, extending northwards from near the mouth of the Murray to the Barrier Ranges, and on the east and north-east by the ranges of Victoria and New South Wales. This tertiary water-basin is occupied by a succession of sedimentary formations, both porous and impervious. It is of interest to note that the waters of the Murray River are partly supplied by influx from the water-bearing beds of this basin; this is proved by the fact that, at low water, springs are observed at certain places flowing into it from beneath the limestone cliffs from Pyap Bend downwards. Similar springs must exist along the courses of other branches of the River Murray system, where they cut through the tertiary formation.

(iv.) *Plutonic or Meteoric Waters.* While it has long been held that the Australian artesian basin is a typically-formed one, and that its intake beds are as described above, a theory has been recently advanced (viz., by Professor Gregory, <sup>1</sup> formerly of Melbourne, but now of Glasgow University), that the water, although called artesian, is not impounded rain-water, or *meteoric* water at all, but is derived from the older rocks, i.e., that it is *plutonic* in character. If this were so, and if the water contained in the basin were merely such as occurs in the molten lava from volcanoes or imprisoned in the solidified quartz of granites, we should, of course, be rapidly exhausting our supply. He founds his main arguments on (a) the amount of friction caused by the flow of water through the minute interstices between the sand grains, i.e., on the loss of its hydrostatic head before the bores are reached; (b) on anomalies in temperature and pressure; (c) on the chemical analyses of some of the waters; and (d) on evaporation measurements in Central Australia. He suggests the pressure of overlying rock, and gas pressure caused by the internal heat of the earth, as causes of the flow from the bores.

This new theory has recently been replied to at length by the Government Geologist of New South Wales.<sup>2</sup> While this Year Book is hardly the place to enter at length upon arguments of a purely scientific nature, it may be said that Mr. Pittman avers that "many of Professor Gregory's statements appear to be in opposition to observed facts." In regard to the loss of hydrostatic head, he quotes the opinion of the United States Geological Survey in regard to bores in Kentucky, and the experience in connection with the Grenelle bore in Paris. So far as temperature is concerned, he shews that it would be illogical to contend that, because some Australian bores give higher rates of increase than the average results of a number of ascertained bores and tunnels in other parts of the world, the water must be plutonic and not meteoric. In regard to pressure, stress is laid on the more accurate results obtained with the dumpy level than with the aneroid, and it is shewn how accurately the height to which the water would rise has been

1. See J. W. Gregory, F.R.S., D.Sc.: "The Dead Heart of Australia"; London, John Murray, 1906.

2. E. F. Pittman, A.R.S.M., Government Geologist of New South Wales: "Problems of the Artesian Water Supply of Australia, with special reference to Professor Gregory's Theory." (Clarke Memorial Lecture, delivered before the Royal Society of New South Wales, 31st October, 1907).

predicted in many localities. It is also pointed out that the isopotential lines as laid down are tentative, as information in regard to many private wells is unreliable. The question of the chemical constituents of artesian water is dealt with at length, and it appears that instead of decreasing from east to west, as stated by Professor Gregory, the salinity of the water actually increases, and that some of the wells in the eastern district mentioned by the latter as being particularly rich in saline matter are actually outside the artesian basin altogether.

In regard to evaporation measurements in Central Australia, Mr. Pittman holds that these do not affect the question at issue at all, as the water does not enter the porous beds in Central Australia, but on the flanks of the Dividing Range, where the rainfall is copious. The theories of the pressure of overlying rock and of gas pressure are not accepted by him.

The strength of the argument seems to be unquestionably in favour of the older theory of meteoric water, as upheld by Mr. Pittman. Professor Gregory has made a rejoinder entitled "The Flowing Wells of Central Australia," which appeared in *The Geographical Journal* for July-August, 1911.

(v.) *Particulars of Artesian and Sub-artesian Bores, 1910.* The following table gives particulars of artesian and sub-artesian bores in each State and in the Commonwealth up to the end of the year 1910:—

**COMMONWEALTH AND STATES.—PARTICULARS OF ARTESIAN AND SUB-ARTESIAN BORES, 1910.**

\* Not available. † Government bores only. ‡ See footnotes to table at bottom of page 587.

2. **New South Wales.**—Artesian boring in New South Wales dates from 1879, when a private bore was put down on the Kallara pastoral holding, between Bourke and Wilcannia. The first Government bore was that at Goonery, on the Bourke-Wanaaring road, completed in 1884. At the end of 1910, out of 445 known artesian bores in New South Wales, 189 were Government bores.

The distribution of these bores was as follows:—

**NEW SOUTH WALES ARTESIAN BORES ON 31st DECEMBER, 1910.**

Particulars.	State.	Private.	Total.
Bores existing ... No.	189	256	445

Minimum ... "	70	71	...

\* Excluding the flow from eighteen bores, the particulars of which are not available.

† Not available.

Of the wells at the end of 1911, the depth is stated in 487 cases, and it appears that only 21 wells were less than 500 feet deep; while 88 ranged from 500 to 1000 feet; 239 from 1000 to 2000 feet; 102 from 2000 to 3000 feet; 32 over 3000 feet; and five over 4000 feet. There is a preponderance of wells from 1000 to 2000 feet in depth, but neither the shallow wells under 500 feet, nor the very deep wells over 3000 feet are so numerous in proportion as in Queensland. The two deepest wells in New South Wales are those at Boronga, in the County of Stapylton, with a depth of 4341 feet and a daily outflow of 1,062,133 gallons; and at Dolgelly, in the Parish of Careunga, in County Stapylton, with a depth of 4086 feet, and an outflow of 622,185 gallons per day. The largest outflow is stated to be that at the Boobora bore, in the County of Stapylton, which yields 1,133,300 gallons a day, and has a depth of 3225 feet.

The Zetz Spa, much used as a mineral water in New South Wales, comes from Ballimore, near Dubbo.

It may be said that the cost of artesian wells works out at an average of about 20s. per lineal foot; it depends, of course, upon the depth to which boring operations have to be extended, and on the accessibility of the bore to a railway station. The practice is to line the bore with three strings of casing, ten, eight and six inches in diameter respectively. The ten and eight inch strings are inserted as far as may be considered necessary, and the six-inch string generally taken to the bottom of the bore. Recent contract prices per lineal foot for a bore complete are as follows:—To 1000 feet, 27s. per foot; 1000 to 1500 feet, 17s. 9d.; 1500 to 2000 feet, 18s. 3d.; 2000 to 2500 feet 19s. 3d.; 2500 to 3000 feet, 21s. 3d.; 3000 to 3500 feet, 23s. 9d.; 3500 to 4000 feet, 30s. The increased cost per lineal foot for the first 1000 feet is owing to the insertion of the three strings of casing.

**3. Victoria.**—Victoria lies altogether outside the Great Australian Artesian Basin, and as water is obtainable in most parts of the State at shallow depths, there has not been much occasion for artesian boring. As early as 1884, however, an artesian well was bored at Sale, which for a number of years gave a supply of about 100,000 gallons per day until, either through corrosion of the casing or by choking up with sand from below, the flow ceased. In 1905 a new bore was therefore put down, which at a depth of 277 feet yielded sufficient water to fill Lake Guthridge, a local depression. But as the water was impure, and contained too much sulphuretted hydrogen, boring operations were continued to 520 feet, when the lowering of the casing shut off the supply of water. A further bore was then put down at some distance from the first, and this, at a depth of 238 feet, yielded a fresh and clear water supply, which at present is stated to be about 145,000 gallons per day. Further trouble, however, has been experienced owing to failure of casing and a fresh bore is being prepared.

In the late eighties a number of bores were put down in the North-Western part of the State varying from 200 to over 2000 feet in depth, but without any notable success. In 1897 a Board reported on boring for artesian water supply in the Mallee country but this report was adverse except as regards the extreme northern portion thereof. In 1906 eight bores were put down on the Overnewton Estate, Maribyrnong, to depths varying from 147 to 272 feet; small supplies of good and medium water for stock purposes were obtained, but only one of the wells yielded water fit for domestic purposes. In 1908 boring was commenced in the Mallee country near the Border east of Pinnaroo in South Australia, and a line of bores from the Border to Kow Plains has proved the existence of a large sheet of underground water. Altogether forty-two bores have been sunk, thirty-eight of which have been successful. Their depths vary from 150 to 475 feet, and the water rises to within from 200 to 7 feet of the surface. In one instance the bore flows, the water rising to four feet above the surface. The fresh water extends as far east as the 142nd meridian and its northern limits are not yet ascertained. Information as to the geological formation of this district is given on page 584 preceding.

At the end of 1910 the number of existing Government bores in use in Victoria was 31, from which supplies are obtained by pumping. The total depth bored amounted to 8873 feet, while the maximum and minimum depths at which water was struck were 436 and 131 feet respectively.

4. **Queensland.**—The publication of the reports issued annually by the Hydraulic Engineer of Queensland has been suspended during the last eight years, and these reports are only available to 30th June, 1902. At that date the following bores were in existence :—

**QUEENSLAND ARTESIAN BORES ON 30th JUNE, 1902.**

Sunk by—	Artesian Flows.	Sub-Artesian Flows.	Pumped Supplies.	In Progress, Abandoned, Uncertain.	Total.
Water Supply Department (trial borings)	22	...	3	24	49
Railway Department ... ..	2	...	2	13	17
Local governing authorities ... ..	10	...	15	5	30
Private owners ... ..	530	9	131	168	838
Total ... ..	564	9	151	210	934

The depth of 850 of these wells is given, and it appears that there were 229 less than 500 feet deep, 200 from 500 to 1000 feet, 231 from 1000 to 2000 feet, 124 from 2000 to 3000 feet, and 66 over 3000 feet. The deepest well was one known as Bimerah Run No. 3, Whitewood, lying between the Barcoo and Thomson Rivers; this had a depth of 5045 feet, and was stated to yield 70,000 gallons daily. This flow is, of course, a comparatively small one, many wells yielding, when uncontrolled, from one to three million gallons a day. A well at Cunnamulla is stated to have a daily flow, when uncontrolled, of no less than 4,500,000 gallons. The waters of many of the wells have been analysed, and some found suitable for wool-scouring only, others are suitable for watering stock but not for irrigation, owing to the presence of alkali; others again serve for both stock and irrigation, while some, such as those containing sulphuretted hydrogen, are not of any use. Water fit for stock may generally be said to be "safe" for domestic purposes in spite of its slightly mineral taste. The wells yielding the mineral water known as "Helidon Spa," which is much in use in Queensland and New South Wales, are shallow wells from 60 to 200 feet in depth.

The following table shews particulars as to Queensland bores at the end of June, 1911 :—

**QUEENSLAND ARTESIAN BORES ON 30th JUNE, 1911.**

Particulars.	State and Local Authorities.	Private.	Total.
Bores existing ... .. No.	268*	1,443†	1,711

\* 54 flowing, 45 pumped, 151 abandoned or uncertain.

† 731 flowing, 284 pumped, 428 abandoned or uncertain.

5. **South Australia.**—The information about artesian wells is somewhat meagre. Early in 1908 a list of twenty-five of the principal Government bores was published, of which four were under 1000 feet in depth, twelve from 1000 to 2000 feet, two from 2000 to 3000 feet, and seven over 3000 feet. The deepest flowing well was at Goyder's Lagoon, on the Hergott to Birdsville route, measuring 4580 feet, and yielding 600,000 gallons per day. A bore at Patchawarra, 35 miles north of Innamincka, was in September, 1909, down to 4863 feet, but had not at that depth struck the subterranean water. The maximum flows, viz., 1,250,000 gallons and 1,000,000 gallons daily, occurred at Coward Springs and Dulkaninna respectively.

The following table shews particulars as to South Australian bores at the end of December, 1910:—

SOUTH AUSTRALIAN BORES, 1910.

Particulars.	Artesian.	Sub-artesian.	Total.
Bores existing ... ..	26	47	73

† Not available.

(i.) *Bores along Bordertown Railway.* The sinking of bores across the Ninety-mile Desert between the Murray and the Victorian boundary was commenced in 1886 at Coonalpyn; with the exception, however, of salt water at 55 ft., none was reported to have been struck. Ki Ki bore was sunk in 1887 and at 361 ft. a good supply of water fit for stock was struck. Tintinarra bore was sunk in 1887; it was artesian when first tapped. The water was found to be fit for locomotive engines and is still used for that purpose. The bore at Emu Flat was also sunk in 1887.

The following table gives particulars relating to bores along the Bordertown railway. In all these bores water was found in porous beds of Eocene (Tertiary) age.

SOUTH AUSTRALIA.—PARTICULARS OF BORES ALONG BORDERTOWN RAILWAY, 1910.

Bore.	Elevation of Surface above Sea-level.	Depth of Water.	Depth of Water-level from Surface.	Quality: Salts and Matter per Gallon.	Supply per diem.	Remarks.

Keith ...		264				

(ii.) *Bores along and near Pinnaroo Railway Line.* The subjoined table gives particulars of some of the principal bores in the Pinnaroo country. In 1904 the first bore was sunk in this district at Cotton; numerous successful bores have since been put down by the Public Works Department, and subsequently by the residents of the district. Several wells, ranging in depth from 55 ft. to 221 ft., have also been sunk in this district.

**SOUTH AUSTRALIA.—PARTICULARS OF PRINCIPAL BORES NEAR PINNAROO  
RAILWAY LINE, 1910.**

\* Bottomed on granite at 839 feet.

The latest Government bore is situated  $7\frac{1}{2}$  miles south of Brown's well, near the terminus of the proposed railway from Taillem Bend. The depth of this bore is 220 ft., and the water, which is in large supply, rises to within 52 ft. of the surface. The water is fresh, containing  $\frac{1}{4}$  oz. salts and other solid matter per gallon.

6. **Western Australia.**—As already stated, no artesian water has been found east of the Darling Ranges, although a large number of shallow bores yield either fresh or salt water.

At the end of the year 1910 the total number of bores west of the Darling Range was 79, of which 47 were Government bores. The total depth bored is given as 48,349 feet in Government and 31,251 feet in private bores. The total cost of construction of State bores at the end of the year 1910 was about £83,000, of which amount £13,000 was spent in 1910. The total daily flow of the Government bores is stated as 15,532,310 gallons, and of private bores as 12,406,400 gallons. The maximum and minimum depths of State bores were 3011 feet and 56 feet respectively, and the maximum and minimum temperatures 140° and 60° Fahrenheit. The maximum outflow, 1,167,000 gallons per day, is said to be obtained from a well at Guildford.

### § 3. Irrigation Plants.

1. **General.**—Various causes have combined to keep proposals for irrigation works on a large scale before the Parliaments of several of the States for a number of years without any very tangible results, except in the case of New South Wales, Victoria, and South Australia. The absence of the example of any country which has constructed such works under similar climatic and labour conditions, the very partial success of some of the smaller works undertaken in Australia, and the abundant supply of artesian water obtained during the last twenty years in parts of the continent most liable to droughts, have all tended to delay the undertaking of large works.

2. **New South Wales.**—(i.) *Irrigation Trusts.* The first action by the Government of this State for the establishment of irrigation settlements was taken under Acts of Parliament, which authorised the formation of irrigation trusts in the vicinity of Wentworth in 1890, Hay in 1892, and Balranald in 1893. The Wentworth Trust controlled an area of 10,600 acres, but has been dissolved and its powers assumed by Government. A pumping plant has been provided and channels laid out for the irrigation of an area of 1500 acres, of which 1000 acres are at the present time under successful occupation, largely for the production of horticultural crops and a small amount of lucerne. The original area under the Hay Trust was 12,847 acres, but in 1896 this was reduced to 3000 acres. The pumping plant and channels provide for the irrigation of 900 acres, which are under occupation, principally in connection with the growth of fodder crops for dairying, a small area being under horticultural crops. No works for the supply of water have yet been carried out by the Balranald Trust, which controls an area of 1000 acres. It is improbable that any irrigation will be provided in this area in the near future.

(ii.) *Private Irrigation.* Irrigation by private individuals is almost entirely carried out by pumping plants licensed under the provisions of the Water Rights Act. The largest plants draw their supplies from the River Murray for irrigating areas of from 600 to 700 acres of lucerne grown for stock feeding purposes.

(iii.) *The Murrumbidgee Northern Irrigation Scheme.* This scheme provides for the utilisation of a large proportion of the waters flowing from the Murrumbidgee catchment area in normal seasons. The works which are necessary to provide for the conservation of these waters consist in the first place of a large storage reservoir in which the water is to be retained by a weir known as the "Burrinjuck Dam." This dam is being constructed across the channel of the Murrumbidgee River, about three miles below the confluence of the Goodradigbee River. The catchment area above this point is 5000 square miles.

The retaining wall will have a total height of 240 feet from its crest to the deepest foundation level; the total length will be 784 feet curved in plan to a radius of 1200 feet; the thickness at the crest will be 18 feet and at the base 170 feet. The maximum depth of the water stored will be 224 feet, the total volume being 33,630 million cubic feet. The wall itself will contain about 600,000 tons of material, and will require about 50,000 tons of cement for its construction. The work is now partially completed and it is estimated that it will be finished in 1913. The object of constructing this weir is to regulate the supply of water, so that the large volumes which are afforded by the winter rains and the melting snows of the spring may be retained and made available to supplement the natural flow of the river in the dry months of the summer, when irrigation water is most required. The volumes of water thus made available for irrigation requirements will be conveyed in the channel of the Murrumbidgee River for a distance of 200 miles from the storage to a point above the town of Narrandera at Berembé, where a reservoir known as the Berembé Weir is in course of construction with the object of diverting supplies by gravitation into the irrigation lands. A main canal, capable of carrying 1000 cubic feet per second, is being constructed from the Berembé weir for the purpose of conveying the waters to the irrigable lands situated along the base of the hills to the west of the town of Narrandera.

It is proposed that the State Government shall acquire and subdivide for the purposes of intense culture the whole of these irrigable areas, which consist of about 200,000 acres of first-class and 360,000 acres of second-class land. The main canal will be capable of carrying to these areas only about one half of the water which will be made available for irrigation by the construction of the Burrinjuck dam. No determination has yet been arrived at as to whether the additional available volumes will be utilised for irrigating further areas of these same lands on the northern side of the river, or whether a separate canal will be constructed for the purpose of carrying supplies to lands on the southern side.

It is stated that the conditions as regards water-supply, soil, and climate are such as to ensure the success of the scheme, and it is anticipated that when the whole of the lands are settled there will be an addition of at least 50,000 people to the population within the district. It is expected that, in addition to the horticultural crops which will be grown, the supplies of fodder which will be afforded by the irrigation settlement will be sufficient to obviate the evil effects of droughts in the surrounding pastoral districts and will thus largely increase their stock-carrying capacity and productiveness.

(iv). *Other Irrigation Schemes.* The following proposals are under investigation by the State Irrigation Department :—

- (a) *Lachlan River.* The construction of a storage reservoir on this river at a place known as Wyangala, below the confluence of the Abercrombie River, for the purpose of affording water in the river channel for pastoral purposes and for the irrigation of small areas along the river banks by pumping.
- (b) *Macquarie River.* The construction of a storage reservoir on this river at Burrendong below the confluence of the Cudgegong River, for the purpose of affording water by gravitation for the irrigation of certain lands to the west of Narromine.
- (c) *Murray River.* The construction of a storage reservoir across the Murray River at Camberoon, above Albury, in order to supply water by gravitation through a canal which will be taken off at Bungowannah, below Albury, for the irrigation of high-class lands lying between the Murray and the Billa-bong Creek near the town of Berrigan.
- (d) *Hunter River.* The construction of storage reservoirs on the Upper Hunter or Goulburn River with a view to supplying water by pumping from the Hunter River to the adjoining lands and supplementing the water supply of Newcastle. It is stated that the valley of this river is one of the most fertile districts in the State and that it is capable of carrying a dense population under the conditions of intense culture by irrigation.
- (e) *Darling River.* The conversion of Lake Menindie into a large permanent storage by means of a diversion weir across the Darling River and of a canal through Lake Pamamaroo, the water so stored to be utilised in the irrigation of the bed of Lake Cawndilla and of certain lands to the south-west.
- (f) *Warragamba River.* A scheme has been prepared for the construction of a large storage dam on the Warragamba River, so as to retain a depth of 225 feet and a volume of 103,000 million gallons of water. This would be available for the supply of 80 million gallons daily for the domestic services of Sydney, 30 million gallons daily for trade purposes, and 80 million gallons daily for irrigation purposes in the county of Cumberland.

It is proposed that the water for domestic purposes should be conveyed and delivered at Potts Hill through 48 miles of open concrete channel and pipes; that the supplies for trade purposes should be delivered in the vicinity of the Great Western Railway, between St. Mary's and Penrith; and that the lands situated along the banks of the Nepean River and in the valley of South Creek should be irrigated.

3. *Victoria.*—(i.) *Classification of Works.* The Water Conservation Works in Victoria naturally divide themselves into those providing mainly a domestic supply, such as the Yan Yean works, controlled by the Melbourne and Metropolitan Board of Works; the Coliban, Broken River, Kerang Lakes, and Mallee Supply Works, which, although now administered by the State Rivers and Water Supply Commission, are properly local

government works; other works for domestic supply controlled by Water Works Trusts or Municipal Corporations; and irrigation works proper. With the exception of the last-named class particulars as to these works will be found in the section on "Local Government" of this book.

(ii.) *Works Controlled by the Commission.* With the exception of the First Mildura Irrigation and Water Supply Trust, all of the irrigation schemes and the more important domestic and stock water-supply works in rural districts are vested in and controlled by the State Rivers and Water Supply Commission, which was created by the Water Act 1905, in force since 1st May, 1906. The works under the control of this body, which is composed of three members, may be classified as follows:—(a) Irrigation schemes; and (b) Domestic and stock schemes included in which are a number for providing town supplies, the principal being the Coliban system. The following statement shews the capital cost of each class of works under the control of the commission:—

**VICTORIA.—COST OF WORKS VESTED IN, AND UNDER CONTROL OF, STATE  
RIVERS AND WATER SUPPLY COMMISSION, 1911.**

Particulars.		Irrigation Schemes.	Domestic and Stock Schemes including Town Supplies.	Miscellaneous.	Total.
Capital cost	£	2,889,479	1,989,525	66,547	4,945,551

(a) *Irrigation Schemes.* This division comprises the schemes constructed and under construction for the supply of water to between twenty to thirty irrigation districts. Up to 1906 these schemes were controlled by local Trusts which had obtained the moneys for the construction on loans from the State. By the Water Act 1905 all local control was abolished and the districts were transferred to the State Rivers and Water Supply Commission. Since this date the Government has adopted a vigorous irrigation policy and the expenditure on construction during the past four years amounts to £1,250,000. The irrigation works draw their supplies mainly from headworks constructed on the Murray, Goulburn, and Loddon rivers. The cost of these works, which now stands at £1,087,000, is not debited to the districts benefited, but is borne entirely by the State. Within the last two years the State has adopted the policy of purchasing large areas of land commanded by these schemes and subdividing them for intensive culture. The settlement of the areas on these lines will mean a large increase in the population of the State.

(b) *Domestic and Stock Schemes.* The second division takes into account the schemes constructed and under construction for the supply of water for domestic and stock purposes to very large tracts of country. The principal works of this division are situated in the Wimmera and Mallee districts, and cover an area of about 6000 square miles. The loan expenditure for 1901-11 within this area amounted to between £50,000 and £55,000, while for 1911-12 it is estimated that the expenditure will amount to over £60,000. In addition to the Commission's districts some large areas are still administered by local authorities.

It should be mentioned that in 1899 the State deemed it advisable to write off the sum of £1,073,000 from capital accounts of the local bodies then controlling the works in each of the above divisions.

(iii.) *Mildura.* The first settlement of Mildura dates from 1884. After being managed until 1887 by Chaffey Bros., and then until 1895 by Chaffey Bros. Company Limited, it was in that year taken over by the First Mildura Irrigation Trust and has since then made great progress. Its population, at the Census of 1911, was 6145. For

the year ending 30th June, 1910, the receipts of this Trust aggregated £21,329, and its expenditure £16,466. For the same period the area of land under cultivation and the record of water acres were 12,189 and 35,475 acres respectively.

No precise figures are available as to the capital cost of the works at Mildura; probably the sum was not less than £180,000. The amount due to Government is £72,430, exclusive of £15,434 for accumulations of interest.

(iv.) *Lands supplied with water within the State.*—The area of country lands within the State artificially supplied with water for domestic and ordinary use and for watering stock is approximately 17,000 square miles, equal to 10,880,000 acres. The extent of land under irrigated culture, for all kinds of crop, is 142,857 acres, an increase of 13,086 acres over the area irrigated in the previous year. About 11,000 acres have been watered under yearly permits granting authority to divert water from streams throughout the State. Further progress has been made during the year in bringing all such diversions under the control of the Commission, 469 permits authorizing diversions for irrigation, domestic and stock, and power purposes being now in force.

4. *Queensland.*—The main irrigation works in Queensland are as follow:—(a) those at Ayr, which utilise the waters of the Burdekin River, and shallow wells on its banks; (b) those at Bingera, near Bundaberg, which utilise water pumped from the Burnett River just above the point of meeting of the salt and fresh waters, and (c) those at Fairymead, which utilise water pumped from a number of shallow spear wells sunk on the alluvial flats on the north side of the Burnett River and about six miles from Bundaberg. Apart from the persons benefiting from the two schemes mentioned, there were said to be not more than 363 irrigators in 1909, chiefly farmers and graziers, in the State.

5. *South Australia.*—(i.) *The Renmark Irrigation Trust.* The Renmark Irrigation Trust was established on similar lines to Mildura, but on a considerably smaller scale. At present the extent of the land assessed for the purpose of the trust is approximately 5200 acres, and maintains a population of about 2000. The value of Renmark products averages about £100,000 per annum. It is claimed that without irrigation the land would barely feed 500 sheep.

(ii.) *Other Waterworks.* The Bundaleer reservoir consists of a large earth and clay embankment which impounds water in a natural basin away from the main water-courses. Its capacity is stated at 1,319,000 gallons.

The Barossa waterworks have a reservoir wall of concrete seventy-five feet in height. The reservoir has a holding capacity of 993,340,000 gallons.

A reservoir, the first in the northern part of the State, was completed at the end of 1909 on Pekina Creek, above Orroroo.

The largest of the South Australian undertakings is the Beetaloo waterworks, which supply the towns of Port Pirie, Moonta, Wallaroo, Kadina, and fifteen others, besides one million acres of country lands. The cast-iron reticulation pipes in connection with Beetaloo are 637 miles in length, and the capital cost of the works was £989,950.

None of the South Australian works, Renmark excepted, are, however, irrigation works properly so called, although they are to some extent used for irrigation purposes,

(iii.) *Area under Irrigation.* The area under irrigation in South Australia, including reclaimed lands along the Murray, amounted to only 20,000 acres at the beginning of 1911. The Government, however, proposes to push on with the irrigation schemes along the Murray as fast as possible. The Cobdogla station, held under grazing permits, will be the next area taken in hand, and notice for the resumption of 118 square miles has been given to the present occupiers. The area comprises practically the whole of the original Lake Bonney irrigation scheme, and is contiguous to the Berri irrigation area, which contains a further 19,000 acres of the Cobdogla run. It is proposed to start

the reticulation with channels for an area of 5000 acres, between the Cobdogla homestead and Lake Barmera (formerly Lake Bonney), which lends itself to economical irrigation. A large central pumping station will be erected at the south end of the lake, and will command the whole of the irrigation area, including the 5000 acres, the maximum lift being about 90 feet.

**6. Conflicting Interests.**—The relative rights of the States of New South Wales, Victoria, and South Australia to the waters of the Murray River are undetermined. Territorially the south bank of the Murray was the boundary between the two former States, *i.e.*, the region of the river itself, up to the point where it enters South Australia, was wholly within New South Wales.

At the Federal conventions which preceded the establishment of the Commonwealth the South Australian representatives expressed their fear lest too much irrigation on the Murray and Darling might impair the navigability of the latter river, and the result was the insertion of a provision in the Commonwealth Constitution which reads as follows:—

*“Section 100.*—The Commonwealth shall not, by any law or regulation of trade or commerce, abridge the right of a State or the residents therein to the reasonable use of the waters of rivers for conservation and irrigation.”

Under this section negotiations have for several years been in progress between the three interested States. In January, 1911, a conference took place in Melbourne between the Premiers of New South Wales, Victoria, and South Australia on the Murray Waters question. One of the primary objects of this conference was to discuss the provision in the Murray Works Act, passed by the South Australian Government in 1910, authorising the carrying out of certain works at Lake Victoria in New South Wales subject to an agreement being made for the acquisition by South Australia of the lake together with the two watercourses, known as Rufus River and Frenchman's Creek, connecting the River Murray with the lake. The Premier of South Australia claimed the right to have enough water sent down the river to maintain navigation, and also asserted a right to the waters flowing down the Goulburn in Victoria, and the Murrumbidgee in New South Wales, into the Murray, as well as to the waters of the Murray itself, not only for navigation, but also for the irrigation purposes contemplated by the Government of South Australia. In support of the navigation proposal it was stated that South Australia had in view a scheme for cutting a canal from the Murray to Victoria Harbour, with harbour improvements, etc., which altogether would cost a million sterling. Briefly stated, the results of the conference were that South Australia was to be allowed to carry out storage works at Lake Victoria, New South Wales, and lock her own portion of the Murray at her own expense, but New South Wales and Victoria would not recognise the claims of navigation in any way, and would not bind themselves to deliver any quantity of water at the point of intake into South Australia. No rights to navigation were conceded by New South Wales and Victoria, and the upper portions of the river were left free for irrigation. The storage works which the South Australian Government proposes to construct at Lake Victoria will cost about £162,000, and the total scheme, which will include the construction of at least five locks, will cost between £600,000 and £700,000. It is estimated that as the result of the storage works 22,000,000,000 cubic feet of water can be impounded in Lake Victoria. It is stated that there will be no difficulty in filling the lake in the winter months.

## SECTION XV.

## COMMERCE.

## § 1. Introductory.

1. **General.**—The development of the commerce of Australia might be considered from several standpoints—for example, the historical, the legal, or the purely financial—all of which are important.

The importance of the subject demands a reference to the constitutional power of the Commonwealth in respect to commerce and to the various Acts which have been passed in the exercise of that power, since these profoundly affect its trade and commerce.

In setting out the statistics of commerce regard will be had to the significant features of its development, both from the historical and financial point of view.

2. **Constitutional Powers of Commonwealth in regard to Commerce.**—Under the provisions of the Commonwealth Constitution Act power to make laws with respect to “trade and commerce with other countries and among the States” is vested in the Commonwealth Parliament. [Chap. I., Part V., sec. 51 (i.) *vide* p. 22 of this volume.]

The Constitution Act further provides in relation to trade that:—

“On the establishment of the Commonwealth, the collection and control of duties of customs and of excise, and the control of the payment of bounties, shall pass to the Executive Government of the Commonwealth.” [Section 86.]

“Uniform duties of customs shall be imposed within two years after the establishment of the Commonwealth.” [Section 88.]

“On the imposition of uniform duties of customs the power of the Parliament to impose duties of customs and of excise, and to grant bounties on the production or export of goods, shall become exclusive.

“On the imposition of uniform duties of customs all laws of the several States imposing duties of customs or of excise, or offering bounties on the production or export of goods, shall cease to have effect, but any grant of or agreement for any such bounty lawfully made by or under the authority of the Government of any State shall be taken to be good if made before the thirtieth day of June, one thousand eight hundred and ninety-eight, and not otherwise.” [Section 90.]

“Nothing in this Constitution prohibits a State from granting any aid to or bounty on mining for gold, silver, or other metals, nor from granting, with the consent of both Houses of the Parliament of the Commonwealth expressed by resolution, any aid to or bounty on the production or export of goods.” [Section 91.]

"On the imposition of uniform duties of customs, trade, commerce, and intercourse among the States, whether by means of internal carriage or ocean navigation, shall be absolutely free." [Section 92, 1st paragraph].

"The power of the Parliament to make laws with respect to trade and commerce extends to navigation and shipping, and to railways the property of any State." [Section 98.]

"The Commonwealth shall not, by any law or regulation of trade, commerce, or revenue, give preference to one State or any part thereof over another State or any part thereof." [Section 99.]

"The Commonwealth shall not, by any law or regulation of trade or commerce, abridge the right of a State or of the residents therein to the reasonable use of the waters of rivers for conservation or irrigation." [Section 100.]

"There shall be an Interstate Commission, with such powers of adjudication and administration as the Parliament deems necessary, for the execution and maintenance, within the Commonwealth, of the provisions of this Constitution relating to trade and commerce, and of all laws made thereunder." [Section 101.]

"The Parliament may by any law with respect to trade or commerce forbid, as to railways, any preference or discrimination by any State, or by any authority constituted under a State, if such preference or discrimination is undue and unreasonable or unjust to any State; due regard being had to the financial responsibilities incurred by any State in connection with the construction and maintenance of its railways. But no preference or discrimination shall, within the meaning of this section, be taken to be undue and unreasonable, or unjust to any State, unless so adjudged by the Interstate Commission." [Section 102.]

"The members of the Interstate Commission—

- (i.) Shall be appointed by the Governor-General in Council;
- (ii.) Shall hold office for seven years, but may be removed within that time by the Governor-General in Council, on an address from both Houses of the Parliament in the same session praying for such removal on the ground of proved misbehaviour or incapacity;
- (iii.) Shall receive such remuneration as the Parliament may fix; but such remuneration shall not be diminished during their continuance in office." [Section 103.]

"Nothing in this Constitution shall render unlawful any rate for the carriage of goods upon a railway, the property of a State, if such rate is deemed by the Interstate Commission to be necessary for the development of the territory of the State, and if the rate applies equally to goods within the State and to goods passing into the State from other States." [Section 104.]

Provisions of a temporary nature and which have now ceased to operate were also made as follows:—

"But notwithstanding anything in this Constitution, goods imported before the imposition of uniform duties of customs into any State, or into any colony which, whilst the goods remain therein, becomes a State, shall, on thence passing into another State within two years after the imposition of such duties, be liable to any duty chargeable on the importation of such goods into the Commonwealth, less any duty paid in respect of the goods on their importation." [Section 92.]

"Notwithstanding anything in this Constitution, the Parliament of the State of Western Australia, if that State be an original State, may, during the first five years after the imposition of uniform duties of customs, impose duties of customs on goods passing into that State and not originally imported from beyond the limits of the Commonwealth; and such duties shall be collected by the Commonwealth.

"But any duty so imposed on any goods shall not exceed during the first of such years the duty chargeable on the goods under the law of Western Australia in force at the imposition of uniform duties, and shall not exceed during the second, third, fourth, and fifth of such years respectively, four-fifths, three-fifths, two-fifths, and one-fifth of such latter duty, and all duties imposed under this section shall cease at the expiration of the fifth year after the imposition of uniform duties.

"If at any time during the five years the duty on any goods under this section is higher than the duty imposed by the Commonwealth on the importation of the like goods, then such higher duty shall be collected on the goods when imported into Western Australia from beyond the limits of the Commonwealth." [Section 95.]

## § 2. Commonwealth Commercial Legislation.

1. **Customs Act 1901 (No. 6 of 1901).**—"An Act relating to the Customs," assented to on the 3rd October, 1901, came into operation by proclamation on the 4th October, 1901. This provided for the establishment of the necessary administrative machinery for all matters pertaining to the customs, and prescribed, *inter alia*, the manner in which customs duties shall be computed and paid. It does not, however, determine the rates thereof.

During the interval between the inception of the Commonwealth, viz., on 1st January, 1901, and the coming into operation of the Customs Act 1901, the Customs Acts of the several States were administered by the Executive Government of the Commonwealth, under section 86 of the Constitution.

2. **Customs Tariff Act 1902 (No. 14 of 1902).**—The first Commonwealth Customs Tariff imposing uniform rates of customs duty in all the States was introduced in the House of Representatives on the 8th October, 1901. "An Act relating to Duties of Customs," assented to on the 16th September, 1902, made provision that uniform duties of customs specified in the tariff schedule should be imposed from the 8th October, 1901, at four o'clock in the afternoon, reckoned according to the standard time in force in the State of Victoria. From this time onwards trade between the States became free, with, however, the exception, under section 95 of the Constitution Act, of the right of Western Australia to levy duty on the goods from other States. [Repealed by the Customs Tariff Act 1908 (No. 7 of 1908).]

3. **Sea Carriage of Goods Act (No. 14 of 1904).**—"An Act relating to the Sea Carriage of Goods," assented to on the 15th December, 1904, to commence on the 1st January, 1905, provides that—"Where any bill of lading or document contains any clause, covenant or agreement whereby (a) the owner, charterer, master, or agent of any ship or the ship itself, is relieved from the liability for loss or damage to goods arising from the harmful or improper condition of the ship's hold, or any other part of the ship in which goods are carried, or arising from negligence, fault, or failure in the proper loading, stowage, custody, care, or delivery of goods received by them or any of them to be carried in or by the ship; or (b) any obligations of the owner or charterer of any ship to exercise

due diligence and to properly man, equip, and supply the ship, to make and keep the ship seaworthy, and to make and keep the ship's hold, refrigerating and cool chambers, and all other parts of the ship in which goods are carried, fit and safe for their reception, carriage and preservation, are in any wise lessened, weakened, or avoided; or (c) the obligations of the master, officers, agents, or servants of any ship to carefully handle and stow goods, and to care for, preserve, and properly deliver them, are in any wise lessened, weakened, or avoided; that clause, covenant, or agreement shall be illegal, null and void, and of no effect.

"In every bill of lading with respect to goods a warranty shall be implied that the ship shall be, at the beginning of the voyage, seaworthy in all respects and properly manned, equipped, and supplied.

"In every bill of lading with respect to goods, unless the contrary intention appears, a clause shall be implied whereby, if the ship is at the beginning of the voyage seaworthy in all respects and properly manned, equipped, and supplied, neither the ship nor her owner, master, agent, or charterer shall be responsible for damage to or loss of the goods resulting from (a) faults or errors in navigation; or (b) perils of the sea or navigable waters; or (c) acts of God or the King's enemies; or (d) the inherent defect, quality, or vice of the goods; or (e) the insufficiency of package of the goods; or (f) the seizure of the goods under legal process; or (g) any act of omission of the shipper or owner of the goods, his agent, or representative; or (h) saving or attempting to save life or property at sea; or (i) any deviation in saving or attempting to save life or property at sea."

**4. Secret Commission Act 1905 (No. 10 of 1905).**—"An Act relating to Secret Commissions, Rebates, and Profits," assented to on the 16th November, 1905, provides that—"Any person who, without the full knowledge and consent of the principals directly or indirectly, (a) being an agent of the principal, accepts or obtains, or agrees or offers to accept or obtain, for any person, for himself, or for any person other than the principal; or (b) gives or agrees to give or offers to the agent of a principal, or to any person at the request of an agent of the principal, any gift or consideration as an inducement or reward for any act done or to be done, or any forbearance observed or to be observed, or any favour or disfavour shewn or to be shewn in relation to the principal's affairs or business or on the principal's behalf, or for obtaining or having obtained, or aiding or having aided to obtain for any person an agency or contract for or with the principal, shall be guilty of an indictable offence.

"Any person who (a) gives to an agent; or (b) being an agent receives or uses, with intent to deceive the principal, any receipt, account, or document in respect of which the principal is interested or in relation to a dealing, transaction, or matter in which the principal is interested, the receipt, account, or document being false, erroneous, or defective in any material particular, or likely in any way to mislead the principal, shall be guilty of an indictable offence.

"Any agent who, without the full knowledge and consent of the principal, buys from or sells to himself, or any firm of which he is a partner, or any company of which he is a director, manager, officer, or employee, or in which he or any person for him or on his behalf is a shareholder, any goods for or on behalf of his principal, shall be guilty of an indictable offence.

"Whoever aids, abets, counsels, or procures, or is in any way directly or indirectly knowingly concerned in or privy to (a) the commission of any offence against this Act; or (b) the commission outside Australia of any act, in relation to the affairs or business or on behalf of a principal residing in Australia, which, if committed in Australia, would be an offence against this Act, shall be deemed to have committed the offence and be punishable accordingly.

"This Act applies to trade and commerce with other countries and among the States, and to agencies of and contracts with the Commonwealth or any department or officer thereof.

**5. Commerce (Trade Descriptions) Act 1905 (No. 16 of 1905).**—"An Act relating to Commerce with other Countries," assented to on the 8th December, 1905, and brought into operation by proclamation on the 8th June, 1906, gives power to compel the placing of a proper description on certain prescribed goods, or on packages containing the same, being imports or exports of the Commonwealth. In this Act, unless the contrary intention appears, "trade description" in relation to any goods, means any description, statement, indication, or suggestion, direct or indirect, "(a) as to the nature, number, quantity, quality, purity, class, grade, measure, gauge, size, or weight of the goods; or (b) as to the country or place in or at which the goods were made or produced; or (c) as to the manufacturer or producer of the goods or the person by whom they were selected, packed, or in any way prepared for the market; or (d) as to the mode of manufacturing, producing, selecting, packing, or otherwise preparing the goods; or (e) as to the material or ingredients of which the goods are composed, or from what they are derived; or (f) as to the goods being the subject of an existing patent privilege, or copyright, and includes a customs entry relating to goods; and any mark which, according to the custom of the trade or common repute, is commonly taken to be an indication of any of above matters, shall be deemed to be a trade description within the meaning of this Act.

"'False trade description' means a trade description which, by reason of anything contained therein or omitted therefrom, is false or likely to mislead in a material respect as regards the goods to which it is applied, and includes every alteration of a trade description, whether by way of addition, effacement, or otherwise, which makes the description false or likely to mislead in a material respect."

The operation of the Act is restricted to the following classes of goods:—(a) Articles used for food or drink by man, or used in the manufacture or preparation of articles used for food or drink by man; or (b) medicines or medicinal preparations for internal or external use; or (c) manures; or (d) apparel (including boots and shoes), and the materials from which such apparel is manufactured; or (e) jewellery; or (f) seeds and plants.

**6. Australian Industries Preservation Act 1906 (No. 9 of 1906).**—"An Act for the Preservation of Australian Industries and for the Repression of Destructive Monopolies," assented to 24th September, 1906, provides that any person or any corporation making or engaging or continuing in any combination "with intent to restrain trade or commerce to the detriment of the public or with intent to destroy or injure by means of unfair competition any Australian industry the preservation of which is advantageous to the Commonwealth, having due regard to the interests of the producers, workers, or consumers," or any person or corporation monopolising or attempting or conspiring to monopolise any part of the trade of the Commonwealth with intent to control, to the detriment of the public, the supply or price of any service, merchandise, or commodity, is guilty of an offence. Amended, see Acts No. 5 of 1908 and No. 26 of 1909-1910.)

**7. Customs Tariff 1906 (No. 14 of 1906).**—"An Act relating to Duties of Customs" amends the Customs Tariff of 1902 in relation to the duties on harvesters and agricultural implements and machinery and prescribes the prices to be the maximum prices of Australian harvesters and drills delivered to the purchaser at the railway station or port nearest to the factory where they are made. [Repealed by Customs Tariff Act 1908 (No. 7 of 1908.)]

**8. Customs Tariff (South African Preference) 1903 (No. 17 of 1906).**—"An Act relating to Preferential Duties of Customs on certain goods the produce or manufacture of the British Colonies or Protectorates in South Africa which are included within the South African Customs Union," assented to 12th October, 1906, to operate from 1st October, 1906, provides for special preferential rates of duty on certain goods imported from and being the produce of any of the Colonies or Protectorates included within the South African Customs Union.

**9. Australian Industries Preservation Act 1907 (No. 5 of 1908).**—"An Act to amend the Australian Industries Preservation Act 1907," assented to 14th April, 1908, provides additional machinery for procuring evidence of offences against the principal Act.

**10. Customs Tariff 1908 (No. 7 of 1908).**—"An Act relating to Duties of Customs," assented to 3rd June, 1908, repeals Section 5 of the Customs Tariff 1902 (No. 14 of 1902) and the schedule of that Act and the whole of the Customs Tariff 1906 (No. 14 of 1906) as from 8th August, 1907, at 4 o'clock in the afternoon, reckoned according to the standard time in the State of Victoria,<sup>1</sup> and imposes new rates of Customs Duties from that time. This Act provides preference rates of customs duties on certain "goods the produce or manufacture of the United Kingdom which are shipped in the United Kingdom to Australia and not transhipped, or if transhipped then only if it is proved to the satisfaction of the Collector (of Customs) that the goods have not, since they were shipped in the United Kingdom, been subjected to any process of manufacture."

**11. Customs Tariff Amendment Act 1908 (No. 13 of 1908).**—"An Act to amend the Tariff Act of 1908," assented to 10th June, 1908, provides that where the rate of duty to be paid on goods the produce or manufacture of the United Kingdom is not set out in the Customs Tariff 1908, and where such goods are not expressly declared to be free, the "General Tariff" rates shall apply. This Act also provides that no higher duty shall be payable under the South African Preference Act 1906, than the duty under the General Tariff of the Customs Tariff 1908, and that no duty shall be payable under that Act on any goods which are free of or exempt from duty under the General Tariff of the Customs Tariff 1908. The purpose of this Act is merely to remove possible doubt as to the intention of the original Acts.

**12. Australian Industries Preservation Act 1909 (No. 26 of 1909).**—"An Act to amend the Australian Industries Preservation Acts 1906-1907" formally repeals Sections 5 and 8 of the parent Act, which were declared by the High Court to be *ultra vires*; also provides that, in relation to trade and commerce with other countries or among the States, the payment of rebates, or the refusal to sell, "either absolutely or except upon disadvantageous conditions," with the purpose of promoting exclusive dealing, shall be an offence.

**13. Customs (Interstate Accounts) Act 1910 (No. 9 of 1910).**—Repeals Sections 272 and 273 of the Customs Act 1901. These sections relate to the passing of dutiable goods from one State to another State of the Commonwealth and their repeal was consequent on the termination of the book-keeping system of accounts, between the Commonwealth Government and the Governments of the States, in favour of a system of payments based on population.

**14. Australian Industries Preservation Act 1910 (No. 29 of 1910).**—An Act to amend the Australian Industries Preservation Act 1906-1909. This Act removes from the principal Act the obligation to prove *intent* to restrain trade and detriment to the public.

**15. Customs Act 1910 (No. 36 of 1910).**—An Act to amend the Customs Act 1901 gives the Customs control of all goods for export, the exportation of which is subject to compliance with any condition or restriction under any Act or regulation, extends the machinery provisions for the prevention of the importation or exportation of goods which are prohibited imports or exports respectively, amends the provisions for the payment of duty under protest, gives the Governor-General power to prescribe the nature, size, and material of the coverings for packages, and the maximum or minimum weight or quantity to be contained in any one package of goods imported or exported, or transported coastwise from one State to another; the condition of preparation or manufacture for export of any articles used for, or in the manufacture of, food or drink by man; the conditions as to purity, soundness, and freedom from disease to be conformed to by the goods for export.

1. "Standard time" is identical in the States of New South Wales, Victoria, Queensland, and Tasmania.

16. **Customs Tariff 1910 (No. 39 of 1910).**—An act relating to duties of Customs, amends the Customs Tariff of 1908 by more explicit definition of certain tariff items, and by alteration of some rates of duty.

17. **Customs Tariff 1911 (No. 19 of 1911).**—An Act relating to duties of Customs amends the Customs Tariff of 1908-10 by alteration of some rates of duty.

### § 3. Method of Recording Imports and Exports.

1. **Value of Imports.**—The recorded value of goods imported from countries beyond the Commonwealth represents the amount on which duty is payable or would be payable if the duty were charged *ad valorem*. The value of goods is taken to be 10 per cent. in advance of the fair market value in the principal markets of the country whence the goods were exported, the increase being intended to represent roughly the cost plus insurance, freight, and other charges to the place of landing.

2. **Value of Exports.**—The recorded value of goods exported is taken to represent the value in the principal markets of the Commonwealth in the ordinary commercial acceptance of the term.

3. **Records of Past Years.**—In the years preceding federation each State independently recorded its trade, and in so doing did not distinguish other Australian States from foreign countries. As the aggregation of the records of the several States is, necessarily, the only available means of ascertaining the trade of Australia for comparison with later years, it is unfortunate that past records of values and the direction of imports were not on uniform lines admitting of the preparation of a record for Australia as a whole. On the introduction of the Customs Act 1901, the methods of recording values were made uniform throughout the States, but it was not until September, 1903, that a fundamental defect in the system of recording transhipped goods was remedied. Up to this date goods arriving in any Australian port for transshipment to a port in another Australian State were recorded at the latter port only, where they were ordinarily recorded as from the transshipping State, and not as an import from the overseas country.

In recording exports an analogous defect also existed in most of the States, since goods despatched from one Australian State for transshipment in another State to an overseas country were simply recorded in the former as an export to the transshipping State; thus no proper record of the export overseas was made. Owing to this defect the overseas trade prior to September, 1903, is understated by an amount which it is impossible to accurately estimate, since it varies with the development of the shipping facilities of the States concerned. To discover the direction of the transshipping trade is not possible. The figures presented in the tables hereinafter are therefore the values as recorded, and must be taken as subject to the defects explained.

4. **Vessels (Ships) Imported and Exported.**—The imports or exports of vessels were not recorded prior to the year 1905. The value of vessels imported during the years 1905, 1906, 1907, 1908, 1909, and 1910 was, respectively, £265,957, £366,300, £680,700, £700,050, £757,100 and £711,850, while the exports for the same years were respectively £79,975, £51,365, £90,201, £82,355, £38,600, and £72,000.

5. **Ships' Stores.**—Prior to 1906 goods shipped in Australian ports on board overseas ships as ships' stores were included in the general exports. From 1906 ships' stores have been specially recorded as such, and omitted from the return of exports. The value of ships' stores during 1906 amounted to £875,966 (of which bunker coal represented £575,471, or 65.7 per cent.), during 1907 to £998,897 (bunker coal representing £663,724, or 66.45 per cent.), during 1908 to £1,196,106 (bunker coal £867,707, or 72.55 per cent.), during 1909 to £1,071,677 (bunker coal £781,113, or 72.90 per cent.), and during 1910 to £1,080,133 (bunker coal £740,567, or 68.57 per cent.).

### § 4. Oversea Trade.

1. **Total Oversea Trade.**—The following table shews the total trade of the Commonwealth with oversea countries from the earliest date for which records are available. In consequence of the defects of record, referred to in the preceding section, the results can be only approximate to the actual figures. The very marked rise and sudden fall in the value of imports during the period 1837 to 1842 were contemporaneous with heavy land speculation and a subsequent severe financial crisis. The great increase of trade in the early fifties is due to the discovery of gold. In the State of Victoria the value of imports from oversea countries increased from £500,000 in 1851 to nearly £11,000,000 in 1853, and to £13,000,000 in 1854; while in New South Wales similar imports rose from £1,390,000 in 1851 to £5,500,000 in 1854, when the total imports into the Commonwealth reached the sum of £34 13s. 10d. per head, and the total trade £56 3s. 10d. per head of the population. The rapid influx of persons anxious to share the good fortunes of these times, however, soon reduced the value of the trade per head, till, in 1858, it had declined to £31 19s. 6d. per head. The period 1867-1872 shews a marked reduction in the value of trade per head. For some years prior to this period New South Wales had experienced a succession of indifferent seasons, and Victoria was suffering from a congested labour market consequent on the decline of alluvial gold-mining in that State. This congestion of the labour market during the years 1862 to 1866 gave rise to the agitation for a protective tariff to provide employment in manufactures, and in April, 1866, the Tariff Act, which expressed the protective policy since adhered to in Victoria, was assented to.

1. Reckoned on mean population of the year. 2. Preliminary figures, subject to revision.

The graphs illustrating the movement of the oversea trade of Australia (see pages 643 and 644) shew that periods of depressed trade have been recurrent at more or less regular intervals of from seven to nine years, and measured by population, each succeeding depression since 1855 has carried the trade per head lower than the preceding one, until the lowest point was reached in 1894.

The year 1892 marked the beginning of a period of acute financial stress, culminating in the commercial crisis of 1893. The collapse of these years, by no means confined to Australia, but affecting in varying degree many countries, is plainly reflected in the records of the trade of that period, for the trade of 1894 had fallen to £54,028,227, a decline of no less than 26.75 per cent. in three years. In 1895 there was a slight recovery, and a continuous upward movement until 1901, when the trade reached £92,130,183, or £24 6s. 1d. per head. A decline, due to drought, in the exports of agricultural, pastoral, and dairy produce, reduced the trade of 1902 to £84,591,037, but although in the next year there was a further shrinkage in the exports of agricultural produce, the increase in the value of the exports of metals, specie, butter, and wool was so large as to effect an increase in the total trade. From 1902 the increase in the value of trade continued, till in 1907 it reached the amount of £124,633,280, equal to £30 4s. 5d. per inhabitant.

The imports during 1907 were, doubtless, to some extent inflated by the importation of goods in anticipation of the tariff revision of that year. The trade of 1908 shews a decline of £10,523,000 as compared with 1907, of which £8,513,000 was in the value of exports, notwithstanding an increase of £3,447,767 in the export of gold and specie. This decline in the value of exports was largely due to reduced prices ruling for wool and metals in consequence of the financial crisis in the United States during the previous year, and in lesser degree to the smaller exports of agricultural and pastoral produce, due to the unfavourable season experienced in some of the States.

The trade of 1909 per head of population was slightly more than in 1908, notwithstanding that the gold exports were less by £5,193,587. In 1910 the trade reached an absolute amount never before attained, while, measured by the population, the value of imports per head was higher than in any year since 1885, and the value of exports was—excepting the years 1906 and 1907—the highest since 1857. The high value of exports is particularly striking when considered in conjunction with the exceptionally small exports of gold. The exports of gold, already much reduced in 1909 as compared with 1908, were in 1910 still further reduced by £4,264,368 to £4,108,783, the smallest recorded since 1892. These relatively small exports of gold do not indicate the decline of the gold production, but are merely due to the fact that the recent prolific seasons and high prices made the exports of merchandise sufficient to meet all obligations abroad and so render the export of gold unnecessary. During 1911 the exports of gold again increased to twelve millions sterling. The particular classes of goods from which the increases in trade arise are shewn on pages 623 and 624.
